Although minute in its details as to the irrigation works completed, in progress, or in contemplation, the paper was very comprehensive in its range and exceedingly picturesque in its manner of treatment. Not only did Colonel Greathed explain the conditions of climate and soil in Hindustan generally, indicate the average amount of rainfall in the various zones or districts, and dwell on the available water supply that might be obtained by utilizing the river system; but he presented a graphic sketch of the severe struggles of the native cultivators to gain their living and raise their crops in the face of difficulties that are often insuperable. Yet, with all its darker shades, his picture would have been far more gloomy had he not been able to contrast the past with the prospects of the future. It seems strange that we should hitherto have done so little to remedy such a state of things, when the remedy might have been applied so easily and so much to the advantage of an embarrassed treasury. For, if India suffers from scarcity of water, it suffers too from its occasional excess. The famines that depopulate provinces, bringing terrible epidemics in their train, succeed sometimes to inundations as well as to protracted droughts. The duration of the annual rainfall varies greatly, from the Eastern shores of the Bay of Bengal where rain is abundant to the remoter inland plains on the Ganges where the climate is exceptionally dry. It is often possible to store the rain in sufficient quantities to provide against the ensuing drought; and where that is impracticable, water enough may be drawn from the rivers that have their sources among the melting snow-fields of the Himalayas. Unhappily, when nature is left to herself, those melting snows for the most part run to waste, and the Ganges and the Jumna are at their lowest during the driest season of the year. In the months of April, May, and June, during the prevalence of the warm Westerly winds, "vegetation of unwatered plants seems to be suspended." The peasants wait with impatience the advent of the South-West monsoon, when the rain clouds come travelling slowly up the course of the Ganges. Undue delay means injury, and possibly absolute ruin, to all the hopes of the year. Even the hardier Indian corn and millet, which form the staple food of the population, depend in great measure on the early arrival and on the abundance of the rains. On the great North-Western plains, where the whole rain of the year sometimes comes down in a fortnight, the ordinary crops are often utter failures, while the more valuable ones, such as sugar and indigo, depend entirely on artifical irrigation. Even those who live in the immediate vicinity of water can derive but little advantage from their situation; a single landowner can hardly water his own portion of land to much purpose. We are informed, for example, that fifteen lakes in Bundilcund only irrigate at present 1,300 acres. Elsewhere the cultivators depend almost entirely on the primitive plan of well-sinking. On the plains water is usually to be found at a depth of from ten to fifty feet. Where the springs are near the surface, the wells may be sunk cheaply, and may be kept open, although only lined with brushwood. When driven to more considerable depths, brickwork must be used for the lining, and the cost, rising from 15*l.* to 30*l.*, becomes practically prohibitory. But when water from the great rivers can be led in a variety of channels all about those arid plains, it will often turn the baked and crumbling sand into rich and productive loam; it will secure to the husbandman a return which has hitherto been worse than precarious, and will save him money and money's worth, although he should pay a very considerable price for the water provided him by an irrigation Company. When this water is once made sure to him, he need never have a succession of lean years to swallow up the profits of the fatter ones, and he may select the most profitable crops in place of falling back upon the hardier products which are best fitted to withstand protracted droughts. The Government, on the other hand, by undertaking works which can only be carried out on a fitting scale by means of combination and ample capital, reclaims semi-deserts that support with difficulty a population of paupers, and covers the land with a contented and industrious peasantry. Above all, while providing cheap facilities of transport for produce and persons, while drawing off superfluous water that might otherwise come down in floods or stagnate and generate malaria, it provides against the periodical recurrence of famine; and, finally, it makes the whole thing pay very handsomely. This last important point being placed beyond all dispute, there seems no reason why a beneficent and remunerative system of irrigation should not be carried out almost indefinitely.

Already in those North-Western provinces which have come specially under Colonel Greathed's supervision irrigation has made highly satisfactory progress. We shall not attempt to give a catalogue of the various systems contemplated or carried out, of which the Ganges and the Jumna are to be the chief feeders. But we may state briefly what Colonel Greathed says of one or two of the leading canals, as indicating the scale on which these irrigation schemes are undertaken. Works consisting mainly of excavation are scarcely likely to be so lasting as massive constructions in stone or brick; yet the Great Ganges Canal might almost take rank with some of those mighty memorials which the Roman Empire has left behind it. The full capacity is 6,500 cubic feet of water in a second; its width of bed on the Solani Aqueduct, eighteen miles from its head, is 164 feet, while its depth is 10 feet. We may remark that the breadth of the Suez Canal is 162 feet; that of the New North Sea Canal 165. The main channel is 348 miles in length, and is navigable throughout; the branches are 306 miles; the distributories 3,071 miles. A carriage road, shaded by timber trees, is kept up along the banks of the main and branch canals. The canal irrigates three-quarters of a million of acres, supplying upwards of five thousand villages; in other words, an area of 320 miles by 50. It is estimated that a water system which shall irrigate the whole country between the Ganges and Jumna may be completed for 5,000,000*l.* sterling, and will return twelve per cent. on the capital. The Agra Canal, intended to irrigate the districts on the Jumna below Agra, will be completed in the course of the present year; while an Eastern Ganges Canal, to be constructed for the benefit of the plains to the east of the great river, will supply, it is calculated, a district of 450,000 acres. The undertakings we have referred to are far from exhausting the list given by Colonel Greathed, although we may have said enough to give some idea of what is being done for Northern India. Broadly speaking, the Government schemes may be said to embrace the whole upper country, extending to the kingdom of Oude and to the Punjab. Taking the year all round, there is water enough in the rivers to irrigate the vast area of their basins; and even from the point where the canals are made to tap them, there is fall sufficient to enable the engineers to command the water with comparative ease. We should imagine that greater hydrostatic difficulties will be encountered where the necessity for intervention is most urgent—in the deltas formed by such unbridled torrents as the Mahanuddy, which flood the low lands by the sea in famine-haunted provinces like Orissa. There the territory has been devastated from time immemorial; much of it lies under stagnating backwater or great deposits of *débris*, and the rivers are absolutely unnavigable. Very possibly the cost of the necessary works would hardly pay a moderate interest. Yet the Government will doubtless feel it urgent to deal with these districts, subordinating pecuniary considerations to more pressing ones; and a return of twelve per cent. obtained elsewhere should furnish the means without any undue strain on the Treasury. Increased harvests in the Upper Provinces will bring little benefit to isolated districts like some of those in Orissa, unless facilities are provided for transporting to them the superabundance of more favoured regions. In the last famine there was abundance of grain in Bengal, could it only have been delivered where the people were starving. But as the Indian Government has shown itself so much in earnest, and as its schemes promise so well pecuniarily, we may give it credit for resolution to persevere. Perhaps we may best estimate its enterprise and energy by contrasting what it has undertaken among Orientals with whom it had to take the initiative with the backwardness of the authorities in the countries of Southern Europe. We need not go so far as Greece or Turkey. Spain and Italy have much in common with our Indian dominions. They have their short but heavy rains, and their long dry seasons. They have rivers and torrents which would make invaluable servants, but which are suffered to become arbitrary and tyrannical masters. This very winter some of the richest districts in Italy have been submerged because there had been unusually heavy rains in the plains and a warm season had melted the snow in the mountains. Next summer the water that has been permitted to break loose would have done excellent service, had it only been stored or held in reserve. Yet irrigation has been sufficiently practised in Lombardy to encourage its development in a country that counts upon its natural resources for relieving its embarrassed finances. So in Spain, where the Cuban war is draining the exhausted treasury, the irrigation concessions granted to foreigners previously to the last revolution have been permitted to lapse in consequence

of other preoccupations. Really when we compare the lot of our Indian subjects with that of the people who live under the boasted civilizations of Europe, we may say, "O fortunati nimium si sua bona nôrint."

SOCIETY AND POLITICS IN FIJI.

THE blessings of civilization, including newspapers, are abundantly enjoyed by the white and coloured subjects of King Cacobau. We are happy to learn that in distant Fiji the contest between the *Times* and the *Gazette* proceeds exactly in the manner of polemical journalism in England. The community of which Levuka is the capital desires to become subject to Queen Victoria, but we hardly see how its condition can be improved by annexation. It has nearly everything that we have, and the identical advertisements with which we are too familiar at home occupy a prominent place in the *Fiji Times*. All the people of any consideration have "Esq." after their names; a supply of Worcester Sauce is kept at a store in the town, and the Ladies of Levuka are organizing a grand charitable fête. There are many Conservatives in England who honestly believe that Mr. Gladstone holds office simply because he would starve without his official salary; and we find that the politics of Fiji are viewed from an equally personal point of view. A correspondent states that the Chief Secretary took office under pledges of retrenchment and reform, but "his aim was the 500*l.* per annum." His plantation being a failure, it was necessary to his very existence to grasp a Ministerial salary, and to sacrifice the best interests of his country for the sake of his pocket. Let us hope that the Chief Secretary does not regard this kind of thing any more than Mr. Gladstone. The correspondent strongly urges annexation to England as a means at once of shelving the Chief Secretary, and of obtaining "substantial and immediate benefit and prosperity to all" in Fiji. We should feel more flattered by the compliment conveyed to England if we did not apprehend that England would have to pay for it. But obviously one of the first consequences of annexation would be the introduction of a Fiji loan upon our stock-market. It is not wonderful that Fiji should desire to share the benefit which is so freely bestowed on Australia and New Zealand. "Our credit would be increased if we had a really powerful government." It is thus that annexation is recommended, and the argument has considerable force. Trade is depressed, and the cause is said to be an absence of confidence in the stability of the country and in the security of investments. There is not sufficient capital in Fiji, and trade languishes for want of it. If this be a true description of the country, the settlers in it may reasonably desire to be annexed to England, and English statesmen might perhaps incline to gratify the desire. We express no opinion as to the expediency of annexation, but we venture to say that the possibility of incurring an annual outlay ought not to deter us from it. This country owes something to the world, and if civilization is really likely to be promoted by our help to Fiji, we ought not to withhold it. If the civilization it now enjoys is not altogether a lovely spectacle, we ought at least to own that it too faithfully reproduces many features of our own society. The existing Government, after a year and half of trial, have not succeeded in creating that sense of security which would invite enterprise and capital. Immigration has fallen off, and the price of land does not advance. Under English rule banks would be established; the planter could get advances in cash on the security of his produce, and could thus pay off the storekeeper and buy afterwards in the cheapest market. The soil and climate are good, but capital and labour are greatly wanting. As regards capital, it can hardly be doubted that it would be attracted under English rule; but the importation of labour might occasion difficulties. We all know that the ideas of Fiji planters on this subject are not quite in harmony with our own. But as the importation of so-called free labour is certain to proceed, this country would perhaps do well to assume the power to regulate it creditably.

On the whole it appears possible that annexation may take place, and perhaps it is in view of this eventuality that His Majesty King Cacobau occupies such a very subordinate place in the columns of the newspapers of his capital. We had looked through several numbers of the *Fiji Times* before it occurred to us to observe that it contained nothing similar to the "Court Circular" among ourselves. The insecurity of property on plantations and the imbecility of the King's Ministers are the topics on which the *Times* enlarges. But perhaps if we had the *Gazette* at hand we should learn that property is safe, trade lively, and the Ministers all that Mr. Gladstone appears in the columns of the *Daily Telegraph*. We might even be able to learn from the organ of the Government what has become of the King. The only reference we have found to him is a paragraph which mentions that a great number of his subjects residing in his immediate neighbourhood are unable to pay their taxes. It appears that these defaulters are liable to be hired to planters for compulsory labour. But the local authority has no native police adequate to arresting five or six hundred men, and it is recommended that white police should be sent from Levuka for the purpose. If this be a fair sample of the condition of the country, the time has really come for intervention, if any Power can be found to intervene. Here in England we have contemplated an enlargement of our gaols for the reception of offenders under the Licensing and Ballot Acts. But it appears that in Fiji the bulk of the native population require attention from the police. It is stated that in certain districts the natives refuse to work for the white men unless they are paid in coin. "They will not take paper money on any account." They have not made any effort to get money ready against the time when the tax-collector shall go round, "and they appear quite careless and indifferent on the subject," as we should think they might safely be. The local government of Levuka seems as unsatisfactory as the general government of the country. "A deputation waited upon his Worship the Mayor to ask him to resign." His Worship promised to give an explanation to the ratepayers. "After the customary amenities to the Mayor, the deputation retired." We must express our unqualified admiration of the manners of Fiji, and indeed as regards politeness we fear that even a Governor selected from the aristocracy of England could teach them nothing. To invite a Mayor to resign and at the same time to pay him the "customary amenities" would seem to require the refined courtesy which is said to be almost extinct among ourselves. With a bankrupt treasury, an incompetent Ministry, and all the natives except the police deserving to be put in gaol, it is certainly rather hard upon the people of Fiji to receive weekly "warnings" in a style with which we are familiar. But in every newspaper that we have seen Dr. Smith of Victoria has a column to himself. If the physical constitutions of the people are going to the bad so rapidly as Dr. Smith represents, it can really matter little whether their political constitution is likely to last a few years more or less. A curious advertisement appears under the title of "lawyer's arts," which may be reckoned with quack medicines among the blessings of civilization already enjoyed by Fiji. The advertiser desires to remark upon an advertisement which has already appeared, that it is distinguished by that mendacity which is characteristic of the advisers of the person whose signature it bears. As soon as leisure will permit, the advertiser will thoroughly expose the barefaced falsehood of what we should call in England "the other side." These perhaps are the kind of "amenities" that were offered to the Mayor.

The exposure of the weakness and insolvency of Government is renewed in almost every page. A correspondent writes that the present concern cannot stand. To contend that it can is like arguing that a steam-engine can work without fuel. There is no money in the Treasury and no means of getting any. "A friend of mine presented a dollar-note to the Treasurer a few days since, and could not get the silver for it. The Treasurer and his clerks declared that there were not four shillings in the safe." We cannot help thinking that, if this be so, the Chief Secretary has been unjustly accused of sticking to his place for the sake of a salary which he is very unlikely to get paid. When it comes to dishonouring a dollar-note, the suspension of cash payments had better be definitively announced. As the correspondent puts it, much more forcibly than we could do, "If the Treasurer of a nation cannot jingle four shillings together, it is pretty near time to put up the shutters." It occurs to us that the kingly office, however honourable, can scarcely be lucrative in Fiji, so perhaps King Cacobau would be prepared to accept moderate compensation on its abolition. "No money in the Treasury, no means of getting any, the country flooded with useless paper, the natives and whites all over the group refusing to pay taxes, the bubble must burst." We should think it must; but if there is another side to this picture, we should like to see it exhibited in the columns of the *Gazette*. The provincial collectors of taxes have no boats, the rugged nature of the country forbids walking, and, as the correspondent forcibly puts it, the Government cannot expect them to swim, even if they were likely to catch defaulters by that method of pursuit, which we think improbable. It might be interesting to hear the opinion of the highest authority, Mr. Lowe, on this difficulty of the Fijian Chancellor of Exchequer. If there is any balance at the command of that officer, it is manifestly a floating one. The natives laugh in derision when the collectors speak of taxes, and indeed, if they are prepared for swimming, they might recall to the mind of a despairing collector the proverbial difficulty of taking breeches off a highlander. In one case an "enterprising and generous" settler offered his own boat to the collector "to try a last hopeless experiment of getting a few pounds from the natives," but the natives carried away the boat, and the owner of it has a claim for the value of it upon the Government, which may be described as a particularly bad debt. All things considered, it is difficult to believe that, unless help comes from without, society will not soon resolve itself into its pristine elements in Fiji.

THE OLD MASTERS AT THE ROYAL ACADEMY.

IV.

WE have received a letter from Mr. Crowe on behalf of himself and his fellow-labourer, M. Cavalcaselle, which states that since the year 1864, the date of the English edition of the *History of Painting in Italy*, they have seen "The Assumption" (191), by Sandro Botticelli, and accordingly have been able to insert a full description of the picture in the more recent German edition of their work now in course of publication. We have further to

attention, with Gregorio Schiavone, a disciple of Squarcione and a companion of Mantegna. The name "Mosca" in the Academy Catalogue is taken solely from "a fly" painted on the picture, and supposed to be the artist's monogram.

We have reserved for a concluding paper "the deceased masters of the British School." We confess that it was not without some misgiving that we found four years ago our English artists placed in immediate competition with the greatest painters of all time. A safer, though a more timid, course would have been to keep them apart in a separate room. We have now every reason to be satisfied that the bolder line was taken, and that our modern art was placed in immediate juxtaposition with the old. The challenge thrown down has not been followed by defeat; neither side is seriously worsted; indeed the contest for supremacy ends as a drawn battle. In many points the ancients have the advantage, but in some directions the moderns win. For instance, there can be little doubt that within the present century the literal study of nature has been pushed further than at any prior period. Thus landscape painting has found novel developments in recent times. But the chief reason why English art suffers so little in competition is that the leading masters of our school, especially in its early stage, have modelled themselves on great historic examples, and have fashioned their works according to the immutable laws which govern all art alike. Thus the pictures of Wilson and the earlier landscapes of Turner show no antagonism to the compositions of the Italian masters. For like reasons the portraits of Reynolds make themselves quite at home among the sitters of Vandyck, Titian, and Antonio More; indeed Reynolds, Romney, and Gainsborough form a triad which has never been equalled at home or abroad since the time when Vandyck, Rubens, and Velasquez were contemporaries. There are, too, some minor considerations which favour our earlier painters; the notion, for example, had not died out that dark canvases are grand, that deep shadows have a mysterious meaning, that classic columns and massive draperies are stately. Modern pictures composed on such ideas are sure to agree sufficiently well with the old masters; they are in fact not too modern, and frequently the change in fashion and costume, as well as the sobering tones which time sweeps across a canvas, serve still further to remove the figures from that immediate present which cannot but clash harshly with the shadowy past. But the very reason why certain modern pictures are not bad company for works more than twice their age may be taken as a warning not to admit products unmitigated in modernism. Thus it would not be politic to multiply indefinitely such span-new canvases as "Beatrice knighting Esmond" (202), though the work is one of the very best that the late Augustus Egg ever painted. The preceding apology for our English school would be unfairly onesided did we not candidly confess that modern art again proves in these annual competitions inferior to the older schools in reach of imagination, in grasp of intellect, in philosophic insight, and in religious aspiration. Occasionally it is true that Fuseli, Barry, and even Reynolds made futile efforts to soar to high art, but evidently the authorities in Burlington House have a wholesome dread of proclaiming the incapacity of their deceased brethren. The English school is strongest when it is simplest, and the selection has wisely been made accordingly.

The portrait of Mrs. Hogarth, the daughter of Sir James Thornhill (40), lent by Mr. Heugh, recalls the anecdote that one day, when the lady was sitting to her husband, she remarked, "It is one thing, my dear, to scribble about beauty, but quite another to paint it." Which reference to Hogarth's *Analysis of Beauty* gave occasion to Garrick's smart repartee, "I suppose he writes from his own ideas, and paints from his wife." A portrait of Mrs. Hogarth, also by her husband, was lent by Mr. Adye in 1867 to the Exhibition of National Portraits. Neither work is quite at the artist's best.

Walpole pronounces as "most admirable" Sir Joshua's least unsuccessful attempt at high art, "Count Ugolino and his Children in the Dungeon" (46). Northcote remarks that this painting assumed its historic aspect by accident. A study from White, a well-known model, was seen in the studio by Burke and Goldsmith, who at once were struck with its fitness for the Ugolino of Dante's *Inferno*. Reynolds immediately had the canvas enlarged—a fact now of easy verification in the Academy—in order to make space for the starving children. The picture was finished in 1773, when Reynolds had entered on his fiftieth year, and the work formed a chief attraction in the fifth Exhibition of the then newly created Academy. The surface is cracked, and the colours have darkened; but, compared with the ruin that has overtaken other of the artist's works, the canvas has suffered little. The fault of this eminently tragic scene of starving despair, which haunts one like a nightmare, is its want of dignity and elevation; the figures do not rise above common nature, and thus the style belongs to the period of decadence; in other words, it is founded on the Carracci, who are known to have exerted undue influence over Reynolds. The execution, too, is far from the artist's best, as may be judged by comparison of the clumsy handling bestowed on the starving Ugolino and his sons with the delicate touch and exquisite gradations of tones in the portrait in the adjoining room of "Lady Elizabeth Keppel" (88). There can be no doubt that the painter's true sphere was portraiture. The head of Ugolino is unsatisfactory because imagination does not transmute the portrait of White, the beggar-born model, into a Dantesque creation; the same model served for "The Banished Lord" in the National Gallery, but the beggar always remained. Much more in the artist's true line is a portrait exhibited in the Academy in 1772 of "Miss Meyer" in the character of Hebe (39). This graceful little girl, guided by the eagle, glides up a rainbow path towards the sky. Reynolds had a pretty fancy; indeed his works might serve in illustration of the oft-made distinction between adaptive fancy and creative imagination. In the painting of children, where fancy with taste and tenderness has free play, he is almost without compare. Gainsborough, who in these exhibitions always runs close upon his rival, is scarcely an equal in a "Rustic Portrait of a Young Lady" (53). Yet perhaps Reynolds is never quite so simple and unsophisticated; for instance, he would scarcely have ventured to delineate, as here, without added graces, "a young lady" as a poor peasant girl gathering sticks; and he certainly would not have thrown in as her surroundings so truthful a transcript of field and wold. How sensitive an eye Gainsborough had for nature, when simple and unadorned, may be seen in a "Landscape, with Cattle" (51). Neither Crome, Cotman, nor Cuyp was ever more warm and liquid in sunset glow. Burlington House contains several noteworthy examples of the distinctive ways in which landscape was made to bear upon portraiture by the three great portrait-painters of the period—Reynolds, Gainsborough, and Romney. "Mrs. Abington the Actress" (3), "The Portrait of Miss Leigh" (59), and "The Portrait of Mrs. Powis and her Daughter" (103), all show Reynolds fertile in resource. By his backgrounds alone he may be known. Gainsborough is more grey, Romney more florid, while Reynolds has the distinction of being always right; the trees which he throws into companionship with his figures reflect the colours of his draperies and complete the lines of his compositions. Thus "Miss Leigh" (59), in the act of carving her name sentimentally on a trunk in a wood, bends her figure gracefully as the trees grow; animate and inanimate nature move with kindred life and sensibility. Reynolds produced between two and three thousand works—a startling fact, which may account for the ever-recurring surprise that his genius, however copiously displayed, remains inexhaustible. Among many recurring and familiar moods we cannot refrain from calling special notice to "The Portrait of John Hunter" (158). Reynolds as a courtier and a man of society approached sitters according to their individual sympathies. He had a military method, dark and terrible, suited to the warlike Major-General Keppel (109) and Captain Augustus Keppel (199); he had also a fashionable, dressy manner, as in the ladylike and lovely "Portrait of Mrs. Stanley" (112); and then he could assume a grave and philosophic mien of sober greys, as in this strictly student portrait of Hunter the anatomist, painted in the pause of inspiration, pen in hand, and books loading the library table.

"Reynolds and Romney divide the town," said Lord Thurlow; "I am of the Romney faction." Romney, indeed, became the favourite of fashion, and certainly his style was well calculated to allure the eye by its grace, its witching beauty, its romantic sentiment, and its showy, not to say its meretricious, colour. "The Countess of Warwick and her Children" (26), included among "National Portraits," in 1868, exemplifies the master's merits and defects; the colour is more than usually silvery, the reds are not so obnoxious as often, the white satin rivals the sheeny dresses of Terbourg, and no one will forget the beseeching gaze of the little girl looking lovingly into her mother's face. This happy attitude the artist repeats in another graceful composition, "The Countess of Albemarle" (108). Reynolds, too, reflects the same thought in a group emulous of Romney's grace—the family portrait of "Mrs. Powis and her Daughter" (103). Romney fell into routine; it is no wonder that his effects are conventional, and his execution hasty and slight, when we remember that in his prosperity he painted on an average at least one portrait a day. And yet "Mrs. Drummond Smith" (15) is beyond the reach of criticism. Pearly greys and blushing pinks delicately blend, and a wondrous hat, large as an umbrella, is so managed as to enhance the charm. Yet it must be admitted that Romney's art was often an artifice, that his alluring treatment was sometimes but one remove from a charlatan's trick.

Gainsborough compared with Romney was the child of nature—simple, true, and honest. His art, too, was the growth of our English soil. Gainsborough, unlike his contemporaries Reynolds and Romney, wanted the opportunity of raising his style and of enlarging his vision by Italian travel. The eight pictures now exhibited show art but as a second nature. Especially would we point to the portrait of "Miss Linley" (35). This lady, who won all hearts, was painted as St. Cecilia by Reynolds; we know also of two portraits by Gainsborough besides the picture now exhibited—of the one altogether lovely Miss Linley and her brother, half-length as children; the other done at a later period, a full length standing in a landscape, at the time when the fascinating daughter of a musician in Bath had refused a coronet to share love in a cottage with the penniless Sheridan. The portrait before us represents the lady seated on a grassy bank, surrounded by trees. The wind which blows across the landscape ruffles her hair; the impersonation is altogether *spirituelle*: the young wife whose song was an enchantment appears in the picture graceful as a sylvan sprite, beaming as a gleam of sunlight. Yet the artist's intention is better than his execution. Gainsborough's flesh is apt to be waxy; his draperies are sketchy, scratchy, and chalky; he had but one touch for trees and grass, for costume and hair. Gainsborough fritters his detail, Reynolds subordinates each touch to the general effect.

The Academy, with a generous wish to give in succession an inning to each of its deceased members, opens its rooms this season to a remarkable display of the obscure genius of Robert Smirke. Some persons there may possibly be who have scarcely realised how much the arts of our country are indebted to this facile yet conventional book illustrator. Eleven performances which range

from the sublime to the ridiculous now attest his services. Some persons have seen points of contact between Smirke and Stothard; at any rate, the two artists, belonging to the same time, shared like influences; but the grace and the poetry of Stothard degenerated in Smirke into weakness and commonplace. To realize the difference between the two Academicians, it is only necessary to contrast "Venus and Adonis" (28), by Robert Smirke, with "Venus Rising from the Sea" (31), by Thomas Stothard. A fellow-Academician, Mr. Richard Redgrave, in *A Century of Painters*, makes apology for the defects of his brother of the brush when he writes "Robert Smirke, R.A. (born 1752, died 1845), is better known as a designer than as a painter, for though he painted many works from the poets and dramatists, they were designed with a view to engraving, and were most of them engraved; he also made many book designs." Stothard, whom we have just named, presents points of interesting analogy with Flaxman, whose classic bas-reliefs are exhibited in the "Octagon Room" with the plastic works of other Academicians.

The history of our English landscape art in its rise and development is slightly sketched in a few representative works of Wilson, R.A., De Loutherbourg, R.A., Constable, R.A., Turner, R.A., Crome, Cotman, and Muller. The supremacy of our native school is further enforced by a roomful of water-colour drawings from the easels of Varley, Robson, Girtin, Cozens, De Wint, Copley Fielding, David Cox, Turner, &c. Once more Turner astounds the world, no less than Reynolds in another sphere, by his endless resource and infinite variety. "Dunstanborough Castle" (16), exhibited in the Academy 1798, and "The Lock on the Mill" (69), show the painter in his nature-loving ways ere his eye was troubled by wild frenzy; and yet what glory of colour is here! The public, having had a satiety of Turner's intoxicated manner, here gladly reverts to his temperate moods. "Old Crome and the Norwich School" have seldom been in greater force. Crome's "Slate Quarries" (47) is a work, write Messrs. Redgrave, "founded on Turner's early versions of Poussin; somewhat unfinished, yet with great local truth of colour and a fat impasto of execution." "The Yarmouth Water Frolic" (42), also set down to Crome, must be transferred to the later date of Cotman, inasmuch as the small steamer here seen on the river could have no existence in the lifetime of "Old Crome." The picture is of such rare merit that the question of authorship is not a matter of indifference. The liquid sea, the sunny sky, the rich hues reflected from brown and golden sails, have never been surpassed even by the delicious tones of Cuyp and Du Jardin. We would willingly dwell longer on these and other examples of the English school, which serve to prove how earnest and truth-seeking have been our artists in the study of nature.

In conclusion, an amusing incident may be recorded—the withdrawal from the Academy of a picture entered in the Catalogue "Landscape with Cornfield; water in the foreground (30) by John Constable, R.A." This measure became imperative when Mr. Wainewright, a living artist, claimed the picture for his own. Mr. Wainewright says, "I think it only right to state that I painted that picture in the year 1853, and that the original water-colour sketch (a view near Starcross, Devonshire) which I made for it is still in my possession." It will be remembered that a similar mistake was made two years ago, when a picture by another of our living artists was hung conspicuously on the line as a masterpiece by Turner. Such laughable instances would of course be indefinitely multiplied could the Old Masters visit the Academy and disavow the rubbish which heavily weighs on their historic reputations.

REVIEWS.

HAYWARD'S BIOGRAPHICAL AND CRITICAL ESSAYS.*

MR. HAYWARD'S essays, among many merits, have the distinguishing quality of being eminently readable. Although they originally appeared in periodical publications at various times, they rather gain than lose by reproduction in a collective form; for the reader becomes accustomed to Mr. Hayward's mode of treatment, which is characteristic, though it is exempt from mannerism. While his judgment on literary questions is entitled to respect, his critical faculty seems to exercise itself by preference rather on the curiosities and puzzles of history and tradition than on controversies relating to style or to principles of composition. An essay on "the Pearls and Mock Pearls of History" is devoted to a subject which must have had special attractions for the writer. Mr. Hayward shows that nearly all the celebrated sayings of ancient and modern times are apocryphal; and he might perhaps have included in his sceptical conclusions the residue of similar utterances. It happens unluckily for the collectors of anecdotes that even with the wittiest of heroes and statesmen a great crisis is not conducive to the delivery of opportune epigrams. "Shenstone," says Mr. Hayward, "defined good writing to consist in or of 'spontaneous thought and laboured expression.' Many famous sayings comprise these two elements of excellence, the original writer or speaker furnishing the thought, and the chronicler the expression." A pitched battle, or the crisis of a revolution, is not favourable to laboured expression, and scarcely to spontaneous thought, except for immediately practical purposes. Marshal Ney's famous flourish at the close of his trial, about preferring death to acquittal, on the ground that he was by birth a Prussian, was really delivered; but both the thought and the expression had been previously drawn and settled by his counsel. In the majority of instances the original speaker has not even supplied the thought, though his actions or his fortunes have suggested it to later biographers. Some of the good things which are attributed to Talleyrand, and nearly all the recorded sayings of Lord Melbourne, are genuine; but the wit of one statesman, and the admirable humour of the other, were not generally displayed on important occasions. The famous question or comment which was said to have been addressed to Talleyrand on his deathbed is evidently fabulous. Mr. Hayward gives some specimens of celebrated sayings which have derived all their point and notoriety from wilful or careless perversion of the meaning of the speaker. "Sir Robert Walpole was accused of the worst cynicism of corruption on the strength of his alleged maxim, 'All men have their price.' What he really said was, 'All *these* men have their price,' alluding to the so-called 'patriots' of the Opposition." In consequence of the same common tendency to inaccuracy, nearly all the scraps of Latin which are proverbially used in England are invariably misapplied. "Cui bono," "Cadit quæstio," "Exceptio probat regulam," have acquired a popular sense which is wholly at variance with the real meaning. "Si sic omnia," which originally referred to the contrast between Cicero's doggrel verses and his eloquent orations, is habitually quoted as if it had expressed a wish that his poetry might have resembled his prose.

Two of the most elaborate essays in the compilation deal with severer subjects; but even a scientific discourse on whist is relieved by many anecdotes of past and present whist-players. Mr. Hayward expresses the paradoxical opinion that memory has little or nothing to do with the real understanding "or finest points of the game." "Of course," he contemptuously admits, "a certain number of rules and maxims must be learnt; but it is not more difficult to learn these than to learn the Catechism." In both cases, it might be added, the lesson is never likely to be learnt at all unless it has been learnt in early life; and *Hoyle* or *Cavendish* is, like the Catechism, easier to learn by heart than to illustrate by practice. Memory is required at whist, not to remember rules and maxims, but to remember the cards which have or have not been played, and the indications which have been afforded by the players. It is probably true that the most accurate memory needs the aid of skill and judgment; and, on the whole, Mr. Hayward, like Imlac in *Rasselas*, will probably convince the ordinary reader that it is impossible to be a whist-player. No other accomplishment commands greater respect among the votaries of the game; yet it may be suspected that Mr. Hayward has studied the science quite as much on account of the associations with which it is connected as for its intrinsic value. Some of the stories with which the essay concludes are told in his happiest manner. Here and elsewhere Mr. Hayward conveys the impression that he is a conscientious narrator, although he would probably not in all cases vouch for the actual truth of his stories; but he always seems to select the best reading of an anecdote, and in many instances he must have taken much trouble to record it in its neatest or most authentic form. Sometimes the newest version is the best, as in an anecdote told *ex relatione* S. P., one of the best players of the new school. "One night, turning very faint, I struggled through the rubber, then got up, and left the room, and fell on the landing with a crash that brought the other three players to my side. As I was recovering my senses I heard one of my late adversaries say, 'He never can have played the hand through without a revoke,' and I saw him steal away to see. *His* partner followed to aid in the examination of the tricks, and *mine* to see fair play, leaving me stretched as I fell."

Although the second desertion is not satisfactorily accounted for, the story is preferable to the old joke of the bet on the recovery of the man in front of the window of White's. The more serious essay on the authorship of Junius has been formerly noticed. The case against Francis has never been more forcibly argued, although the adherents of the popular faith still remain unconvinced. It is fair to admit that Lord Aberdeen's statement as authenticated by Mr. Arthur Gordon has, since the original publication of the essay, supplied Mr Hayward with additional, though not conclusive, evidence against Francis. Lord Aberdeen's statement that Pitt professed to know the name of the author has apparently diverted Mr. Hayward's preference from Lord George Sackville to Lord Temple. The controversy is too abstruse to allow of incidental discussion.

The range of Mr. Hayward's essays is not inconsiderable, extending from Richard III. to Sir Henry Holland and M. Van de Weyer. The character of Richard, like the authorship of Junius, probably interested him by the conflict of evidence which had previously attracted the curiosity of Walpole. In general Mr. Hayward is rather inclined to occupy himself with recent or modern history, and especially with the personal or biographical part of the subject. One of the essays consists of a concise and comprehensive Life of Marie Antoinette, and there is a singularly amusing account of the wonderful career of Marshal de Saxe. No other period offered the same opportunities as the first half of the eighteenth century to high-born adventurers; and Maurice of Saxony was the most brilliant and the most successful of the class. An athlete, a profligate, a man of genius, and a great

* *Biographical and Critical Essays.* Reprinted from Reviews, with Additions and Corrections. By A. Hayward, Q.C. New Series. London: Longmans & Co. 1873.

soldier, he resembled rather a hero of one of Dumas's romances than an illegitimate cadet of an actual reigning House or an historical Marshal of France. His passing fancies of making himself King of Madagascar, or of establishing a Jewish kingdom in Central America, were only a little more extravagant than his all but successful attempt to become sovereign Duke of Courland. In those happy days it was not necessary to have either a definite country or any particular religion. Count Maurice learnt the art of war in campaigns against the French, whose armies he afterwards commanded. He could never spell or write French with any approximation to correctness; and it is not known whether he could write German at all; but he was the finest specimen of the type of character which was then chiefly admired in France and in Europe. It is not surprising that he was admired by Voltaire, who nevertheless falsified history at his expense by attributing the victory of Fontenoy to another celebrated reprobate. The Duke of Richelieu was as licentious as the Marshal de Saxe, but he was wholly destitute of military genius; and Mr. Hayward conclusively proves that the celebrated charge on the English column at Fontenoy was executed in accordance with the original plan of the Commander-in-chief. It is surprising that there could be any doubt of the result of a battle in which the Duke of Cumberland was opposed to the Marshal de Saxe. In accordance with his usual custom, Mr. Hayward corrects Voltaire's famous story of the civilities which were supposed to have been exchanged between the English and French Guards. Lord Charles Hay, instead of politely requesting the Frenchmen to fire first, expressed an ironical hope that they would stay to be shot at; after which he turned round and "speeched his own men," probably in language not complimentary to the enemy. No historian of future wars fought with arms of precision will be able to record or even to invent a similar exchange of banter in the field. One anecdote reported by Mr. Hayward illustrates the tendency of special skill and knowledge to create a professional conscience even in the least scrupulous of men. The Marshal, who set all the ordinary rules of morality at defiance, was by calculation, and perhaps by feeling, remarkably tender of the lives of his men. When one of his subordinates in command recommended a movement by the argument that it would only cost the sacrifice of eighteen grenadiers, Marshal de Saxe answered, "Eighteen grenadiers! If indeed it were eighteen lieutenant-generals!" On the whole perhaps it is better that an army should be commanded by a prudent and skilful general of lax moral principles than by a model of propriety who exposes his men to unnecessary risks.

In his just appreciation of the merit of Alexander Dumas Mr. Hayward misapprehends a playful criticism in which Thackeray noticed the voluminous novelist's peculiarities. In other passages Thackeray expresses the warmest admiration for Dumas, who excelled all competitors in fertility of invention. The charge of having affixed his name to books written by his assistants is properly rejected by Mr. Hayward; but there is internal evidence that Dumas abused the privilege of great artists to employ pupils and journeymen on furniture and draperies. In some of his novels there are chapters after chapters of elaborate episodes which have evidently been composed by inferior writers without reference to the main current of the story.

While Mr. Hayward has learnt much from books, it is easy to see that his proper study, if not that of mankind, is contemporary man. It may be collected from casual and unobtrusive remarks that he has enjoyed unusual opportunities of social experience and observation for many years. His biographical notices of Lord Lansdowne, of Lady Palmerston, of Lord Dalling, and others are founded on personal knowledge; and he has evidently been acquainted with almost all the conspicuous members of French and English society during an entire generation. His review of Sir Henry Holland's autobiography is rather a supplement than a criticism, for the reviewer was fortunately not bound by the professional obligation to suppress the most interesting parts of his experience. The theory that history is a science, or that there is a so-called philosophy of history, may be supported by many plausible reasons; nor can it be denied that the causes and results of great political changes are more important than the peculiarities of the statesmen who may have promoted or opposed them; but for many minds biographical details and illustrations of manners have a remarkable fascination. St. Simon, Horace Walpole, and Boswell will outlive many laborious exponents of the reasons why events could not have been other than they have happened to be. Mr. Hayward has a taste for characteristic anecdote, and this collection of essays furnishes abundant proof that no one tells them with better effect. One or two stories, which are perhaps slightly hazardous, are properly veiled in the semi-transparency of a foreign language. It is too probable that hereafter cultivated society and politics will occupy distinct regions in England as in the United States. A new *couche sociale* may probably rise to the surface; and the refined and intelligent classes may find that they have no longer any influence on public affairs. Reminiscences of a mode of existence which will have become obsolete will then acquire historical value; and it is well that the want should be supplied in advance by those who have ability and opportunity for the task. Mr. Hayward would earn the gratitude of many readers if he would, before it is too late, write additional biographies of some of the eminent persons whom he has known. He may probably have been acquainted with Lord Melbourne, and he has certainly been intimate with many of Lord Melbourne's friends and associates. It is greatly to be regretted that the peculiar vein of humour which marks Lord Melbourne's reported sayings should be forgotten for want of sufficient record. His humour was evidently not a mere intellectual amusement, but the expression of an original character; and a mere collection of his more remarkable paradoxes and epigrammatic phrases would have a biographical interest. It would be easy to enumerate other subjects for Mr. Hayward's future essays; but he may probably not require officious advice; yet the most genuine proof of the goodness of a culinary or literary composition is the fact that it produces a wish for more.

EWALD'S LIFE OF ALGERNON SYDNEY.*

IF, as will be readily conceded, there are few remarkable ages which fail to produce remarkable men, so it is not in many instances the fortune, good or ill, of remarkable men to live in what would be falsely described as remarkable times. The latter fact has long since been discovered for the use of that large and growing class of biographers who, while unwilling to apply to a hero the treatment so much resented by the guests of Procrustes, yet seem compelled by the influence of some dire necessity to fill two volumes with materials which would scantily furnish forth one, or to make a subject fit for an essay serve their fixed purpose of composing or compiling a book. To judge from Mr. Ewald's *Life and Times of Algernon Sydney*, we should conceive him capable of expanding the life of any Englishman of repute into matter for any given number of pages, so long as he were not denied the right which every Englishman possesses of quoting at will from Macaulay and Hallam, and of filling up the interstices of argument by occasional notes on the political phenomena of the present day. The art in which this biography proves its author to be no common proficient has been sometimes called the art of bookmaking; and doubts have been expressed whether its exercise be worthy of the historical, or of any other, scholar. Mr. Ewald in his preface conscientiously and candidly enumerates his main authorities, and admits that his own researches among the State Papers have remained without an adequate result for increasing the materials of his biography. In truth it adds nothing new by way either of fact or argument to our knowledge of Sydney's career; but it may be welcome to those to whom the two collections of the *Sydney Papers* are unknown or inaccessible, or to those who esteem it a tribute to the rhetorical genius of Sydney that the facts of his life should be presented to them embedded in the copious political reflections of his biographer. It is a pity that the ready pen of Mr. Ewald should not have been used to better purpose; for the most useful part of his book is perhaps its concluding chapter, which contains an excellent summary—precisely the kind of work by which a biographer is likely to earn the best thanks of the reader whom he should most desire—of Sydney's *Discourses on Government*. We regret not to have begun, like ladies on opening a new novel, at this end of the book, instead of conscientiously commencing with the ominous sentence—

> A few miles from the fashionable little watering-place of Tunbridge Wells, and approached by a drive through scenery as charming as any which the fair county of Kent can offer, stands a handsome quadrangular pile on the brow of a gentle eminence—

and going over the "almost hallowed ground" and the almost hackneyed quotations once more.

Prolixity, which ought to be a venial fault, at least inasmuch as it usually brings with it its own punishment, and which in the case of so ardent a lover of the existing British Constitution as Mr. Ewald may perhaps almost be thought a virtue, is not however the only charge which we are bound to make against him. Well acquainted with the main matter of his book, and familiar enough with a great age of the past to have a genuine sympathy with many of its most significant currents, Mr. Ewald is not saved by the dignity of his subject or by his appreciation of its dignity from faults of taste which are too glaring to admit of being passed over. We have already noticed his apparently uncontrollable tendency to drag in references to politics and politicians of the present day of whom he wishes to signify his disapproval. "Sydney was a Republican—not a Democrat." We may grant the proposition without requiring to have it illustrated by the assertion that "the League and the International would have entirely declined his services," and "Citizen Dilke would have found in him no ally"—an assertion weakened rather than strengthened by the mysterious remark that, "had Algernon Sydney lived in this our time, he would have been content with being a philosophical Liberal." That "Sydney was a sincere Christian, and no disbeliever," might have been accepted as a true, if tautological, statement, without its being pointed by the defiant declaration that "with the atheism of Mr. Bradlaugh and his followers he would have had no sympathy." "The miserable men who call themselves the Republicans of the nineteenth century," as they are elsewhere paraphrastically termed, might surely have been left to continue in peace to call themselves by a name combining with political presumption what is undoubtedly chronological accuracy. But Mr. Ewald cannot resist the temptation to allusions which would be regarded as stale and unprofitable by most experienced penny-a-liners; he talks of Sydney having been

* *The Life and Times of the Hon. Algernon Sydney, 1622–1683.* By Alex. Charles Ewald, F.S.A., of Her Majesty's Record Office. 2 vols. London: Tinsley Brothers. 1873.

"in his lifetime regarded by many as a 'Rabagas'"; while his own style seems occasionally to be modelled upon the very species of eloquence which he so praiseworthily abhors. To find a sober historian speaking of "a trinity of Republicans" and "a trinity of ambassadors" is sad enough; to read his description of Queen Christina of Sweden as "erotic and erratic" is necessarily excruciating; but pain gives way to astonishment when we read of "religious toleration" as "dead and buried in the days of Charles II., and "*the Five Mile Act dancing over its grave.*" This is indeed a prize metaphor, of which the use should at once be made over to the Civil Service Examiners.

Apart from the excrescences which Mr. Ewald has allowed to deface his text, and the long "connecting" passages, partly consisting of quotations from historians in everybody's hands, by which he has lengthened out his narrative, it may be questioned whether Sydney's life is an appropriate subject for any biography extending beyond the modest limits of an essay. His cruel and unjust death has established him in the position of a political martyr; and though at his trial he sought to evade responsibility for the composition of the writings on which it was sought to found an untenable charge, a nation as well as a party justly identifies his name with the cause to which his life, if not his death, bore direct testimony. But it was his hard fate to be able to contribute to the victory of the cause of free popular government little besides the example of his single-minded devotion; to be excluded, partly by the rigour of his principles and partly by the circumstances of the times, from any active influence upon the national history as a politician or a legislator, except on isolated occasions of secondary significance. The main ends of his political life he had in the period of his manhood to endeavour to advance by intrigues in which he failed, and in which success itself would have been a most doubtful gain. And yet, though sprung from a race of high intellectual gifts, nature had not bestowed upon him a genius able to embody his opinions in immortal words of kindling enthusiasm, and thus to cause posterity to regard him as the prophet sacrificed for his too early knowledge of the truth. It is his death rather than his life which has consecrated his memory; and it is rather isolated points in his career, above all its close, than its often dreary and painful course, that seem to call for the comment of the historical writer who appeals, as the historical writer on such a subject justly appeals, to popular national sympathy.

On one or two of these points we propose to touch. We have no quarrel with the general tenor of Mr. Ewald's estimate of his hero and of his hero's opinions. That Sydney was no fanatical devotee of a political Utopia of his own creation, that his ideal of government was no other than that to which the English Constitution as re-established and developed by the Bill of Rights reasonably corresponded, his *Discourses*, which Mr. Ewald has most appropriately summarized, remain to show. His bold and manly refusal to make himself responsible for the condemnation to death of Charles I. gains rather than loses by his subsequent maintenance of the theoretical justifiableness of the principle which he had refused to help to carry in practice to its extreme consequences. An aristocracy with a popular basis and a monarchical head was Sydney's conception of a Republic; and the right of resistance was to him the palladium of national freedom. The time has long passed for any party to be able to claim a monopoly of the principles which he consistently asserted; but until the nation at large has abandoned them, his figure has a right to stand among those of the illustrious witnesses who line the path to the meeting-place of a national Parliament.

It is a strange coincidence that Algernon Sydney should, like another Whig statesman whose name is of even greater significance in the annals of his party, have found one great opportunity of attempting to realize among Englishmen, though far beyond the borders of England, the principles of government which he acknowledged. Shaftesbury, with the aid of Locke, was the author of the stillborn constitutions for Carolina; Sydney was consulted by Penn on the frame of government for Pennsylvania. We should have been grateful to Mr. Ewald if, instead of drawing a long parallel between the concessions which Sydney advocated for the Pennsylvanians in 1682, and those which in 1867 and 1872 the British people has gained, or "almost gained," "thanks to Conservative tactics" or otherwise, he had given us some of the details, if ascertainable from the MSS. at Penshurst, as to the alterations effected by Sydney in Penn's original draft. He indeed quotes Mr. Hepworth Dixon to the effect that it was Sydney who prevented Penn from introducing a fixed body of constitutional law, and thus repeating Locke's and Shaftesbury's fatal error. In the elasticity of the Pennsylvanian constitution lay the secret of its endurance, as to which its admirer Frederick the Great was so sceptical; but it may be pointed out as worthy of observation that the constitution originally gave to the Governor and Council the initiation of all laws; and that when this proviso was modified by the Pennsylvanian Assembly so as to give to itself an equal right of initiation, a veto, or what amounted to such, was allowed to the Governor on any law. Thus, as Mr. Bancroft admits, Pennsylvania fell short of being a representative democracy, and the principles consistently advocated by Sydney in theory were carried out into actual practice in the only instance in which he had an opportunity of applying them. It is this which makes the framing of the Pennsylvanian constitution one of the most significant facts in his political biography.

In foreign policy he took high credit to himself for the result of his mission to Denmark at the close of the Commonwealth period. Sydney seems to have had high qualifications as a diplomatist. Besides much power of observation of persons (of which his excellent letters from Rome, quoted by Mr. Ewald at the close of the first volume, give abundant evidence), he seems to have possessed a clear insight into the aims and ends of conflicting parties, and to have followed with vigorous persistence instructions the spirit of which he thoroughly appreciated. On his Danish mission this object was the conclusion of peace between Denmark and Sweden, whose mutual hostility, the parent of many bitter wars, was once more, as it had been in the earlier part of the Thirty Years' War, a serious stumbling-block to the Protestant interest. The mission of Sydney and his colleagues was designed to patch up the war which had again broken out after the Peace of Roeskild, and in this he was successful, chiefly in consequence of the death of the ambitious Charles Gustavus, of whose very remarkable character Sydney sends to his father an appreciative sketch. The same letter contains a curious reference to the action feared on the part of the eccentric daughter of Gustavus Adolphus, Queen Christina, who, Sydney "is apt to think, will now turn Lutheran again." He afterwards, when in exile, saw her at Hamburg, and satisfied himself that nothing serious was to be apprehended from her, as she had "a great deal of wit"—enough to recognize the importance of her position—and in fact only availed herself of the situation to seek the settlement of her yearly revenue. The whole of these transactions forms a very curious passage in a very interesting chapter of European diplomacy. Sydney was an excellent agent of an excellent policy, of which the main merit of course belongs to Cromwell. The Swedish alliance was one of the cardinal points of his foreign system, and though this connexion afterwards proved a broken reed in the war of 1666, it was again secured in the days of the Triple Alliance, and helped to produce the immediate effect which was the result of that famous achievement of English diplomacy.

With the Restoration, which put an end to Sydney's brief diplomatic career, begins the period of his life which possesses most interest for those who honour his name. Mr. Ewald has not, indeed, been able to add any new facts of importance or arguments of weight to those which are already familiar to all readers of English history; but his sympathy with his subject, and the numerous extracts from the two collections of the Sydney Papers which he has inserted in his narrative, sustain the interest of the reader through the greater part of the second volume. Unfortunately, little or nothing is known of the life of Sydney during his exile in France; and as much is known of what occurred in England meanwhile, Mr. Ewald gives it us instead. Yet his account of the foreign policy of the Cabal is perfunctory and inaccurate, as, *e.g.*, where the negotiations which led to the Secret Treaty of Dover are apparently viewed as the *consequence* of its advice. But we have only space in conclusion to dwell briefly on the most critical point in the latter part of Sydney's career, on which Mr. Ewald, with more gallantry than success, has ventured to confront the most eminent authorities with a bold demand for the acquittal of his hero from the charge which is usually regarded as the one blot upon his fame.

That already about the year 1665 (Mr. Ewald has an inconvenient way of eschewing dates), Sydney, after in vain attempting to bring about a Dutch invasion of England, to be supported by the Republican exiles and malcontents at home, made a similar offer to Louis XIV., is acknowledged by Sydney's biographer, and indeed, as he shows, is proved by the testimony of the French King himself. This abortive attempt is of no importance except as furnishing a very sufficient reason for the special suspicion with which Sydney was regarded by the English Court. For the manœuvres in which Sydney, together with the other heads of the Whig party, engaged at a later period have nothing in common with the desperate scheme of an isolated exile. In those transactions Louis XIV. and the Whig leaders each pursued their own ends; both parties desired to bring about the dissolution of a Parliament adverse to their views and interests, and each only intended to use the other so long as necessary. But Louis was in the stronger position; for while he might at any time return to his former policy as soon as the English Government showed itself willing to return to its former submissiveness, the Whig leaders were incurring the utmost risk by embarking in so perilous an intrigue. He had, what they had not, an alternative policy, and he was risking nothing, while they were risking all. Both parties to some extent gained their object; but though the Whigs, as events proved, had no cause to repent of their intrigue as a political manœuvre, they were unable all to come stainless out of the transaction. For though as a body they may at once be acquitted of any motives of a base description, yet in the case of some among them there remains an irremovable charge of personal corruption.

Among these Algernon Sydney is included on the direct and explicit testimony of the agent who administered the bribes, the French ambassador Barillon. Neither Macaulay nor Hallam ventures on resisting a charge which rests on such evidence; but Mr. Ewald has not one, but three (indeed four) pleas to urge on behalf of his hero; or, as he oddly puts it, Sydney's conduct may be judged from three points of view. In the first place, though Sydney lived in an age when "men of honour and position freely accepted bribes and presents without any sense of self-reproach or degradation," still, if Sydney "accepted money for himself in order to advocate the views of France, even though those views were in conformity with his principles, it was conduct unworthy

of a man of his ancient race and hitherto stainless honour." As this is meaningless if it amounts to more than urging everybody to "bear in mind" what no reasonable man is likely to leave out of sight, we pass on to the second "point of view." This is that, if Sydney accepted 1,000 guineas, he expended them "in distribution to followers for the purpose of organization, and not for his own private needs, then the honour of the Republican does not suffer in the least." On this it is only necessary to observe, first, that nothing is known on the subject, and secondly, that nobody ever supposed that Sydney took the money to buy horses and plate. Mr. Ewald's notion of the ethics of bribery seems to be that, if a bribe is spent for patriotic purposes, it is no bribe at all. The same argument might be applied to certain other pecuniary transactions—simony *e.g.*—with singular felicity. But the third "point of view" makes the second of little importance. "Did Sydney receive any money at all?" There is no evidence but the assertion of Barillon. Now Barillon was "avaricious, unscrupulous, sensual, and luxurious." Madame de Sévigné says that he spent 50,000 francs in one year, but that "*il sait bien où les prendre.*" Now "the diplomatic agents of Louis *were allowed to pay themselves out of the money entrusted to their care.* Nothing would have been easier than for Barillon to quietly pocket this secret service money," and concoct a list by way of account. And the list which he did concoct shows that he pretends to have given small sums of 500 and 300 guineas to men of fortune and probity such as Hampden. "Why was no money given to Shaftesbury and Howard, both of whom were determined opponents to Charles, and the latter an abandoned man who sought only to gratify his own interest and ambition?"

Everything is possible, no doubt; but Louis XIV. was not so badly served that we can without a jot of evidence assume his ambassador to have proceeded on a plan of such exquisite simplicity. Bribes mean in this instance presents or compliments which bind without securing the receiver. The gift to Hampden was doubtless not intended to purchase him, but to place him under a distinct obligation. As to Lord Shaftesbury, Barillon may have justly hesitated before seeking to fetter by such means a man of whose ability to withdraw from amicable relations when it suited him the French Government had had sufficient experience in the days of the collapse of the Cabal; while, as to Lord Howard, he may not have thought him worth the money. But all such suppositions *pro* and *con* are alike futile; there is no sufficient reason to suspect Barillon's good faith to his master in a matter of high political importance because of the vague gossip of the excellent Madame de Sévigné; and Mr. Ewald seems to feel the weakness of his position, for, as a fourth and last resource, he permits himself to suppose that the sums granted by the ambassador "never quitted the clutches of his agents."

We fear that all this wealth of conjecture will do little towards relieving Algernon Sydney's name from the suspicion of a grave indiscretion. A more prudent politician—and he was the reverse of such—would have shrunk from so doubtful a transaction as that of placing himself under the obligation of accepting a pecuniary compliment from a foreign sovereign. The case needs not, we think, to be put more emphatically than this; and so we leave it. Into Mr. Ewald's account of Sydney's trial and death we cannot follow him; but he is here on safe ground; and few will reperuse in his pages the narrative of these "detestable" proceedings (to use Fox's epithet) without understanding why the great Whig statesman thought fit, when stigmatizing Hume's remarks on the trial and execution of Sydney as the most reprehensible passage of his whole work, to rebuke in the eminent historian that spirit of adulation of deceased sovereigns which is the best safeguard of tyrants. Sydney's present biographer, discriminating between Sydney's defence and Sydney's cause with straightforward earnestness, is at his best where his subject rises to its height; and we only wish that he had, in the execution of his entire task, either contented himself with less or braced himself to attempt more.

RAMBLES.*

THE art of travelling without crossing the Channel is in some danger of being forgotten. By travelling we mean travelling for pleasure; for, of course, the art of locomotion was never before carried to such a pitch of perfection. England for such purposes resembles the conception of matter which has been accepted by some philosophers. It consists of a number of detached points, separated from each other by a vacuum. From London, or as Cobbett called it, the "Wen," we make but one stride to some watering-place or commercial centre, and are sublimely ignorant of all the intervening points. One historic town is to us nothing but a place where we ought to change carriages, and another nothing but a bar where our throats may be scalded with hot tea and our digestions tried by hideous outrages upon all culinary principles. And yet England is a country which is really worth seeing. There are some interesting specimens of mediæval architecture in different parts of the country, and every now and then there are fragments of picturesque scenery. Patricius Walker, who describes his "rambles" in the pleasant little volume before us, proves by example that a man of cultivated mind and poetical sensibility may do worse than spend his vacations in making acquaintance with this unfamiliar part of Europe. The conveniences of travel are indeed so great that we are inclined to wonder that the practice is not more common. Railways are plentiful and have indirectly done much good. Not only do they put you down at the best starting-point, but they drain off that more offensive variety of traveller which is apt to tread on our toes in the beaten routes. And thus there are innumerable districts in England where one can be at once transported backwards for a century or two and enjoy the perfection of the good old sleepy rural existence. Riverside inns still abound which recall the pleasant conversations of Piscator and Venator; there are districts where, at every turn of the road, one expects to meet Tom Jones on his walk to London, and villages where, as Patricius Walker shows in a pleasant chapter, the spirit of old Herrick still seems to be murmuring

> of brooks, of blossoms, birds and bowers,
> Of April, May, of June, of July flowers.

The England of the nineteenth century, it is true, is gradually encroaching upon the England of the past. Gipsies are becoming rare, even in the New Forest, and are condescending to marry the children of the Gentile. Mr. Borrow would have some difficulty in discovering a secluded dell where he could set up his tent in peace, after the preliminary ceremony of a few rounds with "blazing Bosville or the flaming tinman." The rural police would order him to move on, or possibly he might find that an Enclosure Act had led to the destruction of his little fragment of common. And yet more remains than might be imagined by the hasty observer. Even within the circle defined by the daily ebb and flow of London men of business, there are many patches of unbroken country where the pedestrian may fancy himself to be, if not quite on a Scotch moor, yet on the verge of a really wild country.

Properly to enjoy these remnants of the old world, the traveller should follow the example of Patricius Walker, and, having settled himself in some prominent centre, should make a series of excursions on that conveyance which Patricius describes as the "Irishman's tandem," and which is more generally known as Shanks' mare. If he finds it necessary to carry a knapsack, he will be regarded with a certain amount of suspicion; the British rustic being, as a rule, but dimly awake to the existence of such a variety of the human race as the genuine tourist. He will have to put up with very indifferent imitations of bitter beer, and probably become rather tired of the constant consumption of eggs and bacon. Yet he will have his reward, if he brings with him the necessary powers of perception; and will not unfrequently enjoy the pleasure of being the first discoverer, and, in a poetical though not in a legal sense, the sole proprietor of many lovely nooks and corners never visited by more ambitious travellers.

To enjoy such pleasures presupposes a certain amount of education, and we do not know that a better teacher could be suggested than Patricius Walker. He has the right capacities for appreciating English scenery. He has not indeed—and we decline to say whether this peculiarity should be counted as a defect or a merit—any particular desire to kill anything. His description of the New Forest begins in a manner calculated to arouse our suspicion. "A meet of foxhounds," he says is there "a pretty enough sight"; but we are happy to add that he declines to proceed to the conventional description of a run. He takes his pleasure after a different fashion. He describes the grand old oak called the "Queen's Bower," which stretches huge limbs across one of the rare forest brooks; and recommends us to recline beneath its branches, after the fashion of Jaques, and watch the trooping insects that play in the rays of sunshine or form dancing parties on the surface of the water. Thence we may ramble further to stumble upon a gipsy encampment, and discuss with the natives the difficulties that have dawned upon a totally uneducated race in the study of the first chapter of a Bible presented by some wandering missionary. What, by the way, is to become of these curious outcasts when compulsory education is universal? What legislative net will be close enough to entangle them in its meshes, or will they be swept out of existence or into respectability? Meanwhile, as we wander through the Forest, we are pleasantly reminded of William Gilpin, vicar of Boldre in these parts, and author of *Forest Scenery*. Here he lived through the final quarter of the last century, industriously making sketches—drawn with a reed pen and brownish "iron-water" ink, and "toned" with a yellow wash—which he sold for considerable sums. One collection produced 1,200*l.*, which he invested for the benefit of the school at Brockenhurst, and to increase the endowment he made another series of drawings at the age of seventy-eight, which were sold at Christie's for 1,625*l.* His drawings, such as they were, and the books which he published, were amongst the first symptoms of that growing love of the picturesque in nature which was so marked a tendency of the period. Three tall trees—a plane-tree, a yew, and a maple—still flourish in Boldre parish to recall to memory the good simple old vicar who first celebrated their beauty. He was an admirable specimen of that charming variety of the English country gentleman of which White of Selborne is another instance, and which has earned the gratitude of all lovers of rural scenery. A little anecdote reported by Patricius Walker is characteristic of the man. In Boldre churchyard, not far from the tomb where the old vicar and his wife rest beneath his favourite maple, is a headstone with this inscription composed by the vicar himself:—"Here rests from his labours William Baker, whose industry and frugality, whose honesty and piety, were long an example to this parish. He was born in 1710 and died in 1791." Mr. Gilpin, it seems, had found this pattern

---

Rambles. By Patricius Walker. London: Longmans & Co. 1873.

rustic eating his humble dinner in a retired cottage during one of his walks. Baker was old but athletic; a fine sturdy peasant, full of shrewd common sense, well versed in the Bible, with a little store of pithy maxims, and of blunt and independent character. Mr. Gilpin was charmed with his visit, which he frequently repeated, and after the old man's death not only composed his epitaph, but published an account of his life. But there is a sad conclusion. Some time after the decease of the lamented Baker, Mr. Gilpin was undeceived, and "had the sorrow rather than the mortification to find that Baker had been through life a worthless and flagitious character; that age, instead of curing, had only altered the nature of his vices, and that by all, except the pastor, he had ever been known and despised as a consummate rogue, an oppressive extortioner, and a base hypocrite." These words, however, were not added as an appendix to the epitaph; otherwise they might have thrown some light upon Charles Lamb's childish inquiry as to the place where the bad people were buried. The old sinner retains his posthumous compliment; but we agree with Patricius Walker that he is probably not included in the charitable but guarded expectation inscribed on the good vicar's own tomb, that it will be "a new joy to them" (that is, to Mr. and Mrs. Gilpin) "to meet *several* of their good neighbours who lie scattered in these sacred precincts around them." The italics are not in the original.

It is pleasant to believe that, in spite of hypocritical Bakers, there are yet many English clergymen and English peasants leading innocent and beautiful lives, "far from the madding crowd's inglorious strife," and adding fresh associations to the charms of our rural scenery. Patricius Walker visits other places which are consecrated by similar memories. Mr. Barnes is fortunately still amongst us to describe English country in an English dialect. George Herbert, whom, however, he appears to regard as a little too respectable, and too much idolized by his affectionate biographer, rests under the altar of Fugglestone Church, and receives due honour from this pilgrim of the nineteenth century; and that sly, humorous, double-chinned, and rather indecent old Devonshire vicar, Robert Herrick, who laid his Pagan bones, for Pagan he was in spite of his Christian veneering, lies in the churchyard of Dean Prior, amongst the flowery lanes that wind up to the purple ridges of Dartmoor. He was rather a disreputable old person, it is true, and scarcely a fitting companion for Herbert or for Gilpin; if the triers of the Commonwealth had turned no better men out of their livings, the Church of England would have counted but a very questionable list of confessors in those troublous times; and yet we cannot but love him, if only for the sake of the exquisite songs, "Gather ye rosebuds while ye may" and "Fair daffodils we weep to see." A genuine lover of old English poetry may find many wayside shrines in which to pay his devotions beside the world-famous centre on the Avon. We half regret that Shakspeare's immortal curse has not received a wider acceptation. Many memories which are now lost in the crowded aisles of Westminster Abbey would have given fresh interest to scattered country villages, and have there gathered associations far more closely personal and more harmonious. Few people in comparison would visit the sacred places; but a man would surely prefer that his tombstone should be approached once in a generation by a traveller coming in the spirit of Patricius Walker than that it should be daily trampled under foot by a herd of wild verger-driven tourists. Much might be said on the subject; but we must be content with repeating our full adherence to the infallible authority of Shakspeare. We never can be grateful enough for the anathema which has hitherto defended his remains against prying Yankees and money-making Britons.

We must hasten to take leave of Patricius Walker; but we cannot conclude without saying that we have confined ourselves to one vein of reflection out of many that might be suggested by his pages. His rambles are not strictly confined to rural England; he has something to say of Irish scenery, where indeed he speaks with the authority of long familiarity and of native birth; he gives us many pages of excellent criticism and biography—as, for example, a notice of Cobbett of much interest, though, in our opinion, rather too lenient; he enjoys our cathedrals, and denounces most righteously the destruction wrought by ignorant zealots under the mask of restorers; moreover, though a poet and a man of fine literary taste, he has a liking—with which we confess that we sympathize very imperfectly—for attending meetings of the British Association. The theories of scientific professors suggest to him many reflections upon which we have not space to dwell; but we may say generally that he discourses agreeably enough upon this and other topics to convince us that the American tourists to whom he once acted as guide were singularly fortunate in their selection. We hope that, although he does not act in that capacity in the flesh, his book will serve as at least an imperfect substitute for personal guidance to the numerous Englishmen who fail to appreciate the varied beauties and interests of their native land.

HAYMAN'S ODYSSEY.*

SIX years have elapsed since Dr. Hayman published his first instalment of a complete English commentary upon the Odyssey; and these years have been to him years of such eventful change and unforeseen distraction from the calm pursuits of literature, that had the second part, now put forth, fallen short in merit of the first, no just critic could have failed to make allowance. But no such allowance is needed. It speaks a great deal at once for Dr. Hayman's philosophic habit of mind, and for the sedative and constraining charm of classical research, that, amidst trials of which we forbear to speak because we here take account solely of his literary labours, he has worked in this interval faithfully and fruitfully at his Homeric task. The result is a volume of high intrinsic value as a textual and illustrative commentary, with a preface so logical, elaborate, and exhaustive as to be calculated to give a quietus (if commentators can see when they are beaten) to the modern "craze" that Homer represents a comparatively late poet, coeval, it is averred, with Herodotus and Antimachus. Dr. Hayman has conferred a weighty obligation on those who have a leaning towards reasonable probability and old beliefs by coming to the front, like one of Homer's heroes, to meet exorbitant demands with a lance of sharpness and precision. We are much mistaken if in England, as already in Germany, a reaction to the old faith in an embodied father of poetry, the author of the Iliad and the Odyssey, is not destined to follow from the skilful array of arguments with which, in the pages of his learned preface, he has weighed *seriatim* the windy postulates of Mr. Paley and his followers.

These indeed are not to be confounded with the views of the "chorizontic" *Edinburgh* Reviewer, whom our author more summarily despatches. It would be hard to find a more complete disproval of the arguments urged for a separate authorship of the Iliad and Odyssey than is contained in the first seven pages of the preface. Several of these arguments, whether based on language or on internal evidence of manners, are shown to be worthless, inasmuch as the alleged diversity does not exist. The Reviewer denies the use of *θόρη* in the singular in the Iliad. Dr. Hayman cites it from Il. xxiv. 317. The Reviewer urges that in the Odyssey there is no trace of a belief, which exists in the Iliad, that the Olympian Gods were wont to be present at feasts instituted in their honour. But lo! says our author, in the very first council of the Gods in the Odyssey (i. 22-5) Poseidon's absence is accounted for on the ground that he is gone for this very object to the distant Æthiopians. Again, the Reviewer makes out the "peplum" to be Asiatic in the Iliad, and infers a different authorship from its use in the Odyssey by Greek women of rank. But he is reminded that the ground on which some have suspected the chief passage where it occurs in the Iliad (vi. 271) of spuriousness is no other than its specially Attic affinities; and, even assuming it to have been Asiatic, we are reminded that Homer was an Asiatic Greek, and that Helen, who in the Odyssey gives a peplum to Telemachus, was also a Greek princess who has long sojourned in Asia. Thus we have confirmation resulting where contrariety has been searched for; and it is the same in divers other cases which Dr. Hayman crumbles up with an ease that betokens reserve of power. On the general question of difference of manners in the two poems, he suggests the perfectly satisfactory explanation that the manners of the Iliad are what one would expect of "men abroad in a state of war," those of the Odyssey characteristic of "men at home in a state of peace." It is, as he happily illustrates, the difference in "habits and equipments of our Guards in the Crimea from the same in their barracks or in society at home."

Mr. Paley, as is just, receives at Dr. Hayman's hands fuller and ampler consideration of his peculiar views on the chronological question of Homer's date. The high respect which this able scholar has won by his editions of Æschylus, Euripides, Hesiod, &c., entitles him to no common deference, even where the views which he propounds are most novel and startling. Indeed we can conceive that not a few younger scholars would accept as conclusive, without more ado, his *ipse dixit* on such a matter, *e.g.*, as the argument from language, that our Homer was later than Archilochus, Theognis, Æschylus, Pindar, and Simonides. On this very account it is matter of rejoicing that he has met with an antagonist who copes with him in detail, and that successfully and exhaustively; arguing with him severally the fifteen points of his argument, and rebutting, sometimes to the full extent of a *reductio ad absurdum*, claims which would have no plausibility at all were they not stated by a scholar of great repute and research. Thus the argument for a modern date which Mr. Paley deduces from the fact of archaisms, symptomatic of an early period of the language, being intermixed with a comparatively modern style of diction, is met in Dr. Hayman's preface by a challenge to show that the bulk of the diction is more recent than the date of Archilochus; and in an eloquent and convincing note (p. xi.) the occurrence of so-called archaisms is accounted for by Homer's wielding, like Shakspeare, as a poet of the people, a mass of language and vocabulary and word-forms greater than any other poet of his country. The objector would also argue a late date from the details of the Homeric armour. But where, asks Dr. Hayman, are the details of early armour wherewith to compare these? Besides which, as he shows from Hallam, fashions of war have a strange fixity and long continuance. Sieges and siege works hardly varied from the Roman epoch till the invention of gunpowder. And it speaks volumes that the Homeric weapons and panoply had a basis of copper (*χαλκός*).

A favourite ground of argument with Mr. Paley is that which may be labelled "altered treatment"; his theory is, that unwritten poems so ancient and popular must have been cooked and hashed for the tastes of successive ages, and therefore liable to be superseded by a still later written, even if anonymous, composition.

* *The Odyssey of Homer.* Edited, with Marginal References, various Readings, Notes and Appendices, by Henry Hayman, D.D., late Fellow of St. John's College, Head-master of Rugby School. Vol. II. London: David Nutt. 1873.

Thus he would take the νεῖκος of Achilles and Ulysses sung of by Demodocus in Od. viii. 75, *seq.*, as an "altered treatment" of the μῆνις of Achilles in the Iliad; and he would regard in the same light the episodes of the Cyclopes and Laestrygonians, and of Circe and Calypso in the Odyssey. Dr. Hayman shows, with regard to the first instance, in a detailed examination which our limits forbid us to reproduce, that the parallel goes no further than Fluellen's "the situations, look you, is poth like." As to the second, he asks whether there is anything in the alleged resemblances inconsistent with their being distinct and original tales of adventure, and repetitions of types of savagery not improbably culled from travellers along the Mediterranean coasts—repetitions, too, in which the elements of a king, a polity, a city, a palace, and a road traversed by waggons, in the later instance, sufficiently distinguish it from the case of the Cyclopes, where there are none of these. And with regard to the third instance, Circe and Calypso, we are constrained to agree that it is "Fluellen again," and "Macedon and Monmouth"; suggesting naturally to Dr. Hayman's mind Archbishop Whately's *Historic Doubts*, and to our own Sir G. C. Lewis's "Egyptological Method of Writing History," wherein St. Peter's at Rome and St. Paul's in London are shown to be "altered treatments" of one and the same fact, in that both are in a city, both on a river, both built by an architect, and both named after an apostle. There is perfect fitness and force in our author's plea that by parity of reasoning Virgil might be convicted of repetitions, because Anchises's ghost in the Third Book of the Æneid is but "another version" of Hector's ghost in the Second; and because the end of Palinurus and that of Misenus are both by drowning. But really the point is too inconsiderable to waste words upon, although it is in the interest of common sense that it should be disposed of in arguments softened and brought home by the introduction of humour and pleasantry; just as where our author, in dealing with Mr. Paley's plea for the modernness of Homer drawn from the absence of *direct* reference to Homer in Pindar and the Tragic poets, and in showing that the importation of "ipsissima verba" savours of parody and burlesque, takes an instance from the *Ingoldsby Legends*, and, on the basis of an only approximate quotation, maintains that a parity of reasoning would make Barham to have had before him a text of Shakespeare not commonly known when he quoted or introduced words from *Coriolanus*.

Although it is by no means conceded that the great Tragic writers for the most part ignore Homeric themes and subjects—and indeed evidence to the contrary is satisfactorily adduced—it deserves attention that the cause assigned by Dr. Hayman for the greater indebtedness of the Tragics to post-Homeric and Cyclic writers is the more pathetic development of the Homeric heroes in the works of the latter. This would obviously be more attractive, available, and popular material to work upon; but as surely would it assist a conclusion as to the early date of the Iliad and the Odyssey of our Homer. It is not alleged that the Tragics did not avail themselves of intermediate legends, but that there was quite enough in Homer for them to work upon had no Cyclical steps ever come into play; and this is shown by pertinent reference to Shakspeare and his treatment of the Chronicles wherein he found his plots. "And if," says Dr. Hayman, "our Homer is shown to be later than Æschylus, because the latter borrowed from the Cyclics, he is for the same reason later than even Apollonius, Rhodius, and Virgil." *Solventur risu tabulæ.*

The three chief lines of evidence on which Dr. Hayman, beyond any of his compeers, relies for the early date of the Homeric poems are, first, that of the vases and vase-paintings in the British Museum and elsewhere; secondly, the argument as to language deducible from the greater or less coincidences of thought and word in the poets from 800 to 500 B.C. with Homer; and thirdly, that, on which he insists with great plausibility, arising from the very rudimentary character of the geography of the Iliad. As to the first, there is yet more, we suspect, to be made of it; and we shall await with considerable interest the result of the researches and observations of Professor Heinrich Brunn, which it is to be hoped will be made accessible to English scholars. Meanwhile we think that Dr. Hayman's inferences from an analysis of the scenes on the chest of Cypselus, which may be as old as 600 B.C., and which was, when Pausanias saw it, a very ancient Greek carving, satisfactorily point to the craftsman's knowledge of Homer, but not of the Cyclic poets. Pausanias recognized on it five (probably designed) illustrations of Homer; he does not, as he might have done had an early Ἰλίου πέρσις of the date of the chest existed, refer to a Cyclic poem the incident represented thereon of Menelaus chasing Helen with a drawn sword, which appears in Euripides and on a vase in Millingen's ancient monuments. "So far," concludes Dr. Hayman, "as the chest of Cypselus can show anything, it shows that our Homer was when the Cyclics were *not*." Again, the result of a comparison of the vases with the poems, as regards horse-riding, is curiously in favour of the antiquity of the latter. The rare tokens of equestrian performance in Homer are a subject large enough for separate illustration and scrutiny. One thing is quite clear; it was unknown in Homeric warfare. Yet, if the oldest Greek vase in the Museum exhibiting the human figure has equestrian forms upon it, and if the vases dating from 700 B.C. to 550 B.C. present frequent instances of horse-riding, it is obviously presumable that the Iliad and Odyssey belong to a date prior to the former of these dates, or at all events to the mean between them. But we cannot here go further into our author's researches into the question of the vase-pictures; enough perhaps will have been said when we state, as a general result of it, that in one important private collection, that of the Count of Lamberg, the proportion of Homeric to non-Homeric subjects is ten to three.

Dr. Hayman is on yet firmer ground when he rebuts the charge of modernism on the faith of coincidences, often lying half-hid in a key-word, between our Homer (not Mr. Paley's) and his successors. Even in Theognis, although his poetry is so little akin to that of the objective epic, there are many likenesses as curious as that which occurs between the Megarian poet and his epic father in poetry, wherein the former welds into this pentameter, ἰχθυόεντα πεφὼν πόντον ἐς ἀρήγετον, two distinct Homeric combinations—namely, πόντον ἐπ' ἰχθυόεντα, and πόντον ἐπ' ἀρήγετον. Then, too, as is shown lucidly in pp. lxiv.–v, the correspondence of language between the *Supplices* of Æschylus—a play without Homeric affinities in plot, scene, or character—shows nearly as many Homeric words and phrases as the parallelisms which Mr. Paley has reckoned up between Homer and Herodotus. Equally striking is the specimen group set in array from Pindar's Nemean Odes in its family likeness to Homer; and as to the transitive middle verbs, which to Mr. Paley have a savour of modern cookery, Dr. Hayman caps them by fifteen instances from Hesiod and six from Archilochus. It seems to follow that, if word-forms relied upon to fix the lateness of Homer's date occur also in the poets who range from Hesiod and Archilochus down to Pindar, the old bard is at any rate in precisely the same predicament *qua* imputed modernism as those poets with whom Mr. Paley seeks crucially to compare him.

We can but glance at the geographical and topographical argument; but really the giant to be vanquished is here a mere stuffed straw figure. Compare Homer's geography with that of Æschylus and Pindar (in the early fifth century), and say then if his barrenness can possibly be coeval with their wealth. Great ignorance of Western geography; no hint of Cyrene, which Pindar celebrates in such glowing legends; only the faintest allusion to the yet insignificant Dorian and Ionian races; the very narrowest ideas of travel as compared with the geography of Hesiod; an utter ignorance of names for local seas—all these particulars are notes of a most primitive poet, as well as of geography in its infancy. In short, to avail ourselves of Dr. Hayman's forcible way of putting it, "to ascribe to the Homeric poems a date posterior to Æschylus and Pindar is like trying to roll all human knowledge backward, and making the river reascend to its course." Much more certainly "do the Tables in Spruner's Atlas, 'Orbis ad mentem Homeri,' 'ad mentem Hecatæi,' 'ad mentem Herodoti,' as clearly mark successive strata of knowledge as the fossils in geological formations attest so many successive deposits of the earth's crust" (pp. xcvi.–vii.). We cannot help adding that, if the eyes of modern scholars are to be freed from the glamour which has of late years obscured them as regards this old-world faith, the result will have been mainly due to the steady, unflinching position which Dr. Hayman has maintained in this matter; and that not with the obstinacy to which superficial observers might ascribe it, but with a tactician's readiness to surrender assailable and unimportant outposts, such as textual discrepancies referable to the original author's own fugitive memory, the omissions and interpolations of the rhapsodist, and the frailty in judgment of the early Alexandrine critics.

The careful commentary which succeeds this exhaustive preface presents so many aspects of value and importance that it can scarcely even be glanced at in the remainder of the present article. One of these is subsidiary to the argument for unity of authorship. In a note at vii. 172, on the ceremony of the χέρνιψ, according to Athenæus finding no place in the Iliad, we recall Dr. Hayman's distinction between *camp* life in the one poem and *home* life in the other. Upon viii. 131–2, where, of five games proposed, four are despatched with the briefest mention, he notes that this brevity may be the poet's way of recognizing his fuller previous treatment of the subject in Iliad xxiii., and so may represent a link between the poems. Upon viii. 313–5 we find a note on the ethical likeness of the sensitive Hephæstus of the First Book of the Iliad to the same God in the lay of Demodocus. Nor are these insignificant anti-chorizontic notes. In viii. 553, οὐ κακὸς οὐδὲ μὲν ἐσθλὸς—epithets reversing the order of "gentle and simple," and referable, as Dr. Hayman notes, "to the estate and condition of the child born"—are words which suggest an obvious addition to the coincidences of language between Homer and Theognis, who uses these epithets constantly in a kindred sense.

Sound taste distinguishes Dr. Hayman's choice between alternative interpretations in such cases as where, in vii. 105–6, ἠλάκατα στρωφῶσιν | ἥμεναι οὐλά τε φύλλα, κ. τ. λ., is explained by him of Areto's maidens "combining rapid motion in working with a fixed position at work." The simile he takes to express, not the idea of their sitting "close as leaves on a poplar," but like as "the leaves of the poplar tremble and show both sides, yet without quitting their hold on the bough." In the next verse καιροσσάων is rightly read and explained, though perhaps the full form should have been given καιρόεσσων in the note. For lucid and full interpretation we may refer to the sufficiently intricate passage about Alcinous's vineyard and the successive stages of nature's process in it (vii. 123–8); and for copious illustration to the note (viii. 475) on ἀποπροταμών, which deals amply with the whole question of "heroic" feeding. Dr. Hayman, too, is very happy in rendering epithets—*e.g.*, πάλιν ἰφθιμην, "the *lovely* city" (*i.e.* socially pleasant, *cf.* ἴφανος), or ἑλίπαδας βοῦς, "the shuffle-gaited oxen." For such epithets he has ever

a parallel from English poetry; indeed his ready use of illustrations from modern literature is one of his happiest gifts. A young student may have his fancy profitably turned to comparative folklore when, in plodding through the story of the Lotus-eaters in the Ninth Book (94-9), he finds a parallel legend cited from Miss Frere's *Old Deccan Days*.

If our space allowed, we could say much more about this volume as evincing rare and many-sided erudition. In dealing with other new editions of the Odyssey, or of parts of it, we may have an opportunity again to examine the commentary, as well as the learned and valuable appendices. At present we must be contented to express our conviction that Dr. Hayman's Odyssean labours cannot fail to enhance his repute as a scholar both at home and abroad.

ZELLER'S HISTORY OF GERMANY.*

(*Second Notice.*)

THE different parts of M. Zeller's book, of the general nature of which we have spoken in a former article, differ widely according as he writes in the character of a scholar or only in that of an angry man. In the first part, the "Introduction à l'Histoire d'Allemagne," the latter character prevails, while, in the last part, where he deals with the course of Frankish history, the scholar's point of view prevails over that of the wrathful man—shall we say of the renegade? In the Introduction M. Zeller's wrath boils over; it is really little better than a libel on Germany and the Germans in all times, past and present. His great point is that Cæsar says that the Germans saw no shame in robberies done beyond the bounds of each man's own tribe. This charge is over and over again cast by M. Zeller in the teeth of all Germans from Cæsar's day to ours. Now we should be very much surprised indeed if the charge were not true of the Germans of Cæsar's day. The only question is, Is such a state of things in any way peculiar to Germans, and therefore in any way specially disgraceful to Germans? Is it not equally true of all nations at a certain stage of their national being? Nay, if we enlarge the limit, if, instead of the tribe, we take something wider—men of the same language, of the same religion, of the same colour, or wherever else the line may happen to be drawn—is it not very largely true of all nations at a stage of their culture very far advanced beyond the Germans of Ariovistus? It was only late in the last century that it began to strike modern Europeans that there was any shame in robberies committed on black men. This was simply the same doctrine, only with the area of the tribe extended so as to take in all Europe, all Christendom, or whatever the limit was held to be. It is foolish in a man like M. Zeller, who can write sense when he chooses, to write in this silly sort of way, which can do nothing but provoke an endless *tu quoque*. Then M. Zeller goes on to tell us that Germans in all ages have made war only for the sake of gain, while France alone makes wars for ideas, whether in the days of the Crusades or in later times. Yet we think that we have heard of sacked towns where the cry of *ville gagnée* was heard as loudly as any Teutonic equivalent; and as for making wars for ideas, the Germans might perhaps answer that the results of such warfare are themselves apt to be somewhat ideal. Those who now fill the Professor's chair at Strasburg might perhaps remind M. Zeller that, though there was much talk, much fighting for the idea of the liberation of Venice in 1859, yet the thing itself, in its practical, and not its ideal, shape, came only from quite another quarter in 1866. We are quite ready to see German history treated from a French as well as from a German or English point of view; but M. Zeller should really remember that nothing whatever is proved as to the rights and wrongs of disputes between one nation and another by simply showing that all have gone through the same stages, and that some nations have gone through them earlier than others.

The Introduction is followed by a map, and, when it comes to drawing a map, the higher of M. Zeller's two characters prevails over the lower; we get more of the scholar and less of the angry partisan. We say more and less, because it is as easy to turn a map into an engine of polemics as anything else; still the process of making a map is in itself a scientific one: it can hardly be done without some thought, some attempt at accurate representation; it cannot, as an introduction may, sink into a mere outpouring of angry words. M. Zeller gives us what he calls "Carte de l'Allemagne physique," where we have nothing to say against the way in which the rivers and mountains are laid down, though we might now and then make a gentle murmur as to the places occupied by some of the names. "Scandinavie," for instance, should surely not come south of the Eider; nor do we quite understand about "Allemagne Occidentale," something distinguished between both "Haute" and "Basse," the letters making up the name of which creep up the right bank of the Rhine in a very remarkable way. Then, on the other side, we have the letters of the name "France" arranged in a sort of broken semicircle; the F, the R, and the A seem to keep dangerously near to the Belgian frontier; the N gets east of the Vosges, but, as if it did not find itself at home there, the C and the E turn away with a sudden angle in a south-easterly direction. We are comforted however by finding the name *Bourgogne*—we may add privately that vague rumours are afloat that, by the use of a strong geographical telescope, an eleventh Burgundy has lately been brought to light—set down in the region of the Saone and the Doubs; we should have had nothing to say against M. Zeller if he had carried it further to the east. But all these things are trifles; there is nothing of any moment to say against M. Zeller's map, nor yet against the map later on in the book which is headed "Carte de la Germanie ancienne." To be sure we again get "Scandinavie" coming down into *Saxonia Transalbania* and in the eastern part of the maps the "race finnoise" and the "race slave" seem to divide things among them in a way which leaves hardly any room for our old friends the Lithuanians and Old-Prussians. We must say, once for all, that we cannot have the last bison or the last verb in —mi put upon by any man, French, German, Russian, or anything else. But throughout it is not for anything as to the mere statement of facts that we have to find fault with M. Zeller; it is the way of putting them, the inferences he makes from them, and the utterly irrelevant matter which he drags in, which forms the ground of our quarrel against him. What, for instance, is proved by bringing together a great number of instances to show that the Germans are called by different names among different nations? M. Zeller points out this undoubted truth with an air of triumph; we see nothing in it but a fact common to the Germans with many other nations. To trace out the different historical causes why a people call themselves by one name, while their neighbours very frequently call them by another, is often most curiously instructive as a matter of history, but it really proves nothing for or against any of the nations concerned. We confess that we are rather pleased than otherwise when the Briton calls us a Saxon, and when the Englishman beyond the Ocean calls us a Britisher. It is quite certain that the Germans are at this day, and have been for a long time past, called by four or five different names, while the French are everywhere called by some form of the name which they give themselves. But we do not exactly see in what way this is to the discredit of the Germans, and it is quite possible that the argument might be turned the other way. Why is the greater part of Gaul now called France? Because the Duchy of France has step by step swallowed up most of its neighbours. By this process the name of a part has been transferred to the whole. But the names *Germani, Deutschen, Allemands*, and the Slavonic name meaning dumb, which we had rather not take on ourselves to spell, are at least names, whatever they mean, which are meant to describe the whole nation; nobody speaks of Germany as "Prussia," "Austria," or "Saxony," in the same way in which we do speak of the more part of Gaul as "France."

In the department of ethnology proper M. Zeller does not strike us as strong. Or perhaps he is only anxious to make out the barbarous Germans to be as barbarous as possible by mixing them up with all manner of uncouth nations to the east of them. To be sure we have in some sort brought this upon our own heads. Jornandes and Grimm have identified Goths and Getæ; so it is perhaps to be borne in patience if M. Zeller goes on somewhat further in the same path. Still this game also may be played on two sides. If later Greek writers speak of Goths and other Teutonic nations as Scythians, Dion Cassius constantly speaks of the Germans as a whole as Celts. Such a lack of discernment on the part of a Roman Senator and Consul must be not a little grievous to M. Zeller; for our own parts we can stand being called anything, except perhaps Semi-Saxons. And a feeling of neighbourhood, if not of kindred, makes us crave of M. Zeller that he will not write *Kimrys* when we guess that he means *Cymry*. And, if Lord Strangford were still among us, he would have something to say about rash identifications of *Cymry* with *Cimbri, Cimmerians*, and what not. But the *Kimrys* are perhaps only an extension in a Celtic direction of the tendency which troubles M. Zeller—or his printer—like everybody else, or everybody else's printer, who writes about Teutonic matters in the French tongue. We have often and in vain tried to find out why it is that no Frenchman or French-speaking person, from the time of Domesday onward, has ever been able rightly to copy any Teutonic word, German, English, or Scandinavian, even though it be set before him printed in Roman letters. We are used to "Willians Pitt" and the "Wighs"; we now, by an opposite process to the latter, get the *whergeld* nearly, if not quite, every time that it is spoken of, to say nothing of "Herminn (guerrier)," which looks like a jumble of the two rival explanations of the name of Arminius. Words are written in so many ways that we cannot dogmatically assert that *Heretoga* or *Herzog* may not, in some time or place, have been written *Hecrezoghe*, but it is, to say the least, an odd form to pick out. And it is going beyond the bounds of bad spelling when M. Zeller tells us how certain people, by a ceremony in the Assembly, formally cut themselves off from all relations with their families or with the tribe in general:—

> Ces malheureux ou ces indomptables rebelles sont proscrits rejetés de la société, poursuivis par elle. Ils se rassemblent quelquefois par bandes sous le nom de warang (*warg*), d'*out law* (hors la loi), rendent guerre pour guerre à la société et ajoutent au désordre général.

We of course feel flattered at seeing the modern English form *outlaw* carried back into such early times, but does M. Zeller fancy that *warg* and the *Warangians* have anything to do with one another? This is really the nearest approach to a meaning which his words suggest to us.

Against the greater part of the narrative as a narrative we have very little to say; it is a good enough account of the migrations and invasion, and of the general Merovingian history in Gaul. It is almost wholly the colouring against which we protest throughout. But when he gets into Italy he is less lucky;

* *Histoire d'Allemagne. Origines de l'Allemagne et de l'Empire germanique.* Par Jules Zeller. Paris: Didier et Cie. 1872.

it is better to leave Theodoric alone than to slur him over, and we should greatly like to have a reference for the following account of Odoacer with which M. Zeller favours us:—

Maître alors de Rome, *il annonce au sénat qu'il prend le titre de roi d'Italie*, des terres pour les siens, et il lui ordonne de renvoyer à Constantinople les insignes de l'empire d'Occident décidément renversé. La Germanie du dehors et celle du dedans avaient vaincu; par violence et par trahison, elles avaient réussi; l'empire romain n'existait plus; les barbares pouvaient se donner la main ou se battre sur les ruines.

After this, on the principle that "de minimis non curat lex," we are not inclined to be hard on M. Zeller, especially as he is so civil to us here in our island, for quartering Winfrith, *alias* Bonifaco, in Essex instead of Wessex, and for further High-Dutching him into Win*fried*.

M. Zeller has clearly read the original writers and worked at them; he has also clearly read his Waitz, and he has understood him whenever it was not inconvenient; in short, if M. Zeller had been inspired by something better than the wildest frenzy of political hatred, he might have written something worth reading about the time that he has taken in hand. It is a time which it is well to have looked at from the French point of view as well as from the Roman, German, English, or any other. But the way to do so is not to write a libel on a whole nation and all that it has done for nineteen hundred years.

We will wind up with an extract from M. Zeller's last page, which we could quite well understand in a mere vulgar chatterer, but which is astounding in one who knows perfectly well that Charles the Great did not reign at Paris. He has spoken of the Roman coronation, and adds these words:—

Mais cette œuvre éphémère et peut-être chimérique de sa vie appartient moins à cette période qu'à la suivante, au moins pour l'histoire de l'Allemagne. Même, en effet, en s'affaissant bientôt sur lui-même, parce qu'il n'était point viable, cet établissement politique rendit possible en Allemagne la création de cet empire germanique qui fut un long et ambitieux plagiat de l'empire carlovingien, comme aujourd'hui le néo-empire allemand que nous voyons se relever à la fin du xix^e^ siècle, est un plagiat, funeste pour l'Europe, de l'empire napoléonien deux fois tombé en France.

WHERE IS OUR COAL?*

A FEW years ago, discussions as to how much coal was to be found, and how long it was likely to last, in this or that country, were matter of interest only to a limited clique of geologists or to a few mining capitalists and statisticians. The progress of events has now, somewhat abruptly, enlarged the circle of those for whom such questions have a meaning and a value. We shall indeed hardly find any householder, rich or poor, who, when called upon to pay for his domestic or his engine coal, does not ponder on the amazing price of that necessary of life, and marvel what on earth—or rather under the earth—has become of those stores of fossil fuel which we used to hear, in England at least, called practically inexhaustible. When Sir William Armstrong in 1863, at Newcastle, announced his fear of the rapid exhaustion of the Northern coal-field, it was not without good evidence contributed by local authorities as to the quantities already made away with and the quantities still available. But for years before his warning the extent of the coal-producing power of that district had been more accurately gauged than that of any other of our numerous British coal-fields. Nor were there wanting experienced mine-agents to put forward their estimates that, at the then moderate rate of consumption—less than half what it now has risen to—a period of from 350 to 360 years would exhaust the whole region. Mr. Hull, collecting into one focus all the materials which he could obtain, some of which as a Government surveyor he vouched for by his personal examination, ventured in 1860 to publish not only a description of the features of each separate district, but a calculation of the actual tonnage, from which it resulted that a sum-total, for the United Kingdom, of 79,843 millions of tons of coal were stated to exist in reserve. This amount would, at the then rate of consumption, suffice for about one thousand years. But an uncomfortable suspicion haunted the author that the quantity raised per annum had been doubled every twenty years; and that if this galloping consumption were to be continued, the whole stock of the entire country would be finished off in 172 years. Whether or not this particular hypothesis as to the rate of the unmistakably increasing drain on our resources was well founded is quite open to doubt; but, in order to get rid of the depressing effect of such an inference, we must overturn it either by showing that the progression is really more moderate, or that the total amount in store in the depths of the rocks is greater than had been allowed; or, again, both these debateable conclusions might be a good deal modified. This, in fact, is what has been done by the Royal Commission on Coal, which lately published a Report giving the principal results of its labours. The annual increase in the quantity raised would appear to be between two and a half and three millions of tons; but the total quantity upon which we have to draw is, according to the Commissioners, nearly double of the estimate of Mr. Hull, being no less than 146,480 millions of tons, within workable distance from the surface.

Our author has now published a third edition of his work, no longer an unpretending little book giving in the main his own conclusions, but a bulky volume, in all the glory of numerous maps and large type, "embodying the Reports of the Royal Commission." He shows fairly enough how the discrepancy between the two estimates arises—namely, in part from the Commissioners having elected to include a number of coal-seams thinner than he believes ought to be considered workable; and, secondly, from their adding an enormous area, which, being concealed under newer formations, must remain matter of much uncertainty until actually explored. Several indeed of these gentlemen appear to have been fired with a patriotic ardour to make the most of the several districts on which they had to report; and one of their number is even sanguine enough to suggest that a large tract beneath the German Ocean may be worked through the instrumentality of shafts to be put down miles away from land in the midst of those stormy waters. It is difficult to resist the impression that some of the reporters may, in making up their liberal totals, unconsciously have felt, as it is natural for coalowners to feel, that such an abundance of fuel in reserve would operate as an argument against any future interference with the export trade, which, to the chagrin of some of our home consumers, now amounts to above twelve millions of tons per annum. In the estimates now before us we have the larger figures of the Commissioners, somewhat reduced by the author's deduction for the thinner seams.

The first part of the work treats of coal very generally, and a variety of peoples and tongues are brought into play with reference to the early history and the names of the material in question; but it is scarcely creditable that amid such a blaze of linguistic pretension the pages should be spotted with so many inaccuracies. The well-known passage of Theophrastus is very unliterally rendered, and the quoted terms λιθὶς (*sic*) ἀνθρακας, and καθάπερ οἱ ἀνθρακες (*sic*), are almost as shaky Greek as Kara-on (*sic*) and Kara Denghoz are wonderful Turkish. In the same way of misspelling foreign words and names, we read further on of the valley of the *Rhur* for Ruhr, and of the basin of the Plauenschen Grund*es*. But these blunders in words, with such expressions as "tracts (*sic*) of marine worms," and even the describing of certain phenomena as on the Southern, instead of the Northern, side of the Welsh coal-field, are venial in comparison with startling errors in those very quantities on which the estimates pretending to scientific accuracy are founded. We are told that the production of Scotland, which in 1859 was 10,300,000 tons, in the year 1870 was no less than 21,273,000 tons; whilst, according to the official returns of Mr. R. Hunt, published by Government, we find it was actually 14,900,000. The amount raised in France for 1870 is stated, p. 416, to be 6,550,000 tons; whereas we read at p. 333 that the field of St. Étienne alone yields six millions per annum, and the published statistics show for the whole of France a total of thirteen millions. The annual production of the Forest of Dean is set down at 500,000 tons, whilst the official returns give for the same year, 1870, 907,000 tons. Again, we read that the number of iron furnaces in blast in South Wales in 1870 was, in the bituminous coal district, 45, and the quantity of pig-iron made 500,950 tons; but the same authority—Mr. Hunt, F.R.S.—specifying the details, gives the number of furnaces as 105, and the production of pig-iron almost the double of what the author has stated. It is inseparable from the nature of many of the estimates of the vast quantities which are brought under our notice that no high degree of exactness should be attained, but it is inexcusable that such mis-statements should occur among the figures which confiding readers may take for the basis of calculation and comparison.

In his later chapters, on the temperature of deep workings and on the duration of the coal-fields, Mr. Hull has brought forward a number of important observations contributed by various colliery viewers, and has rationally examined the subject with the aid of the fuller light which has been thrown upon it by further and deeper operations, and by the views of several authors who have also been quoted by the Royal Commission. But we believe that in drawing parallels between our own country and others, sufficient stress has not been laid upon the fact that our great commercial success, so far as it depends on our stores of coal, has been attained by the enormous amount we have been able to raise, good in quality, and low in price. Compare Belgium, France, and Germany in this respect with Great Britain, and you have a sufficient illustration of the great natural advantages which our manufacturers have enjoyed. But when we once have to work, in any large proportion, deeper and thinner and dirtier seams, and can only put them on the pit-bank at a higher price than heretofore, we must lose our former vantage ground, if only other nations can so far economize their resources as to be less affected by the same evils. It is thus not mere quantity in reserve nor rate of consumption that has to be taken into account, and it now becomes too evident that other agencies are at work, the potency of which was before last year not fully appreciated. The coal is abundantly proved to exist in such quantity as to supply the increasing demand with ease, and yet we are all suffering from famine prices, which in certain branches of industry are almost prohibitory. Plenty of coal is at hand in our pits, but a year of unexampled inflation of the iron trade has sufficed to cause such a pressure upon the insufficient amount raised to the surface as to induce purchasers to give twice or three times the prices to which we had been accustomed. The colliers, participating in the prosperity of the trade by the high wages they receive, insist on limiting the out-put by working less and less. We have it on the best authority that in Northern districts a pitman earns with 6½ hours' work from 8*s*. to 10*s*. In the Midland districts men are obtaining wages which

---

* *The Coal Fields of Great Britain.* By F. Hull, M.A., F.R.S. London: E. Stanford. 1873.

give them 150*l.* or 200*l.* a-year; and in the part of South Wales where a gigantic strike is reducing to misery a large population beyond the circle of their own families, the colliers have been getting an average of 30*s.* to 36*s.* a-week, and at the steam-coal collieries 39*s.* to 40*s.* Liberal as are such wages for mere pick-work, in comparison with the modest incomes of industrious clerks, young officers of the army and navy, curates, and a host of others who contrive by thrift to keep themselves and families in a respectable position, no one would grudge them to the pitmen did they but seek to do their best. But when we find them only intent on shortening their hours, spending all that they get, and with their Unions and "Amalgamations" interfering at every turn with the masters, determined to exclude others from working, and to limit the out-put according to their own sweet will, the condition of things becomes simply intolerable. It happened to us not long since, on crossing a river in the North, that, asking the meaning of an unusual crowd of pleasure boats, we learnt that they belonged to the pitmen of the neighbouring colliery, who were pleased to pass their afternoons in the harmless pastime of sailing and fishing. Who were the owners of the wager-boats skimming the stream? The pitmen. It was here like the old story of the Marquis of Carabas. Who were the dwellers in the neat cottages pleasantly ranged near the shore? The pitmen; paying in some cases a nominal rent, in others having them free. For whom those spacious school-rooms? For the pitmen's children to frequent free of charge. Who were they that composed the dense mob thronging the railway stations whenever there was to be a pleasure trip, or a race, or a launch, or a swimming match? The pitmen. We have too long been accustomed to regard this class from a sentimental point of view as ill-used innocents, ground to the earth under hard task-masters. And when we now find them, under the leader-ship of paid agitators, striving against the established principles of political economy, and seeking by aid of absurdly exaggerated prices to limit the supply of what we know to exist in rich abundance, we can no longer rejoice in the high wages that engender such license. And if they maintain the determination, by unduly consulting their own ease, to pinch the whole community, and jeopardize the commercial prosperity of the whole country, they may be assured that they will rouse the adverse opinion of all right-minded men in the country.

LÜBKE'S HISTORY OF SCULPTURE.*

THIS book is better worth the pains bestowed upon it by the translator than the dismal platitudes of Herr Grimm's *Life of Michael Angelo*, to which the same name (we know not whether male or female) was affixed. We shall indeed presently have to indicate heavy deductions from our praise, yet these two handsome volumes may be accepted as filling for the time a serious gap in the library of the English student of art, and as containing materials of value for some writer better qualified to deal with the subject. The book is also handsomely illustrated, and although woodcuts,—unless handled with far greater skill than is here generally shown, let all the finer elements of sculpture escape, yet, if simply looked on as diagrams, they carry the reader's mind with them through the otherwise tedious details of narrative, and form at least a kind of pictorial index, pointing out where he should look for matters of interest. The translator's work, so far as we can judge without referring to the original, has been executed with care and clearness. Nothing, indeed, can impart liveliness to so characteristically Teutonic and heavy a writer as the learned Professor; but we feel little doubt that he is considerably more readable in this version than in the original. A few misspelt names (Perithous, Epigonoi, Poseidipp, and the like) should be corrected in a second issue; and a perplexing interchange of the present with the past tense, in describing matters lying wholly in the past, should be avoided. Scrupulous fidelity to the diction of the original, it should never be forgotten, is no virtue in translating German prose.

The work begins with three chapters which, in the brief space of sixty pages, dispose of the whole sculpture of India, Egypt, and Asia, together with an introductory chapter on the theory and development of the art. This introduction is in that style which lays claims to the title of "philosophical." Great principles and high-sounding general phrases are in the field throughout, and, as in many other German works, this style is so consistently sustained that the reader, if inexperienced, will at first be apt to say, "How deep and thorough is this treatment compared with the superficiality of the French, or the irregular handling of such a subject common in English writing!" The difference between architecture and sculpture, we read, "is the *subject* of their works. While architecture exhibits in its just harmony the beautiful in inorganic nature, sculpture has no other aim than the complete physical representation of the animate and organic form"; and so on, through many well-balanced paragraphs, in which the author describes the different modes of sculpture—the group, the relief, &c.—points out the aim of Christian art as compared with classical, and winds up with the usual thanksgiving to that revival of the antique through which "the plastic art by strict discipline recovered her healthfulness," until, having now "invested the exact impress of the individual character with the breath of the ideal and the imperishable," we learn, with a very agreeable sense of surprise, that she has "attained her aim of manifesting in finite forms the presence of the Infinite."

Far be it from us to imply that this style of disquisition, upon which the authority of Goethe and Schiller is supposed in some quarters to have set an eternal sanction, is without meaning to the writers, or may not convey to readers of a certain class ideas of real value. But we must own to a strong conviction that this general treatment of a subject so full of individuality and technical elements as art is a very perilous thing, and, except in the strongest hands, sure to lead to nothing but high-flying emptiness. It was so, too often, in the case of one at least of the two great poets whom we have named; Goethe's criticisms on individual works of art making a wretched contrast to his eloquent dogmatism on first principles. What a display of the feeblest conventionalities on painting is made in his *Italian Journey!* What an exhibition of pomposity and inappreciativeness do we find in his relations to Beethoven and Mendelssohn! Dr. Lübke is by no means a man of genius, or (as we should infer from this book) of taste; hence the result, where these qualities are required from a historian of art, is tame and unsatisfactory. But taste and vivid feeling for art as art are gifts so rarely found amongst Dr. Lübke's compatriots that their absence from German criticism must be readily condoned. What might, however, have been remedied is the ignorance which we trace everywhere in regard to the technical side of the writer's subject. His remarks on drapery, on low and high relief, and the like, are thoroughly vague and empty when stripped of those ample folds in which the professorial style rejoices; they bear no relation to the actual necessities under which the sculptor works; they give the reader no definite or useful rules of judgment. A greater contrast between modest taste and knowledge and this pseudo-philosophic pretentiousness cannot be found than by comparing Sir C. Eastlake's Essay on the Elgin Frieze with these portions of Dr. Lübke's performance.

The history opens, as we have said, with a brief sketch of Asiatic and Egyptian art. This is fairly executed, although the space allotted is insufficient to trace more than an outline, especially as the races reviewed have been precisely those amongst whom the "plastic art," so far as they could carry it, has been more fertile than amongst any others, the Greeks perhaps excepted. Dr. Lübke's plan of beginning each school with a philosophical sketch, intended to place the art to be reviewed in relation with the history of the race and the feelings of the period, has also wasted some pages. Such summaries may be of use to uneducated readers; the educated will know the absolute impossibility of reciting within a few paragraphs the circumstances which governed the hieratic art of Egypt, or which rendered possible the sculpture of the Parthenon. Greek art comes next; and here the author, following a vast number of careful investigators, to whose merits he does just and candid honour, has given a really valuable condensation of the little which, unhappily, is all that can now be recovered. Passing from generalities, he reviews with some skill the Hellenic schools, claiming for them in all substantial points an independent and "autochthonic" development, and confining any impulse from the East, perhaps a little too strictly, to simple technical elements. Greek sculpture is here divided into four main periods:—from its obscure beginnings to Phidias; thence to the end of the Peloponnesian war; then the brilliant and fertile age down to Alexander's death; lastly to the Roman conquest of Hellas. The after school, down to the transfer of central government to Constantinople, is dealt with under the head of Italian sculpture. We regard this as the most successful portion of the book; the discriminative criticism, if not marked by genius, is a fair summary of established opinion, and few persons would not find it an advantage to have such a manual in their memories when exploring the scattered fragments of that glorious art through the weariness of galleries and museums. Only here we must regret that Dr. Lübke's zeal has led him, in common with most who have written on this attractive subject, into giving an appearance of knowledge upon it for which we have in truth no adequate materials. This is that spurious "thoroughness" which, highly as we honour the real thing, is the curse of the modern German literary mind. To judge by the detailed criticism on the style of the great Greek masters and schools which this and similar books present, one would think that we were reading about this year's Exhibition, with plentiful and authentic examples of every artist before us. But what are the facts? We have literally (taking as one work every collected group) not above six examples throughout the whole range of genuine Greek sculpture to which we can with certainty ascribe the sculptor's name. Among these only one rated by the ancients in the first class is found, although in this case it is, happily, the greatest of them all. Even the list of marbles certainly belonging to the four periods specified by Dr. Lübke is excessively small; beyond our Museum, which contains incomparably the largest number, three rooms as large as the Elgin room would, we believe, lodge them all. The vast majority of antique sculptures are copies of no assignable date, and generally of no assignable value in reference to their lost originals. How then, it may be asked, have we this and so many other elaborate histories of Greek sculpture? The sad truth is that the bulk of these books, excepting their catalogues of names and subjects, is theoretical. The criticisms of the ancient world, comprising notices by men of the most different ages and powers of judgment, supply one part; the writers, anxious to fill up their wretchedly defective material, quote them all as authorities, Pliny's remarks

---

* *History of Sculpture from the Earliest Ages to the Present Time* By Dr. W. Lübke. Transla. d by F. E. Bunnett, with numerous illustrations. London: Smith, Elder, & Co. 1872.

figuring on the same level with a notice by Plato, just as Mr. Buckle puts Thucydides and Zonaras, or the like, on an equality as historical witnesses. Another part is supplied by the copies just mentioned. A particular Aphrodite, let us say, praised, not by Romans—whom, on art, we find little above intelligent Turks—but by the Greeks themselves as divine, is conjecturally identified by a tiny outline upon a coin. Statues presenting the attitude thus identified are then assumed to be copies of the original; the insoluble question, how near the copy is to the original, is tacitly dropped, and forthwith the statue figures in the pages before us as the work of Praxiteles or Scopas. We do not deny that in this process of identification there is much of interest and of value. It does bring us nearer to a lost masterpiece. But that insoluble question, *how near?* is precisely the only one which is of vital moment. The rest is archæology; it is history; it is not art. We will give an example in which the existence of an original enables us at once to test how wretched are the data upon which the bulk of criticism on the Greek sculptors rests. Suppose Raffaelle's "San Sisto" were known to us only by such versions of it as we may all have seen in a cottage woodcut or a Christmas card. We might learn thus the subject of the picture, and something of the colour and the arrangement. But the approach which we should thus make to the real matter—the supreme beauty and majesty of the picture—would be small almost to infinity; and our criticism of the work would be meagre and conjectural in proportion. Yet this is a more favourable example than Greek sculpture can afford; our primary identification of the original and the copy being here assumed as beyond question.

With the sculpture of the middle ages we enter a field where the historian's task becomes very different. Several centuries pass before the art disengages itself from architectural exigencies and from its employment, with painting, in absolute deference to the practical purposes of religious edification. And until this period has passed there could be little place for that expression of individual feeling and thought which is of the very essence of the fine arts. Individuality, no doubt, was silently at work throughout, and many a *pictor* or *sculptor ignotus* may have put his best into his work, and animated his scholars with all the energy or ambition of a Titian or a Michael Angelo; only the bounds set by the age could not be overleapt. Dr. Lübke has taken great pains with this portion of his work, and has collected many long-obscured indications of the early workmen and their ways. Yet, except as a piece of history, we think most readers will find his patient enumeration of the German and Italian early schools very tedious. The circle of sculptural subjects was inevitably small, and, although points of great merit may be discerned here and there, yet we must own at the end that mediæval sculpture was throughout sadly inferior to the architecture which it decorated. Excepting, of course (though not to the degree which some recent admirers require), the famous Italians of the Renaissance before 1500, there is also this great drawback from our interest in these early naïf artists, that their art came to no climax of perfection, but from the fourteenth century onwards really died away into affectation in France and England, into indescribable ugliness in Germany. Mediæval sculpture generally reminds one of Goethe's saying in the old German picture gallery at Cologne: "I see the flowers, but where is the fruit?" Dr. Lübke's labours in this field deserve our gratitude; but the work of really sifting and arranging the mediæval sculpture, so far as the work is desirable, can hardly be performed until much more trouble has been given to the subject, and until the materials are also much more completely assembled. Even parts of Italy have been little examined; Spain, we suppose the richest mine, is almost wholly passed over in this History—an immense deduction from its claims to thoroughness.

The rest of the Professor's work we can but briefly notice. In regard to the Italians of the great age his account, resting again on those antecedent labours without which no one man, however diligent, can hope to succeed in such an encyclopædic task, is pretty full; although we cannot say that his criticisms on Michael Angelo strike us as of any value. Coming to later times, the author is again oppressed by the multitude of sculptors of varying orders of merit. Here also a natural, but by no means philosophical, prejudice in favour of his own countrymen becomes curiously prominent—we might say predominant. No Frenchman would accept for a moment Dr. Lubke's meagre history of French sculpture; whilst for Englishmen it is enough to say that Flaxman, of all modern sculptors incomparably the most fertile in exquisite and appropriate design, is dismissed in a few lines to make room for the inevitable laudation of Thorwaldsen, whose hollow and pretentious pseudo-antiquarianisms we have on a former occasion sufficiently exposed. But Thorwaldsen worked under very learned German influences, and wasted considerable technical gifts in the attempt to re-embody legends mostly lifeless except to the very learned. Could anything be more alien from the spirit of the real Greek art, that absolute expression of the whole national mind and of every one's common interests, than this? Yet we read that in Thorwaldsen "the antique seemed to revive with new glory." When we read such a sentence we should be disposed to question Dr. Lübke's capacity to write upon sculpture at all, did not his book contain many pages entitling him to the praise of having produced a work which, with all its faults, we may still recommend to the English public.

MINOR POETS.*

IT were much to be wished that the Poet Laureate had a monopoly of all Court versification, and was not only allowed, but even required, to prosecute any one who ventured to write in metre about the Queen or any member of the Royal Family. Nay, we would go even further than this, and would give him the exclusive privilege of writing poetry about any Royal personage who has died within these hundred and fifty years. He alone should lament the "late lamented" Prince Consort; while other melancholy bards who felt courtly disposed should be forced to content themselves with writing dirges on the death of Queen Anne. After all, there is nothing unreasonable in this. For if Alexander could publish an edict that no one should put him in a picture but Apelles, we might surely allow our gracious Queen to direct that no one should put her in a poem but Mr. Tennyson. No one, except perhaps the critics, would be so much a gainer by this arrangement as the Queen; for she would be free from those poetical offerings which are almost daily bestowed on her because there is no one else found good-natured enough to accept them. It would seem to be the case that the more exalted any one is the more he is troubled with the songs of the most contemptible of poets, just as it is the loftiest trees that sound most with the croakings of the crows. The author of the *Bright Spot near Osborne House, and other Poems*, thinks it necessary to inform the reader of the chief reason that has induced him "to make this short poem determine the title of the book." His readers—if, that is to say, he gets any—will, he may rest assured, be utterly indifferent to the title; and when once they have satisfied themselves with laughing at his tediousness, and at his arrogance in bestowing it all on Her Majesty, they will not be moved by learning that it has "obtained the Queen's most gracious acknowledgment." The Queen's state is indeed melancholy in this, that no sooner does Fate begin to shower upon her its blows than all the poets begin to shower their verses. The ancients believed that whenever a monarch had gained the height of prosperity, then the jealousy of the gods would give him a trip. They never, however, added insult to injury, nor imagined that in his fall the Muses would vent their spite by bringing upon him the worst of versifiers. Women too often have to mourn over the death of a husband and the illness of an eldest son; but all of them save one are allowed to mourn alone, and are left unpestered by that consolation which is administered by the help of a rhyming dictionary. It is most unfortunate too for our Sovereigns that *King* and *Queen* are such tempting words for the poets, and, by the abundance of rhymes that can be found for them, are in themselves almost equal to an inspiration from the Muses. *King* perhaps had been almost worn threadbare by the hymn-writers, but *Queen* till within the last thirty-four years had been but little worked. In the first poem by "Glowworm" we have it rhyming with "seen," "been," "between," "serene," in addition to "sheen," which we find in the following verse that opens the poem:—

> One Crown alone of regal state
> Can deck a nation's sheen;
> One brow alone of Monarchs great
> Doth wear it like our Queen.

We think that Her Majesty, troubled as she is with such nonsense as this, might share her ancestor's hatred, if not for "Painters," at least for "Poets." We must do the poet the justice to admit that he does not confine his muse entirely to the precincts of the Court. In one touching poem he tells us how

> The sceptic's heart began to melt,
> The fountain real'd broke out in tears.

It would seem that, while

> his child of tender years
> Lay dying in a dismal room,

the sceptic, not merely content with directing him to

> renounce the creed
> Imparted in the Sabbath school,

wrote with chalk upon "the barefaced wall 'God is nowhere.'" Why he chose chalk to write upon a barefaced wall, which we presume is the poetical manner of describing a white-washed wall, we are not told. The child, however, read the sentence "*God-is-no-where*" with the happiest result in the instantaneous conversion of his infidel father. We only wish that as rapid and as easy a cure could be found for the poet as for the sceptic.

Mr. Herbert Randolph, the author of *So Far*, seems to have some suspicion that his poems, after all, may not be of the highest order of excellence. At all events, he thinks it needful to state, by way of preface, that "they are the result of much enforced leisure":—

> Leisure is the couch of the mind, and to work at leisure is to work when lying at full length. Such work is of necessity unstable and unequal, fitful with hasty power and sudden feebleness. Half-successes which are whole-

---

faults, are as apparent in this book, to the author, as they can be to any one. Violent writing is almost unavoidable by a youth who, after a course of most *frigid* education, first tasted of liberty of thought and action in southern Italy.

When Mr. Randolph has published a few more poems he will not waste in a preface such a choice conceit as that "leisure is the couch of the mind." There is many a poet who, if he had got hold of such a thought as that, would have soon expanded it into a sonnet. How naturally, for instance, might be added "and poetry its coverlet," and how with a little thought a dozen conceits equally good might be invented! The story is told of an old epicure who groaned over the folly of a young fellow whom he saw wasting a fine appetite over a piece of mutton. With equal reason might an old poet groan over Mr. Randolph wasting such a fine fancy over a preface. While we are ready to go so far with the poet as to admit that there is a good deal of "feebleness" and a great many "whole-faults" apparent in this book, we cannot allow that the one is at all "sudden" or that the others are in any way "half-successes." There may be enough of "violent writing" in all truth, but feebleness and violent writing very well go hand in hand together. It is something new to find a poet asking for indulgence for his poems on account of the frigidness of his education. What Mr. Randolph means by a frigid education we do not pretend to know. If we might hazard a guess, we should surmise that his whole attention at school had been limited to the composition of nonsense-verses, and that when he talks of "liberty of thought and action" he refers to the liberty he now enjoys of being as nonsensical as ever, though not under compulsion. We are sorry to learn from another part of his preface that he does not "intend to give up writing." Mr. Toots, we remember, in Mr. Dickens's story, used to write long letters which no one ever read but himself. We much fear that Mr. Randolph, unless by a long course of prose composition he attains the difficult art of writing sense, will find that, even if he does not intend to give up writing poems, no one else intends to begin reading them. Who that gets to the second verse on the first page of *So Far* will not exclaim, when he reads such folly as we will now quote, "It may be So Far, but by heavens! it shall be no further!":—

> Who shaped each lid-lash in angelic spites
> To a sting of love sprayed forth from lids of cream?
> Doth young Love keep his mouth there much o' nights,
> Sly of the sting, and pay for drink with dream,—
> Slow crystals with the far shown fair, loosed through the stream?

As for Mr. Randolph, if he is tired of his "enforced leisure," and suffers from the defects of "a frigid education," we would respectfully advise him to return from "southern *Italy*," and to see if he can apprentice himself to some business where his literary tastes might still be gratified, and where at the same time a little sense might be gradually cultivated. When a man has gone so far as to write about "a swift-blown twilight now by dainty ear," "a sea-plunge is thine hair behind," "Moon-maiden, of the wild star distance-tame," "the checked sea's very beard," "blare wind, flare sun, and let the green trees sprout," and all the rest of it, it is high time that he should be called upon, now that he has acquired the art of expressing his meaning, to see if he can acquire some meaning to express. If happily there should chance to be a vacancy in Mr. Bradshaw's office, we think that Mr. Randolph might get rid of a good deal of nonsense, and at the same time find his aspirations as a man of letters not altogether unsatisfied, if he were for a year or so to find work there in the composition of the Railway Guide. To fill up any "enforced leisure," he might give the world a metrical version of the alphabetical list of steamers. He would be certainly more usefully employed than in the composition of such a song as the following:—

> Blind, blind,
> Gilden rind
> No bird shall peck, agree?
>
> Say, say
> Shall she stay
> The Love-bird in Life-tree,
>
> Peck, peck,
> Sleepy-neck,
> The gilden fruits that be?

The author of *Nuova Italia* informs us that "he lately left Italy standing statue-like, triumphant, amidst the ruins of empires, principalities, and powers, temporal, spiritual, and eternal." Without pretending to know whether it is Italy that is temporal, spiritual, and eternal, or the empires, principalities, and powers, or the ruins, we are glad nevertheless to learn that he left her in such an upright position. Her posture is all the more creditable to her as she has only just come forth from "struggles to shake off the constricting coils of superstition and oppression that threatened to strangle her," in which she had, however, the gratification of knowing that one English poet was "watching her." After such struggles as these she might surely have been excused if, instead of "standing statue-like," she had stretched herself on that "couch of the mind" which Mr. Randolph, who has also visited Italy, tells us of. Should any other of our poets shortly visit Italy, we should be glad to hear that she had got a little cramped in her statue-like position, however triumphant it might be, and had come down to look after a few abuses which, whether temporal or spiritual, seemed destined unfortunately to be eternal. Before the brigands or the floods are quite got rid of, we fear we should be more than resigned to learn that the one or the other had carried off all the English poets who happened to be within their reach. We do not know if we are quite hard-hearted enough to desire the destruction of the poets themselves. It might be sufficient if the floods swept all their manuscripts down into the Adriatic, or the brigands turned them to some good account every time they lighted their pipes or their fire. If ever, indeed, it is pleasant *e terra magnum alterius spectare laborem*—how doubly pleasant it must be when we know that it is a poet who is in danger on the flood, and that he bears all his poems with him. We may justly feel more aggrieved with Italy than with any other country for allowing two such poets to escape her; for a glorious example was once set in her capital of tearing a poet to pieces for his bad verses. How the author of *Nuova Italia* and Mr. Randolph escaped while poor Cinna was torn to pieces, we can only explain on the supposition that a "statue-like" position, however triumphant, is not favourable for action. There are indeed certain whitewashers of humanity who, vindicating the character of the mob, as others have vindicated the characters of Tiberius, Henry VIII., and Robespierre, maintain that it was not Cinna, but Cinna's verses, that were torn to pieces. It was only, they go on to say, the indignation of some poet who feared that his works might justly suffer a like treatment that led to the perversion of the history of what was in reality an act of the most righteous vengeance. As for ourselves, we shall not pretend to decide so knotty a point, nor shall we pretend to think it of much importance, so long as something is torn to pieces, whether it be the poet or his poems. The author of *Nuova Italia*, if he is no poet, is at all events a conscientious narrator. He does not think it right to sing of Italy, whether new or old, without telling his readers how he went there and how he returned. He cannot either leave London or return to London without singing of "the smoke and sooty blacks," and urging his countrymen "a new Smoke Act to shape." We cannot follow him in his careful descriptions of the whole route through Paris and Geneva to Italy. He hopes that his poems "will add to the enjoyment of many a leisure hour at home." If our readers, after reading the two following stanzas, which we have selected almost at random, find them to their taste, we are happy to be able to inform them that there are some eight hundred more or so all after the same pattern:—

> Behold the great Napoleonic way!
> That model masterpiece of engineering,
> Fit for the heaviest gun, or largest dray;
> Triumphant, o'er the Simplon pass careering;
> Proof against landslips, storms, and avalanches,
> Or falling pine trees with their roots and branches.
>
> * * * *
>
> Whilst like a Triton leader in persistence;
> A spermaceti whale begins to snort
> His bright parabolas, far in the distance,
> And looms just like a jolly-boat, in short,
> And lightning flashes 'neath the dark horizon,
> On which the weather-wise all set their eyes on.

Rheingold, as we are told in the preface, "is the principal produce" of Mr. Fosbroke's "twenty-first year." We hardly know which of the two to admire the more, the luxuriance of the growth of that particular season, or the utter worthlessness of the produce. Mr. Fosbroke does not inform us why he lays before us this chance bit of personal history. It may be that he wishes to set us thinking, if he can write so well at the age of twenty-one, how well he will write when he has reached the advanced age of say twenty-five. He may also wish to lead the calculating reader to estimate how many lines he will write should his life be as much lengthened out as his first poem. An examiner in arithmetic might found some interesting questions on this subject which would present an agreeable variety in the next paper he sets. He might ask, for instance, if Mr. Fosbroke produces six thousand lines in his twenty-first year, how many lines at the same rate will he have written if he lives till he is fourscore? and if Mr. Fosbroke for every thousand lines he writes has one reader, how many readers will he have had by the end of his life? Our only apprehension for him is lest, long before he reaches that period, he may, as Alexander had to weep because there were no more lands left for him to conquer, in his turn have to weep because there are no more subjects left for him to write about. A man who at the advanced age of twenty-one "seeks to illustrate the great problem of why evil should exist," will, long before he is fifty, find nothing worthy of his pen. Perhaps, however, by that time he may have had an attack of the gout; and, instead of troubling his head with the question why evil should exist in the universe, will have all his faculties fully employed in wondering why it should exist in his gouty toe. At present we have no doubt Mr. Fosbroke is blessed with the best of digestions and the rudest of health; for we have noticed that they who speculate most on the origin of evil are those who suffer from it the least. We must do him the justice to admit that he does "not pretend to throw any new light" upon this great problem, but is contented with "suggesting some cheering reflections thereon." Cheering reflections are very well in themselves, but then six thousand lines of them! He would seem to be a kind of homœopathist in his treatment, for he tries to cure our sufferings by making us suffer. But then he should remember that the homœopathic treatment requires the smallest of doses, and will never allow the drug that is to excite symptoms similar to those of the disease to be admin-

istered in such quantities as to increase by tenfold the original suffering. Long as *Rheingold* is, it is only one in a series. "Let the public," the poet says, "give but some encouragement, and they shall speedily be presented, not only with its predecessor, but with its successors both in prose and verse." The public has fair warning, and if it is weak enough to give any encouragement, it knows what it will bring on its own head. Unfortunately—and this is a part of the great problem of evil—it does not suffer alone, for it is on the innocent critic that, after all, the chief burden falls. As perhaps the public, however, would never have known of Mr. Fosbroke's existence save from our columns, we may be to a certain extent to blame. If, after reading the six lines which we will now quote, it feels inclined to give any encouragement, we hope that it will first read the rest of the six thousand before it complies with its inclinations:—

> This knight was German, and the banks of Rhine
> Beheld his deeds, his tourneys and his wine.
> —But being German on the German Rhine,
> No destiny could possibly confine
> His life within the boundaries material
> Of mortals born in regions less ethereal.

Mr. Fosbroke says, "I leave it to my readers to determine whether I have any claim to the title 'poet.'" As we doubt whether he will have any readers, we think it best to leave the decision to our readers.

GRACE TOLMAR.*

CLEVER and careful as *Grace Tolmar* is, it has a curious undertone of imitation running through it, reminding one partly of Owen Meredith, partly of the analytical school of French novelists. Perhaps the theme of unlawful love demands a fixed kind of treatment which creates a certain family likeness among all the expositions thereof. Details of passion have to be carefully suppressed, yet the fact of an overwhelming passion has to be kept steadily before the reader; an incessantly recurring moral and mental analysis must throw a subtle air of fate over the various stages which lead down into sin; and the purity of the original nature of the woman must exculpate her from blame, and whitewash her questionable life. Then there must be certain accessories. The woman's wondrous beauty of an enthralling and spiritual type excuses the man; the man's marvellous powers of mind, coupled with the humblest worship and the deepest devotion, excuse the woman. They must be persecuted by evil-minded people who have inconvenient prior claims; and hampered by cruel laws which do not recognize free love. If the scene is laid in Hungary or in Italy, the local colour gives an additional charm, at least to us dull islanders. The one place is so far away that we scarcely feel our morality responsible for what happens there; the other has been so long the prescriptive domain of love and adultery that we naturally look for a repetition of the old tale, and know beforehand to what the scents of flowers and moonlight skies are sure to lead. Still, in spite of its well-worn theme, *Grace Tolmar* is by no means an ordinary novel; and for all its undertone of imitation, it has been both boldly conceived and sharply executed.

One thing, however, strikes us as untrue; Grace is not English. Neither in character nor person has she a trace of her nationality, and we think that part of her charm was lost in describing her as of our race. She is too subtle, too indefinite, and, we would add, too metaphysical, for an Englishwoman. We do not say that the sinuous, subtle, introspective British matron is impossible; but it is not the national ideal; and Grace Tolmar would have been more harmoniously nationalized had she been described as French or Italian. Neither would the circumstances of her life have impressed an Englishwoman so powerfully. She would not have felt the impossibility of freeing herself from them as Grace did. A young woman who had been entrapped into a marriage with a hoary-headed villain whom she has always loathed, who has a child by him, and then discovers that she is not really married to him, he having committed the playful offence of bigamy, would not have felt herself bound by such indissoluble ties as those which Grace Tolmar suffered to fetter her, and on which she therefore founds her excuse for falling into sin. And when we remember that the Marchese, her pseudo-husband, has been forced to make himself dead to escape the consequences of some crime—not confided to the reader—we can only wonder at the self-torturing perversity which causes her to hold herself unable to marry any one else. We wonder still more why she does not fling herself into the arms of her lover when he opens them to her, and begin life afresh as Robert Pole's wedded wife. She does not denounce her pseudo-husband's infamy, she says, because of the stain of illegitimacy which would thus rest on her little daughter. Granted. But when the Marchese is civilly and socially defunct, why is she so weak as to allow him to threaten, persecute, spy after her? He could not claim her child. Both as an illegitimate father and a dead man his powers were absolutely *nil*; and he could not have broken his agreement to pay a large proportion of the revenue of his estates into Madame Tolmar's hands, as he must then have declared himself alive, when he would have to be punished for the crime he had committed against society and his wife; which contingency his making himself dead was to avoid. We would ask, however, as a matter of curiosity, by what means he managed still to receive the revenues of his estates? We had an idea that land was held in Italy on somewhat the same conditions as in England; and that when the holder of large estates was supposed to be dead, the revenues would pass into the keeping of the lawful heir, whoever he might be, ghosts not being eligible as landowners.

Mr. Dangerfield is fond of working on shadows which have no substantiality, and of weaving his tangled web of life out of spider's threads which a single honest breath could blow away. His hero, Robert Pole, contents himself with appearances and inner convictions, and never seems to think it necessary to have practical demonstration that what he imagines is true. If Grace looks pre-occupied or paler than usual, he understands the whole direful line of thought and action that has led to this heart-breaking result; and he does not stop to make sure that his suspicions of treachery, loss of love, and universal cataclysm of hope and life, are well founded. He is a restless, self-torturing kind of person, introspective to a distracting extent, and unable to accept anything with simplicity; an eminently uncomfortable man to deal with, and sure to wreck himself on shoals and rocks which, had he been of a healthier nature, he would have avoided. Madame Tolmar and he play a curious game of cross-purposes throughout. Now he is uncertain of her love, and breaks his heart against the doubt he has set up with his own hands; now she is sceptical of his, and because he has business in England, assumes that this is only a ruse to get rid of her. Whereupon she takes to flight on her own account, crosses over to London, and hides herself from her lover to save him the pain of an open desertion. Finally, however, they get this great question of doubt so far settled that they come together again by chance and with rapture; and so are happy for a time. But their happiness is always of that vague, trembling, uncertain kind, which carries no peace, because no security, with it; and which one longs to see consolidated by free speech and frank confession. Doubt, which the unhealthier sort of lovers swear is inseparable from true love, and which the nobler kind repudiate as a sort of high treason to loyalty, is the ruin of Madame Tolmar and Robert Pole. They can bring themselves neither to trust nor yet to confide. Madame Tolmar's whole life is a mystery which she expects Robert to accept with unquestioning faith; but she has not enough trustfulness on her own side to put herself frankly into his hands, and make him her confidant as well as her lover. Consequently evil days befall them, as it is easy to foresee; and it is only after the one is dead that the fair fame of the other is cleared. The author must forgive us if we confess to a certain impatience with this kind of portraiture. We do not deny its cleverness, the opportunity it affords for a thousand subtle and ingenious touches, and the skill required to give so much consistency to all the obstructive shadows which steal about the plot and get into the way of everybody's happiness as shall preserve our interest while damaging our tempers. But, in spite of the technical cleverness demanded, the result is not pleasant; and, for our own part, we prefer the tragedies which come from the fateful tyranny of circumstances to those which are made to spring from mistaken doubts and morbid feelings. The cruel power of the one is intelligible; but when a single frank word, a single moment of self-surrender and confession, would blow the others to the winds, it does chafe us to find that no one has the honesty to tell the truth and throw light into the dark places; and that consequently people live in pain and die in sorrow all because of absurd mistakes and baseless misunderstandings.

The villain of the book who comes to the front is Count Rehden, though the Marchese Tolmar, the heroine's husband, is the main rascal of the story. But he never appears. The description of the Count is a good piece of work:—

> He was a man of not ignoble sentiments, manners or appearance: a tall, well-built, fair man of between twenty-five and thirty years. A face not, to me, particularly attractive in its expression, but singularly handsome; of the fine North-German, blue-eyed, flaxen-haired type. What I chiefly liked about Count Rehden was a certain resolute, frank, military set of the features—an expression to which the German type lends itself not unkindly.
>
> There is a class of men of few but not feeble emotions, whose judgment of things is so clear, whose reasoning is so just, whose whole conduct is so logically deducible from their characters, whose feelings and whose reason are so nicely balanced, that the world has agreed to accept their class of character as the most perfect type; but their judgment is clear only because it is not apt to be distorted by their feelings, their reasoning is just because the sphere of their arguments is narrow. No counteracting impulses hinder their resolves; no weakness of purpose nor violence of passion moderates the severity of their judgment.
>
> Such was Count Rehden; a man of blunt sensibilities, and therefore of limited, but so far as they extended, not seemingly unkindly sympathies: logical in his conclusions, but by his very nature harsh and inexorable in abiding by them. He classified the weaknesses and emotions and passions of human nature as a botanist classifies his plants, and his limited mental vision never permitted him to reverse a decision which the whole force of his mind had been employed to arrive at; never perceiving that all human actions were not caused by motives as simple as the machinery of his own ideas and sensations.
>
> What community of thought or feeling could there be between this man and me, whose former experience is thrown aside as every fresh event occurs: whose judgment is a painful weighing of each various and varying impulse, whose conclusions, even when formed, are reversed on the slightest grounds?

In this last sentence we have the key to the character of Robert Pole, and all the disasters which accumulate on his head; and in

---

* *Grace Tolmar.* A Novel. By John Dangerfield. London: Smith, Elder & Co. 1872.

the character of the Count, though there is not a line as yet hinting at the villany which develops as the story proceeds, we can see how baseness once adopted would be persevered in, and how no scruples of conscience would come to torment a mind which neither questioned nor doubted. "In politics an absolutist, in philosophy a materialist, in religion nearly a sceptic," he was sure to do evil if the temptation came in his way, and his selfish appetites were aroused. But is it quite like life to say only "nearly a sceptic"? We would have said entirely. Had he possessed any kind of vital faith, save in a man's own strength of will and self-assertion, he would have had so much of a conscience, and he would scarcely then have played the shameful part assigned him. Indeed, as it is, cynical, conscienceless, sceptical as the man is, we question the truth of his action. He might have betrayed his friend; men do that every day; and to win the woman he loved, in the way in which such men do love women, he might have condescended to any act of treacherous strategem, to any falsehood both of word and deed that would further his object. But before this, before he had begun to love Grace, would he have lent himself to the husband's baseness as he did? A man like Count Rehden is a villain on his own account: but he does not make a good tool, absolutism and subserviency not running well together. This we think a grave oversight in Mr. Dangerfield. Also we demur to the theory of the Count's cowardice. We know well enough that there are pumpkins among men—creatures who look the very essence of magnificence, and are in reality the very essence of meanness. But they are difficult to portray. Those shifting kaleidoscopic views of character are as impossible to give in literature as it is impossible to give the transitoriness of action in sculpture. We understand the typical qualities in the one, the lines of arrested motion in the other; but not the complex diversities which produce harmony in the living man, nor the attempt to convey the idea of actual, fluent, unstable motion in the other. Nevertheless, with all its mistakes and shortcomings, *Grace Tolmar* is a noticeable work, and shows considerable power in the author. There are touches in it of real mastery, and we hope to see sterling work from Mr. Dangerfield before we have done with him.

NOTICE.

We beg leave to state that we decline to return rejected communications; and to this rule we can make no exception.

The SATURDAY REVIEW *is duly registered for transmission abroad.*

The publication of the SATURDAY REVIEW *takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.*

Nearly all the back Numbers of the SATURDAY REVIEW *may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.*

Now ready, VOLUME XXXIV., bound in cloth, price 10s. Cloth Cases for Binding all the Volumes, price 2s. each. Also, Reading Cases, price 2s. 6d. each. May be had at the Office, or through any Bookseller.

Copies of the SATURDAY REVIEW *Bill of Contents will be forwarded every Friday Evening by post, prepaid, to any Newsagent in Town or Country on application to the Publisher.*

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 902, FEBRUARY 8, 1873:

The Queen's Speech and the Geneva Award.
Prospects of the Session. England and Germany. Manchester Anxieties.
Politics. The Last Proposal of the Education League. Spain.
Canada. Dr. Hessd and the Police.

Force in Literature.
Religion and Patriotism. Balzac's Monsieur de Mortsauf.
Stone Architecture in the Tenth Century. Protestant Propagandism in Rome.
Snow in London. Criminal Liability for Collision.
Irrigation in Northern India. Society and Politics in Fiji.
The Old Masters at the Royal Academy.

Hayward's Biographical and Critical Essays.
Ewald's Life of Algernon Sydney. Rambles. Hayman's Odyssey.
Zeller's History of Germany. Where is Our Coal?
Lübke's History of Sculpture. Minor Poets
Grace Tolmar.

CONTENTS OF No. 901, FEBRUARY 1, 1873:

The Coming Session—Prince Bismarck—The Negotiations with Russia—The Liverpool Election—France and the Right—Mr. Lowe and the Deputations—Harcourt and Liberty—The Rival Leagues—Contempt of Court.

Professor Sedgwick—An Economical Problem—The Divorce Court—The Election of the Swiss Federal Council—The Dungeness Collision—Mr. Spurgeon on Foreign Religion and Art—The Guild of Literature—The Old Masters at the Royal Academy.

Zeller's History of Germany—The Spirit of St. Francis de Sales—De Carné's Laos—The Official Austrian History of the War of 1859—Hare's Wanderings in Spain—The Mormons and the Silver Mines—Mayor's Juvenal—Wilson's Memorials of Edinburgh—Not Without Thorns—French Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS.
THIS DAY and NEXT WEEK.
Saturday (February 8)—Saturday Concert, at Three. Schumann's "Paradise and the Peri."
Monday to Friday—The New Original Masque and Harlequinade "Jack and Jill," by F. L. Blanchard, at Three.
Saturday—Sixteenth Saturday Concert, at Three.
The Fine Arts Courts and Collections, including the Picture Gallery (the Works on Sale), the Technological and Natural History Collections, all the various Illustrations of Art, Science, and Nature, and the Gardens and Park always open. Music and Fountains daily.
Admission, Monday to Friday, 1s.; Saturdays, 2s. 6d. Guinea Season Tickets free.

WEDNESDAY NEXT.—LONDON BALLAD CONCERTS, St. James's Hall.—Under the Direction of Mr. John Boosey. Wednesday Evening next, at Eight o'clock. Artistes: Miss Edith Wynne, Miss Banks, and Madame Patey; Mr. Sims Reeves, Mr. Nordblom, and Mr. Santley; the London Orpheus Quartett. Pianofortes, Miss Kate Roberts. Conductors, Mr. J. L. Hatton and Mr. Lutz. Stalls, 8s.; family tickets (for four), 21s.; balcony, 3s.; area, 2s.; gallery and orchestra, 1s. Tickets of Chappell & Co., New Bond Street; Austin, St. James's Hall; Keith Prowse, & Co., Hays, Royal Exchange Buildings; and Boosey & Co., Holles Street.

JOHN PRESCOTT KNIGHT, R.A., *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Triumph of Christianity," "Christian Martyrs," "Francesca da Rimini," "Neuvaine," "Titania," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS. Two, £40; Six, £40; Four, £20. Election, Second week in May.—Apply to the SECRETARY, The College, Cheltenham.

TRINITY COLLEGE, Glenalmond, Perth, N.B.
Warden Rev. R. THORNTON, D.D. Oxon.
A School on the model of the greater Public Schools of England. Terms (including every necessary expense), 80 and 90 Guineas, according to age. There is also a Theological Department, for Candidates for Holy Orders. Particulars may be obtained from THE WARDEN.

AMALIENBERG CASTLE, Murgthal, G.-D. of Baden, and 24 rue de la Faisanderie, Passy, Paris.
Dr. HEDLER and BROTHER receive in their Establishments in Paris and Germany a Limited Number of ENGLISH PUPILS who wish to acquire a thorough knowledge of French and German. Both Establishments are beautifully situated, and offer in every respect all the comforts of a private home. Highest References in England, France, and Germany. One of the Partners will remain in London a few days longer, and will be happy to see Parents or Guardians at 22 Holles Street, Cavendish Square, any day from Two to Four, except on Saturdays. Letters can be directed to the above Address for inquiries, to Castle Amalienberg, or Paris.

EDUCATION at ZÜRICH, Switzerland.—M. F. de BAUDISS, recently Assistant Master at Wellington College, receives a limited number of PUPILS, and has now a FEW VACANCIES. M. de Baudiss's Pupils, besides receiving instruction in French, German, and English subjects, have the opportunity of working with an excellent Mathematical Tutor, and of attending the Lectures of the Polytechnic School, on Practical Mechanics, Engineering, Chemistry, and other technical subjects (without extra charge).—Terms, references, and particulars may be had on application to M. F. DE BAUDISS, Rudolfstein Seefeld, Zürich.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon (formerly Principal of the Elphinstone High School, Bombay), will continue, with the Assistance of a Cambridge Honour-Man, to prepare PUPILS for the Universities, Indian Civil Service, Woolwich, and all Competitive Examinations.—Terms and References on application.

REV. C. BEDFORD, Allesley, Coventry.—Careful PREPARATION for the PUBLIC SCHOOLS. Age from Eight to Fourteen.

BOARDING SCHOOL, Seeheim, near Constance, Baden.—Classical Studies. Preparation for Commercial, Naval, and Military Schools. Limited number of Pupils. Terms, £60 sterling a year. Parents are respectfully referred to Rev. Hahn, Doctor of Theology, Stuttgart (Heslach); Ph. Paulus, Unt. Olgastr. 4 Stuttgart; or to the Principal, Fr. BETTEX.

A GERMAN GENTLEMAN, Graduate of a University, aged Twenty-eight, who has been Tutor in Paris and Germany for several years, desires an ENGAGEMENT in a College or School, or in the Family of a Gentleman (the latter preferred). He teaches thoroughly Latin, French, German, and Mathematics. The highest references can be given. A moderate salary would be accepted.—Address, A. S., 39 Almorah Road, Islington, N., London.

UNSALARIED GOVERNESS.—A LADY, well connected, an accomplished Linguist (having lived on the Continent for many years), a good Musician, experienced in and fond of Teaching, wishes to be received into a Gentleman's Family living in London, where she would give the Daughters Instruction, from Nine A.M. to One P.M., for her Board. Excellent references given and required, and a personal interview.—Address Rust, D., care of Miss Pope, High Street, Exeter.

TO the CLERGY, LITERARY MEN, and PUBLISHERS.—The Whole or Part of the COPYRIGHT and MANAGEMENT of an Old-Established CHURCH PAPER to be DISPOSED OF by Private Treaty on unusually advantageous Terms. Apply to L. M., Messrs. J. F. Bold and Nephew's Advertisement Office, 10 George Street, Mansion House, E.C.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. Turkish Baths. Consultations daily (Saturday excepted) at 7 Princes Street, Hanover Square, from Ten till Twelve.

ASYLUM for FATHERLESS CHILDREN, Reedham, near Croydon.
Orphans are admitted from Three Months old, and retained till Fourteen and Fifteen years of age.
324 Children now in the Home.
85 Candidates for Election.
820 have been received since the Charity was established, of whom some were resident for upwards of twelve years, knowing no other parental care and training than that of the Institution and who are now filling positions of trust and respectability.
FUNDS are anxiously SOLICITED—at least £1,000 will be required to pay the Christmas bills. There is no Endowment.
T. W. AVELING, *Hon. Secretary.*
Subscriptions received by the Bankers, Messrs. BARCLAY, BEVAN, & Co., 54 Lombard Street; or by the Secretary, Mr. GEORGE STACEY CLIFF, at the Office, 53 Cheapside (Entrance, 19 King Street).

PICTURES, BRONZES, and WORKS of ART on SALE at 39 Southampton Street, Strand. Pictures Cleaned, Lined, and Restored, if in the worst condition. Frames Cleaned or Regilt equal to New. Sales attended on Commission.
CHARLES DEAR, 39 Southampton Street, Strand.

THE

SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 903, Vol. 35. February 15, 1873. [Registered for Transmission abroad.] Price 6d.

THE ABDICATION OF KING AMADEO.

ONE more unprecedented event has occurred in an age of surprises. Sovereigns have often abdicated before, as in the famous case of the greatest of Spanish Kings; but King AMADEO has abdicated not only for himself and his descendants, but on behalf of all competitors for the throne, and for Royalty itself. When his ancestor, the first of the House of SAVOY who bore the kingly title, abdicated, his son succeeded in due course of inheritance; nor indeed would a community in which sound constitutional and national instincts prevailed allow any functionary, high or low, to abolish his own office by a personal withdrawal from the discharge of his duties. If Spain preferred a Republic, a foreign Prince ought not to have been invited to fill the throne; and the maintenance of the monarchy should not depend on the judgment or caprice of any single person. The expediency of monarchical institutions was only three years ago affirmed by a Constituent Cortes. The Legislative Assembly of the present time derives its authority from the Constitution which it has now in a precipitate panic summarily set aside. It is true that the circumstances were embarrassing, that the majority of the Assembly was pledged to resist the claims of the various Pretenders, and that the result of the late experiment is not encouraging to the choice of any foreign candidate for the throne; yet it would have been at the same time dignified and prudent to revert in the first instance to the provisional mode of government which lasted from the dethronement of Queen ISABELLA to the arrival of King AMADEO. Unfortunately Spanish politicians have since the murder of PRIM been like sheep without a shepherd. ZORRILLA and his colleagues, though they had been supported during their tenure of office by a large majority in the Cortes, had no guidance to offer to their followers, and shrank from responsibility and risk. When the Cortes, under the pressure of necessity, assumed supreme power, the Ministers of their choice tamely resigned their offices to successors who had courage to seize the opportunity. The great Republican orator CASTELAR, who undertakes the charge of the Foreign Office, is probably the real chief of the Government. Señor FIGUERAS attributes his own appointment as President of the Council to the absence of Señor ORENSE; and he endeavours to reassure himself, his colleagues, and the frightened Assembly which has called him at random to power, by the expression of a hope against hope that the Republic may be established for ever. It was still more premature to prophesy that other nations of the Latin race would follow the example of establishing an institution which in Spain, or rather in Madrid, had lasted for a few hours. It is not impossible that the Spanish Republic may survive the vice of its origin; but an unpremeditated revolution caused by the personal act of the late Sovereign is an ignominious transaction, boding little good in the future.

King AMADEO was an honest and capable man, but he has declined the part of a hero. After he had accepted the throne of Spain he ought to have established his dynasty, or in a persistent struggle to have demonstrated to the world that his task was impossible. The difference with his Ministers which immediately furnished a pretext for his resignation would probably have increased his popularity with the army. General CORDOVA, who resumes his office in the new Republican Cabinet, had thought fit to appoint to a high command a certain General HIDALGO, who had given offence to the army, and especially to the artillery, by a so-called massacre which he was said to have formerly perpetrated. Many Spanish generals have had occasion to massacre or shoot mutineers; but in this case the KING concurred in the objection to the appointment, and he was overruled by the Ministry. Among many slights and mortifications which the KING had been compelled to endure, the disregard of his wishes by the MINISTER of WAR seems a wholly inadequate reason for abdication. It may be conjectured that the birth of his son, an event which might perhaps have consolidated his power, may have been his true motive for withdrawing from a country in which assassination is a common political weapon. The KING's personal courage has been proved on several occasions; but perhaps he may not have wished to expose his wife and child to a perpetually recurring danger. That his own position was in the highest degree irksome and painful was sufficiently obvious. The mob was taught to revile him, the nobility refused to frequent his Court, the priests cursed the Liberal son of the profane King of ITALY, and the politicians who had created the vacancy which AMADEO was regularly invited to fill resented the preponderance of their opponents in the Ministry and the Cortes by studied rudeness to the KING and QUEEN. He had no friends in Spain, and he knew that every action of his life would be misconstrued; but before he entered on the warfare of Royalty he ought to have counted the cost. Unless the Prince hereafter finds for himself a career in Italy, he disappears henceforth from history. His short and insecure reign throws a retrospective light on the ludicrous nature of the quarrel which the Imperial Government of France with the consent of the nation fastened upon Germany. It was to prevent a disturbance of the balance of European power by the elevation of Prince LEOPOLD of Hohenzollern to the tottering throne afterwards occupied by AMADEO that the French Government amidst universal applause thundered out its defiance to Prussia. Prince LEOPOLD's fate could not have been more inglorious than that of his substitute; but his influence on the affairs of the Continent, if he had become King of Spain, would have been wholly imperceptible.

The prospects of Spain are more interesting than the fortunes of an amiable and spirited Prince who has proved himself unequal to a difficult enterprise. At present the most sanguine of Spanish politicians can scarcely fail to anticipate disaster. The Cortes, in their fright and confusion, have proclaimed a Republic before it was possible to ascertain the wishes of the country; and they have not ventured to distinguish between the two Republican types which are respectively advocated by opposing factions. The centralized Republic of the French kind is believed to be more unpopular in Spain than the federal Republic which has served as a pretext for more than one insurrection. A cross division separates the comparatively moderate Republicans represented by CASTELAR from the Socialists and Jacobins who have lately invented the appropriate title of the Republic from Below, or the Republic of the lowest. The property and intelligence of the country are hostile to Republics of every kind, although they may probably side for the moment with the moderate party, in the hope of protection against the extreme revolutionary faction. As might be expected, the vultures are gathering to the scent of the carcase. It is reported that former members of the French Commune are hurrying to Madrid from Paris and Brussels and Geneva. It is not surprising that they should persuade themselves that an opportunity has arisen for the organization of anarchy and plunder. In a certain sense France can afford to make revolutions, because the machinery of administration is never altered under successive forms of government. The hereditary or elective Chief of the Executive governs the country through the Home Office and the Prefects, whether Liberty, Equality, and Fraternity are painted up at the corners of the streets, or society is for the time saved by the army. Nevertheless the French Government regards with undisguised anxiety the overthrow of constitutional monarchy in Spain. In that country there is no definite or recognized depositary of supreme power when an existing Government is overthrown. After the

last revolution a resolute soldier conducted the Government for a time with considerable success; but PRIM has apparently left no successor; nor has any statesman or general the recognized authority which would command willing obedience. It is possible that universal uneasiness may secure for a short time the maintenance of order. The results of revolutions often show themselves not on the morrow, but on the day after. The present catastrophe proves that the expulsion of the BOURBON dynasty was a fatal error. The personal demerits of the QUEEN affected the expediency of hereditary succession of the Crown as little as the good intentions of King AMADEO. A Government which is at the mercy of a mob or of an accident is unfit for its functions.

The hopes of the Pretenders and the activity of foreign enemies will be effectually stimulated by the collapse of the SAVOY dynasty. The Carlists, who had previously appeared in large bands, will be justified in assuming that the attention of the generals and officers of the regular army will be distracted by the political occurrences of the capital. Prince ALFONSO has been despatched in haste from Vienna to Paris that he may be ready to profit by a possible demonstration in his favour. If a Carlist Government is formed in the Northern provinces, the Republic will in popular estimation be held responsible for the temporary disruption of the State. It is also probable that the latest revolution may lead to new foreign complications. The American papers already combine with their exultation at the establishment of another Republic the expression of a hope that the change may lead to the freedom, or, in other words, to the annexation of Cuba. The characteristic candour of national selfishness in the United States has never been more cynically displayed. The cosmopolitan philanthropists of America resemble a man who, while he congratulates his friend on an act of generous imprudence, calculates that on the impending bankruptcy he will have an opportunity of buying a picture which he had long coveted without a hope that it would be brought into the market. If the Republic is maintained even for a short time, its supporters will not fail to profess even a more enthusiastic patriotism than that which was displayed by their predecessors. In their earliest utterances they have expressed a confidence that the integrity of the Empire will be preserved; and it is clear that their language refers exclusively to Cuba. The Republican party is pledged to the abolition of slavery, and therefore to the removal of the excuses with which the Americans have lately thought fit to defend their desire for the annexation of Cuba; but the Spaniards have now received notice that the sympathy of Transatlantic Republicans has no tendency to allay or to suspend territorial cupidity. A still more urgent reason for anxiety is uncertainty as to the intentions of the army. It is not known that any of the military chiefs have become converted to Republican doctrines, nor was the MINISTER of WAR himself a Republican a week ago. It is at least possible that the considerable force which is engaged in the harassing struggle with the Carlists may think it pleasanter to return to Madrid; and though SERRANO and TORRE have announced their resolution to concur in the preservation of order, they may perhaps afterwards assert their claim to a share in the determination of the future form of Government. Even if the army submits for the time to the Republic, its demeanour when it is required to suppress disturbance and to support the actual Government will excite serious anxiety. The abdication of King AMADEO is a just retribution for the unsteadiness and impracticable obstinacy of all Spanish factions. If the extemporized Republic lives and thrives, the well-wishers of Spain will experience an agreeable disappointment.

THE IRISH UNIVERSITY BILL.

THE Irish University Education Bill is not unworthy in point of comprehensiveness to take rank with the Irish Church Act and the Irish Land Act. Like the speech by which it was introduced, it bears evident traces of Mr. GLADSTONE's passion for detail, and of the positive enjoyment which he finds in providing for all imaginable contingencies. Whatever other objections may be brought against the Bill, it certainly cannot be said that it is hasty or ill considered. Fault may be found with the way in which this or that difficulty is got over, but it will not be easy to point out a difficulty which has not been foreseen.

The subject of endowments has been dealt with in the way which has all along seemed to us to be at once the simplest and the most satisfactory of the alternatives which were open to the Government. They are all, so far as they are created by the Bill, to belong to the University, and not to any particular college. Fellowships, exhibitions, and bursaries may be held by any matriculated student of the University who fulfils the requisite conditions of residence and examination, whether he be a member of an affiliated college or an unattached student. By the side of the endowments of Trinity College the provision looks somewhat poor. A yearly average for the whole University of two fellowships, six exhibitions, and twenty-five bursaries, is hardly more than is provided at Oxford or Cambridge by some of the smaller colleges. The fellowships will not be rich, but they will be rich enough; 1,000*l.* in five annual instalments is a sufficient reward for the trouble of receiving a good education. It might be well to reserve some power of appropriating a further portion of the ecclesiastical surplus in case the endowments provided in the Bill should be found to be inadequate. There is no object to which the alienated funds of the Irish Church could be more appropriately applied than the promotion of the higher education. In the matter of endowments Trinity College comes off exceedingly well. Considering the very unnecessary reference to some future taxation of the colleges at Oxford and Cambridge for University purposes which Mr. GLADSTONE, with a characteristic want of statesmanlike tact, introduced into his speech, it would not have been surprising if the Bill had applied this principle in a much more sweeping manner. As it is, the great bulk of the endowments of the College will be preserved to it. This gain has been evidently purchased by the very frank acceptance of secularism by the authorities of Trinity College. It would have been plainly impossible to allow one Denominational College to retain any public endowments unless others had been admitted to the enjoyment of similar benefits. Trinity College had virtually the choice between keeping her tests and keeping her revenues, and by adopting Mr. FAWCETT's Bill she chose the revenues. Having done so, she naturally renounced all claim to a Theological Faculty. This is, very fairly and properly, to be handed over to the religious body with which it has always been exclusively connected—the Disestablished Church of Ireland. If Trinity College had elected to cast in her fortunes with the Disestablished Church, this severance would have been unnecessary and inexpedient. The voluntary secularization of the great Anglican College leaves the Government no choice but to reduce the Theological Faculty to the level of an ecclesiastical seminary.

The provision for the rights of conscience made in the Bill is in all respects ample. Whether it will satisfy Roman Catholic complaints is another question. The Bill gives them the means of obtaining a University education and a University degree for their sons without in any way perilling their religious belief. It does this, first, by allowing the present Roman Catholic University to affiliate itself as an independent college to the reconstituted University of Dublin; secondly, by allowing students, not members of any college, to matriculate and reside in the University, and to enjoy all its privileges; thirdly, by various provisions against any conflict between University teaching or examinations and theological belief. The Roman Catholic students will have as large a share of the University endowments as their abilities will enable them to carry off; indeed, inasmuch as by a very fair provision holders of fellowships or scholarships in Trinity College may not hold fellowships or exhibitions in the University without resigning their college preferments, it is probable that the University endowments will be mainly carried off by Roman Catholics. The teaching in their own college will in no way be interfered with. The necessity of passing the University examinations, and the natural wish that their men should stand well in examinations for exhibitions and fellowships, will no doubt suffice to maintain a good standard of secular scholarship, but to this may be added as much theological teaching as the authorities think fit. The examinations in the University will be conducted by examiners chosen by the governing body or Council of the University. The composition of this Council has always been one of the greatest difficulties in the way of an Irish University Bill. When the reconstituted University has got into working order—subsequent, that is, to the year 1885—the vacancies in the ordinary members of this Council will be filled up alternately by the Crown, by the Council itself, by the Professors, and by the Senate. At first the ordinary members will be appointed by Parliament, and vacancies occurring previously to 1885 will be filled alternately by the Crown and by the Council. Of course, if the appointment by Parliament is found to make the passing of the Bill easier, that is a very fair reason for adhering to the proposal. We should think, however, that it would be more likely to

lead to irritating party divisions as to particular names; and it cannot be said to be a good proposal in itself. Either the appointment by Parliament is merely another name for appointment by the Crown, or it is an appointment by a body which is singularly unfit for the purpose. How many members of either House of Parliament can undertake to say who is best qualified by special knowledge and experience, by ability, by character, by capacity, by influence, to guard and promote the work of University education in Ireland? Yet these are the titles to a place on the Council which Mr. GLADSTONE very properly proposes to recognize. It is quite true that some intermediate process of appointment is necessary because the ultimate mode of appointment cannot be applied until the institutions which it postulates have been created. But unless the confidence of Parliament in the Government is lessened to an extent which would make the passing of the Bill hopeless, it might certainly be extended to the nomination of twenty-eight eminent Irishmen. A provision which cannot fail to excite considerable opposition is the exclusion of Philosophy and Modern History from the subjects taught in the University as distinct from the colleges. As regards the latter of the two, it ought no doubt to be possible for Roman Catholics and Protestants to come to an entire agreement as to the facts, however much they may differ as to the inferences to be drawn from them. But we are still a good way on the wrong side of this academical millennium, and until it is attained Protestants will probably dislike having their sons taught the history of the Reformation by a Roman Catholic as much as Roman Catholics will dislike having their sons taught the history of the Popes by a Protestant. As regards Philosophy, the difficulty is more fundamental, and is likely to last longer. Proper views as to the method of historical investigation even now occasionally bring Protestant and Roman Catholic scholars into substantial agreement, but the distinctions between different schools of philosophy admit of no reconciliation, and the teaching of Atheism is none the less disliked by persons of definite religious belief because it comes from a philosophical, not a theological, chair. It is possible, however, that some solution of the difficulty may yet be discovered. The exclusion of a great subject from a University course must always be matter for regret. In some mixed Universities in Germany the difficulty has been met by the institution of double chairs in certain studies, and possibly there might in the University of Dublin be two Professors of Philosophy and two of Modern History, both chosen by the Council, but one always a Catholic and the other a Protestant.

Anything like a complete examination of the scheme must be reserved until the Bill itself is in our hands. At present it is enough to add to these incidental criticisms an expression of hearty satisfaction that the proposed University is to be a teaching as well as an examining body, and that, with some exceptions which we should be glad to see removed, residence as well as examination are to be exacted from all students.

THE NEGOTIATION WITH RUSSIA.

LORD GRANVILLE'S assertion that the result of the Russian negotiation would be satisfactory to Parliament and to the country is fully justified by the correspondence which has since been published. The discussion, which was conducted throughout with perfect courtesy on both sides, ends with the unqualified acceptance by Russia of the original proposal of the English Government. The general principle of the arrangement had been previously settled. In Prince GORTCHAKOFF'S words, which seem to be tacitly accepted by Lord GRANVILLE, Afghanistan had been chosen as the "intermediary zone" which was to prevent the English and Russian territories from coming into immediate contact. It only remained to determine the limits of the dominion which should be recognized as belonging to the Ameer of CABUL. The Russian Government declined to "accept as a basis "the territorial extension" which Afghanistan had attained during parts of the reign of DOST MAHOMMED, who is by an oversight described as the founder of the Afghan State. It was consequently agreed to include only those territories of DOST MAHOMMED which are now in the possession of SHERE ALI. General KAUFMANN had been instructed to collect all necessary information; but his report had not been received when the recent negotiations began. General KAUFMANN himself states that he was unwilling to make inquiries through officers of his own in the disputed districts, because even a scientific mission "might have created a panic in "Afghanistan, and would have awakened suspicions and "apprehensions on the part of the Government of India." General KAUFMANN adds that in all his communications with Khokan and Bokhara, as well as in letters to the Ameer of CABUL, he has "applied himself to dispel this bugbear of a "conflict between the two Great Powers." In a memorandum he gives reasons for disputing the boundary which Lord GRANVILLE had assigned to Afghanistan. The English Government held that Badakshan with Wakshan, from the Lake of the Woods on the east to the junction of the Kokcha river with the Amoo or Oxus, and Afghan Turkestan, including Balkh, down to a post called the Khoja Salee, belonged to the Ameer of CABUL. To the north-west, the sovereignty of Cabul extends over various districts between Afghanistan proper and the desert which is inhabited by independent Turcoman tribes. Prince GORTCHAKOFF contended that, although the Ameer of CABUL had at various times interfered in the affairs of Badakshan, he had not exercised there the rights of sovereignty. The country was governed by native functionaries, the taxes were not collected by Afghan officers, and, as may be readily believed, the chiefs of Badakshan regarded themselves as independent rulers. It was not, in the opinion of the Russian Government, expedient to assume for the purpose of the arrangement with England the Afghan title, which was in itself disputed or denied. Badakshan was too insignificant to quarrel with its neighbours, whereas the Ameer of CABUL, if by his possession of Badakshan he were brought into immediate contact with the Northern Khanates, might be tempted to encroach on Kashgar, Khokan, and Bokhara. Prince GORTCHAKOFF also disputed the actual possession by the AMEER of the districts on the North-Western frontier enumerated by Lord GRANVILLE; but he admitted that the annexation of the region between the AMEER'S territories and the desert would be inconvenient or unobjectionable.

According to General KAUFMANN'S memorandum, during the reign of DOST MAHOMMED one of his sons had compelled Badakshan to pay a tribute, and SHERE ALI now receives a small annual payment from the chiefs of the province whom he had assisted in an attack on a previous ruler. It is added that SHERE ALI with difficulty keeps up a show of authority in Badakshan; and that a recognition of his title by England and Russia would encourage him to interfere in the affairs of Bokhara. Wakhan, a remote district on the sources of the Amoo, is a dependency of Badakshan, but General KAUFMANN states that it has no direct relations to the Ameer of CABUL. The subsequent course of the negotiation suggests the conjecture that the Russian objections were advanced for the purpose of being at a later period gracefully withdrawn. It must have been obvious to both parties to the controversy that the legal or practical claim of SHERE ALI on an outlying province had little bearing on the settlement which was to be made between the two great Powers. It was the object of the English Government to interpose Badakshan and Wakhan between the Khanates under Russian influence and Afghanistan, and the Russians were not unwilling to accept the principle, although they raised objections in detail. In answer to General KAUFMANN'S statement, Lord GRANVILLE explains that the AMEER had, in the exercise of his discretion, arranged that the taxes of Badakshan should be collected by native officials, to be transmitted to himself through a local Governor whom he had appointed. The AMEER expressly reserved the right of altering this arrangement, and of amalgamating the revenues of the province with those of the Afghan State. Such was the ostensible answer to the Russian argument, but it was more to the purpose to explain that the object of the English Government in subjecting Badakshan to the sovereignty of Cabul was not to encourage any disturbance of the peace in Central Asia. The English Government, on the contrary, undertakes to restrain the AMEER by all the influence which it can exercise from any attempt to extend his dominions. Relying on this assurance, and "considering the greater facilities which the "British Government possesses for collecting precise data, and "above all considering our wish not to give this question of "detail more importance than is due to it," the Russian Government accepts the line of boundary laid down by England. Prince GORTCHAKOFF states that his Government "is the more "inclined to this act of courtesy as the English Government en- "gages to use all its influence with SHERE ALI in order to induce "him to maintain a peaceful attitude. This influence is indis- "putable. It is based not only on the material and moral "ascendency of England, but on the subsidies for which SHERE "ALI is indebted to her." The despatch is dated January 31, after the result of General SCHOUVALOW'S mission was known at St. Petersburg. No correspondence with the special envoy is published, probably because he bore the character of a personal

representative of the EMPEROR. The assurances as to the Khiva expedition which were quoted by Lord GRANVILLE in the House of Lords were probably verbal.

It appears that the supposed designs of Russia on the independence of Persia formed no part of the subject of discussion. In the official *Journal of St. Petersburg* it is accurately stated that the independence of Persia is guaranteed by express treaties between Russia and England, nor was this subject matter directly connected either with the proposed expedition to Khiva, or with the determination of the boundary of Afghanistan. Everything for which Lord CLARENDON and Lord GRANVILLE had been contending has now been conceded by Russia; and it is not a sufficient objection to a diplomatic agreement that it does not cover or preclude all possible causes of future difference. It is something to have obtained an undertaking that Russia will not seek to interfere with Afghanistan as long as the AMEER abstains from encroaching on the territories of the Khanates. SHERE ALI has always shown that he understands the value of English support; and his successors will be fully aware that by meddling with Bokhara or Khokan they would forfeit the protection of England. There is no danger that any English or Indian Government will adopt the rash suggestion that Cabul should be permanently occupied by English troops. The Russians would not unreasonably regard such an operation as inconsistent with the recent understanding; and in case of war they would at once be welcomed as liberators by half the population of Afghanistan. The protest of zealous writers against the policy of confiding in Russia is both ungracious and unreasonable. There is no reason why English statesmen should be lulled to sleep, but it is neither dignified nor courteous to take the present occasion for betraying offensive suspicions. If it is true that the strength of the Russian army in Asia is exaggerated in popular belief, there is the less ground for apprehension. It would be but reasonable to wait for some fresh menace or cause for alarm before the English Government is urged to take additional precautions. No reference is made in the correspondence to Eastern Turkestan, where it is possible that political or commercial rivalry may hereafter arise. The supremacy of Russia in other parts of Central Asia is not formally recognized, though it is perhaps taken for granted in the correspondence. It is not necessary to anticipate the possible claim of Russia to exclusive influence in a country which is nearer to India than to the existing Russian possessions. The vigilance which has been shown by the English Government will be appreciated by Russia. It will be clearly understood that any dangerous approach to India will be summarily resisted, unless a friendly arrangement obviates the risk. It is on the whole convenient that differences should be amicably arranged; and that, even while they exist, they should be discussed in temperate and courteous language. The Russian journals are in some degree to blame for the irritation which prevailed in England before Lord GRANVILLE made his recent statement. The Russian Government on the other hand has thrown no impediment in the way of a friendly solution. It is not the moment for recapitulating in hostile language all the grounds of jealousy which may exist between England and Russia.

THE LORD CHANCELLOR'S PLAN.

ONE more LORD CHANCELLOR has grappled with the subject of the consolidation of our Courts of Justice, and the fusion, as it is called, of Law and Equity. Nothing could be more lucid than Lord SELBORNE'S sketch of the past attempts which have been made to cope with this thorny subject, or more satisfactory than his statement of the objects to which such a reform should be directed. But it is in the nature of the subject that the success of any measure, and indeed its very meaning and essence, must depend upon the machinery adopted for giving it effect; and until the actual Bill, and what will be much more important, the schedule of rules which it is proposed to annex to it, have been produced, it would be premature to pronounce any definite opinion as to the sufficiency, or even as to the tendency and character, of the changes which Lord SELBORNE proposes to introduce into the administration of justice. The speech in which the LORD CHANCELLOR introduced the subject said, and for the most part said clearly and well, all that could be looked for in a preliminary explanation; and yet it would be quite possible for two draftsmen to frame two Bills with schedules of procedure each of which should faithfully follow the lines laid down in the opening address, though the result might be to produce two schemes of reform, not only widely differing from one another, but in the most direct and startling antagonism. We shall wait therefore till we have seen the Bill before venturing on any detailed consideration of the CHANCELLOR'S project, and indeed it would be equally unwise and unfair to attempt to criticize a statement the meaning of which cannot possibly be grasped without reference to the scheme which it is intended to recommend.

There is one point, however, on which we need not defer our congratulations. Mindful of the dangers which proved fatal to his predecessor's Bill, Lord SELBORNE has determined to introduce a complete Bill dealing with the whole subject of procedure, and not to evade the real difficulties of the case by delegating to any judicial or other Committee the function of remodelling the administration of justice. In other respects we can scarcely as yet do more than guess how far the measure now introduced will differ in substance from the Bills of 1870; but we are glad to see that Lord SELBORNE emphatically adopts the view for which we then contended—that it was the duty of Parliament itself to effect this great reform, and not to entrust legislative powers of a revolutionary character (not using the word in any bad sense) either to the entire body of Judges, or to a Committee to be selected by the Chancellor. But for this unfortunate defect the Bills of 1870 might have led to the reform into which Lord SELBORNE'S measure may—with the assistance which Lord HATHERLEY, we trust, will soon be able to render—ultimately ripen, and it is satisfactory to know that the risk of shipwreck on this rock, at any rate, is not again to be incurred. What the CHANCELLOR says upon this point will commend itself to men of every school of opinion:—

"In the Bills which Lord HATHERLEY introduced in 1870 he adhered to a main outline of the recommendations of the Commission, and did not attempt to fill up that outline, or show how the general scheme laid down was to be put into operation. That was to have been done by rules framed by an authority which itself was the object of much criticism; but the discussions which took place in reference to those Bills showed, that, while there was a favourable disposition towards the formation of a High Court, it was felt that in a matter of such importance it was absolutely necessary to know how the scheme was to be worked out, and that anything in the nature of a skeleton scheme could not be regarded as satisfactory. It was felt that it was not desirable to delegate to an external authority—even were that authority itself beyond criticism—the making of rules to work the scheme out. That criticism commended itself to every one conversant with the subject."

We rejoice in this declaration as removing—once for all, let us hope—the most serious peril to which our institutions could be exposed, that of being handed over to be refashioned *ad libitum* by any select bodies invested for the purpose with despotic powers. With this pledge, we may rest satisfied that whatever changes are contemplated will be openly proposed, and no doubt fully discussed, before they receive the stamp of legislative approval. Nor will the discussion be without fruit; for, as might be expected from the known type of his mind, Lord SELBORNE recognizes, more fully perhaps than some of his predecessors would have been disposed to do, the necessity of basing legislation upon well matured public opinion. "It is," he rightly says, "probably a universal law—certainly a general law—concerning all legislative matters of importance in this country, that they depend on the gradual formation of opinion founded on experience, and if that is proved in any class of measures, it is emphatically proved in those measures called improvements or amendments of the law. . . . . Time is required—and on the whole I think it is good that time should be required—to bring opinion on these subjects to the maturity necessary for sound legislation." A man of Lord SELBORNE'S power, approaching his task in the spirit indicated by the passages we have cited, and indeed by the general tenor of his speech, ought ultimately, if not immediately, to succeed in harvesting that crop of law reform which has been gradually growing and ripening under many seasonable, chequered by not a few unseasonable, influences. Whoever may have the honour of introducing the Bills which may some day pass, the credit of maturing the measure will belong, as Lord SELBORNE justly and gracefully acknowledged, to all the eminent men whose labours have contributed to the disentanglement of our tangled skein of judicial administration.

Perhaps, in accordance with what we have already intimated, it would be as well to abstain from all remarks at present upon a scheme which is not yet fully before us, and what we have to say must be taken as subject to

large possible modifications after considering the Bill and its schedule. But there is one point on which the CHANCELLOR'S speech is singularly provocative of inquiry. He points at "the fusion of Law and Equity" as the grand object of the whole project; and yet it is difficult to gather the sense in which he understands these often misused words, or to guess how far the fusion is to be nominal and how far real, or whether we are to look for anything more than the sort of mock fusion which is exhibited in the County Courts, where two entirely distinct systems of jurisprudence are administered with no more connexion than is derived from the fact that the local Common Law judge of Monday happens to be the person who on Tuesday fills the role of a local Vice-Chancellor. Doubling a part is not the same thing as fusing two characters, and is perhaps the most mischievous form which a desire for theoretical or apparent unification could take. We do not suppose that Lord SELBORNE is blind to this, and we expect to find in his Bill that the proposed fusion is to be something more than nominal. At the same time, the justice of his observation, that some of the distinctions between Law and Equity represent realities which cannot be ignored or confounded, is one which, though well recognized by all who are familiar with the subject, has been too much overlooked by frothy declaimers on the defects of our jurisprudence. The same Court may in future recognize the possessory ownership of the trustee and the beneficial ownership of the *cestui que trust*; but the two kinds of ownership must continue to exist for the convenience of society, though we are not quite sure that it will be desirable to maintain the old designations of legal and equitable estate. This, however, is a detail as to which a good deal might be said on either side; but it is well to see a plain recognition of the truth that the fusion of Law and Equity means something more than a hocus-pocus transformation scene effected by a vague section in an Act of Parliament.

There is another danger which we also hope Lord SELBORNE will be found to have escaped. Nothing would be easier than to satisfy the cry for theoretical symmetry in the law by a mere transfer of jurisdiction. For example, an Act of Parliament might simply abolish all Courts of Common Law as administering an inadequate and obsolete jurisprudence, and enact that for the future Courts of Equity should exercise jurisdiction over all subjects, using their own accustomed methods of procedure. Or, on the other hand, a similar enactment might abolish Courts of Equity and direct Courts of Law to administer all equitable relief. Either of these methods would be only a mock fusion, for long experience has shown that the transplanted principles will not readily take root in an alien soil. The principles of the Common Law, and to a still greater degree the principles of Equity, rest in the traditions of the respective Courts. For many years Courts of Law have enjoyed a large share of equitable jurisdiction, and Courts of Equity have been allowed to employ the Common Law method of trying causes by *viva voce* evidence with the assistance (as it is supposed to be) of twelve unprofessional assessors. But little or nothing has come of it. The best equitable pleas in the world have ended in failure partly because the machinery of Courts of Law was unsuitable to equitable relief, but to a much greater extent because Equity doctrines and Equity authorities lost their essence and their force when presented to a Common Law Bench. So in Courts of Equity the practice of taking evidence *viva voce* never fully established itself, partly because it was found to occupy three or four times as many judicial hours as the Court of Chancery could dispose of without doubling or trebling its staff of judges, and partly also because the Bench showed very little inclination to encourage the unaccustomed practice. Any error of this description would be the most fatal that could be committed. The first condition of any successful fusion must be to see that the parent stock, whether of Common Law doctrine or Equity doctrine, is not mutilated or destroyed before the transplanted offshoot has fairly taken root.

AMERICAN SMARTNESS.

THE *Alabama* question, now happily converted into a domestic controversy in the United States, has assumed a form which is both amusing and instructive. It might have been supposed that the distribution among the claimants of the damages awarded at Geneva was an easy and simple transaction. The American counsel and agents succeeded in satisfying the Arbitrators by evidence that the claims, including interest, amounted to about 3,250,000*l.*; and their statements must have approximately shown the separate items due to every claimant which collectively constituted the total sum. By the provisions of the Treaty of Washington, the Arbitrators might, if they had thought fit, have left the amount to be determined by a Board of Assessors, which would in that case have been "appointed to ascertain and determine what claims are valid, and what amounts shall be paid by Great Britain to the United States on account of the liability arising from failure [in fulfilment of duty] as to each vessel." The Arbitrators chose the alternative of awarding a sum in gross, which was evidently intended both by the framers of the Treaty and by the Tribunal to correspond with the amount of valid claims. The Senate of the United States has accordingly passed a Bill appointing a Commission for distributing the amount to be paid under the Geneva Award; but it has appeared to the leaders of the majority in the House of Representatives that the agents of the United States had not during the litigation exhausted the possibilities of sharp practice and litigious perversity. General BUTLER, as the organ of the Judiciary Committee, has reported to the House a Bill which practically affirms that the English Government was cheated, that the Geneva Arbitrators were tricked, and that the persons who had suffered injuries from the inculpated cruisers ought now to be deprived of the fruits of a fraud to which they may perhaps have been parties. The object of the Bill is to secure for the Treasury of the United States a portion of the damages which were, in accordance with the contention of the American counsel, awarded for injuries inflicted on private American citizens. It must be admitted that General BUTLER is probably not influenced by patriotic cupidity in his attempt to secure for the Treasury a portion of the spoil. The amount awarded was, as he perhaps correctly argues, larger than the total sum proved to be due for Direct Claims, and therefore he contends that the surplus was after all granted by the Arbitrators in satisfaction of the Indirect Claims which they had never taken into consideration, and which had been formally withdrawn by the American counsel before the commencement of the inquiry. That the damages demanded for losses by American citizens were considerably larger than the sum awarded is a consideration which was not likely to weigh with General BUTLER. He probably thinks that a deliberate and successful attempt to delude an international Court of Arbitration redounds to the credit of any lawyer by whom it may have been practised. That a trustee should obtain damages and then refuse to pay them over to the person beneficially entitled on the ground that they are exorbitant in amount, and that they were obtained by misrepresentation, is a proceeding which General BUTLER could not fail to appreciate and approve. It is well that the English nation and Government are wholly unconcerned with the latest aftergrowth of American smartness. It would be interesting to learn Mr. ADAMS's opinion on a proposal which implies that he and his colleagues were either parties to or victims of a fraud.

Some members of the House of Representatives and of the Senate will be at present too much occupied with the defence of their private conduct to enter heartily into the prosecution of General BUTLER's ingenious project. Some of the most eminent Republican politicians have unfortunately suffered by the exposure of a system of pecuniary corruption which is probably not an isolated experiment on the virtue of Congress. Mr. OAKES AMES, a member of the House and an active promoter of the Union Pacific Railway, appears some time since to have sold, on unaccountably favourable terms, shares in an undertaking called the Crédit Mobilier, to twelve conspicuous politicians in the House and the Senate. Congress had assisted the Railway by grants of 12,800 acres of land for every mile of line, and also by a subsidy or loan of 16,000*l.* per mile in the mountain districts, and of 3,300*l.* in the plains. The promoters afterwards found means to persuade Congress to issue bonds for the cost of the undertaking with a first charge upon the revenues. By this operation they practically converted the Government loan into a free gift, and they then proceeded to form themselves into a financial Association, called the Crédit Mobilier, for the purpose of providing funds for the construction of the line. By the sale of the land and of the United States securities which had been granted to the Railway Company, the Crédit Mobilier was enabled to divide in one year 1,505 per cent. on its capital, and it was naturally thought expedient to secure so profitable an enterprise against inconvenient investigation. For this purpose Mr. OAKES AMES, as agent to the Company, assigned to several virtuous and prominent members of the Senate and the House, at par, shares in the Crédit Mobilier carrying dividend to the amount of fifteen times the nominal

price. In some cases the purchase-money was deducted from the dividend, so that the share and the residue of the profit were handed over without pecuniary consideration. The discovery of the corrupt bargain seems to have been due to the acuteness of Liberal opponents of the Republican party during the Presidential contest; but in the midst of universal calumny and vituperation a well-founded charge is naturally attributed to the malignity of partisans. The members of Congress who were accused unanimously and positively denied the truth of the statement; and it is satisfactory to find that one of their number, Mr. BLAINE, Speaker of the House of Representatives, has been able to establish his innocence. Among those who have been less fortunate, the most conspicuous are Mr. SCHUYLER COLFAX, late Vice-President of the Republic, and Mr. HENRY WILSON, actual Vice President. As their original defence, consisting in a direct traverse of the charge, has been found untenable, the inculpated patriots now fall back on the argument that their acceptance of gifts cannot be shown to have affected their political conduct. It is perhaps impossible to prove that they have honourably performed their part in a dishonourable transaction. They had the power of conferring on the Crédit Mobilier Company and the Union Pacific Railway large benefits at the public expense; and one or both of those Corporations thought it worth while to offer large bribes, which were accepted probably without any distinct promise of services to be rendered in return. In such a case the misconduct of a judge or legislator is generally inferred from his acts, and if the delinquents intended rather to defraud the bribing Company than to abuse their legislative powers, the moral estimate of their character and conduct will not be materially altered. It is interesting to remark the natural connexion between unscrupulous political subserviency and liability to direct pecuniary corruption. Mr. SCHUYLER COLFAX was the Speaker who formally welcomed the Fenian conspirators on the floor of the House. Votes and popularity were to be obtained by a gross violation of international courtesy and public decency, as money was to be acquired by a prostitution of the influence of the second public officer in the Republic. Disinterested foreign bystanders will share the amusement which the exposure of the Crédit Mobilier fraud has caused in the United States, though some of them will suffer a vicarious remorse on behalf of a community which seems to repudiate all responsibility for the acts of those whom it delights to honour with official promotion.

It is worth the while of English advocates of democratic change to study the operation of universal suffrage under the most favourable conditions. In the United States the system is a necessary result of the structure of society; and the bulk of the constituency is, as Mr. DISRAELI once said, not a mob, but a landed democracy. In the rural districts of the more settled States it would probably be impossible to buy a vote at an election, even if the great number of the electors were not in itself sufficient to prevent direct bribery. The majority of the electors are personally honest, and on the average they are probably better educated than the population of England or of any European country except Northern Germany. Their fault is that, having no upper class to lead them, they are indifferent to character and station in their choice of legislators; and it is their misfortune that they are helpless in the hands of professional managers of elections. Corruption begins with the agents who organize primary assemblies and who draw up lists of candidates, and it culminates in the purchase of members. It is thought easier and cheaper to buy a State Assembly or Senate, or even to give bribes to members of Congress, than to waste money on elections. At the abortive trial of TWEED in New York, one of his dependents stated that he had been in the habit of carrying large sums to Albany on behalf of his employer for the purpose of buying votes. The culprit himself is a member of the New York Senate, having been elected by a large majority after the public exposure of his frauds. It is absurd to claim for Englishmen a higher moral condition than that which prevails in corresponding classes in the United States. The difference between the two countries is that equality and universal suffrage bring the scum to the top. Respectable citizens refuse to associate in private with the reprobates and swindlers who may be their representatives in a State Legislature, or who may sit on the judicial bench; but either they suffer no shock from the exposure of successive scandals, or they are powerless to prevent the mischief. The journals, which in some degree supply the place of more healthy institutions, unfortunately confine their denunciations to members of the party which they may respectively happen to oppose. Mr. COLFAX will escape the censure of orthodox Republicans; and the invectives of Liberal or Democratic critics will be explained by political hostility. The story of the Crédit Mobilier and the Union Pacific Railway illustrates, and in some degree explains, the character of the Bill for the distribution of the *Alabama* damages which has been framed by the Judiciary Committee of the House of Representatives.

THE PARLIAMENTARY NOTICE-PAPER.

THE notice-paper of the House of Commons at the beginning of a Session produces the same repulsive impression of staleness which is suggested by a street hoarding or the advertisement board at a railway station. As it must be assumed that advertisers know their own business, there are probably persons who are attracted by force of incessant repetition to the shops, the theatres, or the newspaper offices, which proclaim their own merits on the most flaring placards. Ambitious members of Parliament rely on the same tendency of commonplace human nature for the disposal of questionable or noxious wares. There is fortunately little chance of the adoption during the present Session of the more mischievous schemes which have already been proposed by private members; but experience shows that notoriety and reiteration are among the conditions of Parliamentary success, and in the vulgar apprehension change is equivalent to progress. In the long list of motions and of questions to be addressed to Ministers are included several judicious and rational proposals: and Mr. FAWCETT'S Bill for altering the constitution of Trinity College raises an issue which must be decided by Parliament when it deals with the most important business of the Session. Sir JOHN LUBBOCK'S Bill for the preservation of National Monuments can provoke no party opposition, and, if it be judiciously framed, it will but formally and nominally affect private rights. There ought to be no delay in taking precautions against the caprice or neglect which may at any moment inflict irreparable loss on the country. Mr. PLIMSOLL can scarcely fail to obtain a Commission of Inquiry into the condition and practice of the mercantile marine. In general it may be said that a private member is usefully and meritoriously employed when he applies his energies with the aid of special knowledge to the correction of a definite abuse, or to the improvement of some public institution. Measures for the alteration or overthrow of the Constitution, and embodiments of the clamour of noisy sects and factions, may sometimes be prompted by patriotic or philanthropic motives; but a country which has within six or seven years doubled the constituency and destroyed, by the introduction of the Ballot, the influence of property, can for the time dispense with new projects of political and social revolution. It may be doubted whether even Mr. MITCHELL HENRY'S modest Bill for the protection of miners from fraud will at the present moment command enthusiastic support. Miners, like other persons, are protected by the ordinary law from fraud; and their advocates are declaiming loudly against the class legislation which they are nevertheless constantly demanding. When coal no longer costs fifty shillings a ton, and when colliers condescend to do a fair day's work for high wages, any special grievances which may affect their calling will be candidly considered.

One of the inevitable debates of the Session has happily been disposed of. Mr. RYLANDS had considerately provided Mr. AYRTON with his best chance of immunity by proposing to move a vote of censure on his conduct. In matters of this kind the House of Commons, like other Assemblies, is sometimes tempted to judge of the merits of a motion with some personal reference to the mover. Mr. RYLANDS is a zealous and patriotic reformer who proposes to abolish the diplomatic profession, to impose a tax of twenty per cent. on landed property, and to adopt other improvements for which Parliament is not fully prepared. If Mr. AYRTON was to blame, it would have been felt that Mr. RYLANDS was scarcely a fit representative of those who disapproved of his official indiscretions. It was on the whole better that the subject should be incidentally discussed than that a formal vote should be taken on Mr. RYLANDS'S motion. Mr. VERNON HARCOURT, having by his impetuous assault secured to Mr. AYRTON immunity and triumph, will probably not think it necessary to bring in a Bill to assert the supposed rights of the people by depriving the Crown of its proprietary control over the Parks. Mr. LOCKE KING cannot be blamed for reintroducing for the twentieth or perhaps the thirtieth time his Bill to alter the law of succession to landed property. The Government has adopted the principle of his measure, and in this or the next Session it

will probably form the subject of a serious attempt at legislation. It is possible that the abolition of primogeniture may be one of the legal changes vaguely indicated in the QUEEN'S Speech, or that it may form part of the ATTORNEY-GENERAL'S Bill for facilitating the transfer of land. A whole generation has passed since Mr. LOCKE KING provoked Lord JOHN RUSSELL into an indiscreet declaration which accelerated by some years the progress of constitutional change. His perseverance in his preliminary scheme for altering the devolution of real estate seems likely to be rewarded by similar success. Mr. RICHARD'S more chimerical scheme for a permanent and universal system of universal arbitration was virtually disposed of by the debate on the first night of the Session. Mr. GLADSTONE is now aware that the submission to the different European Governments of the three Rules of Washington will not be a simple or pleasant transaction. A formal proposal of universal arbitration would be an ill-bred jest. If Mr. RICHARD has ever passed even in thought beyond the region of phrases and abstractions, it is difficult to understand how he can think it possible to arbitrate between France and Germany, or between Russia and Turkey. Mr. HOLMS'S motion for exempting private property from capture at sea is at present almost equally unseasonable, although it may be supported by plausible arguments. The law or practice of blockades, which it is not proposed to abolish, is closely connected with the liability of merchant vessels to capture.

It may perhaps be well that the condition of South Africa and the expediency of annexing the Fiji Islands should be discussed in the House of Commons; and Mr. EASTWICK and other members who have served in India will be able to give valuable information on the affairs of Central Asia. No useful purpose can be served by a motion or debate on the connexion between the mother-country and the colonies. The one perverse journalist who obstinately insists on the separation of Canada corresponds in England to the solitary advocate of annexation whom the Correspondent of the *New York Herald* professes to have discovered in the Dominion itself. The mother-country and the colonies are at present on excellent terms, and it is highly undesirable to analyse the grounds or the intensity of their reciprocal affection. Mr. WHITWELL'S Bill to facilitate the transfer of land for the erection of dwellings for the manual labour classes ought to be superseded by the more comprehensive Government measure; but in this instance also it is interesting to watch the systematic claim of the working men or their advocates to special or class legislation. It is hardly necessary to observe that Mr. OSBORNE MORGAN once more introduces his Burials Bill, and that the deceased wife's sister occupies the usual place on the list of amateur measures. Sir WILFRID LAWSON will probably find that the minority in favour of the Permissive Bill is still further diminished in the near prospect of a general election. Many members who care little for the liberty of Englishmen to do as they like will have reflected seriously on the electoral power which the licensed victuallers and their customers have proved themselves to possess. The coalition at Liverpool of the Irish Roman Catholics with the Welsh Dissenters might perhaps have prevailed, if the advocates of the Permissive Bill had not joined their ranks. The voters who assert their right of drinking in moderation appear for the present to outnumber the scrupulous enthusiasts who fear that they or their neighbours may be tempted to drink too much. Mr. VERNON HARCOURT will make an eloquent speech in support of his motion for the reduction of public expenditure; but no ingenuity will suggest any novelty either of fact or of argument. The House will certainly decline to reduce the strength of the army and the navy; and Mr. HARCOURT may settle with his ally Mr. DIXON the question whether it is desirable to add five or six millions to the expenditure on primary education. The substitution of a Secretary of State for the Board of Admiralty would, in Mr. SEELEY'S opinion, tend to promote administrative efficiency; and proposals of this kind are so far serious that they relate to the conduct of public business. Mr. JACOB BRIGHT'S annual Bill for giving votes to women, and Dr. DALRYMPLE'S amiable scheme for reforming habitual drunkards, may be dismissed as sentimental fancies. Mr. NEWDEGATE'S favourite project for inspecting monasteries and nunneries represents only a harmless and honest delusion.

The most objectionable notice on the list is that of Mr. TREVELYAN'S Bill for extending household suffrage to counties. As a professed advocate of extreme democracy, Mr. TREVELYAN is perfectly consistent in his desire to subject the counties to the absolute control of the farm-labourers, or, in mineral districts, of the colliers and iron-workers. The practical disfranchisement of wealth, education, and intelligence will not be complete as long as either landlords or agricultural capitalists are represented in the House of Commons. The extension of household suffrage is almost avowedly designed as a step to the establishment of universal suffrage; and unfortunately Mr. GLADSTONE has with astounding levity more than once expressed his approval both of the intermediate and of the final measure. But for his sanction, Mr. TREVELYAN'S proposal might be regarded without uneasiness; but a demand which has been recognized by the PRIME MINISTER as just cannot be regarded as wholly impracticable. In consequence of the high industrial civilization of England, the proportion of people living on weekly wages is far greater than in any other country in the world; and it follows that promiscuous suffrage involves greater danger than elsewhere of interference with the rights of property. In the United States universal suffrage has hitherto produced no worse effect than to concentrate all political power in the hands of unprincipled jobbers, and to encourage shameless pecuniary corruption among the members of the various legislative bodies; but America is, happily for itself, not really governed either by Congress or even by the Senates and Assemblies of the several States. The House of Commons is the only really sovereign Legislature in the world; and the consequences of a further deterioration of the constituency which returns it are wholly incalculable. Mr. TREVELYAN and his friends are probably sincere in their belief that a political revolution would be advantageous to the country; but only those who share their aspirations will be justified in voting for Mr. TREVELYAN'S motion. It is especially desirable that the tenant farmers should understand that the same politicians who offer them concessions at the expense of the landowners at the same time propose to deprive them of all electoral power. The leaders of the working classes may claim the merit of exemplary candour in their open avowal of the purpose to which they propose to apply their political supremacy.

THE COMMITTEE AND M. THIERS.

IT is not, after all, upon the question of interpellations that M. THIERS and the Committee of Thirty have parted company. The Committee have not indeed given the PRESIDENT all the freedom of utterance he demanded, but they have consented to his speaking on interpellations relating to home affairs whenever the Council of Ministers, after a special deliberation the result of which has been communicated to the Assembly by the Vice-President, shall declare that the questions raised relate to the general policy of the Government. The inconvenience of this provision will be extreme. It will clearly be better, from M. THIERS'S point of view, that he should speak on questions which do not call for his intervention than that he should be reduced to silence on questions which do call for it. The consequence will be, that the special deliberation prescribed by the resolution of the Committee will be held on all subjects which do not unmistakably proclaim their own unimportance. The plan is one to make it necessary for M. THIERS to speak on occasions when he would rather remain silent, not one to impose silence upon him on occasions when he would rather speak. The common sense of the Assembly may be trusted to see the futility of such legislation as this. The object of the Committee in imposing so foolish a restraint is probably to prevent M. THIERS from getting up a Ministerial crisis at the very short notice which he has occasionally found sufficient for the purpose. They do not want him to catch votes or to shield an unpopular Minister by a sudden threat of resignation. But they forget that the Deputies upon whom this pressure is exercised are men who really want to know how M. THIERS wishes them to vote. They have got, it may be, political views of their own, and in quiet times they attach some importance to them, and are glad to have opportunities of giving them effect. But the last thing they would wish is to give them effect when the result of doing so would be to turn M. THIERS out of office. If by the operation of the rules proposed by the Committee they were to be prevented from finding this out, they would feel naturally and reasonably aggrieved. Their desire is to support M. THIERS, and to enjoy as much freedom of action as is consistent with a due regard for that paramount condition. To prevent politicians of this type from making themselves acquainted with the PRESIDENT'S intentions, whether these intentions be formed before a debate begins or late in the day on which it closes, is not to relieve them from a burden—it is rather to impose a new burden on them. They have no taste for unchartered freedom, they only care to remain on the side of M. THIERS.

They may wish that he were not so ready to take a side; they may even cherish an unintelligent preference for that pale shadow of constitutional monarchy which is the Committee's notion of a strong Government. But if this is unattainable, if M. THIERS is to remain Prime Minister—and the scheme of the Thirty concedes this as completely as the PRESIDENT could desire—they want to know how to steer their course. A Ministerial crisis with M. THIERS out of the Chamber would be like a storm at sea in the intervals when a revolving light is not visible. The majority of the Deputies may be trusted to prefer a steady blaze, however heartily they may wish that there were no dangerous coast for it to shine on. Consequently, if the point comes before the Chamber, there is little doubt which way it will be decided. The Thirty would have done better for themselves if, on finding that they were not resolute enough to impose an effective check upon M. THIERS's oratory, they had elected to impose none at all. It is emphatically a case in which half measures are only an evidence of conscious weakness.

The present schism between the Committee and the PRESIDENT relates to a quite different matter. M. DUFAURE has proposed that, after a short delay, special laws shall be framed as to the composition and mode of election of the Assembly which is to take the place of the present Assembly; as to the composition, mode of election, and functions of a Second Chamber; and as to the organization of the Executive during the interval between the dissolution of the present Assembly and the meeting of these two new Assemblies. The introduction of the words "after a short delay" seems to have thrown the Committee altogether off their balance. They seemed to them to be big with forebodings of an immediate dissolution. It was to no purpose that M. DUFAURE offered to strike them out. They had appeared, and that was enough. Nothing that the Government could say would alter this fact. Whether, if the Committee had not been thrown into this state of terror by the very first line of M. DUFAURE's motion, they would have shown themselves so impracticable as to its details, is not quite clear. The provisions which the Committee propose to substitute for M. DUFAURE's are to this effect. The Committee remains charged with the duty of preparing and ultimately laying before the Assembly a Bill for the institution of a Second Chamber. The new electoral law will be submitted to the Committee as soon as it comes from the hands of the Special Committee by which it is now being prepared. It will be seen that, according to this plan, the Committee of Thirty will practically remain in session as long as the Assembly itself. The Thirty might be trusted not to finally settle the composition of the Second Chamber and the details of the coming election until they had made up their minds that a dissolution could be no longer postponed. Either they feel that they cannot trust the Assembly to be as true to conservative ideas as they know themselves to be, or else, having once enjoyed power, they are unwilling to lay it down again. Whether the Assembly itself shares this view is another matter. The majority were ready to appoint a Committee to prepare certain measures, but it does not follow that they are prepared to leave all their work to the Committee until the closing weeks of the Assembly's existence. Life at Versailles must be very much duller since the Committee has been in session. There are no field days in the Assembly except when M. JULES SIMON is good enough to provide a little sport. If the proposal of the Committee were to be adopted, this state of things would be prolonged indefinitely. An Assembly which has shown itself so jealous of its own power as regards its constituents is not likely long to surrender that power into the hands of a delegacy.

A more serious difference still between the Committee's proposal and M. DUFAURE's is the omission from the former of all mention of the interval between the dissolution of the present and the convocation of the next Assembly. M. THIERS's authority dies with the Assembly, so that if a dissolution comes without any arrangement having been made for carrying on the Government, the elections must be held in a time of absolute anarchy. It is quite certain that the Committee do not intend that this should be the case; their refusal to make such an arrangement must therefore be taken as evidence that they mean the elections to be held while the present Assembly is still sitting. It is difficult to understand the immense importance which the Committee and the Right generally are believed to attach to this provision. It is intelligible that they should wish the conduct of the elections to be in their own hands rather than in the hands of M. THIERS; but the mere prolongation of the present Assembly's life will not by itself have this effect. As long as the Assembly remains the President will remain, and it has been pretty well established by this time that as long as the President is M. THIERS the conduct of affairs will continue in the hands of the Executive. If it has been so while the Assembly was in the full flush of its authority and reputation, it is not likely to be otherwise when it is merely a pale ghost which is only waiting for the elections to be over to vanish into empty space. If M. THIERS pays too little deference to the majority now, how much is he likely to pay when that majority has but a few more days to live? If he has contrived to get his own way when the Assembly was sovereign in fact as well as in name, what chance is there that he will abandon this tradition when a term has been set to its power of annoying or thwarting him? There are rumours occasionally of a *coup d'état* to be attempted by the Right, and they have certainly thus much of foundation, that their wishes cannot be attained without resorting to something of the kind. But a *coup d'état* is essentially the expedient of an Executive at war with a Legislature, not of a Legislature at war with an Executive. Besides, for this purpose the Right would not even command a majority in the Chamber. Assemblies may not always be wiser than their wisest man, but this particular Assembly will certainly be wiser than its thirty wisest men. As yet M. THIERS has given no sign of the course he intends to take when the report of the Committee comes before the Assembly; but it is more than ever probable that, whatever that course is, it will obtain the consent of the majority.

DECEASED WIFE'S SISTER.

ONE of the busiest and most experienced agitators of our time is reported to have once given a short hint to an ambitious pupil. The best way, he said, to get people to believe anything is simply to keep on repeating it over and over again, without taking the slightest notice of contradictions or exposures. The contradictions will either be forgotten, or it will be supposed from your confident reiteration that you have effectually answered them on some former occasion. The COMMON SERJEANT appears to have learnt this lesson, and in advocating his Bill for legalizing Marriage with Deceased Wives' Sisters, he certainly acts upon it with an audacity and recklessness which are rather startling to those who are able to discriminate fact from fiction. On Wednesday he gravely asserted in the House of Commons that this notorious measure has been approved by sixty-three divisions in the Commons, and six times rejected by the Lords. The impression he sought to convey was of course that the House of Commons has for many years been continually sending up the Bill to the House of Lords, and that the House of Lords, in contempt of the Commons, has persistently rejected it. This sort of thing might perhaps pass without detection at an indignation meeting in St. James's Hall, but it requires a peculiar kind of courage to misrepresent the proceedings of the House of Commons in quite recent years in a speech addressed to the House of Commons itself. Perhaps Sir T. CHAMBERS imagined that the memory of the House does not go back beyond the last general election. But what are the facts? The Bill has been five times—with intervals of years between—sent up to the Lords and rejected, and twice it has been introduced in the House of Lords and rejected. But the Bill has also been four times thrown out in the Commons; so that there are four rejections in the Lower House against seven in the Upper; and for eleven whole years, from 1859 to 1871, the Lords never even heard the subject mentioned. The COMMON SERJEANT concocted his list of sixty-three divisions by counting in all the trifling divisions on details which have taken place in Committee. The House of Lords has been consistent in its treatment of this proposal; but the House of Commons has sometimes been for it and sometimes against it. In 1866 the Bill was summarily snuffed out on the second reading. Three years later there seemed to be a momentary turn of the tide, and the Bill passed the second reading by a majority of 99; but this majority has been gradually dwindling in successive years, and now the very utmost that the COMMON SERJEANT and his friends can do, after elaborate and eager preparations, in a desperately whipped division—snatched at the very beginning of the Session, when the Scotch and Irish members, who almost to a man oppose this tampering with the sacredness of marriage, have not yet come to town—is a poor majority of 39. The value of this result must be measured by the violence of the efforts made to obtain it. It will perhaps be time enough for the House of Lords to consider whether on this question it will yield, against its better judgment, to the House of Commons, when it has been made quite clear that the House of

Commons knows its own mind, and really represents the genuine and settled opinion of the country. The flourish about petitions from all parts of the country and other manifestations of public opinion in favour of revolutionizing the marriage law is plainly a mistake in tactics, for it betrays its hollowness. We are asked to believe that the country is wildly anxious and impatient on the subject, and that, in fact, there is quite an excitement about it out of doors. Of course, if the petitions and resolutions of which such a parade is made really represented the actual state of public opinion, and not the results of an artificial and factitious agitation, we should find on every side traces of excitement. The matter would be talked of whenever two or three people met together; there would be public meetings about it, and flaming placards on the walls, and strong articles every day in the papers. It would be the great question at the elections. Is Mr. So-and-So sound on deceased wife's sister? would be the test of parties. Vote for JONES and No Affinities! would be the rallying cry of popular candidates. But somehow this excitement, if it exists, is kept very quiet. Except in the voluminous publications of the anonymous Society which ambuscades behind the name of "JOSEPH STANSBURY, M.A." and a brass plate in Parliament Street, and the annual debates on the Bill, nobody ever hears a whisper of this passionate and universal desire which is supposed to be consuming the country for leave to marry deceased wives' relations.

No doubt there really are people who want to marry, or who have married, their wives' sisters or nieces, just as no doubt there are sisters who would like to marry their brothers-in-law, and possibly mothers-in-law who would have no objection to console their deceased daughters' husbands by marrying them themselves. But how many of them are there? And what sort of people are they who demand that the most sacred and delicate of domestic institutions should be torn to pieces in order that they may lawfully gratify their peculiar appetites? It is rather an odd thing that the people who petition for the abolition of affinities are always anxious for the change, not on their own account, but on account of somebody else. As far as we are aware, the gentlemen who compose the anonymous Society in Parliament Street have never petitioned Parliament in their own names, stating their age, address, occupation, and religion, and the particular relatives they have married or want to marry. It used to be argued some years ago that this was a poor man's question; but a Royal Commission, appointed at the instance of the revolutionists, looked into the matter, and could discover only some forty cases among the poor. It is sufficiently notorious that the people who keep Mr. STANSBURY'S Society going, and who provide the funds which are spent so lavishly on deceased wife's sister novels, pamphlets, and other modes of agitation, are only a few rich men who, having wilfully defied the law (as the agitators did in Hyde Park the other day), would like it to be altered to suit their convenience, and to have the penalties remitted. Mr. BRUCE has stated in the case of the Hyde Park rioters that, whether a law is a good or a bad law, while it exists it must be obeyed.

There are two points of view from which this proposal for the abolition of affinities may be regarded. There is first the question whether it is desirable that all marriages within these degrees should henceforth be legalized; and there is secondly the question whether, if that is conceded, a retrospective immunity can be justly demanded by those who, while agitating for an alteration of the law, have taken the liberty of breaking it. As to the first question, Mr. HEYGATE, it seems to us, summed up decisively the arguments against the Bill when he said that it settled nothing and unsettled everything. The Bill is confined to marriage with a deceased wife's sister, but of course the change cannot stop there, and the blow is practically aimed at all relationships by marriage. Hitherto the marriage system has been based on a distinct and intelligible principle; the forbidden degrees have included relationships both of consanguinity and affinity. A wife's relatives have been regarded by her husband as if they were his own, and all our social and domestic habits and feelings have grown up around this principle. Touch that principle, and all these habits and feelings will be at once subverted. The sister-in-law will become like any other marriageable woman, and will be driven from the bereaved home to which she might otherwise have carried comfort and consolation. She cannot remain, if she considers her own character, unless it has been decided in the very moment of death and desolation whether the funeral meats are to furnish forth immediately a new marriage feast. And this cruel and heartless decree is to be enforced for no other object than to enable a few unscrupulous and reckless men to indulge their passions and caprices without restraint. The COMMON SERJEANT, whose incendiary meeting at St. James's Hall has probably not been forgotten, is apparently prepared, not only to sacrifice any part of the Constitution that may seem to stand in the way of these selfish and shameless marriages, but, if necessary, to revive the Mosaic, or perhaps any other, dispensation that might happen to suit his purpose. It is true that the Jewish law sanctioned the kind of marriages which Sir T. CHAMBERS has so much at heart, but it also tacitly tolerated polygamy, and not only permitted but compelled a man, under penalty of ignominy, to marry his deceased brother's widow. The truth is that Judaism treated the wife pretty much as a chattel; the Gospel proclaimed the identity of the husband and wife, bone of one bone, and flesh of one flesh. Of course Sir T. CHAMBERS is at liberty to think, if he chooses, that Christianity is wrong in this respect; but when he proposes a revival of Judaism, he should be a little more explicit as to how far in this direction he is prepared to go. As far as the House of Commons is concerned, the question is rather a social than an ecclesiastical one; but, when we come to the retrospective action of the Bill, it has also a political aspect. We have no desire to defend the retrospective effect of the Act of 1835. All that can be said is that the law was then in a confused and anomalous condition, and that there were perhaps plausible grounds for not declaring absolutely void marriages which had been contracted on the understanding that they were only voidable. But since 1835 there has been no room for misconception, and all who have married within the forbidden degrees have done so with their eyes open. If Parliament should at any time agree to pass an indemnity for these illegal unions, it will be giving a dangerous encouragement to the theory that laws are binding only on those who happen to approve of them.

THE SURRENDER OF THE PARKS.

THE conduct of the Ministry with regard to the management of the Parks—for we have now, it seems, to deal, not with the blundering of a subordinate official, a mere "clerk," as Mr. AYRTON calls himself, but with the deliberate action of the Cabinet—reminds one strongly of the old caricature of the Englishman standing naked, and wondering what raiment he will wear:—

> For now I will wear this,
> And now I will wear that,
> And now I will wear—
> I don't know what.

One suit after another has been tried on, and discarded, either because the cut of it was not liked, or because it was found to be uncomfortable. The last suit was a trifle too fantastic and provocative, and led to the wearer being mobbed by the rabble. For the present the Government seems to think the safest course is to go bare. Mr. BRUCE'S new Park Rules afford about as much covering as a fig-leaf; and the fig-leaf is a sign of conscious shame, without being an effectual effort at decency. The new Rules are in fact only a pretence, a sham, and about as binding as a Highgate oath. Practically the Parks are surrendered to the mob, and the Government might as well have said so plainly. In the new Rules for Hyde Park it is provided that meetings shall not be held except within certain geographical limits, but these limits are almost the limits of the Park itself. Meetings are to be confined to the "open part" of the Park, bounded by the horse-ride running from the Marble Arch to Victoria Gate, and thence to the powder-magazine and by the carriage drive running from the powder-magazine along the Serpentine to Hyde Park Corner, and so back again to the Marble Arch. In other words, the whole of Hyde Park north of the Serpentine is handed over unreservedly for the purposes of rowdy agitation. All that the Government has ventured to do is to forbid meetings in Rotten Row. But there is yet another clause, and it is very severe and formidable. "No assembly of persons is permitted in "the Park unless conducted in a decent and orderly manner." What is to be done with a vast, promiscuous gathering of people from all parts of the town if they fail to observe decency and order remains to be seen. The nuisance of these meetings consists, it must be remembered, not so much in the rubbishy speeches which are delivered, and which are harmless enough—indeed nobody hears them—but in the noisy and mischievous rabble which is thus drawn together, the mock-Litany men who bawl their blasphemous chants, the roughs who insult and assault women, knock off hats, trample down shrubs, and destroy the trees, and the thieves of all

kinds who here discover or contrive opportunities for plunder. Hitherto the police have apparently found that, when once a meeting took place, they were helpless to prevent its disorderly and disgraceful consequences. They were, in fact, outnumbered, and could do nothing but look on and try to see as little as possible. If it is now intended seriously to enforce this new rule about decency and order, it can only be done in one way, if at all, and that is by withdrawing the police from their local duties in different parts of the Metropolitan area in order to concentrate all their strength upon Hyde Park. In other words, London is to be left bare and unprotected whenever Mr. Odger or Mr. Bradlaugh may choose to summon the scum of the town to meet him in the Park.

The question of allowing public meetings to be held in the Parks is a very plain and simple question, and it is necessary to avoid being diverted from its practical issues by rhetorical flourishes about the rights of the people and constitutional privileges. It is purely a question of public decency and public order. It is sometimes assumed that those who object to tumultuous gatherings of this kind are afraid of political agitation. In reality Mr. Odger straining his voice in a vain effort to make himself heard *sub Jove* in Hyde Park is not a whit more terrible than Mr. Odger speaking comfortably and audibly in the snug shelter of the "Hole in the Wall." It is known, however, that these meetings are invariably attended by large numbers of disorderly and disreputable people who really care no more for Mr. Odger than for Mr. Gladstone, and who have come out solely in hopes of mischief. The two things, judging by experience, would seem to be inseparable. The meeting and the mob go together like light and shadow. If we could have the meeting—just Mr. Odger and his little knot of followers, without the mob—it might not perhaps matter very much; but then the mob is sure to come too, and to take its pleasure after its own fashion. For our own part, we are not in the least afraid of any amount of speechifying in Hyde Park; but London is rather a big city, and there is a good deal at the bottom of it—what Mr. Bright would call the residuum—which had perhaps better not be stirred up more than is absolutely necessary. As it is, the police are not too many for their work, and it is as well not to go out of our way to increase their labours and responsibilities. Not long ago, when a fanatical lecturer who had a craze about the Pope and the wickedness of Roman Catholic priests, went through the country delivering violent harangues which constantly led to disorder and sometimes to bloodshed, Mr. Bruce, in the exercise of his authority as Home Secretary, thought it necessary to do what he could to put a stop to this tour of conflagration. Mr. Bruce interposed, not because Murphy spoke disrespectfully of the Pope, but simply because Murphy's lectures led to unpleasant results. And it is on precisely the same grounds that we object to the meetings in the Park. Prevention in such a case is better than cure; in other words, it is easier to deal with the people who get up meetings than with the mobs who follow them about. The promoters of an illegal meeting can be quickly summoned before the magistrate and fined; but a mob which has to be dispersed by force is difficult to manage. We are led to the conclusion that it is not desirable to encourage meetings in the Park by a very simple train of reflections. In the first place, they are not held for purposes of discussion, but simply and solely—as is avowed and boasted—for purposes of intimidation. Those who organize the meetings put themselves to great inconvenience in going so far out of their way as Hyde Park, and they do this simply because they think it will annoy and perhaps frighten people who live in that neighbourhood. In the next place, a meeting, especially a Sunday meeting, draws together a violent and dangerous rabble who can be kept in order only by withdrawing the police from their ordinary duties, and even then it is doubtful whether the police will be found to be equal to the task if they apply themselves to it, as they have never yet done, in earnest. It is hardly fair that Clapham and Highgate should be left at the mercy of the burglars whenever any foolish or malicious demagogue chooses to convoke the mob in a West-End Park.

It was on every ground a mistake to convert what should have been a censure on the Government into a personal attack upon Mr. Ayrton. Mr. Ayrton has proved, in a variety of ways, his grotesque incapacity for the office he is allowed to fill, but in this instance it is not known that he acted without the sanction of his chiefs. The impression which is produced by reading the report of Monday's debate is that, though it was perhaps a very pretty example of smart Parliamentary manœuvring in order to avoid an inconvenient expression of opinion, the Ministry would really have been less seriously damaged if they had frankly acknowledged their error, and endeavoured to put things in proper train for the future. The early history of the Rules is wrapped in an obscurity which it is perhaps hardly worth while to seek to penetrate. The first set of Rules was no sooner drawn up by Mr. Ayrton than it was cancelled by the Cabinet, who substituted a general regulation that the Parks were to be enjoyed by the public as they had previously been enjoyed; and the House of Commons dispersed under the impression that no new Rules would be enforced until they had been submitted to Parliament. The language of Mr. Ayrton and Mr. Gladstone at the close of last Session justified this impression; but there is of course no reason to suppose that they were guilty of a wilful mystification. In October Mr. Ayrton, to the surprise of every one, issued a third set of Rules of the most fantastic and impracticable kind. And now we come to the really mysterious part of the story. Either this third edition of the Rules was or was not approved by the Cabinet. If it was approved, why has it now been set aside? If it was not approved, why was it not at once cancelled like the original draft? Mr. Ayrton's new Rules were issued in October, and provoked a noisy agitation. Their authority was openly challenged by a Fenian meeting, and there were proceedings before the police magistrate and an appeal to the Queen's Bench. All this time the Government seemed to think that the Rules were very nice Rules, and that they must be maintained at all hazards. It is not till Parliament meets, four months afterwards, that the Rules are withdrawn, suddenly and without a syllable of explanation or apology. It would be interesting to know at what moment the Government became convinced that these Rules were objectionable. There was of course no necessity for waiting till Parliament met in order to cancel them; that could have been done any day, and the Judges of the Queen's Bench might surely have been spared the trouble of determining the validity of Rules which the Government had already condemned and privately abandoned. To complete the chapter of blunders and inconsistencies, Mr. Bruce has explained that the fine exacted from the agitator Bailey will not be returned, because his offence was committed, "not in honest ignorance, but in wilful and ostentatious "defiance of the law and those who administer it." We agree with Mr. Bruce that this is a very serious offence, and that it ought to be punished; but why, then, are Odger and the other offenders not to be punished as well as Bailey? The Ministry have assumed the responsibility of Mr. Ayrton's acts; but we can hardly wonder that Mr. Ayrton should decline to be responsible for the vagaries of the Cabinet. They have certainly contrived with disastrous ingenuity to leave nothing undone that could tend to destroy respect for the law, and to inspire contempt for those who are charged with the duty of enforcing it.

MEMORY.

SHOULD we be gainers if the memory of the world were strengthened so that everybody could always recall at will all the things he wishes to recall? Most people will probably be disposed to think that this would be a questionable boon, unless indeed an access of memory brought with it at least an equal access of judgment and sympathy. Many persons lament their defective memory, and wish they could tell you things—"but my memory is so bad"; and we secretly settle with ourselves that "it is best as it is," for the tax on our attention will be the less. Unquestionably attention becomes more fastidious as the world grows older; we are more chary of it than our forefathers. Hence it may be observed that memory does not now hold the place it once did as an accomplishment. Nowadays a good memory meets with as little envy as any quality that can be named; where it exists it is not thought worth while to dispute it. The way is rather to magnify the wonder while denouncing it as, in injudicious hands, a dreadful engine of social oppression. A good memory is to be kept out of sight like a woman's learning, and only aired when you are quite sure of your company. It was not always so; people used to vie with one another in exercises of recollection; opportunities were devised for its display; friends recorded extraordinary feats. In the summary of qualities in old biographies memory takes a prominent place; its triumphs are enumerated, the injurious surmises of adversaries and suspicious doubters are disproved. But perhaps people discovered that when memory was cultivated as an art it was rarely put to its best uses. The elaborate compliments gabbled over so correctly by Thomas Thafoirus were a satire on a system that did not always put the wisest foremost. Men of thought and learning were baffled and kept back for the want of verbal memory or of nerve to use it. Those lights of the Church, Hammond and Sanderson, each suffered from this cause. What might seem to be for all useful purposes a sufficiently good memory would not pass muster

in either case. Hammond's memory was serviceable, not officious; faithful to things and business, but unwillingly retaining the contexture and punctualities of words; so that it was harder for him to get one sermon by heart than to pen twenty. What was hard for him utterly bothered his brother divine, owing, as he said himself, to his unmanly bashfulness. Their quaint biographer relates how the friends repaired together to a small rustic church, Hammond holding the sermon which the other was to declaim verbatim from the pulpit. The attempt was a dolorous failure, even discernible to many of that plain auditory. As the two walked homewards Dr. Sanderson said with much earnestness, "Good Doctor, give me my sermon, and know that neither you nor any man living shall ever persuade me again to preach without my books." To which the reply was, "Good Doctor, be not angry; for if ever I persuade you again to preach without book, I will give you leave to burn all the books I am master of."

The real importance of verbal memory of this sort sank when the art of printing came in and reading became a common accomplishment, though its prestige lasted some time longer. People therefore are right in valuing memory now according to the use it is put to, for its practical services to its owner, or for restoring to us what is otherwise beyond our reach. What a memory retains is the sole test of what it is worth. In its moral aspect the memory may sometimes indicate an unusual warmth, tenderness, and tenacity of affection; but, on the other hand, there are vindictive memories which retain only provocations, or impertinent memories which treasure up precisely the things born to oblivion, or which we should choose to be forgotten. And so, too, there are frivolous memories which retain only trivialities, and entangle the mind in a maze of nothings. To have a verbal memory like Dick Swiveller's, infested with taps of verse and cues of rhyme, is, somebody has said, as vulgar, as destructive of any train of thought worth the name, as the stable-boy's habit of whistling easy airs upon the mere mechanical excitement of a bar or two whistled by some other blockhead in some other stable.

To the man himself any strength of memory which does not hinder reflection and excuse the labour of thought is valuable; but the memory which is worth most to the world is that which keeps us supplied with a knowledge of things that would otherwise be lost. Books and newspapers tell us a great deal, and enable us often to dispense without much inconvenience with the exercise of memory; but there is one branch of study which owes more to faithful, retentive memory than to all the books in the world. We mean the memory that retains in living freshness the sayings and doings, the look and aspect, of a past generation; that can set before us, as it unfolded itself, a scene all the actors in which are dead and gone, and bring to our ears with just emphasis the very words of feeling or passion spoken years ago. How rare this is we know from the difficulty of getting precise information as to persons or events after a brief lapse of time. The incidents that give excellence to biography Dr. Johnson found the most difficult of all things to obtain from survivors. Such incidents are of a volatile and evanescent kind; they soon escape the memory, and are rarely transmitted by tradition. Still there are memories that do their best to rescue a character from oblivion, that delight to renew its life in truthful description. It argues, no doubt, a disengaged, unselfish attention to note the incident at the time as telling and expressive, and this quality stamps itself on the narrative and inspires confidence in the hearer. Those who have patience to listen to these chroniclers are at once performing a pious work and accumulating a store of the best knowledge, which serves them in good stead as opportunity arises. There is no pleasanter talk than the gleanings of a student of character among the memories of the various circles and classes he has mixed with. We leave his company feeling human nature to be a livelier, cleverer, more impressive thing than we had been in the way of finding out for ourselves. Mere invention, expending itself on a past state of things, commonly falls flat; but the reproduction of the actual life of fifty or even twenty years ago is an invaluable contribution. Memory that performs feats commonly expends itself on the laboured efforts of the human understanding. Memory of the higher sort distinguishes for itself what is memorable. To repeat what another has said because it was characteristic of him is a more useful exercise of the talent than to commit pages of the same man's writing to memory. Perhaps too it is a more difficult one.

In these cases the value of memory consists in its literal, even verbal, truth. There are many personal anecdotes which we feel are most probably false—if not wholly false, yet enough so to destroy their use as evidence of character. There must be a stamp of genuineness which only verbal accuracy can supply. Such memories imply habitual conscientiousness; they are respectable as well as brilliant possessions. For few memories are entirely truthful. We many of us find them false mainly to our own cost or inconvenience. We are *sure* we put a missing article where we did not put it, that we read a passage in the middle of a right-hand page when it turns out to be at the top of the left; the eye of memory has the most distinct recollection, and yet it is not true. The most disinterested witnesses at a trial contradict one another because each is sure of what he neither saw nor heard exactly as he thinks he saw or heard it. Nobody is willing to attach any moral taint to these involuntary errors, though a certain steadiness of observation, an habitual holding self in check, and putting positiveness to the test, might have preserved us from it. Again, certain ideas, certain forms of expression, slide into the memory unawares, and pass current for original thought, and betray people into involuntary plagiarism. We suspect that a great many persons assume to themselves a faculty of invention when they are only cheated by their memory introducing itself as an original conception, and performing its feats in disguise. Not many suffer under the reverse deception, of which Charles Lamb accuses himself when lamenting the strange fatality through which everything he touched turned into a lie; relating how he once quoted two lines from a translation of Dante which Hazlitt very greatly admired, and quoted in a book as proof of the stupendous power of that poet. But no such lines were to be found in the translation searched for the purpose; whereupon he adds, "I must have dreamed them, for I am quite sure I did not forge them knowingly. What a misfortune," he plaintively concludes, "to have a lying memory!" On the other hand, a correct memory is the most necessary of all aids to the liar, as we are reminded by a hackneyed proverb; and it also prompts to lying in unprincipled hands. Wood tells a story of Hoskyns the Winchester boy who, having neglected to write his verse exercise, glanced for a minute or two over the shoulder of a more diligent schoolfellow, and upon the master calling him up, said he had lost his paper, but if he might be allowed he would repeat without book the twenty verses he had written; which he was permitted to do. The other boy was called next, and showed the verses which Hoskyns had just repeated, and, being taken for the thief, was sorely whipped.

Next to the lying memory, and far more common, is the treacherous memory that fails us at a pinch, hiding itself in darkness, leaving us cognizant of its existence but eluding our grasp. Nothing is more tantalizing than this state of mind. The man who feels the fact or word or name flitting just out of his reach is a misery to himself and everybody else. Very few people have philosophy enough to give in; to reflect that what they search for in such restless persistence matters to nobody; for the time being they have lost part of themselves and worry after it; for

> Memory frets
> When words that made its body fall away
> And leave it yearning dumbly.

This fretting is a bore, but it is also evidence of the universal regret at the failure of memory. It is one of the most pathetic facts of life, to which no use reconciles us, that so much of the prime and flower of its thought and wit should pass utterly away while still ringing in our ears; that words which range themselves in noble, touching, solemn order should slip out of our thought, never to sound with the same rhythm again; that sayings and incidents, each a revelation of personal character or of deep human nature, should have no witness capable of recording them; that each generation should know so little of its predecessors. This is the memory which men yearn after, for the want of which conversation is disappointing, and history and biography so imperfect; but in desiring which we know not what we ask. Life, in fact, has not room for such memories.

INVECTIVE AS AN ORNAMENT OF DEBATE.

WHEN Mr. Disraeli said that "invective was a great ornament of debate," he was doubtless thinking of the weapon with which he himself had fought his way to the leadership of the Tory party. It was not for the strength of his arguments that the country gentlemen chose him to be their gladiator, nor was it the keenness of his logic that they saluted with frantic cheers. It was the savage strokes that he dealt at the Minister who, as they thought, had basely betrayed the party which had given him place, power, and honour. The fierce, unscrupulous invective which he flung at the renegade made them drunk with joy. Colonel Sibthorp and his friends saw the rhetorical flaying of Peel with some such delight as a band of Red Indians would view the torturing of a famed and dreaded captive. Nor did they too curiously ask what were the motives of the torturer. They forbore to inquire why he had been so quickly filled with a zeal for Protectionism, and why he had so speedily forgotten the Free-trade logic to which he had given the light cogency of wit in his novels. It was enough that the reputation of a traitor was torn to pieces; that the man whom they had once saluted as a paragon of statesmanship was pulled down to the level of commonplace humanity; and that he was accused of having lived on the beggary of other men's intellects. The most stupid of squires doubtless know that Sir Robert Peel was not the compound of pretence, hypocrisy, incapacity, and treachery which was painted in the lurid hues of Mr. Disraeli's perorations. And the more dignified foes of the Minister were doubtless half ashamed of the witty satire which they cheered. But that did not prevent Mr. Disraeli from reaching a first position in the Conservative ranks at a bound by his mastery over invective. When he had once taken his place beside the leaders of his party, he did, it is true, display a rich store of unsuspected qualities, and notably such a power of leading men against their wills into strange paths as eclipsed the personal influence even of greater Parliamentary chiefs. But he might have sat for years on the back benches, and in all probability he would never have been Prime Minister of England, if he had not been a consummate master of satire, and if he had not been audacious in the use of burning epithet. Nor did he sheath the weapon when place had come to him, and

power, and the official privilege to be dull. His later speeches, as clearly as his earlier, are essentially pieces of invective, and his oratory would fill a small space if it relied on the sober qualities of fact and reasoning. In fertility of illustration, in swiftness of argumentative statement, in the union of academic brilliancy and homely force, they lie far behind those of Macaulay. In power of advocacy they do not compete with the harangues of Mr. Bright, or in lucid argumentation with those of Mr. Cobden. Nor in mastery of detail and subtlety of view do they rise to the same dignity as the defective oratory of Mr. Gladstone. They draw their fascination from the fact that the chief passages are essentially personal. Dull and almost commonplace so long as they deal with matters of fact, they are full of point so soon as they fly at character. Who that heard the rhetoric will forget how Mr. Disraeli has again and again lashed out at Mr. Gladstone, or how, on a certain famous if not decorous occasion, he turned aside from the dry details of Parliamentary Reform to paint Mr. Lowe's rich capacities for hate. He has brightened Parliamentary life by the glow of his satire, and cast into the language a crowd of sparkling phrases or epigrams on the follies of his foes. For him sarcasm has thrown so widely open the gates of place, power, and fame, that, if his pride did not disdain the trivialities of heraldry, his crest would be a dart, with the motto "I pierce." It is no wonder that he believes invective to be a great ornament of debate.

The same value might have been attached to poisoned or loaded words by Canning, for his statesmanship was the late flower of a short life, and he made himself formidable in youth chiefly by such qualities as shine in the *Anti-Jacobin*. Sydney Smith contemptuously said that he was no more than a writer of squibs. Pitt knew that stronger stuff lay in the brain that played with its unforced leisure by penning witty lampoons, and that threw the House into convulsions of laughter by the clever levity with which it treated grave themes. But Canning could never cast aside the habit of using his old weapons. A satirist when, with easy conviction and high ambition, he held briefs for Pitt, he was a satirist when the death of Pitt left him the most brilliant debater in the House, and a satirist when, as Foreign Secretary, he penned against Minister Falck the rhyming despatch:—

> In matters of commerce the fault of the Dutch
> Is giving too little and asking too much.

Canning was trained in a time which gave to invective as high a place in the armoury of political discussion as we give to statistics. It is, in fact, startling to compare the ablest political utterances of seventy or eighty years ago with the most powerful of our own day. Burke was unquestionably the most commanding intellect in the Parliament of his time, and he was not the least quick to distrust theories or to see the value of facts. Indeed he waxes fanatical in his contempt for the dreamers who draw the materials of constitutions from the depths of their moral consciousness, and who fancy that they are equipped for the government of a State when they have rhetorically mastered a few windy principles about the rights of man. Although essentially a philosopher, he seemed to grovel at the feet of practical men as if he were half ashamed of his own faculty for generalization. Yet his writings are the most eloquent of practical commentaries on the text that "invective is a great ornament of debate." His *Reflections on the French Revolution* is a piece of invective from the first page to the last. Although a pamphlet in form, it is a speech in reality; and it is the most passionate and most brilliant speech ever addressed to the English people. The coolest mind cannot read it calmly or prosaically. Nowhere else in English literature are such richness, such picturesque force, such point, and such wealth of invective crowded into the same space. Even the passionate malignity and the epigrammatic skill of "Junius" fail to coin a like multiplicity of epithet. The mint of Burke's literary genius was furnished with an indefinite number of dies. And each struck a new impression, so that his pages glow with images of scorn and hate. If Mr. Disraeli were to offer frank counsel to young rhetoricians, he would parody the eulogy which Johnson applied to Addison, and say, "Whoever wishes to attain a Parliamentary style, passionate but not coarse, and picturesque but not flowery, must give his days and nights to the writings of Burke." At least that has been done by Mr. Disraeli himself, just as certainly as it was done by Macaulay. The picturesque epithets, the pointed phrases, the passionate dislike of commonplace words, the Oriental richness of imagery, by which the speeches of the Tory rhetorician charm, amuse, and amaze, recall at every turn the qualities of Burke. They are the reduced copy of a great original. The likeness is so striking that it is difficult for students who are familiar with Mr. Disraeli's peculiar intonations to read aloud some passages of Burke without falling into a mimicry of the living rhetorician's voice. Nor did Burke stand alone in giving a chief place among the weapons of debate to invective. Sheridan's only claim to the honour of statesmanship lay in a rich armoury of personalities. Nor was Fox ever a calm reasoner. He thundered out his arguments with a fury that sometimes made him almost inarticulate, and he was really less eager to make good his case in a calm court of logic than to blazon forth in burning hues the incompetence, the folly, and the perfidy of the right honourable gentlemen opposite. If the prosaic and statistical calmness of living debaters might have been expected from any of Burke's brilliant contemporaries, it might seem to be from Pitt, who had become a statesman before he had ceased to be a youth, and who brought to the House of Commons the principles of Adam Smith and the facts of finance when Fox was ostentatiously ignorant of the economic laws that regulated the commerce of England. And the speeches of Pitt are certainly more like those of our own day than any other speeches of Pitt's time. Their stately frigidity has as certainly been a model to Mr. Gladstone as the Asiatic luxuriance of Burke has been a model to Mr. Disraeli. Yet Pitt's most potent weapon was his power of sarcasm, and he used it unmercifully. As ready for a war of personalities as of facts, he would have used the epigrams of "Junius" if nature had not denied him the faculty of condensing invective into barbed and poisoned epithet.

Such was the place that invective played in debate three or four generations ago. But a wonderful change has come over the House of Commons. Mr. Disraeli is the only debater who keeps alive the old practice with a power worthy of old days. Mr. Bernal Osborne is too light a lance to form another exception when we are speaking of chiefs. Mr. Bright has often flung epithets at his opponents, and his sarcasm on the Cave of Adullam won high success; but the literary merit of such sallies has been enormously exaggerated in a time of strange rhetorical barrenness, and the vigorous stream of invective which Mr. Bright turns upon all who do not agree with him is too vague and general to possess an artistic value. Lord Salisbury strikes a note which is more like the old sound. And Lord Westbury might have become a master in the art if nature had as richly gifted him with oratorical utterance as with bland malignity. Mr. Gladstone often betrays by tone and gesture a wish to wound, but the artistic form of the menacing words does not match the accompanying modulations of the voice, and so they sound like decorous commonplace next morning. In print they would be effective only if they were illustrated by a pictorial sketch of the gesture with which they have been propelled. The reader would then see why the House laughed loudly when Mr. Disraeli said that Mr. Gladstone had given him such a look as to make him glad that there was a solid piece of furniture between them. But gesture is not invective.

There is one obvious cause of the fact that invective fills so much smaller space in the debates of our day than it did in the discussions of a past generation. Although Mr. Miall has been vigorously prompting us to commit political arson, we hardly know what is meant by "blazing principles." Our great party fights would have seemed so many squabbles in the street to the England which was rocked to and fro by the tempest of the French Revolution. We have fallen on a time of prose. Sir Robert Peel—we mean of course the great Sir Robert—put his finger on its real character when he recommended young members of Parliament to leave the windy strifes of foreign politics alone, and go for lessons in statesmanship to the Railway Committees. There they would find few principles and many facts. There they would learn to become masters of detail. And this is essentially a time of detail. The House of Commons gives a specimen of its real ability only when it deals with matters of detail. It often displays a consummate power of practical criticism when it examines the several clauses of a Bill in Committee of the whole House; when every chairman of Quarter Sessions and every country squire brings the experience of a lifetime to bear on any scheme for the readjustment of local taxation; or when heavy members from the City fling down piles of tabulated figures and facts to turn aside the ploughshare of a Budget. But heroic oratory is as distasteful as "heroic remedies" to an age in which Cobden made himself the idol of the middle class by a large and vigorous arithmetical faculty, by contemptuously pushing aside all theories that were too subtile to be comprehended at a glance in the counting-house, and by speaking in a style which was a model of clearness, which did not contain one eloquent sentence or one far-reaching thought, and which did not let fall a single phrase felicitous enough to be remembered a generation hence. Mr. Cobden's audiences were so eager to get at the facts of the subject before them, and they were so little troubled by a fastidious culture, that they did not complain because the statement was not spiced with invective. But there is a less flattering reason why invective now plays a small part in debate. It is a difficult weapon to handle. Mere abuse is not invective; it is only an expression of rage. Very often it signifies only that the author of it would wound if he could. Nor is the feeble and monotonous blasphemy of the streets the invective of art. It is only the round general terms that betray confusion of thought, and an inability to find a phrase of accurate description. It bears the same relation to invective as the crying of an infant bears to the articulate complaints of its future years. But artistic invective stands on an altogether different plane. Its aim is to do the work of argument by means of a sentence or a phrase. It should paint the victim as such a fool or such a knave that what he says must seem incredible, or ridiculous, or the offspring of a wish to dip his hand into the public purse. Such invective as will tell on the House of Commons must, on the other hand, be so free from any taint of vulgarity, or of cant, or of vague abuse, that it must be able to bear analysis at the hand of educated gentlemen. It must be descriptive, it must condense an argument into a phrase, or it must in some other way give a criticism in shorthand. It is nothing if it is not epigrammatic. And, if it is epigrammatic, it will be pardoned for being false. When Mr. Disraeli said that Sir Robert Peel's life had been "one great appropriation clause," Lord George Bentinck and the howling phalanx of squires did not believe the phrase to be literally true; but it had a basis of truth, for Sir

Robert Peel had an assimilating rather than an originating mind, and the words were a witty exaggeration of the fact that he had to cast about for ideas. Such satire can be minted, however, only by men of literary power. It is common in France, which is more richly endowed than any other nation with the faculty of artistic expression, and it is to be seen even in the degenerate Assembly which mirrors the passions rather than the intellect of a country that shows symptoms of decline. It was common in England when Burke, Sheridan, and Fox all framed their oratory on a high literary model. But it is vanishing from a House of Commons which represents before all things the select vestry and the counting-house. There has seldom been a House so poor in all the higher, subtler, richer graces of culture and literary capacity as that which has again begun to legislate and speak. Its "great debates" seldom bring forth one great speech of the old stamp. Such greatness as it does display comes from a command of detail; and in that respect Mr. Gladstone has seldom, if ever, had a superior in the House of Commons. The power may be somewhat Churchwardenish, and it is whispered that Mr. Disraeli once apologized for his own lack of it by saying, with an air of grand sarcasm, "My intellect was never parochial." At least it is the power which comes most readily to a commonplace mind, and it offers the dullest and most ephemeral of all reading. No chance of living belongs to speeches which are only masses of detail. Those alone live which rise from detail to general principles, which deal with truth that does not perish with the day, or which clothe fact, argument, and feeling in language that has the true touch of literature. And such speeches are now so seldom heard in the House of Commons that a generation hence this Household Suffrage Parliament will be remembered only for what it did, not for what it said. It betrays the reign of the *bourgeoisie*. And the young members of the House display so little power of raising the standard of oratory, that we may have to wait long for a revival of the power to give reason and feeling the utterance of artistic grace. But when culture shall come back to the House of Commons, and with it political passion, invective will again be a great ornament of debate.

EUTHANASIA.

A CURIOUS controversy in which we were more or less concerned shows symptoms of breaking out afresh. The original cause of the discussion was an essay which formed part of a volume published by the Birmingham Speculative Club. Mr. Williams, its author, suggested that persons dying of incurable diseases should be mercifully put out of the way, as we shoot a favourite dog or horse under similar circumstances. There was undoubtedly, in a sense, something attractive about the proposal; and, moreover, the essay in which it was set forth showed considerable literary power. The author belonged to the small class of systematic pessimists; he held that, on the whole, pain greatly predominates over pleasure throughout the knowable universe, and that all that was left to us was to diminish its amount within the narrowest possible limits. Without sharing so appalling a creed, we admired, from a purely artistic point of view, the vigour with which it was proposed as a basis for action. Mr. Williams indeed seemed to prove too much; for if humanity is really in so pitiable a state as he imagined, we ought all to be classed amongst the incurables. There would be a presumption in favour of killing anybody; and our only logical course would be to join the Shakers or the Russian sect which thinks that the process of increasing and multiplying should be summarily stopped. Limiting ourselves, however, to the narrower question, we could not deny that Mr. Williams rested his case upon an undoubted basis of fact. There are many cases in which cruel suffering is endured for days or weeks without the smallest prospect of ultimate relief. The friends of the sufferer feel it to be their duty to keep life in the body as long as it can possibly be preserved, though life means merely a prolongation of torture. To put an end to the victim in such a case would undoubtedly be, so far, to diminish the total amount of human suffering; and if that were the whole of the question, we must, on utilitarian principles, admit the cogency of Mr. Williams's argument. A curious passage has been quoted from Sir Thomas More's *Utopia* which shows that that amiable philosopher had been impressed by the same reflections. The clergy in his ideal country encouraged their flocks in the discharge of this melancholy duty. A writer in the *Fortnightly Review*, who has just taken up this proposed reform in our morals, apparently in sober earnest, and in the spirit of an eager proselyte, adopts the suggestion. He thinks that, to provide a due guarantee against the possible abuse of a practice which certainly would have its dangers in careless hands, the clergyman of the parish should be always present on the occasion of the proposed *Hari-Kari*. Future novelists will have to paint the white-haired vicar, summoned from his repose at dead of night, not in order to soothe the dying hours of his parishioners by spiritual consolations, but to kill them offhand. A good deal of trouble will be saved both to vicar and parishioners, but to our uneducated minds the priestly character seems to be scarcely in harmony with ministrations of this kind. We can, indeed, produce a close parallel. Mr. Charles Buxton suggested, in the posthumous book which we lately reviewed, that old and imbecile persons should be shot by the bishop of the diocese. We are inclined indeed to suspect that Mr. Buxton was not quite serious, and therefore that he differed a little from these very earnest advocates of the new mode of lightening the heavy burden of humanity. However, in Utopia it is possible that this and other applications of the same principle may be carried out. When we are a little more enlightened we shall perhaps take upon ourselves the responsibility of pruning mankind as we now prune a garden. Such a scheme, carried out systematically and with adequate knowledge, would provide the solution of many difficulties. Mankind might be allowed to multiply as fast as they pleased; all children would be allowed to grow up, say, to twenty-one; it would be determined by law how many conscripts were required for the service of humanity, the finest specimens would be selected for the purpose, and the inferior would be put to death with all possible kindness. Not only physical, but moral or intellectual, infirmities, such as a tendency to kill, or rob, or bore one's neighbours, or an incapacity for arithmetic, would be considered as reasons for plucking, which in this case would mean killing, the unfortunate candidate for life. These speculations, however, as we are anxious to repeat, apply strictly and solely to Utopia. We should most strongly oppose a Bill for giving effect to our suggestions if Mr. Gladstone should introduce one in the next Session of Parliament. We are speaking merely of that imaginary region where the laws of society will be laid down on mathematical principles, and morality ground out by a calculating machine. That we have not yet arrived at that consummation cannot be too distinctly announced, for it seems to be a prevalent notion with many modern zealots that whatever would be true in Utopia is true of England in this nineteenth century. There could not be, in our opinion, a more fatal mistake, and the proposal of which we are speaking is a curious illustration of the fact. Whether admissible or not amongst the "Coming Race," or in "Erewhon," or some other land of the future, we protest against it altogether when proposed as a practical innovation at the present day.

Without examining the religious aspect of the question, a simple utilitarian view seems to give quite sufficient answer. The proposal, briefly put, is to legalize suicide in certain cases. In order to support this doctrine, it is said that the absolute prohibition of suicide sometimes causes great and unnecessary misery. That is true, and is indeed little more than a truism; it is equally true of almost every other moral law that can be mentioned. Casuists have invented any number of cases in which the discharge of a duty involves a great amount of suffering, and they have generally decided that, in some extreme cases, the duty ceases to be binding. Such, for example, is the hypothetical case of telling a lie to prevent a murder. The mischief done by adherence to the law may conceivably be so great and palpable as to overbalance the mischief always done by breaking the law. In like manner, in the case under consideration it is possible to suggest instances where the suffering is so fearful and so obviously useless that few persons would condemn with severity the man who should on his own responsibility break the law. But moralists have very rightly been shy of making a definite exception to the law, even whilst admitting that in some extreme cases obedience may become impracticable. There is an enormous difference between saying beforehand, The rule against suicide has such and such definite limitations, and admitting that in some indefinite cases the palliation of the offence may almost amount to an excuse. There are some cases in which murder turns into excusable homicide; but it would be very rash for the Legislature to attempt an exhaustive definition of them beforehand. The question is better left to the jury and to the authority with whom the power of pardon remains. And thus, whilst admitting that exceptional cases are conceivable, we altogether decline to admit that the rule against suicide should be relaxed in a definite set of cases. Our objection rests on a very simple principle, as indeed we explained when previously discussing the subject.

It is of primary importance to inculcate a regard for the sanctity of human life. The reluctance to take life is indeed often pushed to an extreme by the opponents of capital punishments. But nobody can say that the mass of the population have as yet pushed their tenderness to the verge of effeminacy. A little story related for a different purpose in the *Fortnightly Review* illustrates very prettily a sentiment which is not so uncommon as might be desired. A sensible Scotchman watching by the bedside of his dying wife became impatient at the poor woman's anxiety to express her last wishes, and civilly requested her to "get on wi' her deeing." Now amongst the poorer classes, where the inconvenience inflicted by people who "take an unconscionable time in dying" is necessarily felt much more keenly than with people in a different rank, it is to be feared that this delicate hint is frequently followed up by some practical remonstrances. "They pinched his nose beneath the clothes," as Barham says, on the authority of a real occurrence, "and the poor dear soul went off like a lamb." Suppose, in fact, the case of a small cottage, where the invalid has become a heavy burden upon his family instead of a support, where the expense of providing medicine and attendance is most seriously felt, and where the sick room is also the only dwelling room, must there not frequently be a strong temptation to give him a quiet push or two along the downward path? If it were understood to be the law that invalids might be finished off when the case was hopeless, would not the temptation be frequently overpowering? Yes, it is replied, but the doctor and the parson must be present. That is all very well, but if the practice became common the people would quickly learn to take the law into their own hands. For it is to be observed that this is one of the cases where nobody could tell tales. A man on the verge of death does not require to have

his throat cut or a dose of arsenic administered. A judicious shake, an omission to cover him properly, or the exhibition of an over-dose of laudanum, will do the business effectually, and no possible proof remains. Once allow that such things may be done with due precautions, and the precautions will soon be neglected as troublesome formalities. Why bother the doctor and the parson, why ask the sick man's consent, when the case is so clear? Of course the system need not be openly mentioned, but it would be speedily understood to be a highly convenient practice. The advocates of the scheme admit that the precautions of which we have spoken are absolutely necessary to prevent abuse; and we may add that it is simply impossible to enforce their observance. The practice itself once sanctioned, nothing is clearer than that people could, if they chose, carry it out in their own methods. No practice, again, could be more directly destructive of any strong persuasion of the sanctity of life. We need only read a few police reports to understand how great is the existing tendency to violence of all kinds. Infanticide, as we know, prevails to a terrible extent, and wife-killing is not much less popular. Admit that the slaughter of invalids is also right under certain limitations, and it is easy to guess the consequences. The devotion which the poor display in cases of sickness is often amongst the most touching and amiable features of their character. In spite of the temptations we have noticed, they will often make noble sacrifices for the comfort of their dying relatives. Tell them plainly that they are rather fools for their pains than otherwise, and that they had better suggest suicide to the sufferer at the earliest opportunity, and you do your best to encourage, not merely suicide, but the cruel murder of a helpless man. A deathbed, instead of being the scene for calling forth the tenderest emotions and the noblest self-sacrifice, will be haunted by a horrid suspicion; the sick man fearing that his departure is earnestly desired, and his friends inclining to the opinion that killing is not murder, but kindness. The agitation of the question what is the proper moment for smothering your dying father instead of soothing him is not favourable to the development of those sentiments and the inculcation of those lessons which we generally associate with a sick-bed. In fact, the plan which certain eccentric philanthropists have advocated with such queer enthusiasm has a direct tendency to make men greater brutes than they are, and they are quite brutal enough already.

A LOCAL PAPER A HUNDRED AND FIFTY YEARS BACK.

WE have lately come by chance on one of those smaller relics of past times which perhaps bring those past times before us in a more vivid way than the more dignified sources of history. A will, a journal, a private or local document of any kind, will often, in the hands of one who knows how to make use of it, prove even more than a state paper. Here we have before us a local newspaper, at least the reprint of one, a hundred and fifty years old. The *Reading Mercury* has, it seems, just reached that venerable time of life, and it has wisely commemorated the fact by giving its subscribers a facsimile of the number of the paper which appeared on February 1st, 1723. The outward form of the paper is widely different from that of a local paper of our own day, and its matter is no less widely different. It has the air rather of a pamphlet than of a newspaper, consisting of eight small quarto pages, the first of which is wholly taken up by a title-page, made up mainly of a symbolical picture. If we turn to the contents, we at once feel that the paper is meant for a class of readers quite different from those for whom local papers are now meant, and for a much higher class. We have no special knowledge of the *Reading Mercury*, but we will suppose it to be an average specimen of the higher class of the ordinary country paper. We of course put out of comparison papers like some of those published in Manchester, Glasgow, and others of the great Northern cities, which, though not published in a capital, are really something more than local. Comparing our Reading paper of 1723 with an ordinary respectable county paper of 1873, our first feeling is that the standard of taste and culture must have stood higher in Reading and the coasts thereof a hundred and fifty years ago than it does now. The paper is printed at Reading, but the affairs of Reading and its neighbourhood take up only a few lines of its seven pages; all the rest is devoted to matter of national and even of cosmopolitan interest. But we should be greatly mistaken if we thought that this at all proves that the inhabitants of Reading have gone back in cultivation since 1723. That the paper has in some respects a higher character than a local paper has now is simply because many more people can read now than could read then. We must of course bear in mind that in those days the society of a county town stood, though not positively, yet relatively, higher than it does now. Reading in 1723 would not have lost the character of a local capital, of which a few places like York and Exeter keep some traces still. We may be sure that a class of people lived there then whose descendants most likely do not live there now. But notwithstanding this, we may be sure that the standard of culture in Reading or in any English town is higher now than it was in 1723. The real difference is that the local paper of those days was addressed to the highest standard in its own neighbourhood, while the local paper now is, not exclusively but mainly, addressed to a standard far short of the highest. Those who now form the great body of the readers of a local paper would in 1723 have read nothing at all, and those for whom the paper of 1723 was published would now, to say the least, read London papers as well. In 1723 the *Reading Mercury* was doubtless, if not the only, yet certainly the chief, means of communication with the outer world which was open to the reading public of Reading and its neighbourhood. As such, it appeals not to their lowest but to their highest tastes; it conceives them as taking at least as much interest in the doings of his Czarish Majesty as in their neighbour who was knocked down and bruised by two footpads. No doubt a modern local paper has its general and foreign as well as its local news. But then the higher class of its readers hardly look at those parts of it; they get their knowledge of those matters from other sources. It is only a lower class of readers to whom the local paper is really the means of giving knowledge about the affairs of the world in general. In 1723 this class did not exist; it was only the more cultivated part of the inhabitants of Reading who read anything at all, and, as far as the current events of the world were concerned, most of them could have had no means of learning anything except from the *Reading Mercury*.

The local paper of 1723, besides the difference in its size and shape, differs from a modern local paper in two very marked ways. It has nothing at all like a leading article; it states facts without comments, or with such comments only as were supplied by the sources whence it got its facts. And it is written throughout in straightforward English; there is not the faintest approach to fine writing, there is not the feeblest shadow of a joke, from one end of its seven pages to the other. The chroniclers of current events in those days, just like the travellers in those days, simply said what they had to say, and did not think it any part of their business to bring in a hop, skip, and a jump in every sentence. We may also mark another thing; the title-page announces that the paper is printed by D. Kinnier, whose name sounds like that of a Scot who had come to enlighten the Berkshire men; and it is added "of whom may be had Land-tax Receipts, Assessors Warrants, Funeral Affidavits, and by whom Advertisements are taken in." To judge, however, from the paper itself, it would not seem that any advertisements were taken in; at least there is nothing like an advertisement in the paper, unless we reckon half a page of "Books published in London, this week." These amount to four, the first of which is no other than Burnet's Travels through Switzerland, Italy, some parts of Germany, &c., a book which it is instructive to compare with any modern book about the same countries. Burnet did not go up the mountains, and he did get up the constitutions. Another is a Mr. Whiston's *Proposals for Printing by Subscription, authentick Records concerning the Jewish and Christian Religions.* Several places are mentioned where subscriptions are taken in, but all are in London; it does not seem that the great monoganist had any agent in Reading. This comes on the second page along with the weekly bill of mortality for London; there is in the last page a weekly bill of mortality for Reading. At Reading, if we rightly understand, only three persons died in the week, and that was an increase of two on the burials in the week before. All three died of "the convulsions," unless indeed we are to raise the deaths to seven and suppose that the word "Ch rined," which we took to mean "christened," really stands for some kind of disease. Certainly some of the causes of death in the London report seem strange enough. Of the 761 burials no less than 308 are those of people who have died of "convulsion," which, plural at Reading, becomes singular in London. Four died of "headmouldshot," two of "livergrown," one of "purples," and two of "rising of the lights." Two are entered as "chrisoms," which ought to mean while still in the white robe of baptism, but which we believe had, in the language of bills of mortality, got to mean unbaptized children. Besides these there are, as in Sir Richard Baker's Chronicle, the "Casualties" "Drowned in the river of Thames at St. Paul at Shadwel 3. Found dead at St. Margaret in Westminster 2. Murder'd at St. Olave in Southwark 1. Overlaid 3."

The London exports and imports are given, and the prices of corn in Reading market. Several elections of members of Parliament are recorded, and several ecclesiastical preferments. Among the former we find that "George Morton Pitt, Esq."—the only person mentioned in the paper who has a double name—"one of the Representatives of Old Sarum, having since his Election accepted of the place of Regis*ter* [*sic*] of his Majesty's Revenue of the Excise, is rechosen a Burges of the said borough." The election for Kingston-upon-Hull is described at much greater length, and the Reading paper copies seemingly from the London *Evening Post* the exulting words of a Hull informant, how George Crowle, Esq., was elected "to the entire Satisfaction not only of this Town, but of the whole Country round about us; who heartily joyn with us in giving all possible demonstrations of joy upon our having chosen a Gentleman of the most unblemish'd Character, being sincerely Loyal to his most Sacred Majesty, a Zealous Asserter to the Just Rights and Privileges of his Countrymen, more especially of his Fellow Burgesses, and a true Lover of our present happy Establishment in Church as well as State." This is the finest political flourish in the paper. For the rest, we hear of a few cases of robbery, one of them of a clergyman in a chariot in High Holbourn, of the taking of a pirate sloop in the West Indies, how "Saturday last Sir Richard Steele, Kt., Member of Parliament for Wendover, arrived in Town from Bath in good health," and how "the Corpse of William Lowndes, Esq., late Coadjutor Secretary with Horatio Walpole, Esq. to the Lords Commissioners of the Treasury," was to lie in state successively

at two houses of his in Buckinghamshire. Of anything like private gossip the only bit runs thus:—

> We hear, that a treaty of Marriage is on Foot between John Mydleton, Esq., Brother of Robert Mydleton of Chirk Castle in the County of Denbigh, Esq.; and the only Daughter of Mrs. Liddel, of Bedford Row, a young Lady of a very considerable Fortune.

Happy 1723, when a treaty of marriage was "on foot" and not "on the tapis." Of anything like a Court Circular there is not a trace; there is no account of any personal doings of the King or any of the Royal Family. Only we do hear that at Newcastle-upon-Tyne "his Majesty's Health and the Health of the Prince and Princess of Wales, and the Royal Family were drank with the utmost Loyalty, and the Evening concluded with ringing of Bells, and other Demonstration of Joy." But this was because "William Carr, Esq., our Representative in Parliament, deliver'd to the Mayor, Matthew Featherstone, Esq., his Majesty's Licence and Pardon to this Corporation, for having some time ago made a considerable Purchase of Land contrary to the Statute of Mort-Main." The account of these rejoicings at Newcastle is followed by a paragraph saying "We hear, that a Proposal will be laid before the Parliament, to reduce the Duty on French Brandy, to prevent the Smuggling of it." The article before the word "Parliament" has now quite gone out of use, as has the addition of "Esquire" to the names of persons bearing the prefix of "Honourable." But as "Honourable" is an adjective and "Esquire" a substantive, and as peers' younger sons are Esquires, the custom is perfectly reasonable.

But perhaps the most taking part of our *Reading Mercury* is to be found in its notices of foreign affairs. The year 1723 was not an unimportant point in European history. Some of the entries read almost as if they belonged to our own time; only the titles of "Emperor" and "Imperial Majesty" are reserved to their proper owners, and the sovereign of Muscovy, though the Great Peter himself, is pointedly distinguished as "the Czar" and "his Czarish Majesty":—

> Mr. Dierling, Resident of the Emperor [at Constantinople] had an Audience of the Grand Vizier; who 'tis said, declared to him that the Grand Seignior seeing that notwithstanding the Remonstrances of the Porte, the Czar goes on with augmenting his Troops on the side of Persia, with an intent, it seems, to subdue Part of that Kingdom, his Highness has thought proper to send some of his Forces towards the Frontiers of Russia, to oblige his Czarish Majesty to desist from his Enterprize, which, if carried on, would certainly prove very prejudicial to the Ottoman Empire. That, however, the Grand Signior will always be disposed to preserve Amity and Friendship with the Czar, provided his Czarish Majesty, abandons his Conquests on the Caspian Sea.

In another part is a curious account, coming in letters from Lisbon, of the disputes between different Christian sects at Jerusalem, how a Franciscan friar "proselyted a Grecian Priest and endeavour'd to do the same by his neighbours and acquaintances," how the Greeks "wrote to Court, complaining bitterly of the Innovation," and how "the Sultan, willing to oblige the Greeks, decreed, that those Monks should neither preach nor enter the House of any Laymen, whether Romanists or others, and that all the new Converts *should return to their old Principles upon pain of Imprisonment.*" The Franciscans then send two of their own body to the Sultan, praying that the decree may not be carried out, "but till they hear further they are forced to perform the Offices by Night, and with the utmost Secresy, for fear of the Greeks."

Lastly, there is much about the resignation of the Crown of Spain by Philip the Fifth, and "how we hear that the late Queen of Spain would very willingly have diverted his late Catholick Majesty from his Resignation, but she came to the knowledge of it too late, so that finding no Remedy and perceiving the Spanish Grandees jealous of her Authority and, uneasy at her favouring Italians, she quitted the Throne with all apparent satisfaction. Everybody is expecting the Consequences of an Event so very surprising." In the same extract from the *St. James's Evening Post* we find that Cardinal Alberoni "receiv'd his Hat."

Altogether the Reading people got no bad supply of news in 1723; but they had to comment for themselves.

THE PROTEST OF THE PRUSSIAN BISHOPS.

IT was of course not to be expected that the Prussian bishops would pass over in silence the proposed ecclesiastical legislation to which we recently called attention. They could not but feel, as one of the German newspapers expresses it, that a sufficiently strong leverage has been applied to disintegrate the whole fabric of hierarchical and Ultramontane ascendency in the country. And they have accordingly issued what is on all sides understood to be not so much a protest as a menace, but a menace the true value of which had been pretty well discounted beforehand by the Government, as is clear from the brief and somewhat contemptuous comment of the semi-official *Provincial Correspondenz*. One or two obvious criticisms are indeed suggested by a first cursory glance at the document, and before entering on any detailed examination of its verbose and interminable paragraphs. In the first place, it is worth observing that, while the protest is presented to the Cabinet by the two Archbishops "in the name of the rest of the Episcopate," we have no intimation of its having received their signatures, from which we may perhaps infer that some at least of the body felt shy of committing themselves too definitely. Not indeed that their signing an official protest would have proved much as to their real sentiments. All the German bishops subscribed the recent protest against the expulsion of the Jesuits, but it is said that two of the best known among them, one of whom was appointed after the Vatican Council, freely express in private conversation their satisfaction that the Jesuits are got rid of. And then again there is the important point, of which the Government organ has not failed to remind them, that these very bishops protested at Rome against the action of the majority of the Council on the express ground, among others, that it must inevitably lead to conflicts between Church and State, in the responsibility of which they desired to disclaim all share before God and man. Still more explicit, we may add, was the language of Archbishop Kenrick of St. Louis, in his published *Concio de Pontificiâ Infallibilitate* (quoted in Lord Acton's *Letter to a German Bishop*), where he says, "Qui Concilii decretis obsequi vellent, invenient se maximis in difficultatibus versari, Gubernii civilis eos tanquam subditos minus fidos, *haud sine verisimilitudinis specie*, habebunt." The Archbishop had, in fact, predicted accurately enough what has since occurred in Germany, where the undisguised political disaffection of the infallibilist party has led the Government to take up a decided attitude. Another general remark is suggested by the mingled complaints of persecution and ostentatious aspirations for martyrdom—except indeed in the unromantic form of pecuniary fines, which alone are threatened—so freely indulged in throughout the episcopal memorial. The prelates appear to forget that the State only interferes with their freedom of action so far as it accords them its support. The new laws apply to the two established and endowed Churches of Germany—the Catholic and Evangelical—and to those alone. The appeal to the absolute freedom enjoyed by Catholic bishops in England and North America, where they are simply regarded by the State as ministers of one out of many unestablished sects, is therefore illusory. If the German bishops like to purchase immunity from State control by resigning their civil privileges and endowments, they can do so to-morrow. But, in spite of their brave words, it is highly improbable that they will do anything of the kind, and it is tolerably certain that many of them have as little genuine desire to be taken at their word as they had genuine affection for the Jesuits.

The memorialists are determined to begin *ab ovo*, and their protest, said to be the composition of Bishop Ketteler, starts with a minute and long-winded exposition of the rights possessed by the Church in Prussia on grounds of Catholic doctrine, the laws of nature, common law, statute law, and Concordats. The first and most essential of these rights is that of maintaining full communion with "the Pope, who is by divine institution the foundation (*Fundament*) and supreme pastor of the Church." The second is the absolute independence of the bishops of all authority except that of the Pope. And then we are told that the three great duties of bishops, which are inalienable from their sacred office, are to proclaim and guard the Catholic doctrine, to select, educate, and commission their clergy, and to suspend and excommunicate all obstinate offenders; all these rights and duties the new laws "violate and annihilate." First comes a complaint of the claim of the State to interfere with clerical appointments, though only on civil and political grounds, and though such a claim is admitted to exist and to be allowed in other countries. On this it is enough to observe here that any priest may be ordained and open a church if he or the bishop can build or get it built themselves; but if he is to hold an endowed benefice, the State claims a veto on the appointment. The bishops soon pass on, however, to what was sure to be the main topic of their jeremiade; for it touches most closely on their moral influence and the whole tone and spirit of the future clergy of Germany—we mean the laws on clerical education. Here again they begin by appealing, not exactly to the laws of nature, but to the precedent of eighteen centuries, forgetting apparently what is admitted in their very next paragraph, that the separate system of seminary training which they are anxious to preserve at all hazards is at most barely three centuries old, having been first established—to meet a special emergency—by the Council of Trent. Nor is it easy to understand, except indeed in connexion with the infallibilist controversy—for there is hardly a Theological Faculty in Germany that has not protested against the new dogma—their vehement dislike to the University education of their clergy, which has been the general rule hitherto in many German dioceses. Still less intelligible is their objection to the clerical students being subjected "not only to a matriculation examination, but to a final examination at the close of the three years' course," which, by the by, they are quite wrong in saying is not required of any other class. There are various civil offices in Germany for which the State insists on a University degree. Complaints are sometimes made of the rigour of many English bishops in refusing to ordain candidates who have not taken their B.A. degree. What would be thought of their insisting on the rule that residence at Oxford or Cambridge could only be permitted to candidates for orders on condition that they never entered the final schools? Yet this is what the German bishops claim as a sacred right—again, we presume, from their knowledge that nearly all the professors, secular or theological, are anti-infallibilists. The objection to the closing of the seminaries or clerical colleges at the Universities is less obviously unreasonable. But it must be remembered that these establishments are supported by the State,

and if the bishops choose to found and endow colleges of their own, there is nothing to prevent their doing so; still less is any restriction placed on such theological training as they may like to bestow on their students after the general University course is completed. Whether the boys' colleges, which are also to be closed, are State establishments we are not aware; but there can be little doubt that the separate training of students intended for the priesthood from early childhood is a mischievous and irrational system. No doubt the real ground of the extreme soreness of the bishops is revealed in the paragraph where they speak of "what people are fond of calling"—and, we must add, rightly calling—"the Ultramontane spirit dominant among the clergy," which the present method of education is carefully calculated to foster. And this feeling is still more unmistakably betrayed in their comments on the restraint put by the new laws on the infliction of ecclesiastical penalties.

It may seem strange at first sight that Christian bishops should put in the forefront of the most sacred rights and duties of their office the right of depriving, suspending, and excommunicating all who resist their authority. But this is of course to be explained by the crusade at present being waged by some of them against the Old Catholics. We say advisedly by some of them, for it is well known—and probably to no one better than to the Imperial Chancellor—that in this matter there is no unity of opinion or practice among them. It is true that nearly all the German and Austrian bishops have promulgated the Vatican decrees, but in many cases this amounts to no more than announcing publicly the fact that the Council has assembled and that certain decrees have been issued, without professing or attempting to insist on the acceptance of the new doctrines. This course has been pursued, for instance, by Cardinal Rauscher and Cardinal Schwarzenberg, and the latter prelate still maintains the most friendly relations with Schulte, Professor of Canon Law in his cathedral city, who presided both in 1871 and 1872 at the Old Catholic Congress, and who continues as heretofore to frequent the regular worship and sacraments of the Church. Take again the case of Bishop Hefele, who himself made a formal submission under strong pressure, but who has so little attempted to enforce the dogmas in his diocese that he has never asked for the adhesion of Dr. Kuhn, the first dogmatic theologian of Catholic Germany, and the rest of the Theological Faculty of Tubingen, who are known to be anti-infallibilists to a man. Not long ago one of them was offered a chair at Rome, and declined it on the ground that he would be excommunicated if he went there by the Archbishop of Cologne, who is now one of the few thoroughgoing infallibilists among the German bishops. Another eminent and learned bishop, who has made a formal submission, nevertheless tells every one that the present difficulties in the Church must be settled by drawing a broad line between the doctrines ruled before the division of East and West, which all Catholics are agreed upon, and those defined since; and this is precisely the contention of the Old Catholics. If we turn for a moment to France, Bishop Dupanloup, who, as it has been said, "has made not simply a submission, but a prostration," to the decrees of the Council, is well known to make no scruple whatever of administering the sacraments to professed recalcitrants. It was indeed publicly affirmed by several speakers at the Cologne Congress last autumn that no difficulty whatever was generally made about admitting Old Catholics to the sacraments. At Munich, where the movement first took shape through the suicidal indiscretion of the Archbishop in giving it the most influential leader that could have been found in Catholic Germany, or in the Catholic Church anywhere, all interrogatories in the confessional were dropped directly an Old Catholic church was opened to receive the dissidents. On the whole it may well be doubted whether the excommunicating zeal of the protesting bishops is to be taken seriously as regards a good many of them; and this doubt is increased when we find them gravely complaining of the prohibition to publish their sentences from the pulpit as hindering "the main end of excommunication," for such publication was already forbidden by the existing law of libel. But we have no doubt at all that they are quite in earnest in their protest against the legal protection henceforth secured to the clergy against their own arbitrary authority, and as little that they are wrong in assuming that "the whole Catholic clergy of Germany will feel no sort of gratitude to the authors of this law." Those who are best acquainted with the German clergy tell a very different tale, though it is of course very possible, under the crushing pressure of discipline, that many of them may be induced to sign petitions against it. And when it is remembered—to quote but one instance—that a priest was deprived of his cure not many years ago for expressing disbelief in the genuineness of the Holy Coat of Trèves, we shall be able to appreciate the value of the bishops' assertion of their extreme "love and gentleness" in their "very rare" exercise of penal discipline. They wind up with a solemn assurance, which may be taken for what it is worth, of their resolve never to acknowledge the new tribunal for ecclesiastical affairs now to be established, and to defend to the last "the very least of their ecclesiastical rights." And then follows a broad hint of the resistance of "the many millions of Prussian Catholics," who have, however, themselves as yet maintained a significant silence on the subject, and an assurance that it is a moral impossibility for any Catholic bishop to obey these laws, "the forcible execution of which will bring untold misery on our Catholic people and our beloved Fatherland." Certainly, as one of the speakers said the other day at the Cologne Congress, "the ecclesiastical question has become the chief and most burning question of the day, even in a political point of view," in Germany, as also in Switzerland. It is clear that the Old Catholic movement on the one hand and Ultramontane intrigues on the other are rapidly bringing matters to a crisis. And if there is any truth in the report, which is not improbable in itself, though we do not vouch for its correctness, that Prince Bismarck contemplates appointing Reinkens, or one of the other leaders of the movement, to the next vacant bishopric, the real strength of the rival parties in the Roman Catholic Church will soon be rudely tested. The ultimate result must depend largely on the attitude of the Catholic laity, and there is every reason to believe that the great body of them are on the side of the Government.

COALS, COLD, AND CLIMATES.

ALTHOUGH our climate can scarcely be called a genial one, perhaps on the whole we suffer less from cold than some of our neighbours who live to the south of us. It is our way to talk of sunny Italy, and sunny enough it is in the sunny season. But those who have tried wintering in an Italian summer resort generally pick up some new ideas as to the atmospheric conditions of the country. The cold may never be so intense as in England, although we should be very sorry to assert as much; but then the usual means of protecting yourself from cold are lamentably inadequate. The best houses, with their best rooms facing to the north and east, are carefully constructed so as to escape every ray of sun; under the arched galleries outside your windows you obtain the temperature of an icehouse, with the flavour of a family vault; none of the numberless windows shut, and all the innumerable doors fly open; your romantic villa becomes a palace of the bitterest winds; probably there is but a solitary fireplace in your ample suite of apartments; the only fuel is wood, sold by the pound; you heap all your spare wardrobe on your bed of a night, and, if you are wise, you never stir in your corridors without carrying a charcoal hand-stove for company. You speedily discover that the lungs of the invalid of your party are by no means receiving the soothing treatment which the doctors recommended, while even the comfort of the robust is so seriously compromised that in all probability you decide to make a premature flitting. But if you are miserable in spite of your hardy English training and your stores of English woollen garments, what must be the lot of the unlucky peasants who live higher up the hills? For about nine months in the year they are used to bask about upon their glowing slopes like their own lizards. Their dress as a rule is about as light and scanty as a citizen's of Timbuctoo, and you may be sure they have few spare suits. They go as ragged as the thatch of their huts, and the openings which in their dwellings do duty for windows stand absolutely exposed to the air, or are closed with warped and cracked shutters. They cannot burn their olives or almond trees, and the neighbouring copses are strictly protected by the guards of the proprietors or of the village authorities. It is easy to read their wretchedness in their pinched faces; they limp down to the market and home again, crumpled up like half-frozen partridges. But if the sufferings of these Italians are sore, they are more tolerable than those which must often be endured in Spain. In mountainous Italy the huts have usually shelter from some quarter, while fuel of some kind is obtainable in certain quantities. On some of the lofty *plateaux* of central Spain there can be positively no shelter at all, and the winds iced in the distant Sierras may blow and bite as they list. These plains are cultivated, so there is a tolerably numerous population, and, being cultivated, trees and shrubs and every sort of covert have been scrupulously cut down and grubbed up according to the practice of Spanish high farming. They are seldom visited by strangers in the winter; indeed, they have small attractions at any time, and it must remain a mystery how their inhabitants contrive to keep their blood circulating at all, or to find the means of setting the contents of their pipkins simmering. What we know is that the cold there must be much more severe than at Madrid, and at Madrid the warmly clad sentries before the palace gates have been found of a morning frozen to death in their watch-boxes. We believe that happily no class in England has to support such sustained suffering as those unlucky denizens of Southern climes, for even our tramps and our beggars may occasionally thaw themselves in the close warmth of our casual wards. Nor, on the other hand, are such appalling visitations conceivable with us as the storm that recently swept down on Minnesota. We do occasionally hear of wayfarers who have sunk down and slept their last sleep in a snowstorm; of shepherds smothered with their flocks in the drifts of the Northern and Western hills. This season the ordinary number of accidents of the sort has been multiplied, owing chiefly perhaps to the almost unprecedented suddenness of the change in the weather. But, capricious as our weather is, its capacity for surprising us is limited, nor is it physically possible that we should be the victims of such atmospheric phenomena as produced the catastrophe of last month in Minnesota. It is only in a new and sparsely settled prairie country, driven by storms from the boundless ice and snow fields of the North, that we can imagine the simultaneous destruction of almost all the people who chanced to be abroad and about their business in a district that was perfectly familiar to them.

We suffer, or we have suffered hitherto, less from cold than some of our neighbours, because, never knowing how long

our winter may last, we are in the habit of providing ourselves against the worst. Our clothing, our architecture, and we may add, our diet, reflect the characteristics of an inclement climate. All who can afford it wear warm clothes; our working-men dress in substantial fustian and moleskin; our field labourers make an effort to clothe themselves suitably to their occupations; they wear friezes down in the damp of the Irish bogs, and wrap themselves in heavy plaids up among the mists of the Scottish hills. Dress descends through society, after serving its original owners; and if our beggars are in tatters and rags, the rags are generally thick ones. Our dwellings, cheaply as they may be constructed, and unscientifically as they may be planned, are at least primarily designed for purposes of warmth. Whether or not gluttony be one of the national vices, as our enemies say it is, we all live as well as we can afford; while as for drinking, we may appeal to Sir Wilfrid Lawson as to the facilities afforded in that respect. The towns and the country are covered in their length and breadth with hotels, inns, gin-palaces, beershops, whisky-shops, shebeen-houses—in short, with every sort of establishment providing every variety of stimulant that is supposed popularly, if erroneously, to generate caloric. Above all, the Providence that planted us in a damp and chilly climate seemed to have bestowed on us by way of compensation abundant supplies of fuel. In the highlands and the moorlands, where the drip of the ceaseless rain is only relieved by the whistle of the cold wind, the soaking soil was all combustible. If you could only manage to dry the turf in the occasional gleams of sunshine, you had the means of keeping up a roaring fire. Elsewhere, in the South and in the cities, where labour was better paid and the people were better off, coal was tolerably cheap. Paupers might shiver, of course, but that was only an inevitable item in the catalogue of sorrows that are the appropriate penalties imposed upon vice or poverty. The better-to-do classes, tradesmen in a small way of business, clerks, and comfortable working-men, rather looked forward to the chilly season with pleasure than otherwise. It set them up, and braced them for their business; they might grumble over the coal bill as they grumbled over the rates or the house-rent, but the one item was as much a matter of course as the others, and was calculated for by prudent people who carefully struck an annual balance between expenditure and income. On all these classes, prudent or imprudent, the coal prices of the present season must have come like a catastrophe. Peat there is little or none, because there has been no weather to dry it in, and we fear it would be very difficult to estimate the amount of suffering among persons hitherto unaccustomed to suffer. The pressure, as is always the case, is aggravated in an inverse ratio to the means of the sufferer. Not only are very poor people in no position to economize by watching the fluctuations of the market and making their purchases accordingly, but they are most unfairly mulcted when they buy retail, as they often must do. Dealers who charge four shillings and sixpence a sack to customers who purchase by the ton demand five shillings of the family that can only take a sack at a time, and no doubt prices increase proportionately for those who get their coal by the bushel. It is bad enough for any one in weather such as we have recently experienced to sit over a blank fireplace and weigh coals out by the ounce. But there are always degrees in suffering, and we shall not be suspected of under estimating the sorrows of the very poor if we say that they are less to be pitied than those who belong to the classes immediately above them. The majority of our working people, we fear, are not unused to periods of insolvency and short rations; they have learned the art of tiding them over, or at least of supporting them with a certain equanimity. To them privations are nothing new; neighbours struggle and help each other; they have often travelled the road to the pawnbroker; they are not above being assisted by the parish or by private charity. It is altogether another thing with a clerk or a curate who has a large family and a small income. Each shilling of that income is allotted to its purpose in advance, and what is to be done when he has to pay fifty shillings for the coals which he used to buy for twenty? We call fuel a necessary, and so in a sense it is; yet, necessary or superfluity, he must contrive somehow to retrench in it. Probably he lives in the isolation of a great city, and cannot arrange like the working-man to make up a party to huddle together over a single fire. The constitutions of city-bred families like his are peculiarly susceptible to sudden changes and privations. He has to choose between leaving those who are dearest to him exposed to chest complaints and consumption, enfeebled as they are by having to live poorly, and running himself into debt if there is any one to give him credit. The death returns have been lately rising at a rate which promises soon to bring up the mortality of the winter to an ordinary average, in spite of the reduction shown during months of extraordinarily mild weather. We should be glad to think that the effects of the present coincidence of dear coal with a low thermometer would not long outlast the unfortunate conjuncture. But we greatly fear it will leave its consequences behind in the shape of chronic complaints and clinging embarrassments.

It is difficult to write otherwise than dismally of a subject so essentially dismal. Yet it is not unreasonable to hope that we may learn some profitable lessons from the sharp crisis which we are passing through, now that the community has been fairly frightened and hurt. Hitherto we have been wasting our coal, and—what some people may think of more consequence—our hard-won money in the most unconscionable manner. Other nations which have to burn wood or turf, or to import all the coal they use, have had recourse to all manner of economical contrivances. We are no admirers ourselves of foreign stoves, but there is no reason why we should have gone into the opposite extreme, and should combine the very minimum of warmth with the maximum of waste. It is absurd that families who look most carefully to sixpences in most things should arrange their fireplaces as if they desired to keep their chimneys warm and their rooms cold. Then, although posterity may have done nothing for us, with the patriotism we profess we might certainly consider posterity, especially when the consideration would not only cost us nothing, but would put a good deal of money in our pockets. It is strange that the simple improvements which have been tried so successfully in certain instances should not have been more universally adopted; and that the consumption of coal in our steamers and great manufacturing establishments should not have been reduced by an enormous percentage. Now that society, to say nothing of capital, is so much at the mercy of organized labour, it seems odd that it is only yesterday we should have heard for the first time of the coal-cutting machines which, as report assures us, are miracles of economy and efficiency. We are told that, although coal in the nature of things must ultimately come down, there is no immediate prospect of a material reduction. Were the existing suffering not so severe, we should be inclined to wish that it might be prolonged until it had thoroughly impressed us with the lessons that might prevent its recurrence.

POLICE MAGISTRATES.

A Committee of the House of Commons reported in 1838 that, looking at the circumstances under which the police magistrate had to perform his difficult and important duties, they did not think it consistent with justice or good policy that this should be among the worst paid of judicial appointments. They therefore recommended that the salary attached to the office should be raised to 1,200*l.*, in order to bring it up to something like a level with the emoluments of other legal appointments of similar rank. Sir Robert Peel, who is not supposed to have been unduly lavish of public money, and Mr. Joseph Hume, whose fanatical worship of economy has passed into a proverb, were members of the Committee, and concurred in the recommendation of an increase of salary, as well as in the expression of a general opinion that "Judges' salaries are of all others the least proper objects of rigid economy." Seventeen years passed before this recommendation was carried into effect; and the salaries of the police magistrates of London still remain at the point at which they were fixed in 1855, that is to say, 1,200*l.* a-year each, with an additional 300*l.* for the chief magistrate, who has special duties to perform in connexion with the Home Office. During this time other legal salaries have been gradually rising. The County Court judges, who may be ranked beside the police magistrates, although their duties are of a lighter and less anxious nature, now receive 1,500*l.* a-year. The income of the Chief Commissioner of Police, including allowances, is nearly 2,000*l.*, and the salaries of the rest of the staff of the police have also been increased in recent years. The police magistrates occasionally find it necessary to explain that they are not a branch of the police force, and perhaps they may have reason to regret it. Even the Receiver of Police has obtained an addition of 400*l.* a-year, and the constables did not fail to profit by their threatened strike. But the police magistrates are left exactly where they were eighteen years ago, except that their duties have been enormously augmented. Life, as Mr. Ayrton was good enough to explain to the House of Commons, grows more intricate and complex as population multiplies, and the cares and responsibilities of the magistrates naturally increase with the expansion of the metropolis. Last year they had to dispose of some hundred and thirty thousand cases; and the legislation of each Session is continually extending their jurisdiction, and adding to their perplexities. The Education Act has created an entirely novel class of offences, and the Licensing Act would almost seem to require a special body of police and a special staff of magistrates to do justice to its peculiarities. Ordinary petty larceny cases have become the least part of the magistrate's work. Important commercial cases, important cases under the Masters and Servants Act, grave questions affecting the public health, all go before the police-court. Moreover, the magistrate is expected not only to administer the law, but to play the part of confidant and counsellor to the world at large. Everybody who finds himself in a little difficulty and cannot at the moment think of anybody else to consult takes the liberty of popping in upon the police magistrate and asking his advice in a friendly way. He sits like the Kadi in the gate, and every passer-by may have a word with him. The reports in the newspapers, which are necessarily confined to a few remarkable and important cases, give a very faint idea of the number and variety of applications on all sorts of subjects which are daily addressed to the sitting magistrates. Looking at the composition of the Committee of 1838, it may be assumed that their estimate of what was then a fair salary for a competent magistrate was by no means excessive; and if 1,200*l.* was the proper figure in 1838, it must be very much indeed below the proper figure in 1873. On the one hand, prices have risen and money is of less value than it used to be: on the other hand, the duties of the magistrates are much heavier and more important, and entail both more fatigue and more responsibility than formerly. Mr. Norton in a very temperate and judicious letter to the *Times* has proposed that the salaries of the police

magistrates should be placed on an equality with those of the County Court judges, and this appeal is surely too reasonable to be resisted.

We do not care to follow Mr. Norton in his calculations as to the balance between the expenses of the police-courts and the returns in the shape of fines. The question is, not how much the public can afford to pay, but how much it is necessary that it should pay, in order to secure the services of competent and trustworthy judges. It may be said that there is no reason to raise the salaries of the police magistrates, inasmuch as there is always plenty of candidates for the office at the present rate of remuneration. Of course it is notorious that the Bar is just now sadly overstocked. Every year several hundred young men are added to the profession, and though the legal business of the country increases, it does not keep pace with the multitude of counsellors who are waiting for business. If all judicial appointments were to be given to those who would take them at the lowest salary, a considerable saving might probably be effected, but the economy would be more apparent than real. Besides, if this principle is good for anything, it is applicable to all branches of the public service. There are hundreds of gentlemen who would be delighted to discharge the duties of the Chancellor of the Exchequer without any salary whatever. The question is, what is a fair and reasonable price to pay for the services of a competent lawyer who has to give his whole time to his work? A police magistrate need not perhaps be a very profound or subtle lawyer. He may be deficient in some of the qualities which secure success at the Bar. He may not be a glib orator, or a dexterous pleader. He must, however, be a sound lawyer, within certain limits; there is a considerable body of law with which he ought to be familiar; and he should also have had some experience in actual practice. Nor is it enough that he should be a tolerable lawyer; he should be something more than a lawyer. He should be, if possible, a man of the world, with strong common sense, and some knowledge of human nature. It will be seen from this statement of the qualifications for the office that the magistrates should be chosen from the middle ranks of the profession, from those who have shown that they have some stuff in them, although they may not have been successful in gaining a large practice; and there can be no difficulty in determining what, looking at the average of professional incomes, would be a fair salary to offer to a man of this stamp. It should certainly not be less than 1,500*l.*, or, at least, if it began at 1,200*l.*, it should quickly rise to the former sum, with a prospect at the end of so many years of service of rising above it. It would be a great improvement if one or more of the senior magistrates were constituted into a chief court, to which all very important or difficult cases could be transferred. The daily routine work of each court is already quite enough for the sitting magistrates, and when a very long or difficult case occurs, it either throws all the other business into confusion, or has to be heard in snatches, with repeated postponements. What would have happened if the Claimant had been taken before a police magistrate? A chief court would help to simplify the arrangements of the police, as well as the work of the magistracy.

London is the greatest and richest city in the world, and, as its existence becomes more multitudinous and complicated, it necessarily requires more careful regulation; and this regulation devolves to a great extent on the police magistrates. The police are guided by their decisions, and they help to give tone to public opinion. Very few people except lawyers and their clients trouble themselves about the doings of the superior courts, but everybody reads the police reports. It is of the utmost importance that the magistrates should be strong men, with confidence in themselves, and not afraid to do their duty even in an unpopular way and in the face of public clamour. It is impossible to exaggerate the amount of mischief which one or two weak magistrates might do in a time of popular excitement; and those who have observed the symptoms of social and political life in the metropolis, and the dangerous drift of certain habits and practices, will understand that there may be difficulties in the future which will require the firmest handling. On every ground it is desirable that every thing should be done to get the best men that can be obtained for an office of so much responsibility. It has always seemed to us that something more than a mere increase of salary is required in order to do justice to the position of the police magistrates. It would be well if something were done to make the administration of justice in the police-courts a little more dignified—we had almost written more decent. As a rule, the magistrate is at present shut up in a small, dingy, dirty, foul-smelling court, the atmosphere of which is enough to poison a dog. The whole place has a shabby, sordid, huddled look. The magistrate wears no robes; but there is an usher in a rusty gown, and one or two policemen as a bodyguard. And in this packed, stifling den public justice is administered. A philosophic mind can grasp the idea of a Lord Mayor apart from his furred mantle and golden chain, but the world is not exclusively composed of philosophers, and some vanities are not altogether vain. We do not know that it matters very much whether a magistrate sits in plain clothes like any other elderly gentleman, or whether he wears a wig and gown; but if it is thought worth while to make the judges in the higher courts look impressive by artificial means, there is at least as much reason for doing the same thing in the lower courts. However that may be, the magistrate should at least have a decent court to sit in, and a reasonable supply of fresh air. Mr. Norton has referred in his letter to the *Times* to one of the great deficiencies of the police-courts—the want of a respectable and competent Bar to assist the judge. The character of the Bar usually depends in some degree on the scale of fees, and the sort of people who make their appearance in the police-courts can seldom afford to spend much in this way. This difficulty, we suppose, will always exist; but the unpleasantness and degradation of having to enter such a dirty, poisonous hole as the ordinary police-court have also their effect in driving away respectable practitioners. Judge, lawyers, witnesses, prisoner, policemen, and the general public, are all huddled up together like cattle in a railway truck. At one of the courts not long ago a prisoner took it into his head to make a dash at some papers which had been produced in evidence against him, and which were lying on the table, and instantly there was a free fight all over the place, and the magistrate had to seek safety, or at least dignity, in flight. It is disgraceful that the accommodation of a police-court should be so inadequate as to admit of such a scene being possible. We can only repeat the observation of the Committee of 1838, that the public interest is always badly promoted by any saving which injuriously affects the public service, and judicial expenses are, of all others, the least proper objects of rigid economy.

FREE LIBRARY CATALOGUES.

WE have received from the Librarian of the Liverpool Free Public Library, Mr. Samuel Huggins, a copy of the Catalogue recently compiled by him of the collection of books under his control. We were not surprised to find it arranged on a plan new to us, though Mr. Huggins states in his preface that the merit of its "general principle of distribution" belongs not to him, but to an American librarian, Mr. C. C. Jewett of Boston. For it is precisely one of the miseries of readers whom circumstances of one kind or another compel to use different libraries, that there are hardly two catalogues in existence arranged on exactly the same plan, and that while old catalogues are generally comparatively useless, the use of new catalogues requires at the outset the mastering of the new "principles" on which they have been drawn up. We may, for instance, picture to ourselves a student residing in some place half-way between Liverpool and Manchester, and dependent for reference to books upon the Free Libraries of these two cities. Both are doubtless excellent of their kind, and are institutions of which the two communities are justly proud; but their stores of books are accessible through the catalogues of two librarians who have very different schemes, of the supreme excellence of which they are respectively equally satisfied. If Mr. Crestadoro of Manchester, whose Free Library Catalogue has a more than local celebrity, is in the right, Mr. Huggins of Liverpool must be to some extent in the wrong. If Mr. Huggins has discovered the true thread through his labyrinth, Mr. Crestadoro must have been leading his readers a way which is not the shortest through his. And possibly the shortest way may not always be the best; for while students use libraries, it is one of the objects of libraries, and of those for popular use above all, to make students; and not even a librarian can point a royal road to knowledge.

It is a very old question which thus incidentally crops up once more, and which, as institutions of this kind increase, must necessarily from time to time crop up again. We have not the slightest intention, however, of reviving the Battle of the Books which was fought in a Committee-room of the House of Commons by such heroes as the late Mr. Hallam and Lord Stanhope and Sir A. Panizzi. The Catalogues of the British Museum Library and of similar giant collections shall be sacred from our touch; but it may not be out of season to venture a few hints on the management of libraries of a humbler size and of less national significance. There is so little in most of our provincial towns to leaven the lump of devotion to merely material interests that it is hardly possible to overrate the importance of such institutions as libraries open under the necessary conditions to general popular use. Between the class which is content with Mr. Mudie's books of the season and that which delights in *Reynolds's Newspaper* there is a growing multitude requiring the means of study which Free Libraries and similar institutions can alone supply. What books to buy for this public is the first question; the second is, in what way to enable them to find the books they need. Lenglet du Fresnoy is said to have made a calculation that nobody could read more than nine hundred folio volumes in a lifetime. An ingenious American bibliographer, to whom we owe the quotation, concludes that, roughly speaking, the same scale would allow every mortal man a choice of either 2,700 quartos, 8,000 octavos, or about 16,000 duodecimos, during his earthly course. He and another enterprising American, the well-known publisher Mr. Putnam, accordingly prepared a short list of books worth reading, in which they marked with an *a* the cheap books and with a *b* the more expensive books, and under the important head of Novels distinguished by an asterisk, single or double, the relative excellence (as established by the best recent criticism) of the several works. Thus Goethe furnishes * *Elective Affinities* and the *Sorrows of Werther* and ** *Wilhelm Meister;* in Smollett *Roderick Random* has * and *Peregrine Pickle* ** attached to his naughty name; of Bret Harte you ought to read * the *Condensed Novels*, but you *certainly* ought to read ** the *Luck of Roaring Camp;* and you may be relieved to know that, while ** the *Minister's Wooing* calls for

an immediate application, you may make yourself comparatively easy about obtaining the same gifted authoress's "*Pink and White Tyranny*. It is not, however, such guidance as this that is required from the officers of the freest of Free Libraries, any more than that which we once heard a bookseller offer to a customer and a novice, to whose demand for "a book" the ready-witted Sosius on the spot recommended *Robinson Crusoe*. This, by the by, was in defiance of the advice of Mr. Fred. B. Perkins, one of the authors of the above-mentioned American Book-guide, who is of opinion that in forming the foundation of a private library it will be upon the whole safe to procure books in the following order:—1. The Bible. 2. Webster's Dictionary (the Pictorial unabridged, if possible; if not, the largest edition you can afford). 3. Shakspeare, &c. Heine, we remember, gladdened the heart of a minor poet who hoped the author of the *Book of Songs* would read his humbler friend's offering of verse, by saying that he proposed to retire to the island of Heligoland, with nothing but the volume in question, the Scriptures, and Tacitus. But libraries cannot proceed on such principles of condensation.

It is usually assumed that when a library has been formed nothing is required but to furnish a list in which any reader desirous of finding a book can with the smallest expenditure of time and trouble find it accordingly. Assuming for the moment such to be the case, the best kind of catalogue would be the alphabetical, which gives the author's name where a book bears an author's name, and, where it is anonymous, gives the title. But, simple as this may seem, every reader knows that nothing is more perplexing than the search for a book by its title. In his instructive *Memoirs of Libraries* Mr. Edwards recalls the famous tradition of Sir Boyle Roche's motion in the Irish House of Commons, "that in future all anonymous books should bear the authors' names upon their title-pages." Pending the adoption of such a law, the difficulty of cataloguing anonymous books is all but insuperable. Mr. Edwards gives some excellent examples of titles from which it would puzzle most experienced librarians to select a catchword. We fully agree with the conclusion at which he arrives, that it is an "indispensable condition of a good catalogue, on any plan of alphabetical arrangement, that it should keep entirely distinct the names of authors and the headings which may be chosen for the titles of anonymous works." Mr. Huggins, in his Liverpool Catalogue, goes some way towards this rule by printing the names of authors in a different type from that in which he prints the titles of books, anonymous or otherwise.

But the more important question remains behind. The ordinary reader comes to a public library to find a particular book; if he cannot find it, or finds it "out," he thereupon goes empty away. The better instructed reader, who reads with a purpose, would like to obtain the next best substitute; but he is perhaps ignorant of the name of any second authority, and has at best to depend upon the courtesy of a frequently overbusy officer. His alphabetical catalogue has merely pointed him to the shelf on which the desired book is not reposing; and even if he is lucky in his demand, he has obtained nothing beyond the one book which he for the moment desired. In a classified catalogue, on the other hand, he has, if not the opportunity of finding another book which may serve his purpose equally well, at all events that of seeing what the library can offer on, or in connexion with, the subject in which he is interested; while, which is of the utmost importance, the librarian himself by the same means becomes more easily acquainted with the resources and the defects of the collections under his control.

To classified catalogues two kinds of objections are usually made. One is, that readers will not use them. To this it has only to be answered, that every library should possess both an alphabetical and a classified catalogue, so that the reader may take his choice. The former should be as short and concise, the latter as full and explicit as possible; for it is the latter which, though indolence will prefer the former, will be of the most real use to those who will avail themselves of it. This applies more emphatically to the libraries of colleges and schools, but even in libraries for general popular use it is possible gradually to educate the public for its own advantage. The second objection lies in the difficulty of establishing a system of classification which shall be at once logical, complete, and easy for reference. Mr. Edwards, *e.g.*, enumerates not less than nineteen principal systems, to which he adds one of his own. We have before us a number of catalogues of the classified kind ranging through a wide variety of methods, out of which it would be a task of no small difficulty to select that which seems most fully to meet the necessary demands. That, however, a system of classification equal to the purposes of a library of all but the very largest dimensions can be devised, we have convinced ourselves in practice as well as in theory. The danger lies in attempting too much. The Catalogue of the St. Louis Public School Library, *e.g.*, divides the literature of the world into books on Science, Art, and History. Science again is subdivided into Social and Political Sciences on the one hand, and Natural Sciences and Useful Arts on the other. The former heading comprises Jurisprudence, Politics, Social Science, and Philology. Social Science is bisected into Political Economy and Education. Education comprises five classes of books; and of these classes, one is that of Elementary Text Books, which are again of eight kinds. The first of these is that of "Primers and Spellers"; so that the St. Louis matron who wishes to get at a particular spelling-book has to go through six stages of classification before she reaches the desired end. Now, even admitting the principles of this classification to be sound, their application is evidently preposterous. The degree of minuteness of the classification ought to be adjusted to the character of the library and of its presumable readers. In a Free Public Library it need not seek the precision which may be more nearly approached in that of a college or library for a more select class. But it is not difficult to find a mean between the exactness of a German University Lecture-list and the looseness of a good foreign bookseller's classified catalogue. It will certainly necessitate some hard thinking on the part of the librarian, some additional trouble on the part of his assistants, and some little mental labour on the part of the reader. But in no case will the effort be thrown away. The objection is futile, that when a classification has been made, it is impossible to bring all books decisively under this or that class. Everybody knows the meaning and the use of cross references, a free use of which is only objectionable where a catalogue is in several volumes.

We are so thoroughly convinced that a classified catalogue, together with a brief alphabetical catalogue of authors, and another of the titles of anonymous works, is desirable in every library of moderate dimensions, such, *e.g.*, as the Liverpool Free Library, that we find it difficult to examine with patience an attempt to remain satisfied with less. Yet Mr. Huggins has probably spent far more time and labour in the production of his own Catalogue than he would in that of two catalogues of the kinds indicated. He has sought to combine an alphabetical list of authors and anonymous titles with an arrangement of books belonging to one subject under that subject in alphabetical sequence. But he does not arrange his subjects according to the entire science or art to which they belong—"the Honey Bee," *e.g.*, as he says, comes neither under "Natural History," "Zoology," nor "Entomology," but under "Bees"—or, in the case of historical subjects, according to the country to which they refer; *e.g.*, "History of England under the Stuarts" will come, not under "England," but under "Stuarts, House of." Poetry, Painting, and certain other subjects form separate groups, which are subdivided, while numerous cross references are supplied. But there is no index of these subdivisions so far as we can see. Again, Poems are subdivided under various heads if they are English; but if they are foreign, they must be sought for each under its own title. These seem, in part, more or less arbitrary principles; but the proof of a catalogue is in the use thereof; and it may be that Mr. Huggins understands the measure of classification upon which he can venture at Liverpool better than we do. To us his Catalogue seems a very uncertain step, not precisely in the right direction, but at all events praiseworthy, if for no other reason, for the consciousness which it betokens of the insufficiency of the alphabetic principle. An earlier attempt of a half-way description has already undergone the test of several years. The Catalogue of the Manchester Free Library (Reference Department), which has been in approved use since the year 1864, is excellent of its kind; its principle being that of giving, first as "Principal Entries" the full titles of the books, according to the alphabetical sequence of their author's names, and then an alphabetical list of so-called "Subject-matter Entries," expressed in short titles, and consisting of the author's name, the subject, and the imprint of the book, concluding with the number referring to the corresponding principal entry of the same book; as thus:—

United States. Democracy. Tocqueville. 4 vols. Lond. 1840. 8vo. 23717.
Prayers. S. Johnson. Lond. 1796. 8vo. 12829.

The system is the most convenient that could be devised for readers who know what book they want or on what "subject" they require information; and it has, we believe, proved as successful at Manchester as, according to Mr. Crestodoro, the so-called "British Catalogue," compiled on the same principle, did from the first in the reading-room of the British Museum. Still we cannot abandon our contention that the use of a classified catalogue must bring with it in the long run advantages not to be secured by any other means; and that, wherever the use of a library is designed to help to educate its public *ambulando*, the introduction of such a catalogue cannot be dispensed with. Nor, though we have promised to abstain from any remarks on libraries of still greater size than these admirable Free Libraries, can we suppress our conviction that there are large libraries where the absence of a classified catalogue is a matter beyond all doubt to be regretted. University Libraries at least, if they cannot classify their old possessions, should classify their new acquisitions, after the fashion in which the librarian of the University of Göttingen (thereby rendering a service to all historical students) classifies the historical literature of every year. To know what is not in a library is often next best to knowing what is in it. The time may come when there will be a general English interest in, and perhaps an English word for, *Bibliothekwissenschaft*.

THE COMMITTEE ON THE ENDOWED SCHOOLS ACT.

THE Government have decided to refer the operation of the Endowed Schools Act of 1869 to a Select Committee of the House of Commons. The advantages of this course are sufficiently obvious. The wheels of the Commission have begun to drive heavily. There is a great deal of ignorance on the subject of secondary education which has still to be enlightened, and a great deal of prejudice which has still to be overcome or borne down. The principles on which the Act is founded stand in need of frequent re-statement if they are to maintain even that degree of popular

acceptance which they enjoyed in the first instance. There are many persons probably who, while heartily approving of the Report of the Schools Inquiry Commission, have nevertheless been startled by the application of the doctrines laid down in it to their own neighbourhood. They see the positive good that a particular endowment does; they see that to reconstitute it implies the displacement of men whom they know and respect; they are offended possibly by what looks like neglect of their suggestions on the part of the Commissioners. If they had as clear a grasp of the principles upon which successful organization must proceed as they had when they first studied the question, they might see that the drawbacks which now seem so serious are but the inevitable accompaniments of any large measure of reform. The appointment of a Select Committee may have the effect of reviving these older and more comprehensive views. Doubters may realize once more how impossible it is to reorganize educational endowments upon any considerable scale without sometimes bearing a little hardly upon particular foundations. Even a faulty system can be so administered as to produce many useful results, and where this is the case the substitution of a better system will seem like an unfair reflection on those who have worked to such excellent purpose. This view leaves out of sight the far larger number of instances in which the faulty system has produced nothing but mischief, and the probability that these exceptional persons who have brought good out of evil would have brought still greater good out of good. It is only by a large comparison of cases that this fact can become impressed on that section of the public which is interested in secondary education. At the time when the Endowed Schools Act was passed the Report of the Schools Inquiry Commission had recently furnished the material for such comparison, and the Report of the Committee and the evidence which will be given before them will yield a fresh supply of the same kind. The result of such a provision will be seen, it may be hoped, in a renewed interest in the development of secondary education, together with a more intelligent appreciation of the measures which are needed to ensure its improvement and extension.

A second reason for referring the whole question to a Select Committee is the doubt that exists in many quarters whether the Commissioners have not interpreted their duties under the Act in too narrow a spirit. Suspicions of this sort are constantly found associated with a very hearty desire to carry out the purposes of the statute. It is not the enemies of the Commission who entertain these doubts so much as their friends. The Commissioners have naturally been led, in the course of their work, to lay down certain general rules by which they intend to guide themselves in the administration of educational endowments. There are some who think that these rules have been framed in too rigid a spirit, and without sufficient allowance for the peculiar circumstances of individual cases. There are others, again, who think that the rules, though sound in themselves, have been adhered to in a too mechanical temper. Either way the result, it is said, has been that dangerous hostility has been needlessly provoked, while valuable aid has been needlessly rejected. According to this view, the Commissioners have not shown themselves sufficiently alive to the importance of securing local co-operation. They have sometimes forgotten that a scheme has not only to be made, but to be worked, and that in this aspect the most ideally perfect organization may not be the best suited to the persons who have to administer it. It is possible of course that these mistakes, supposing them really to have been made, are attributable not to the voluntary action of the Commissioners, but to the directions given them in the Act. No doubt the duty of a Commission of this character is to carry out the purpose of the Legislature, not to substitute for that purpose another which they think to be preferable. Into the points thus raised it will be the business of the Committee to inquire. They will review the intentions of the Act and the proceedings of the Commissioners in executing it. If they think that experience has shown the former to require modification, they will state the reasons which have led them to this conclusion, and the benefits which may be expected to follow from frankly recognizing it. If, on the other hand, they think that it is the Commissioners rather than the law, that are in fault, they will point out instances in which a less rigid adherence to the letter of the statute would have enabled them to carry out its substance with greater success. Some ambiguities there certainly are in the Act, and to these, as a matter of course, the Committee will call the attention of Parliament. Some points there are again upon which subsequent legislation has thrown fresh light, and these the Committee will naturally reconsider with the additional experience thus afforded them. It will be a further duty to examine whether the Commission ought to be reappointed; whether, after the year has come to an end, its work ought to be transferred to the Education Department; whether a division of endowments may be effected, and the larger ones be left in the hands of the Commission, while the smaller ones—as concerned with schools little, if at all, above the rank of elementary schools—are reclaimed by the Government. In connexion with this part of the inquiry the Committee will perhaps deal with Mr. Leatham's proposal to make at least one Dissenter an *ex officio* member of the Commission; unless indeed the House of Commons has already disposed of a motion so strangely at variance with the received theories of Liberalism on educational subjects.

To ensure that the Report of the Committee shall be thorough and exhaustive upon all these matters, it is of great moment that the inquiry itself should be proportionately comprehensive in its scope and area. The Committee ought, for example, to go minutely into all the more important instances in which the proposals of the Commission have been rejected by the trustees and other administrators of the endowment to which they relate. At what stage of the negotiation did the difficulty arise? Did it apply to the whole scheme, or only to some one part of it? Was the part to which it did apply an essential or only a subordinate feature of the scheme? Was there any alternative proposal which the trustees would have accepted? If there was such an alternative, what reasons did the Commissioners give for not substituting it for their own proposal? Ample means of answering all these questions must exist in the correspondence which has taken place between the Commissioners and the trustees, and in the recollection and memoranda of the trustees and the Assistant Commissioner through whom the negotiation was in the first instance carried on. If this field is properly worked, the Committe will know the causes of the failure in each case, and will consequently be in a position to pronounce with reasonable confidence whether these miscarriages could have been avoided, or whether they must be accepted as part of that inevitable percentage of failure which must be allowed for in all calculations which have human beings for their subject-matter. There will be no need of course to extend this sort of investigation to every scheme which has encountered a successful resistance. A typical selection may be made without much difficulty. It is important, however, for the Committee to bear in mind that only a small part of their work will have been done when they have heard the Commissioners tell their own story, or enumerate the instances in which reorganization has gone on without let or hindrance. It is to the other side of the shield that the largest part of their attention should be turned.

AUTHOR AND CRITIC.

AN action by Mr. Charles Reade against the proprietors of the *Morning Advertiser* for libel has ended in a verdict for 200*l.* damages. Mr. Reade complained of a notice of the play which he founded upon Mr. Trollope's novel *Ralph the Heir*, without, it should be said, Mr. Trollope's knowledge or consent. This play was produced under the name of *Shilly Shally* at the Gaiety Theatre on Easter Monday last, and the alleged libel occurred among the descriptions of Easter amusements which appeared in the defendants' newspaper the next day. There was one passage of the play on which the critic particularly remarked, and some general comments which he made were probably suggested by this passage, and must be tried by the same test as the particular remarks. We understand Mr. Reade's case to be, that he used the words complained of innocently in their ordinary meaning, and that he is not responsible for any interpretation which may have been placed upon them by persons of impure mind. It is possible that this may be so, but if neither Mr. Reade nor the manager was aware before the performance that any words in the play were liable to misconstruction, they could hardly have remained in the same happy ignorance after the first night. The verdict of the jury must, we suppose, be taken to indicate their opinion that there was no shadow of foundation for the complaint, and we can only say that, if that be so, we are much surprised. There appears to be no question that words were spoken by Mr. Toole in the character of Neefit which the critic partly quotes. He says that he forbears "for decency's sake" to quote the whole, and this reticence was perhaps considered by Mr. Reade more offensive than anything actually uttered. Yet we believe that the critic would carry with him the approval of the majority of playgoers. Suppose that you were reading the scene to which the words belong to a circle of friends, including ladies, would you speak the words or leave them out? We say again that it is perfectly possible that Mr. Reade or anybody else might use them innocently, but we say also that a person accustomed to prepare carefully for dramatic reading would be likely to notice and avoid them. Some of us perhaps remember the Adelphi Theatre in very old days. The words spoken by Mr. Toole bear a strong, but perhaps accidental, resemblance to the sort of thing that used to be commonly heard there. We should have thought that if this had been pointed out to the manager of the Gaiety Theatre he would immediately have desired that the words which excited remark should be omitted. It appears that several other newspapers concurred substantially with the *Advertiser* in complaining of this passage, and if it struck them all in the same way, their unanimity of protest surely deserved attention. At the same time, if Mr. Reade denied that he had any ill intention in using the words, everybody would believe him; and if he had caused them to be struck out of the play, there would have been no occasion for critics or anybody else to say anything further on the subject, and certainly we do not think that it need have occupied the attention of a court of law.

It is not, as we understand, disputed that the words partly quoted and partly indicated by the *Advertiser* were really spoken, nor can it be denied that, if spoken, they would suggest to many minds the idea which the critic considered them capable of suggesting. As the defendants' counsel urged, "there was the fact, staring the jury in the face, that all the gentlemen representing different papers which had been mentioned had had their minds affected in a similar way by hearing the drama played for the first time." Let us consider critics for the moment merely as representatives of the average sense or folly of mankind. There are a good many silly

people among the audience at theatres, and authors and managers ought to consider, and usually do consider, the opinions or fancies which these silly people are likely to entertain. Several gentlemen whom we will regard for the moment as mere "foolometers" have had their minds, or what they are pleased to call their minds, affected in the same way as the representative of the *Advertiser*. According to Mr. Reade, the *Daily Telegraph* was "not so outrageous" as the paper of which he complained, but its remarks tended in the same direction. Mr. Reade thinks it necessary and desirable to explain that the criticism in the *Telegraph* was written "by a rival playwright whose piece was displaced to make room for mine." He seems to think that nobody could suggest a fault in anything that he wrote except under an interested motive for depreciating his work. It is lamentable that a man of talent like Mr. Reade should entertain these suspicions. We are not particularly pleased with any part of this case, and the least agreeable feature of it was the plaintiff's appearance in the witness-box. The *Times* was mentioned as having written in the same strain, and Mr. Reade answered that the usual representative of the *Times* was not in the house. "This was written by some little scrub they had there." It is possible that the *Times*, like other journals, is open to the remark that its criticisms are sometimes written by gentlemen who themselves write plays. We have yet to learn that this practice is necessarily objectionable, and certainly we shall not hastily adopt the opinion of Mr. Reade that no playwright can be an impartial critic. Mr. Reade appears to assume the existence of a sort of trade confederacy which discourages and writes down all plays which are not written by its members. But we do not see that the dramatic author has to contend with greater difficulties than beginners in other walks of life. There is always much occupied ground, and the public is slowly persuaded to believe that anything new is good. But still talent and perseverance will make their way. We should say that the fault of dramatic criticism in England is, not that it underpraises good work, but that it overpraises middling or poor work. Let a young author compose a really meritorious play, and we believe that managers will be glad to hear from him. Putting aside for the moment the controverted passages, we are inclined to think that this play called *Shilly Shally* got quite as much praise as it deserved. Mr. Toole in the character of Neefit asked his daughter, "Did you ever hear of the little article called a father's cuss?" It is needless to say that Mr. Trollope did not write this. He drew his characters with consistency and propriety, and would not condescend to put into their mouths anything merely to raise a laugh. It is true that Mr. Trollope's novels are not easily adapted to the stage, and we ought to make some allowance for the difficulty under which Mr Reade laboured. But still he need not have stooped to such very poor and small devices for the production of which is, after all, very dreary fun. Thus he calls the sea "the briny," and makes a wretched pun upon the proverb "Give an inch and take an ell." Almost the only mitigating circumstance is that the speech containing this pun was omitted after the first night, because, as Mr. Reade says, "they were such weak lines." The Attorney-General, in addressing the jury on behalf of Mr. Reade, said that "it was a singular thing that this comedy had never been played in the provinces from the day the article appeared until the present time." But we do not find this fact at all surprising, and we should greatly doubt whether it could be properly ascribed to the criticism of the *Advertiser*. Indeed it is to be feared that some provincial managers would be rather attracted towards a play which contained passages capable of bearing a double meaning. At any rate, the passages in question are either harmless, or, if by any stretch of fastidiousness objectionable, they could be easily omitted. It is possible that managers might be influenced by the concurrence of the London journals in representing this "comedy" as rather poor stuff. By the help of Mr. Toole's drollery and the "father's cuss" it was made tolerably amusing, but we suppose there are few playgoers who would desire to see it again; whereas the novel on which it was founded might be read pleasantly more than once.

Mr. Reade has obtained a verdict for 200*l.* damages, but we cannot help thinking that he is much indebted to skilful advocacy for his success, particularly as the jury could hardly have been favourably impressed by his eagerness to denounce a supposed combination among critics to write him down. Mr. Lee, who wrote the notice in the *Advertiser*, was called as a witness for the defence, and he was cross-examined as to his own adventures in the field of dramatic literature. The suggestion, we suppose, was, that having once offered a piece to the Gaiety Theatre which was refused, he could not be expected to criticize fairly any piece that might be accepted. But we think that a literary rival of Mr. Reade might regard the success of *Shilly Shally* with equanimity. It is but poor work to dramatize another man's novel, even when the work is done with more skill than Mr. Reade has exercised. We think that the plaintiff's counsel went to the furthest point on behalf of his client when he said that only "a perverted and unfair animosity" could have dictated a criticism such as had been brought before the jury. We grant that the critic was mistaken in attributing to Mr. Reade an improper intention in using the words that have been referred to. But still, if an author cannot take account of the stupidity of mankind, there ought to be a reader, or manager, or somebody capable of assisting him. When the King of England said "Honi soit qui mal y pense," he was doing an act which, in a less exalted personage, might have been liable to misconstruction. We are bound to confess that, hearing Mr. Toole's words, and taking them simply as they were spoken, we should have been disposed to say that at a theatre desiring to maintain a first-class character such words had better be omitted. We do not think it would have been difficult for the defendants to produce persons, not possessed of the ingenuity or malice of critics, who would have testified that they disapproved these words. Any one of these persons, possessing the faculty of writing and a newspaper to publish his effusion, might have expressed himself, not perhaps as strongly, but to the same effect, as the critic of the *Advertiser*. Indeed, if one is not allowed to comment freely on what is actually spoken in a theatre, the liberty of the press, which fine writers delight to call a "palladium," is little better than a swindle. It ought not to be forgotten that something depends upon the manner in which words are spoken, and the author is not responsible for that, although the manager may deserve to be called seriously to account. We think that in the present case an occurrence which was possibly accidental has been made the most of by the critics in the first place, and afterwards by Mr. Reade and the jury.

REVIEWS.

THOMSON'S ELECTROSTATICS AND MAGNETISM.*

THE casual papers on subjects connected with magnetism and electricity contributed for a number of years by Sir William Thomson to various scientific serials are of too solid and permanent a value to be left buried in the comparative oblivion which is the lot of periodical writings in general. It is therefore with much satisfaction that we welcome the reprint in a collective form of a series of articles upon electrostatics and subjects mathematically allied thereto, which during the last thirty years have appeared in the leading scientific journals at home, in Nichol's Cyclopædia, and in Liouville's *Journal de mathématiques*: fresh matter to the extent of about a quarter of the whole having been added with a view to roughly filling up gaps in the collection, and imparting to it as the result somewhat of the unity and continuity of a systematic treatise. The chronological order of arrangement has judiciously been made subordinate to the logical sequence or cohesion of subject matter, so that the reader is presented without much break or disconnexion of ideas with a kind of summary of the most recent progressive gains in the mathematical theory of electro-magnetism. The volume comprises, we are told, as nearly as may be, all that the author has hitherto written on electrostatics and magnetism. He has excluded from it electrical papers prominently devoted either to thermo-dynamics or the kinetics of electricity, with the view of including these in a further series, to be made up, we are promised, of all his other papers already published.

Three years in advance of the date at which his name stood in the Mathematical Tripos as Second Wrangler and First Smith's Prizeman, a paper appeared anonymously in the *Cambridge Mathematical Journal*, February 1842, which was reprinted in the *Philosophical Transactions* (1854, first half-year), with the name of William Thomson attached as author, upon the uniform motion of heat in homogeneous solid bodies, and its connexion with the mathematical theory of electricity. This article, remarkable for the promise it displayed on the part of one so young, a promise since abundantly fulfilled, stands at the head of the volume before us. It is no great disparagement to the merits of a paper so marked with talent that the author, as he was not long in discovering, had been anticipated in many, if not most, of the ideas which he thought new and independent, by M. Chasles. The first of these ideas were those by which he was led to the determination of the attraction of an ellipsoid, given in the latter part of the paper. He soon afterwards found that he had been anticipated by the same author in his enunciation of the general theorems regarding attraction; and still later he came candidly to confess that both an enunciation and demonstration of the same general theorems had been given by Gauss, appearing shortly after M. Chasles' enunciations. Finally it became known to him that these theorems had been laid down in the most complete and general manner, with rich applications to the theories of electricity and magnetism, more than ten years previously, by George Green. Avowals of this kind—which have to be made by many a young author, and are here made with so good a grace—become indeed additional reasons why we should have regretted the omission of the paper, original as it is in many of its suggestions and lines of proof, as well as differing in most of its methods from those of M. Chasles, which are all but entirely geometrical. The general conclusions, as summed up by the author in a foot-note, go to show that the laws of electric or magnetic force in any case whatever must be identical with the laws of distribution of the lines of motion of heat in certain perfectly defined circumstances. With the developments and applications supplied by the next paper in the series on the elementary laws of statical electricity, they may claim to constitute a fairly full theory of the characteristics of lines of force experimentally investigated by Faraday. Completing as they do the analogy with the theory of the conduction of heat, they form attractive

* *Reprint of Papers on Electrostatics and Magnetism.* By Sir William Thomson, D.C.L., LL.D., F.R.S., F.R.S.E., Fellow of St. Peter's College, Cambridge, and Professor of Natural Philosophy in the University of Glasgow. London: Macmillan & Co. 1872.

illustrations of the unity and harmony which pervade the working of all the forces of nature. A further point in which the author found the able treatise of Green (published in 1828) to have been beforehand with him, is the demonstration by direct integration (a year later than his original paper) of a theorem which he had arrived at in the first instance independently, to the effect that, if a surface be described round a conducting or non-conducting electrified body, so that the attraction on points situated on this surface may be everywhere perpendicular to it, and if the electricity be removed from the original body and distributed in equilibrium over this surface, its intensity at any point will be equal to the attraction of the original body on that point divided by 4π, and its attraction on any point without it will be equal to the attraction of the original body on the same point. Almost contemporaneously with this demonstration appeared one to the same effect by M. Sturm in Liouville's Journal. It is, however, no mean proof of analytical power to have arrived independently, towards the close of the paper, at a series of integral expressions for the attraction of an ellipsoid upon a point both within and without it, identical with one found by Pontecoulant by direct integration, through a method discovered by Poisson, showing at the same time how readily by a comparison of the first and second equations Ivory's theorem may be deduced.

Some distinguished experimentalists had of late years begun to doubt the truth of the elementary laws established by Coulomb, as being incompatible with certain newly discovered phenomena. Researches upon this point were undertaken independently of each other by Sir W. Snow Harris and Faraday. All the experiments made by them with direct reference to the distribution of electricity in equilibrium were, however, at the same time held by Sir W. Thomson to be in full accordance with, and in fact confirmatory of, Coulomb's theory. In proof of this proposition, he communicated in French to Liouville's Journal, and shortly after inserted in English in the *Cambridge and Dublin Mathematical Journal*, Nov. 1845, the paper placed second in the present series on the "Mathematical Theory of Electricity in Equilibrium." Coulomb had so expressed his theory that it could only be attacked by proving his experimental results to be inaccurate. Sir W. Thomson shows, by analysis of Harris's experiments, that certain precautions expressly laid down by Coulomb had been neglected by that gentleman, the results being accordingly unavailable for the accurate quantitative verification of any law, on account of the numerous unknown disturbing circumstances by which they were affected, while as qualitative illustrations they amply fulfil the law. Faraday's researches on electrostatical induction were undertaken to test an idea which he had long held, that the forces of attraction and repulsion exercised by free electricity are not the resultant of actions exercised at a distance, but are propagated by means of molecular action among the contiguous particles of the medium surrounding the electrified bodies, which he therefore called the dielectric. So far as his experiments might seem incompatible with Coulomb's theory, the difference could only arise, our author made it clear, from the different method of stating and physically interpreting the same laws. Either method, carried far enough, might be made the basis for a mathematical theory which would lead to the elementary principles of the other as logical consequences. This theory would thus be the expression of the ultimate law of the phenomena, independently of any physical hypothesis which might from other circumstances be adopted. Coulomb, for instance, although his laws naturally suggest the idea of material particles attracting and repelling one another at a distance, most carefully avoids making this a physical hypothesis, confining himself to the mechanical effects which he observes and their necessary consequences. In our ignorance of what electricity is in itself, we cannot be too careful to distinguish between what is empirical or matter of hypothesis, and what is arrived at by processes of mathematical reasoning independent of our tentative and shifting notions of the physical essence or properties which underlie the phenomena of electricity. As an experimentalist, it is interesting to observe how careful Faraday ever was to guard himself against confusion on this point. Nor is it of less interest to trace how, in the absence of mathematical training, which he was himself the foremost to deplore, his experimental results led him, not to confirm merely, but frequently to anticipate, the results of mathematical analysis, which, as in the instance in question, had seemed destined never to be perceived except as truths of mathematics. In later portions of his book Sir W. Thomson adduces other instances in which this true philosopher, without mathematics, divined the results of mathematical investigation, and, what has proved of infinite value to mathematicians themselves, has given them an articulate language in which to express their results. Thus the whole language of the "magnetic field" and "lines of force" is Faraday's, and was greedily accepted, writes our author, by mathematicians, who have ever since been most zealous in using it to the best advantage. Scarcely less fertile in consequences have been the discovery and the name of specific inductive capacity, determined experimentally by comparing the capacities of conductors, alike in other respects, but differing in the materials employed as dielectrics. It may be interesting to compare his determinations with the analytical results enunciated in Sir W. Thomson's articles on the measurement of electrostatic and electromotive force. In the table of different potentials producing sparks in or across different thicknesses of air between parallel metal plates, measured by the absolute electrometer, an unexpected and a very remarkable result becomes apparent—that greater electromotive force per unit length of air is required to produce a spark at short than at long distances. When it is considered that the absolute electrification of each of the opposed surfaces depends simply upon the electromotive force per unit length of the space between them—or, which, says our author, is the same thing, upon the resultant electrostatic force in the air, and occupying that space—it is difficult even to suggest an explanation. What we are forced to recognize is the fact that a thin stratum of air is stronger than a thick one, whether measured against the same "disruptive tension" in the air, as Faraday would express it from his view of the condition of the air on transmitting electric force, or measured against the same "lifting electric pressure from its bounding surfaces," on the view of the eighteenth-century school represented by Poisson. The same results are given by the portable torsion electrometer. Whatever may be the explanation of the *modus operandi* in nature, the result is that of a real mechanical force, and can be measured in terms of balance weight, or by so many grammes per square centimetre; whether this force be regarded as a repulsion in the old-world view, or an attraction effected by tension of the air between the surface of the conductor and the conducting boundary of the air in which it is insulated, as it would probably be considered by Faraday. Some most valuable materials, as well experimental as analytical, bearing upon this and numerous allied problems, will be found in the British Association Report for 1867 on electrometers and electrostatic measurements, which forms perhaps the most conspicuous paper in the first part of the present compilation.

Sir W. Thomson heads the second series of his papers with one presented to the Royal Society in June 1849 on "A Mathematical Theory of Magnetism," in which he shows the fallacy of the theory first laid down in a complete form and adopted in a modified shape by Green and Murphy, resting on the hypothesis of two magnetic fluids. The writer's object was to prove that not only was no physical evidence to be adduced for such an hypothesis, but that the most recent discoveries, on the contrary, especially in electro-magnetism, render it extremely improbable. A complete mathematical theory of magnetism could be established without assuming the existence of those hypothetical fluids. This theory might be made to rest upon the sole foundation of facts generally known, and of Coulomb's special experimental researches. The positive elements of proof would be in agreement with those of Poisson's mathematical theory; and the fundamental formulæ would consequently be the same. Whatever conception we may form of the imaginary magnetic "matter," possessing as it does none of the primary qualities of ordinary matter, and being consequently in no sense to be called either a solid or "fluid," or "fluids," all we know it by in a physical sense is its force, or its property of attracting or repelling magnets or other portions of matter of its own kind, according to certain determinate laws. The determination of these laws is the function of mathematical theory, allied with and resting upon experimental data. The synthetical part of the theory, the paper goes on to explain, has for its ultimate object to determine the total action between two or more magnets when the distribution of magnetism in each is given. With sufficient data in any case, Coulomb's laws of magnetic force are sufficient to enable us to apply ordinary statical principles to the solution of the problem, determining the resultant of the attractions or repulsions exerted between the particles of two groups of matter, in obedience to the law of force which is universally met with in natural phenomena. Upon the problem of the distribution of magnetism an insertion of much importance has been made in this paper (in 1850), in which Sir W. Thomson introduces new and more definite terms to express the different modes of distribution or forms of magnetized matter. The first of these modes is the "solenoidal" (from σωλήν, a tube), suggested by the term "electro-dynamic solenoid," applied by Ampère to a certain arrangement of galvanic circuits in the supposed form of a tube. A magnetic solenoid is an infinitely thin bar of any form, longitudinally magnetized with an intensity varying inversely as the area of the normal section in different parts. The other mode is the "lamellar," when the magnet is supposed to be divided into an infinite number of magnetic "shells," or infinitely thin sheets of any form, plane or curved. The calculation of the magnetic potentials in either case is derived from a theorem due to Gauss, which is followed up by analytical formulæ for determining whether, under certain conditions, a distribution of magnetism is solenoidal or lamellar. Having arrived in the first instance at a definite formula in the case of a lamellarly magnetized magnet, the writer was led by the analogy which exists between the two states to test a similar formula for solenoidal distribution. An analytical view of the problem presenting itself in preference to the synthetical, he succeeded by the process of partial integration in deducing a series of expressions for the potential of distribution in an infinitely thin shell, coinciding with the surface of the magnetized body, as well as for its direction, which is proved to be at every point of the surface perpendicular to the normal. The conclusions thus arrived at are carried on further in a series of postscripts, extending to the end of last year, comprising theorems of great clearness and beauty. Another series of papers of singular value relates to the use of "hydrokinetic analogy," as first perceived by Euler, for the measurement of magnetic force. Defining this principle generally in an earlier article (xxvii.), the author in the last two papers (xli., xlii.), applies it to the case of the magnetic influence of an ideal extreme diamagnetic, and to the general case of induced magnetism. There are curiously close

analogies between some of the circumstances of motion in continuous fluids of different densities, and the distribution of magnetic force in a field occupied by substances of different inductive capacities. We have, indeed, to conceive the case of an ideal fluid, frictionless and incompressible, although denser in some parts than others, as well as that of an infinitely porous solid to be permeated by such a fluid. Yet such hypotheses, unreal as they are in nature, have their counterparts in the conception of magnetic matter itself, as a medium akin to the ether which forms the hypothetical basis of light—vibratory motion being the property which they manifest in common. Such aids to science will not in the hands of scientific inquirers be mistaken for ultimate facts. It is especially to the mathematician that we look to guard the processes of science against the intrusion or the persistent establishment of ideas which are but temporary makeshifts—tentative, empirical, and fluctuating. In an age which is only too apt to be dazzled and misled by the power and beauty of experiments, it is most satisfactory to find the interests of science subject after all to those who, like the author of this remarkable volume, possess in the knowledge which alone can be called exact the key to the only absolute and ultimate truth.

SIR JOHN BURGOYNE.*

THE late Field Marshal Sir John Burgoyne was born in London in 1782. He was an illegitimate son of General Burgoyne, who died when he was ten years old, leaving him without provision. The charge of his maintenance and education was undertaken by his father's friend, the Earl of Derby. He was educated at Eton and went thence to the Royal Military Academy. He received his first commission in the Royal Engineers in 1798, and he went on active service to Malta in 1800. He was employed in the Mediterranean, in Egypt, and in Sweden, but saw no very remarkable service until 1808, when he did much hard work under Sir John Moore in Spain. Returning to England with that portion of the army which retreated on Vigo, he was sent back next year, and remained in Spain serving continuously until 1814. He took part in the passage of the Douro, and thinks that if our army had marched as fast after the French in 1809 as they marched away from them in the previous year, Soult would not have escaped as he did from Oporto into Spain. His journals contain many valuable criticisms, and he sometimes puts military operations in a different aspect from that which they bear in received histories of the period. On the whole, he does not seem to have been an enthusiastic admirer of Wellington's tactics. He says that Marmont had the best of the game in 1811, and again next year, until Wellington turned the tables on him completely at Salamanca. But it must be remembered that Wellington had always to contend with many difficulties caused by others, while his successes were due chiefly to himself. Burgoyne was present at the battles of Busaco, Salamanca, and Vittoria, as well as at many minor affairs in the field, but his special distinction was that he had borne part in all the sieges which Wellington undertook.

The taking of Badajoz was indispensable to any movement into Spain, and the success of the assault was largely due to Burgoyne. It shows what soldiers will do under leaders who inspire confidence. The 3rd Division of the British army, under General Picton, took the castle by escalade while the 4th and Light Divisions were losing their best men in vain attempts to enter at the breaches. The 3rd Division was conducted to the assault by Burgoyne, who was assisted by Captain McCarthy of the 50th Regiment. This officer has left an interesting description of the assault. It was his duty to guide the division to the point of attack, and he felt the weight of the charge. At one moment he feared he had gone wrong. "General Picton, emphatically expressing himself, said that I was blind, he supposed, and going wrong, and, drawing his sword, swore he would cut me down. I explained, and he was appeased." Soon they arrived at the very spot in the first parallel where Burgoyne was waiting. Five ladders were placed by Captain McCarthy, under a fire so heavy that "it was impossible to twinkle the eye on any man before he was knocked down." Four ladders with troops on them, and an officer on the top of each, were broken successively near the upper ends, and slid into the angle of the abutment. On the remaining ladder was no officer; but a private soldier at the top, in attempting to go over the wall, was shot in the head, and tumbled backward to the ground, when the next to him upon the ladder instantly sprang over. This man belonged to the 45th Regiment, in which his name ought to be remembered. Burgoyne gives no account of his personal share in this assault, but it is evident that the success of Picton's division was largely due to his skilful guidance. The two divisions which assaulted the breaches unfortunately got mixed together, and, although they showed great courage, their efforts were not made with the regularity essential to success. Burgoyne has recorded his opinion that an attack by battery on the castle would have brought the siege to an earlier termination.

The employment of whole divisions entails serious losses, but success is worth the price. At Badajoz, and afterwards at St. Sebastian, heavy columns were engaged, but at Burgos the assaults were made by small bodies of troops and they failed. Burgoyne attributed his own failure before Burgos, not so much to the deficiency of artillery and stores as to the unusual parsimony of Wellington in supplies of men. It appears that Burgoyne, both in Spain and afterwards in the Crimea, displayed an inconvenient faculty for plain speaking. It was the regular official practice to speak in the highest terms of the bravery of the Portuguese troops, but when Burgoyne was told that they were to be employed in an assault, he candidly explained that he would prefer to have at least a portion of English soldiers for the difficult work he had in hand. An officer was so foolish as to send to Wellington a complaint against Burgoyne for speaking disrespectfully of Portuguese valour, but Wellington answered that he quite agreed with Burgoyne. "It was rather hard," he said, "that we should be losing frequently the best men in the army because the Portuguese would not do their duty, and then should not be allowed to say so, but, on the contrary, be forced to compliment them." As the siege of Burgos became more critical the besieging force was reduced, in order to make head against the French armies which were gathering strength after the defeat of Salamanca. Finally the siege was raised, and the British army made an uncomfortable retreat to the frontier of Portugal. Burgoyne never shrank from avowing that he had represented to Wellington that the place could be taken with the means at his disposal, and he always remained of opinion that it would have fallen if powerful assaulting columns had been employed to storm it as at Ciudad Rodrigo and Badajoz. He sums up his criticism upon his own performance with the remark, that "an attempt with inadequate means, unless used with great vigour, is almost certain to end in failure." Burgoyne mentions a curious example of the courtesies of war which occurred during this siege. As he had much to do and few assistants, he began early to try to save his time by taking the liberty of crossing the open from one part of the trenches to another. This he did very cautiously at first, till by degrees the enemy became accustomed to him, and would allow him to do what they would not permit to others. Among his comrades the compliment thus paid to him by the French was attributed to a particular coat reaching to his heels which he wore, being "a new and outrageous fashion just arrived from England."

The campaign of 1813 began pleasantly for Burgoyne, as by invitation of Sir Thomas Picton he was attached to the 3rd Division, to which he had shown the way at Badajoz. He anticipated a second and more arduous siege of Burgos, but the French, having omitted to provide properly for the defence of the place, blew up the works and abandoned it on Wellington's approach. In the battle of Vittoria Picton's division was particularly distinguished. The journals of Burgoyne reflect his impressions at the time he wrote, and he seems to have fancied that neither Picton nor himself was a favourite of Wellington. Yet it is manifest that Burgoyne's merit was fully appreciated by Wellington, although at the close of the war he received less public recognition than his services deserved. As regards Picton, the whole army knew, and therefore its leader was not likely to forget, that as a fighting general he was unsurpassed. At Vittoria Burgoyne mentions that several orders which Wellington sent had been anticipated by Picton. He does not state, but we may infer, that he suggested much that Picton did. He probably assisted Picton as Jomini did Ney in the most brilliant period of that Marshal's command of a corps under Napoleon.

At the siege of St. Sebastian Burgoyne served under Sir Richard Fletcher, who was killed in the assault. The difficulties of storming this place were very great, nor did Burgoyne think it would have been carried if an explosion had not occurred behind the breach. Burgoyne remarks that Wellington, after the failure of a small force at Burgos, recurred to the heavy columns which had succeeded at Badajoz, and gained his object, but at heavy cost. Considering the reputation which Burgoyne had acquired in these sieges, his subsequent career was disappointing. The arrival of an officer senior to himself deprived him of the chief command of engineers to which he might reasonably have hoped to succeed on Sir Richard Fletcher's death. Wellington, wishing to compensate him for this disappointment, named him to the command of engineers in the expedition to America which followed immediately on the termination of the Franco-Spanish War. Thus Burgoyne was sent on a service where little glory was to be gained, and he returned just too late to be included in the first arrangements for the campaign of 1815. So it came to pass that he served at New Orleans and did not serve at Waterloo. But whatever was the result of the particular operation in which he might be engaged, his professional reputation steadily advanced. He admitted freely his own errors, and never sought to extenuate miscarriages in which he was concerned by laying blame on others. It is manifest that he thought that he could have taken Burgos if Wellington had allowed him plenty of men and left him to himself; but he was too loyal to say or even to hint that this was the true cause of failure. At New Orleans he thought that the enterprise ought never to have been undertaken, but after the first assault had failed with heavy loss, he advised that a second should be made, and gave good reasons for expecting that it would succeed. But the attempt hastily begun was hastily abandoned. We seem in thus reviewing the early years of Burgoyne's career to be anticipating the remark which would be appropriate to his share in the Crimean War. His opinion as to the failure before Burgos is singularly applicable to the operations against Sebastopol. The attempt was made with inadequate means, and it was not followed up with the vigour which alone could give hope of success. We shall see when we come to the second volume of Burgoyne's *Life*

* *Life and Correspondence of Field Marshal Sir John Burgoyne, Bart.* By his Son-in-Law, Lieut.-Col. the Hon. George Wrottesley, Royal Engineers. 2 vols. Vol. I. London: Bentley & Son. 187[illegible]

that he understood better than his French colleagues the conditions of the problem which lay before the allied army. As regards the attack on New Orleans, we entirely subscribe to the opinion of Burgoyne's biographer that it would be difficult in the whole range of English military enterprise to find a more injudicious operation. He attributes the idea of it to Admiral Cochrane, who perhaps, like sailors generally, undervalued military difficulties. A portion of the troops had disembarked, and were in presence of the enemy before their General, Sir Edward Pakenham, arrived. Nothing was known of the position or force of the Americans until the works were reconnoitred by him and Burgoyne. The enemy were found to be posted too strongly to be overcome by open attack in front, and "the folly of the enterprise became apparent." However, the Admiral proposed an ingenious scheme, which, if perseveringly followed up, might have led to the capture of the place. This consisted in cutting a canal from Lake Pontchartrain to the river, and passing over a body of men in boats to the opposite side of the Mississippi, in order to take possession of an American battery on the right bank, which enfiladed the lines covering the town. It was intended that this attack should precede that on the main works of the enemy. The attack was made and proved successful, but the troops having been delayed in making it, the English General gave the order for the assault on the main works too soon. That assault was made and failed, and Sir Edward Pakenham was killed. It was then reported that the American works on the right bank were in our hands, and in a council of war held on the ground Burgoyne strongly urged a renewal of the attack, but his opinion was overruled. Thus a fine body of soldiers and much reputation was sacrificed because there was at first too much boldness, and afterwards too little, in the counsels of their leaders. This is very nearly an anticipation of the Crimean War. Burgoyne returned to England, and found that another officer had been appointed commanding engineer with the army in the Netherlands. He applied to Wellington, who answered that he would be very happy to have him with the army, but official routine prevented his joining it till after Waterloo. Sir Thomas Picton, passing through London, applied for leave to take Burgoyne as his aide-de-camp, but this application was refused. We may be sure that if Burgoyne had spent the night of the 17th June with Picton, he would have taken care that the farmhouse of La Haye Sainte, which lay in front of Picton's position, should be put into the best state of defence possible. It is evident that there could be no reason satisfactory to anybody except a Horse Guards' clerk for not allowing Burgoyne to go with Picton. With Napoleon in front, there was surely a call for all the talent we possessed. But Fate and the Horse Guards are alike irresistible by the British army.

(*To be continued.*)

OLD-FASHIONED ETHICS AND COMMON-SENSE METAPHYSICS.*

MR. THORNTON has in this book left the field of politico-economical speculation in which he has previously earned a considerable reputation, and ventured on the more difficult ground of metaphysical and ethical inquiry. The title of his book indicates in some degree its general tenor. It is a remonstrance against various heretical opinions which have, as he thinks, been gaining more acceptance than they deserve. In the combat which he provokes Mr. Thornton shows the qualities with which we are already familiar. He writes with remarkable candour; he always endeavours to meet his opponents upon their strongest ground; his style is flexible and occasionally eloquent, and he has a fertile supply of ingenious illustrations. It must, however, be admitted that the attempt to answer metaphysics by common sense is one which generally excites our suspicion. It too often implies a spirit similar to that in which Johnson gave his well-known refutation of Berkeley. It means that a man summarily dismisses difficulties because he does not appreciate their true bearing. The Scotch school of metaphysicians, for example, are generally considered to have shown less acuteness than audacity in their assault upon Hume's scepticism. Mr. Thornton, who has inherited their shibboleth, speaks at times with a dogmatism which reminds us a little too much of his predecessors. True, it is a dogmatism curiously tempered by an amiable modesty. Yet, in his unpretending way, Mr. Thornton lays down the law with a confidence which sometimes appears to us to be hardly justified by the depth of his knowledge. He speaks with something like reverence of Mr. Mill, and yet he accuses Mr. Mill of a number of fallacies so transparent that, if Mr. Thornton be right, they could be detected by Lord Macaulay's schoolboy. He writes with a frank contempt of many of Hume's speculations, till we wonder with him that Hume was ever taken for an acute thinker. He tells us what is right and what is wrong in Descartes and Berkeley and Professor Huxley, though, in spite of his "common sense" tendencies, he ultimately rests in a doctrine nearly identical with that of Berkeley. He sits in judgment with equal confidence upon Mr. Darwin, and he confutes Comte's celebrated theory of the three stages—though he candidly admits that he has not read the original—in a page. Few writers show such genuine candour as Mr. Thornton, and yet very few venture to express themselves so confidently upon points which have exercised the ingenuity of the keenest reasoners that have ever lived. We cannot, of course, follow him into many of the vast inquiries which his book might suggest. Generally, we may say that he is an opponent of materialism and atheism, though we must add that we think him a little rash in imputing those evil principles to some of his opponents. We shall, however, confine ourselves entirely to his first two essays, in which he treats of Utilitarianism and of "History's Scientific Pretensions." They are not, in our opinion, the best part of the book, but they are the only essays of which we can here speak freely.

In speaking of the pretensions of historical philosophers, Mr. Thornton does not, like some writers, assert that the will acts independently of causation:—

> Men's motives [he says] are the results of antecedents. Equally undeniable it is, that a knowledge of all the antecedents and of all the laws of their movements would enable us to foresee the results; for this, supposing the laws referred to to have any real existence, is merely equivalent to the self-evident proposition that if we perceived certain causes, and knew exactly how they would act, we should know beforehand what would be their effect.

Mr. Thornton, then, seems to concede the primary assumption of all who believe in the possibility of a science of history, though it must be added that he is in some sense a believer in Free Will. "But," he proceeds, "what if there be no such laws? What if, on the showing of Mr. Buckle himself and his associates, there neither are nor can be?" Then indeed a science of history is simply impossible, as we may fully admit that it never has been, and from the exceeding complexity of the circumstances in all probability never can be, constructed.

To show that there are no such laws Mr. Thornton has a simple argument. "A scientific law," he says, "is simply a record of the uniform recurrence of consequences." Now in human affairs, as is admitted by Mr. Mill and Mr. Buckle, and all believers in progress or in evolution, the same combination of circumstances never does or can recur. Therefore in human affairs "there can be no scientific laws." As Mr. Thornton spends much energy in enforcing this theory, and in dissipating (not without need) the various equivocations produced by the use of the deceptive term "law," we presume that we cannot be mistaken in his doctrine. Let us try to apply it. The most familiar instance of what is called a scientific law is that formula which asserts the force of gravitation to vary inversely as the square of the distance. A knowledge of that law enables us to predict the course of the planets. Knowing that the law holds in all cases which we have observed, we infer that it will apply also in cases which we have not observed. From the fall of the apple we reason with more or less confidence to the orbit of a planet; and gradually we attain that certainty which enables us to map out the course of a new comet or to discover Neptune. If Mr. Thornton should deny the validity of this inductive process, he would of course reduce all science to simple observation. From the fall of the apple we should infer that another apple would fall under identical circumstances; but we could learn nothing about the moon. From the past phases of the moon we might infer that the same phases would recur in the same order; but the discovery of a new planet would be impossible, because law is "simply a record of the uniform recurrence of circumstances," and we have to deal with a new combination of circumstances. Of course Mr. Thornton admits the process of scientific induction to be valid; but, if valid, the scientific historians have all that they want. If they had discovered that the marriage rate varied inversely as the price of corn, they could foretell the influence of a famine upon marriage, though the same circumstances might never have presented themselves before, just as the astronomer predicts the course of a newly discovered planet. The complexity of the facts, and not the absence of law, makes the calculation impossible. Or, to take a different instance, if Mr. Herbert Spencer's theories should be demonstrated, we could prophesy with perfect confidence that a century hence a greater "differentiation" will have taken place in the social organism, and that certain rules will be spontaneously obeyed instead of enforced by Government. In short, the case of social science is the same in principle as that of chemistry or astronomy. Mr. Thornton considers scientific prediction to be possible only if all events move in cycles according to the theory expounded by the carpenter in *Peter Simple*; whereas the very essence of science, according to its ordinary exponents, lies in the possibility of reasoning from the known to the unknown, and applying the "law" which has been observed in some cases to an infinite number of other cases in which it has not been observed. Mr. Thornton quotes Mr. Mill's statement as to a progressive change in the character of the human race as an argument against the possibility of scientific prediction. Surely Mr. Thornton can see that there may be a law of progress, that it might be a law that men should be always growing fatter or thinner, or more intelligent or more stupid, and that, if so, we are just as much entitled to predict as though the law were that human nature remained stationary. That the constant change renders the problem excessively difficult, we fully admit; and, if that is all that Mr. Thornton means, not only should we agree with him, but Mr. Mill and Mr. Spencer and Comte himself would be on his side. But he means—if we do not misunderstand him—that the problem is not merely insoluble by reason of its intricacy, but insoluble by its intrinsic nature. And thus we regret to say that his argument appears to us to be worthless.

We turn to his assault on utilitarianism. Mr. Thornton claims credit, and we willingly admit the justice of his claim, for a candid desire to put utilitarianism in its strongest light. If we do

* *Old-fashioned Ethics and Common-sense Metaphysics.* By W. T. Thornton. London. Macmillan & Co. 1873.

not think him successful in his endeavour, it is not for want of good will. We must observe, however, that "utilitarian" is a word which covers many different phases of opinion, from Locke and Hume to Paley, Bentham, Mr. Mill, and Mr. Bain. These writers differ radically from each other on the most vital points; but the utilitarianism which Mr. Thornton attacks is different from any doctrine which has ever been maintained by any writer with whom we are acquainted. Mr. Mill is his chief authority, but he arrives at his most singular conclusions by adding to Mr. Mill's doctrine certain inferences which he conceives to follow logically from Mr. Mill's principles. Those inferences would certainly be repudiated by all utilitarians; and we confess that the logic by which they are deduced is in our opinion of a very questionable kind. Utilitarians have generally been accused of upholding the selfish theory of human nature; and such writers as Paley, Tucker, or Bentham are fairly obnoxious to the charge. Mr. Thornton inverts the accusation. Virtue, he says, in the utilitarian sense involves the subordination of our own interest to that of others; and the pleasure which it directs us to seek is the pleasure of attending to the pleasure of others instead of our own. Nay, he goes further. Since it is amongst the highest achievements of virtue to sacrifice your own to secure another's happiness, the virtue will be greater rather than less "if you sacrifice more happiness of your own than you secure to another." Thus utilitarianism proves that we ought to act in such a way as to diminish the total sum of happiness. The answer to this strange interpretation is obvious. Mr. Thornton is confounding the criterion with the motive. That conduct is best, say utilitarians, which secures the greatest amount of happiness. But the greatest amount of happiness is secured by each man attending chiefly to his own interest. Therefore utilitarianism is compatible with, as it has frequently been connected with, the doctrine of enlightened selfishness. Mr. Thornton's error is in the assumption, which to say the least requires much proof, that the general good should be not only the test, but the conscious end, of all moral conduct. And even then the appearance of inconsistency which he imputes to utilitarians is simply produced by his forcing upon them a test radically opposed to that which they adopt. Again, Mr. Thornton declares that utilitarianism measures the morality of actions not only by their tendency in the long run to promote human happiness, but by the particular consequences of each action. Thus a murder might be wrong on one showing and right on the other. Of course a utilitarian who adopted the two principles as independent tests of morality would be a fool. But the very essence of utilitarianism in its later developments is to assert the necessity of acting on general principles, and not on particular calculations. Finally, utilitarianism asserts that the ideal standard of perfection is also the only practical standard. It makes duties of perfect and imperfect obligation equally binding, and confounds generosity and justice. This seems to us to be as strange a misconception as any that has preceded, but it appears to be that which has most impressed Mr. Thornton, and which has induced him to construct a theory of his own. Without discussing its value, we will briefly notice this rival doctrine, simply observing that if utilitarians really hold the doctrines which Mr. Thornton imputes to them, or opinions from which those doctrines are fairly deducible, they must be weaker creatures than their worst enemies have hitherto suspected.

Mr. Thornton's theory is that there are two absolute rights from which all others may be inferred—the right, namely, to deal with oneself as one pleases, so long as one does not injure others; and the right to dispose on the same terms "of the product of one's own honest industry." Let us take the first right. Mr. Thornton says explicitly that we have a "right" to retire to our own rooms, and "make beasts of ourselves to our heart's content." He adds that we should be doing very wrong, but that nobody would have a right to interfere. We presume therefore that Mr. Thornton is giving a theory, not of virtue generally, but only of the particular virtue of justice. We should be glad to know how he proves that the supposed indulgence appears to be wrong, for it would clear up his general theory of morality; but we must confine ourselves to the proposition he has stated. In the first place, then, his "absolute right" is not a right at all. Mr. Thornton would not allow a child of his own to make a beast of itself because it did not hurt anybody but the child. He must therefore amend his statement, and say that all people of sufficient age and understanding have a "right" to do as they please. But as soon as he introduces this qualification, he admits the utilitarian theory; for by what principle can he determine the age at which liberty should be conceded, except by discovering the age at which it will do more good than harm? But, further, the right in any sense is not self-evident. It is disputed by many men of the highest ability—for example, by Mr. Carlyle, for whom Mr. Thornton has a great reverence—and by all people who propose legislation for the suppression of drunkenness. How then would he answer them, except by again appealing to utilitarian principle? If unbounded liberty in self-regarding actions does more harm than good, why should we preserve a mischievous right? To this Mr. Thornton, who denies that he is an "intuitionist," answers by quietly assuming as notoriously true a most questionable principle. "No obligation, be it remembered," he says, "can arise except through some antecedent act of one or other of the parties concerned. Either a pledge of some sort must have been given, or a benefit of some sort received." In fact, Mr. Thornton appears to found justice upon some form of the social contract theory. That theory has been abandoned by all competent thinkers, and Mr. Thornton's quiet assurance "be it remembered" should be supplanted by "it was once held." At any rate, the doctrine being disputed, Mr. Thornton is bound to allege some reason in support of it. This supposed bargain between society and individuals is generally treated as a mere figment of no real validity. The only approach to an argument in favour of what is certainly not a self-evident proposition is contained in a subsequent passage. "Why is it," asks Mr. Thornton, "that every one has a right to fulfilment of engagements, to have faith kept with him, to have promises observed? Solely, as it seems to me, because whatever was promised to any one becomes eventually due, and because whatever is due, or owing, ought to be paid." This is obviously mere tautology. Mr. Thornton evades it in appearance by using the word "due"; but due means simply that to which any one has a right. And his answer to the question, Why is it right to keep promises? is simply that it is right because it is right. Thus if we admit, which we do not admit, that society has made a tacit engagement with every individual to take nothing from him without an equivalent, we are told in substance that the promise is binding because it is binding. Surely this is a very naïve device for escaping the obvious conclusion that promises ought to be kept because fidelity to engagements is a first condition of public welfare. But, admitting this, Mr. Thornton would have to admit utilitarianism; and thus, in the final result, he must either base his argument on utilitarianism, which he regards as an unspeakably inconsistent conglomeration of overstrained morality with excessively lax morality, or else he must take refuge in an intuition, though he denies himself to be an intuitionist, and though the primary axiom on which he relies as requiring no evidence is denied by the great majority of modern thinkers.

We should have been glad to follow Mr. Thornton through the ingenious cases which he has devised for the perplexity of utilitarians. To our mind, the utilitarian solution is very simple and far more reasonable than his own. But we have said enough; and as we have been engaged in attacking his opinions, we are glad to conclude with once more admitting his evident candour and the high tone of feeling which is evident throughout his pages.

DR. NEWMAN'S HISTORICAL SKETCHES.*

THESE *Historical Sketches* do not belong to the more serious and original of Dr. Newman's writings. Their character is what may be called occasional; they are comparatively light, both in substance and method, not professing to be the result of any very profound research, and not possessing, apart from the clearness with which they bring out the author's view of particular periods, an historical value of the highest kind. Even setting aside the errors, as we must think them, which are forced on a Roman Catholic writer by the inverted view he is obliged to take of many of the greatest men and phenomena of modern history, it would be easy to point out omissions and unintentional exaggerations which to some extent diminish the confidence we can feel in him as an historical guide. But the book has, equally with his more elaborate productions, those charms of style and manner which place Dr. Newman in the front rank of living English writers, and which indeed, it may with truth be said, give him in his own peculiar walk an almost undisputed pre-eminence. Few periods of English literature have been able to boast of a greater array of vigorous, active-minded writers and thinkers than our own; but few or none have possessed so few masters of English prose. And among these few, though the authors of *Sartor Resartus* and of the *Mill on the Floss* may be unrivalled in eloquence, richness, and force, this very force deprives them of the exquisite ease and grace which mark Dr. Newman's writing, where the ardour of the feeling illumines but does not trouble the serenity of the thought, the even and harmonious flow of the polished sentences.

Of the five essays included in this volume, the longest and most interesting is that entitled "On the Rise and Progress of Universities"—a series of papers written in 1854, when it was proposed to establish a Roman Catholic University in Ireland, and intended both to enlist public interest in the project and to explain the principles on which it should be carried out. They have, however, an interest and value altogether beyond the occasion of their appearance—an occasion which was, however, as was natural, stimulating to their author's imagination, and inspired him with an ideal which could never have been, and can less than ever now be, realized by a Catholic University in Dublin. No better illustration could be desired of the true University temper of mind than the contrast between Dr. Newman himself, in whom the spirit of Oxford as she was forty years ago (for she is something very different now) produced its fairest and most fragrant blossom, and prelates like Cardinal Cullen and Dr. MacHale, whose views and feelings would too surely dominate an ecclesiastical institution in Ireland. With all his passionate love for his faith, with all his efforts to see it in all things and all things in it, to represent it as the perennial source of life, motion, and progress in history, of happiness, purity, loftiness in the individual: with all his desire to accept it as the guiding star of humanity, and to ensure its

* *Historical Sketches.* By John Henry Newman, of the Oratory, some time Fellow of Oriel College. London: Basil Montagu Pickering. 1872.

dominion over the intellect and heart, he is himself in a curious way still independent of it, and still writes and thinks as one brought up in a freer, fresher air. Dr. Newman would doubtless urge that there is certainly nothing in religious life, nothing even in ecclesiastical influences, to destroy a man's sympathy with intellectual activity, with literary or artistic cultivation; and he could point to the mediæval Church itself as an instance of their union and their invigorating effect on one another. But to this it must be answered that the Roman Catholic Church now differs from the Catholic Church of the thirteenth century almost as much as do the Protestant Churches themselves, and is every year, through her hierarchy, assuming and enforcing on her subjects an attitude of more determined hostility to that free and genial play of intellectual light which radiated over Europe from the Universities of the middle age and still survives in those of the Protestant North. It is not fair to insist on the defects of English and Irish Romanist writers, since they have been excluded from our own seats of learning; but compare those Ultramontane writers whom the exclusively Catholic seminaries of France, Italy, or Spain produce with Dr. Newman himself, or with Dr. Dollinger, reared in the bracing atmosphere of Germany, and see how different is their attitude towards learning and mental life. Nothing is more striking in this volume, nothing more genuinely liberal, than the passage in which the author gives his idea of what a University should be:—

A University is a place of concourse whither students come from every quarter for every kind of knowledge. In the nature of things greatness and unity go together; excellence implies a centre. It is the place to which a thousand schools make contributions, in which the intellect may safely range and speculate, sure to find its equal in some antagonistic activity, and its judge in the tribunal of truth. It is a place where inquiry is pushed forward and discoveries verified and perfected, and rashness rendered innocuous, and error exposed by the collision of mind with mind and knowledge with knowledge. It is the place where the professor becomes eloquent and is a missionary and a preacher, displaying his science in its most complete and most winning form, pouring it forth with the zeal of enthusiasm, and lighting up his own love of it in the breasts of his hearers. It is the place where the catechist makes good his ground as he goes, treading in the truth day by day into the ready memory, and wedging and tightening it into the expanding reason. It is a place which wins the admiration of the young by its celebrity, kindles the affections of the middle aged by its beauty, and rivets the fidelity of the old by its associations. It is a seat of wisdom, a light of the world, a minister of the faith, an Alma Mater of the rising generation

And what a lively love for Athens, which Dr Newman takes as the type of such a University as he has been imagining, we see in the following description of Attica, the dwelling-place which nature had prepared for letters and philosophy!—

A confined triangle, perhaps fifty miles its greatest length, and thirty its greatest breadth; two elevated rocky barriers meeting at an angle; three prominent mountains commanding the plain—Parnes, Pentelicus, and Hymettus; an unsatisfactory soil; some streams not always full—such is about the report which the agent of a London company would have made of Attica. He would report that the climate was mild; the hills were limestone; there was plenty of good marble; more pasture land than at first survey might have been expected, sufficient certainly for sheep and goats; fisheries productive; silver mines once, but long since worked out; figs fair; oil first-rate, olives in profusion. But what he would not think of writing down was that the olive-tree was so choice in nature and so noble in shape that it excited a religious veneration; and that it took so kindly to the light soil as to expand into woods upon the open plain and to climb up and fringe the hills. He would not think of writing word to his employers how the clear air brought out, yet blended and subdued, the colours on the marble, till they had a softness and harmony for all their richness, which in a picture looks exaggerated, yet is after all within the truth. He would not tell how that same delicate and brilliant atmosphere freshened up the pale olive, till the olive forgot its monotony, and its cheek glowed like the arbutus or peach of the Cimbrian hills. He would say nothing of the thyme and thousand fragrant herbs which carpeted Hymettus; he would hear nothing of the hum of its bees, nor take much account of the rare flavour of its honey, since Gozo and Minorca were sufficient for the English demand. He would look over the Ægean from the height he had ascended; he would follow with his eye the chain of islands which, starting from the Sunian headland, seemed to offer the fabled divinities of Attica, when they would visit their Ionian cousins, a sort of viaduct thereto across the sea; but that fancy would not occur to him, nor any admiration of the dark violet billows with their white edges down below; nor of those graceful unlike jets of silver upon the rocks, which slowly rise aloft like water spirits from the deep, then shiver and break and spread, and shroud themselves and disappear in a soft mist of foam; nor of the gentle, incessant heaving and panting of the whole liquid plain, nor of the long waves keeping steady time like a line of soldiery, as they to ound upon the hollow shore; he would not deign to notice that restless living element at all, except to bless his stars that he was not upon it. Nor the distinct detail, nor the refined colouring, nor the graceful outline and roseate golden hue of the jutting crags, nor the bold shadows cast from Otus or Laurium by the declining sun—our agent of a mercantile firm would not value these matters even at a low figure. Rather we must turn for the sympathy we seek to yon pilgrim student, come from a semi-barbarous land to that small corner of the earth, as to a shrine where he might take his fill of gazing on those emblems and coruscations of invisible uncriginate perfection. It was the stranger from a remote province, from Britain or from Mauritania, who in a scene so different from that of his chilly woody swamps or of his fiery choking sands learned at once what a real University must be, by coming to understand the sort of country which was its suitable home.

The idea of this series of papers is to explain what a University should be and should aim at, by illustrations from the history of Greece, of the middle ages, of modern Oxford, showing what are the circumstances and needs which give birth to a great school of learning, and what the conditions of its continued and prosperous life. Two principles are laid down as essential—the one to its creation, its extension, its force and activity; the other to its maintenance in good order—Influence and Law. Like states or societies,

Universities begin in Influence, they end in System. At first whatever good they may have done has been the work of pressure, of personal exertions, of faith in persons, of personal attachments. Their professors have been a sort of preachers and missionaries, and have not only taught, but have won over or inflamed, their hearers. As time has gone on, it has been found out that personal influence does not last for ever; that individuals get past their work, that they die, that they cannot always be depended on, that they change; that if they are to be the exponents of a University, it will have no abidance, no steadiness; that it will be great and small again, and will inspire no trust. Accordingly system has of necessity been superadded to individual action; a University has been embodied in a constitution, it has exerted authority, it has been protected by rights and privileges, it has enforced discipline, it has developed itself into Colleges, and has admitted monasteries into its territory.

This notion is worked out historically by suggesting that, as the Athenians, with their passion for beauty, freedom and movement, first created learning and literature, and the love of them and the desire to teach them; so the Macedonians and Romans, following after, organized these things, gave them local dwellings in duly instituted schools, and transmitted to modern Europe the ideas of discipline and order which were impressed by the Church upon the monastic foundations, and which soon gave a definite shape and constitution to the early Universities, originally mere fortuitous concourses of students. Discipline, however, important as its function is in controlling and regulating, is after all the second thing; the first, the indispensable requisite of a University's effective life, is the energy of the individual teacher:—

It was the absence of rule, it was the action of personality, the intercourse of soul with soul, the play of mind upon mind; it was an admirable, spontaneous force which kept the schools of Athens going, and made the pulses of foreign intellects keep time with hers.

So, with great force and truth, Dr. Newman proceeds to point out, and illustrates by the career of Abelard, the natural and informal character of the first University teaching, the spontaneous pursuit of it just because it was what men were craving for, and could then obtain from the living voice only; and he is thus led into a discussion of the relative position towards one another of a University and the Colleges within it; of the respective functions of Professors and Tutors. A University, in his view,

embodies the principle of progress, a College that of stability; the one is the sail, and the other the ballast; each is insufficient in itself for the pursuit, extension, and inculcation of knowledge; each is useful to the other. A University is the scene of enthusiasm, of pleasurable exertion, of brilliant display, of reviving influence, of diffusive and potent sympathy; and a College is the scene of order, of obedience, of modest and persevering diligence, of conscientious fulfilment of duty, of mutual private services, and deep and lasting attachments.

The business of the professors in the one is to give the learner knowledge and the love of it; the duty of the tutors, and of College life altogether, is to test and confirm that knowledge, to form in him habits of industry and patience, preserve him from the dangers of University life, mould his character by advice and example. All this, and much more to similar purpose, is put here with singular felicity, and much practical sense; and it may be a pleasure for modern Oxford reformers to know that no one can urge more strongly than Dr. Newman does the importance of the University, and the necessity, in the case of that University to which his mind so often recurs, of rescuing it from the oppression of the Colleges, and relegating them to their proper place. The difference is that he expects more from the action of tutors and Colleges, and has a more definite belief in the possibility of maintaining professors and tutors side by side with these prescribed functions, than one finds existing among those reformers. In their eyes the tendency of College tutors seems to be more and more to become virtually professors, in a smaller field perhaps, but making their teaching independent and primary—in fact, University teaching in Dr. Newman's sense—not merely auxiliary and disciplinary. As, however, our object is to present Dr. Newman's views, and not to strike the balance in the great cause of University *versus* Colleges, we refrain from following out a controversy which we have hardly left ourselves space to recapitulate, and still less to discuss.

The graceful sketch entitled "Mediæval Oxford," which, in the form of a review of the late Dr. Ingram's Memorials, contains some notices of the earlier history of the University, has a curious interest to us now, as showing what were the hopes and beliefs of Dr. Newman and his friends in 1838, when the first mutterings were heard of the storm which has since swept over the most conservative of all English institutions:—

Institutions come to nothing which are untrue to the principle which they embody. Oxford has failed in all respects; has compromised its dignity, and has done injury to its inward health and stability, as often as it has forgotten that it was a creation of the middle ages, and has affected new fashions, or yielded to external pressure. . . . A few years ago, a passing humour seized it to open its gates to the Association for Science; Dissenters of all hues were brought to gaze upon its buildings, its precious things, the silver and the gold and the spices and the precious ointments—there was nothing among its treasures that it showed them not. Four of the most eminent among them, each of a separate persuasion, were honoured with degrees; and it was condescendingly predicted by not the least eminent of his body (Unitarian, I believe), that by such a policy Oxford had added a hundred years to its existence. Scarcely had a twelvemonth passed, when the fruits of that policy appeared; those who had been admitted to covet, felt disposed to steal; they felt a greater pang that its gates were closed against them than pleasure in the memory of the short week during which they had been opened to them; and the visit of the *sauans* to Alma Mater was the precursor of the Bill introduced into the Commons for the permanent admission of Dissenters to its lecture rooms. Such is the inevitable consequence of aping or of trembling at the external world . . . . It is really losing time and toil to deny what is as plain as day, that Oxford has, and ever has had, what men of the world will call a Popish character; that in opinion and tone of thought its members are successors of the old monks, or that those who now speak against Wesleyans and Independents

would also have opposed the Foxes and Knoxes of the Reformation. Surely it is our wisdom, as we follow, so to profess we follow, ancient times. Let us not fear to connect ourselves with our predecessors; let us discern in our beautiful homes the awful traces of the past, and the past will stand by us. Let us stand upon the vestiges of the old city, and with the hero in the poet's romance we shall find a talisman amid the ruins. "The talisman is faith."

To set this passage beside the striking one in Mr. Gladstone's *Chapter of Autobiography* in which he dilates on the feelings and hopes with which he and his friends regarded the Church of England and her destiny in these same years (1832-45) suggests many reflections as to the incapacity of even the greatest intellects, animated by the highest and most disinterested purposes, to discern the signs of their own times. Dr. Newman has abjured Oxford; Mr. Gladstone has opened all its honours and emoluments to Dissenters, and overthrown the Irish Establishment. The University which they looked upon as the home of sentimental conservatism, the guardian of mediæval traditions in religion and philosophy, has become a centre of vehement radicalism and bold theological speculation.

A PROFITABLE BOOK UPON DOMESTIC LAW.*

THIS book is better described by the head-line "Essays for Englishwomen and Law Students" than by the catching but somewhat vague terms of the principal title. The matter of Perkins Junior's work is almost entirely different from that of the original Perkins, and he has adopted the very opposite manner. The original "Profitable Book" is a strictly technical treatise on the most technical branch of English Law, while the volume now before us aims at giving the substance of the law touching the everyday dealings of mankind in their families and households in a more popular form than is done in books intended for the profession. The author seems to understand by "domestic law" very much what Continental writers understand by the law of the family—that is, first, the law which governs the relations of husband and wife, and of parent and child, so far as these are subject to positive law; next the modifications produced in the law of property when it comes into contact with these relations. Perkins Junior adds some account of the law of master and servant, which, as a matter of considerable domestic interest to every householder, may naturally find a place in a work meant for the guidance of unprofessional masters and mistresses, though scientifically considered it has nothing to do with the family, being only one of the many special developments of the general principles of contract. It is less easy to see why we should find in this book chapters on real property, the jurisdiction of the Court of Chancery in cases of undue influence, and evidence. It is no doubt true that the law of the family cannot be rightly understood without some previous understanding of the law of property in general, and in thus saying we take property in a wide sense to include both rights of ownership and rights arising out of contract or personal duty. Take, for instance, the subject of voluntary settlements, on which our author touches lightly, leading the reader off the dangerous ground to the practical and certainly wise conclusion that no voluntary settlement should be attempted without the most careful legal advice. Not that what he does say is careless or hasty; on the contrary, he gives without constraint, and yet in a remarkably small space, a statement as nearly accurate as the existing state of the authorities well admits of. However, every reader who begins to think about the matter will find himself confronted by a legion of questions which can be disentangled only by some knowledge of the simpler principles of law. A settlement is a special kind of transaction, generally involving complex relations both of ownership and of contract. Before the qualities of this compound body, so to speak, or the operation of extraneous influences on it, can be understood, it is proper to understand the qualities of the simpler elements which go to make it up. Thus, what is a voluntary settlement? A settlement made without consideration. What is consideration? Money, or money's worth, or marriage, will serve for a rough answer; but the true and comprehensive notion expressed in this form, a notion which indeed has been developed and fully settled only in comparatively recent times, can be obtained only through familiarity with the leading ideas of the law of contracts. Again, a settlement may be impeached on various grounds—fraud amongst others. What is fraud? Most people think they know in a general way what is meant by a fraudulent action, and so they do for ordinary purposes. But for legal purposes it is different. The effects of fraud in its various degrees vary according to the nature of the transaction, the persons, and the circumstances. That degree of fraud which will entitle a man to be released from his bargain before he has performed it may not entitle him to have it undone after it is performed. The law calls many things fraud which are commonly called only carelessness or improvidence, and does not deem some things fraud which most folks would be inclined to deem so. And many other preliminary and accompanying questions might be added. In short, what may be called mixed family law (as distinguished from that branch which concerns the wholly personal relations) is exceedingly complicated, and any one who undertakes to expound it can hardly avoid either prefixing some explanation or presupposing some understanding of the more simple parts of the law.

* *Essays for Englishwomen and Law Students: a Profitable Book upon Domestic Law.* By Perkins Junior, M.A., Barrister-at-Law. London: Longmans & Co. 1873.

Now we have here a preliminary chapter on Real Estate, but not on anything else. This can be explained on two suppositions. Possibly the author may have considered that to know the law of real property is the gift of fortune, but that the law of personal property and contract comes by nature. This view would be in some measure countenanced by the present course of preparation for the Bar, especially the Equity Bar, in this country. But the addition of the chapters on the Court of Chancery and Evidence would remain unexplained. The other hypothesis to which we rather incline is that the book is to be regarded not as an organic whole, but as a collection of essays bound together mainly by a presumed common interest for unprofessional readers.

Probably every one will agree with Perkins Junior that it would be a good thing if the law of England were more generally known amongst Englishmen, and also Englishwomen, than it now is. The reason he reserves for the last, however, strikes us as weak. It is that "our lady novelists, much at home in the love-making, are often sadly at sea with the law, and we would befriend them." There is at least one brilliant exception, for which a writer who dedicates his book to "his fair friends" with professions of unbounded devotion ought to have given the ladies credit. Can Perkins Junior have forgotten how in *Felix Holt* the very singular and artificial institution of English real property law known as a base fee is used, and used with perfect accuracy, as a material ingredient in the plot? We have heard, indeed, that in this case George Eliot's skill failed of its reward; for unlearned readers, not knowing the mysteries connected with estates tail which caused a Chief Justice to lay down that "the reason of the operation of a recovery is in its nature inscrutable," thought the law as correctly given in the novel so odd that it must be wrong. It is a doubtful question, we think, whether the author of this "Profitable Book" has hit on the right method for making the law popular. That which he has chosen is to disguise the formal character of his subject by an occasional inartificial turn of language, and by interspersing digressions, anecdotes, and moral reflections, sometimes on very slender pretexts; thus he discourses through six or seven pages on the conditions of happiness in married life. This may perhaps be fairly called a variety of the "Philosophy in Sport made Science in Earnest" method. Some such plan has been tried in almost every branch of knowledge, but we believe it on the whole to be misconceived. The most popular treatment of a subject is in the long run the most clear, and the most clear will be the most scientific and the least encumbered with extraneous matter. We have little doubt that a good Code would do more to popularize the law than any amount of text-books or other books written down to the supposed level of the lay population. It is indeed almost impossible to make explanations simple when the form of the law is involved in complexities most interesting indeed to the student, as showing the history of its growth, but not so pleasing to those who want to know what the substance of the existing law is. Recent Indian legislation affords abundant matter for example and contrast. We take an instance almost at random. What can be plainer, more reasonable, more likely to command general assent than this?—

> When a party to a contract has refused to perform, or disabled himself from performing, his promise in its entirety, the promisee may put an end to the contract, unless he has signified, by words or conduct, his acquiescence to its continuance.
>
> When a person at whose option a contract is voidable rescinds it, the other party thereto need not perform any promise therein contained in which he is promisor. The party rescinding a voidable contract shall, if he have received any benefit thereunder from another party to such contract, restore such benefit, so far as may be, to the person from whom it was received.
>
> A person who rightfully rescinds a contract is entitled to compensation for any damage which he has sustained through the non-fulfilment of the contract.

These are three sections of an Act which has been the law of British India since the 1st of September last. Though not consecutive, we have cited them together as supplementing and bearing on one another. They convey a clear and intelligible meaning even without the authoritative illustrations annexed in the Act. They are also substantially equivalent to the law of England on the same subject. But the English rules have to be pieced out by way of a string of exceptions from a general technical rule, both the rule and the exceptions being expressed in language of which a layman could make next to nothing; and no English text-writer could venture of his own private judgment to state the result of the whole process with the lucid brevity of the Indian Act. It will be interesting to learn in due course of time what effect the Contract Act and the Evidence Act will have on the legal education of the Indian and Anglo-Indian communities. Perhaps we have no right to expect any conspicuous immediate results; but we are convinced that the true way to restore law to its proper place in the life of the nation, and rescue it from ignorance on the one side and specialism on the other, is to embody the law itself in a form that may be accepted as good food for the mind, and to put no trust in any devices for administering it as a gilt pill in popular abridgments.

But to return to Perkins Junior and his work. The execution of his design is more satisfactory than the design itself. His statements of English law, so far as we have verified them, are careful and accurate. We observe that in one or two places, where the law is not quite settled, there occur sudden gaps in the references (which are collected at the end, to avoid the usual alarming aspect of a law book); and this though the text shows that the writer has not neglected to take counsel of the latest

authorities. Such places are those in which references are most wanted, and the omission is strange. It will not matter to lay readers, but it might be very troublesome to a law student, and is the more to be regretted as the book is one which law students may well find useful, and which we suspect will be more used by them than by the Englishwomen for whom it is in the first place intended.

Some of the introductory and collateral matter is hastily expressed, and not unlikely to mislead. The description of the Court of Chancery in its action "as a Court of honour and conscience, requiring the observance of duties which have been termed of imperfect obligation," is too wide and highly coloured, and might induce an unwary reader to suppose that Courts of Equity are bound by no rules, and undertake to enforce every kind of moral duty. There are also at the beginning some rather loose remarks on codification. Perkins Junior says:—

> Whether there should be an authoritative Digest appears to be disputed; but it is certain that the Law cannot be codified until it is digested. Perhaps the reader will be surprised to hear that the Pandects were a Digest, on whose completion Justinian found it necessary to call in his original Code and supersede it by a new one.

Each sentence of this paragraph is a puzzle. The first contradicts most experience out of England, and what in England is now the prevailing and better opinion. As to the second, any one who has heard of the Pandects or Digest at all will probably know that the names are convertible, were used as such by the authority which promulgated the work, and have been so used ever since. On the other hand, no care whatever is taken to guard the reader who is supposed to know so little against thinking that the Code of Justinian was anything like a Code in the modern sense. We find also in the notes on this chapter a very odd piece of legal genealogy:—"The Novels of Justinian were the offspring of the Pandects and the Code"—which we leave for the consideration of the curious.

However, we have only one positive error to lay to Perkins Junior's charge, and that is not in anything relevant to his main purpose. In speaking of parental authority, he quotes the well-known Winchester inscription—

> Aut disce, aut discede, manet sors tertia cædi—

a precept too largely construed by Prefects who hold the command *disce* to include the learning of "notions," and the sanction *cædi* to authorise the inculcation of such learning by the ground-ash. But for *sors tertia* the quotation unaccountably substitutes *pars altera*, which leaves the verse good, but is doubtful Latin. We do not feel moved to any grave indignation at the slip, but we are bound in common charity to warn Perkins Junior betimes, that he may fly from the vengeance which some zealous Wykehamist is doubtless preparing for him.

LIFE AND DEATH OF BISHOP BEDELL.*

THIS contemporary Life of Bishop Bedell comes at a fit time, now that so much is being talked about the relations between England and Ireland, and specially during Bedell's own days. Bedell stands out as one of an unpopular class, the English and Protestant holder of an Irish Bishopric who, at the time when the mutual hatred of English and Irish was at its height, yet won the affections of the Irish people. He had indeed his share of hardships in the Rebellion; but it is plain that he merely paid the penalty for others, and that, if all the English settlers—perhaps even if all the Protestant Bishops—had been like him, the Rebellion might very likely never have happened. The wild ceremony at his burial is the best witness of his peculiar position. The armed rebels paid military honours to his body, and fired volleys over his grave. And their strange farewell or prayer, "Requiescat in pace ultimus Anglorum," marks him out better than anything else as the one beloved member of a hated class. His great monument is of course the translation of the Old Testament into Irish, which was set on foot by him, though it was not finished by him. The work has a philological value which Bedell perhaps did not think of. Within living memory the Bible which Bedell caused to be translated into Irish was still the Bible commonly in use among the Gaelic-speaking inhabitants of North Britain. So slight was the degree in which the two dialects had parted asunder that a translation meant for the use of the Scots of Ireland could be made use of by the Scots of Britain. It is worth notice that, in the letters of Robert Boyle about this matter, some of which are printed in the Appendix, the Gaelic of Scotland is always spoken of as "Irish," as it commonly was in those days, though the name might puzzle many people now. The translation of the Bible moreover was not Bedell's only work on behalf of the natives of Ireland; for he also printed an Irish catechism, and, what one would hardly have looked for, translations of some of the homilies of St. John Chrysostom and Leo the Great. And, if Bedell was loved by the natives, his very love for the natives was one cause among others which led him into many difficulties with his own countrymen in Ireland. The publication of his Bible was opposed by Bramhall and altogether hindered by Strafford, and he had further to strive against various forms of corruption and misgovernment which beset him in the management of his diocese. The whole life of Bedell after he had finally settled in Ireland makes a tale of deep interest; but it is one which is not a little sad.

The present volume which the Camden Society has put forth consists of a Life of Bishop Bedell, written by his son William. The editor, Mr. Jones, describes himself as the representative of the Bishop's mother's family of Elliston, in which character he puts into his Appendix, among some things which are of value and which concern the Life of Bishop Bedell, some other things which are of no interest to any one except the representative of the family of Elliston. And, in editing the Bishop's life, he now and then alters a word or two when the Bishop's son made a small slip in a date or such like. Mr. Jones, as far as we can see, always tells us in some part or other of the book when he has done this, but it is not the less a thing which ought not to be done. In editing a contemporary authority, what is wanted is to give the exact words of the contemporary authority. If the original writer makes a mistake in any point, his editor ought to point it out in a note, but he should leave the text itself untouched. Mr. Jones's changes of this kind seem to be very few and very small, still the practice ought to be protested against as leading to ways of dealing with original texts which might come to destroy all confidence. Mr. Jones has, we think, clearly shown that the Life was written by the Bishop's son William, a clergyman, and not by his other son, Captain Ambrose Bedell, who served in the war against the Irish rebels, and who seems to have lived afterwards as a country gentleman in Ireland. Of all these people, as well as of the Bishop himself and several of his friends, Mr. Jones has with praiseworthy diligence gathered together a great number of particulars, but he leaves out one point about which we should like to know something. Bedell's son William, his father's biographer, was in 1644 (1645?) presented to the rectory of Rattlesden, in Suffolk, where he lived peacefully till his death in 1671. We naturally wish to know something of the ecclesiastical principles and conduct of a man who kept a living without interruption from 1644 or 1645 to 1671. He was a regular priest of the Anglican Church, having been ordained by his father, and having held a living in Ireland before he moved into Suffolk. How came such an one to be able to conform to the state of things in Suffolk in 1644 or 1645, and if so, how came he to be able to conform to the state of things brought back in 1660? Mr. Jones describes him as escaping from "that hurricane of human passion stirred up by national animosity and intensified by religious hate which swept over Ireland, leaving this and that before and behind it"; and he finds "relief in contemplating Mr. Bedell and his family in the refuge he had gained in his own county and among his own people." But he does not give us a word to explain conduct which at first sight seems to put Mr. Bedell on a level with the Vicar of Bray or Bishop Kitchin of Llandaff.

But we will go back again from the biographer to his more famous father. With regard to Bedell, as to everybody else, we must always bear in mind, what it is not always easy to bear in mind, that he was not born at the age nor in possession of the office for which he is best known. He was born in Essex in 1571, he had therefore reached a mature age before the death of Elizabeth, and it is plain that, though not a zealot either way, he inclined rather to the Puritan than to the Laudian party in the Church. But what specially distinguishes him, his love and care for the native part of his Irish flock, was altogether his own, and was not shared by either party. At Cambridge he was Scholar and Fellow of Emmanuel College, then a specially Puritan foundation, and he was further a kind of disciple of William Perkins of Christ's College, a famous leader of that party in those days. He seems to have been a thorough student in all the learning of his time, taking in the Semitic as well as the classical and modern languages. He had the advantage of seeing other lands when he was chaplain in James the First's time to Sir Henry Wotton, then ambassador at Venice, where he made the acquaintance of Fra Paolo, and where he had many opportunities both of enlarging his studies and of disputing with learned Roman Catholics and Jews; on this latter point his biographer tells us with some simplicity:—

> During his abode in Italy he found opportunity of converse with some of the learneder sort of the Jews, wherein he intended these two purposes, the bettering himself in his skill in the Hebrew, and the drawing some of them to the embracing of Christ. In the former the success answered, but not so in the later, that people being extraordinarily stiffnecked, as the Scripture foretold us.

Afterwards he held the living of Horningheath, near Bury St. Edmunds. Here began his first difficulty of a class with which he was pursued during his whole life—that is, questions arising out of ecclesiastical corruptions, understanding thereby, not questions of doctrine or ceremony, but abuses in the temporal side of the ecclesiastical administration, exactions of ecclesiastical courts and the like. Against these Bedell had to struggle all his days, both as presbyter and as bishop. The first difficulty was when he was presented to Horningheath by his friend, Sir Thomas Jermyn, when he refused to pay the high, and, as he held, illegal fees demanded by the Bishop's officers for his institution. In this case, after some correspondence, the Bishop, who seems to have had no personal interest in the matter, gave way, and Bedell was instituted, it being left to him to pay the Bishop's officers only what he thought good. Presently he had a long law suit about tithes, as he held it his duty to maintain the rights of his church and of his successors, though we are told that he was equally careful on the other side in keeping up all that it was his duty to keep up. His tithe suit also carried with it the incidental gain that it

* *A True Relation of the Life and Death of the Right Reverend Father in God William Bedell, Lord Bishop of Kilmore in Ireland.* Edited from a MS. in the Bodleian Library, Oxford, &c., by Thomas Wharton Jones, F.R.S. Published for the Camden Society. 1872

caused him to learn something of law which afterwards stood him in good stead. While holding this living, he was elected a proctor in Convocation for the diocese, and his son gives a somewhat graphic account of the election; how "there was much packing and plotting and making of friends, by the more ambitious of the clergy, to be chosen for that honour, as they accounted it." At last the ambitious ones, unable to agree among themselves, joined with one consent to elect Bedell, who had not even come to the meeting. Bedell's notions of the value of a seat in Convocation are worth recording:—

> The news whereof no sooner came to his ears but it presently affected him with a great deal of grief and dislike, as he spared not to his friends sadly to express to this effect that he knew he should but lose his time.

This was the Convocation which accompanied the Parliament of 1623, a Parliament which the British Solomon found fiercer than he liked on several points, and which so far deserves our respect, though modern toleration would not admire its savage outcries for further persecutions of Papists.

Bedell was next, in 1627, moved to Ireland, being appointed Provost of Trinity College, Dublin. The appointment seems then to have been made in the same irregular way as the appointment to Old-Foundation Deaneries. Bedell was named by the King, but he was elected and admitted by the unanimous consent of the Fellows. So too, after Bedell's removal, the King first forbids any election till his pleasure shall be known; but the Fellows, backed by their late Provost, prayed for freedom of election, and they seem to have got it. It is worth noticing that Bedell, during his short tenure of the Provostship, was chosen one of the representatives of the University in the Irish Parliament; but he declined the post. The election of a clergyman was therefore plainly not illegal; but was it likely to have happened in any but an academical constituency? At Dublin too Bedell had his troubles; but they did not take quite the same form as those of days before or after, being chiefly disputes within the College. For instance, Dr. Hoyle, the Professor of Divinity, publicly preached at the Provost; but the matter ended in peace, for "they debated the business largely together like scholars, all in Latin, without any witness, unless a Sizar, and parted good friends." Was a Sizar looked on as so little human that he might witness the disputes of a Provost and a Professor, as it used to be said that Russian ladies allowed serfs to wait on them in their dressing-rooms, on the ground that serfs were not men?

Bedell had been less than two years at Dublin, when he was appointed in 1629 to the two Bishoprics of Kilmore and Ardagh, the latter of which he afterwards gave up from a conscientious scruple against holding two Bishoprics at once. Here his troubles were largely of the same kind as those which he had gone through in his Suffolk living. He was engaged in long suits with the Chancellor of his diocese, and was endlessly grieved with the exactions by which his officers ground down his flock, especially the Irish part of it. We also hear of strange interferences with his patronage, especially with regard to a living which he had given to Murtagh King, who was his chief agent in his Irish translation of the Bible. The minute accounts of all these matters, which have been collected by Mr. Jones, put Strafford's government in Ireland in a very unfavourable light from quite a new point of view. Amongst other things, in 1638, Bedell held a Diocesan Synod, about which further storms arose; the acts of this Synod and the rules made by it are printed by Mr. Jones in the Appendix, and are well worth looking at. With regard to rites and ceremonies, he seems to have been attacked on both sides; one of the charges against him suggests an inquiry which it would be well for any local antiquary who is familiar with Kilmore to work out at length. Bedell says, in a letter to Archbishop Laud,

> When I was a minister in Suffolk, I placed the Communion Table in the upper part of my chancel. In Kilmore Cathedral, finding the Bishop's chair in that part, I said that I would never sit there, it being the ancient place of the altar.

On this Mr. Jones comments:—

> This, it is to be observed, is probably the origin of the slander raised by his enemies against him, that he wished to pull down his predecessor's seat in the chancel, and to set up an altar instead.

There was something very anomalous about the diocese of Kilmore, where there were no particular canons or prebendaries, but where the Bishop's Chapter was formed of all the beneficed clergy of the diocese. Is it possible that the ancient use of placing the Bishop's chair in the extreme east end, with the altar before it—an arrangement to be seen in all its glory at Torcello—can have anyhow lingered on at Kilmore?

The whole of the matter which Mr. Jones has collected with regard to Bedell's episcopate, besides the original narrative of the Bishop's son, will be found worthy of careful study, as illustrations of the state of things in Ireland at that time. They are materials of the right sort, which in the hands of a critical historian would prove of great value.

GUBERNATIS'S ZOOLOGICAL MYTHOLOGY.*

(Second Notice.)

WHATEVER may be the issue of the battle, it may be safely said that the controversy which turns on the method and the conclusions of Comparative Mythologists is by no means drawing near its end. Possibly on one side the feeling of irritation may be greater, because the concession of certain principles has been followed by a protest against the continued application of those principles, without any attempt to define the limits beyond which they become inapplicable. That some passages in Vedic hymns, and some stories in Greek or Latin or Teutonic tradition, are mythical, and that the myths on which these tales are founded relate to the phenomena of the outward world, no one probably will now be found to dispute. That the stealing away of Persephonê and her restoration to the mourning mother point to the departure of summer and the grief of Nature until the summer maiden comes back, is admitted by every one; nor perhaps will any deny that the plucking of the Narcissus or stupifying plant is a singularly appropriate action for Persephonê at the moment when she is seized by the dark King with his coal-black steeds, or that her meeting with Demeter is very fitly localized at Eleusis, the trysting-place. The story of Selênê visiting Endymion as he sleeps in the Latmian cave of forgetfulness is dismissed as solar or lunar with a kind of impatient contempt as being a point too clear to be debated; and with the same impatience it is conceded that, as Selênê is the moon, and as in another version Endymion is the husband of Asterodia, who becomes the mother of fifty children, Asterodia must be only another name for Selênê, and that the very name must denote the moon wandering among the stars. But that, when this has been granted, Comparative Mythologists should go on to say that Endymion, lulled in his magic slumber in the Latmian cave, where Selênê watches over him, is simply Odysseus imprisoned in the grotto of Calypso and the palace of Circe, or Tanhäuser fascinated by the Venus of the Horselberg—the hill of Horsel or Ursel, the moon goddess, who in the Christianized myth reappears as Ursula with her eleven thousand virgins—and that Endymion, Odysseus, and Tanhäuser appear again as True Thomas captivated by the Fairy Queen in the woods of Ercildoune, a name reflecting again the Teutonic Horselberg; all this is declared to be unbearable, not because any reason has been given why these conclusions cannot be accepted, but because such comparisons endanger, as it is supposed, the human character of the Iliad or the Odyssey, and may even threaten further disastrous consequences to some of the dramas of Shakspeare.

The science of Comparative Mythology may or may not be spurious; but an opposition thus managed is radically unphilosophical. It is in no way our duty to decide that Achilleus, Odysseus, Herakles, Perseus, and a great many more are or are not only different forms of one and the same hero, and that the story of Helen, Paris, and Achilleus is at bottom the same as the story of Sita, Ravana, and Rama; and we must be understood to hold ourselves entirely neutral in the controversy. But neutrality may involve the duty of seeing that the play is fair, and the play is not fair when the antagonists on one side propound a method which seems to be identical with the method of Comparative Philology, and when their opponents, without assigning any reasons, insist that the method is shown to be false if the results yielded by it are to them unsatisfactory or disagreeable. Clearly only one of two courses is open to the latter. Either they must deny that the mythologists have any evidence at all on which they may make a stand, or they must be content to examine the evidence adducible in each given case before attempting to pronounce any verdict. If they are not (and it would seem that they are not) prepared to take the former course, they must share the fate which sooner or later comes on all who refuse fairly to look facts in the face.

In truth, science has nothing whatever to do with consequences. If a fact so dreadful as the phenomenal origin of some of the stories into which Shakspeare has introduced an infinite wealth of human feeling should be established, it cannot be helped and must be accepted; and perhaps the effort to swallow it may not be more painful than that which some must have made in embracing the belief of Galileo in the stability of the sun and the motion of the earth. Nay, we must even bear it as best we may, if it should be found (we do not say it has been found) that some of the homeliest of our nursery rhymes point to phenomenal myths long forgotten or wholly misunderstood. Professor Gubernatis must be prepared for a large amount of ridicule for introducing into his pages the exploit of the cow jumping over the moon as a feat which may possibly be explained by the imagery of Hindu traditions. It is quite possible that in this or in other instances his interpretation may be groundless; but a thousand mistakes in the classification of legends can no more prove the falsity of his method than the same or a larger number of blunders in the analysis or the mixture of drugs can prove the non-existence of the sciences of chemistry and medicine. It is more than possible, it may be next to certain, that some of his conclusions may be set aside, or that hereafter he may see reason for setting them aside himself; but in the meanwhile he is perfectly justified in bringing the myths of Eastern and Western nations into groups, according to any classification which seems likely to guide to fresh knowledge of their origin or their growth. In thus grouping them he is engaged in the simple process of the colligation of facts; and until this process is complete, the work of induction, even if begun, can certainly not be brought to an end. In this task he is doing only what mythologists in Germany, France, and England have done before him; nor can we deny due weight to the fact that his researches seem to strengthen indefinitely their general conclusions. When independent thinkers work in the same field with substantially the same results, there is at least a possibility that they are neither cheating themselves

---

* *Zoological Mythology; or, Legends of Animals.* By Angelo de Gubernatis, Professor of Sanskrit and Comparative Literature in the Istituto di Studii Superiori at Florence. London: Trübner. 1872.

nor deceiving others as to the real nature of the soil. This general harmony of a school which has now been growing for half a century has been far too much lost sight of; and in this country there has been of late a disposition, scarcely excusable, to fasten first upon Professor Max Müller, and then upon Mr. Cox, assertions and conclusions which had been put forth years before by other writers, and which ought long ago to have been examined and accepted or rejected. Like them, Professor Gubernatis feels that he is engaged in a work the importance of which, if the science has a real foundation, can scarcely be exaggerated; and with praiseworthy candour he admits that he has embarked in the same boat with them, and is ready to share generally the responsibility of their conclusions:—

I recognize with gratitude [he says] the labours of Max Müller and Cox upon Greek mythology, the writings of Michael Bréal upon Roman mythology, the immortal work of Adalbert Kuhn upon the Indo-European myth of fire and water, and a few other helpful beacon towers which send their light shafts clear and steady athwart the waste, and serve as useful guides to the studious navigator of the *mare magnum* of the myths. And because that which there is yet to do is immense in proportion to the little that has been done well, I shall take for granted what has been demonstrated by my learned predecessors, and go on with my own researches, restricting myself, however, entirely to the zoological field.—I. 262.

It cannot of course be pretended that the ground traversed by Professor Gubernatis is altogether different from that which has already been trodden by Comparative Mythologists; but the classification which he has adopted has this great advantage, that it scrutinizes from a different point of view evidence some or most of which has been already examined. It is even a further gain (although it may be won at the cost of some repetitions), if it be shown that the myths which have grown round objects in the natural world are as numerous and complicated as the forms and colours which those objects may assume in different aspects and under changed conditions. If we take the most obvious and familiar of all phenomena—those, namely, which are caused by or connected with the sun—we can scarcely help feeling that the task merely of making a list of these would be endless. The sun of summer and the sun of winter, the sun of the arctic regions and the sun of the torrid zone, the sun gaining strength at every moment in the morning, or sinking down on his blood-red couch in the evening, the sun as travelling in solitary splendour through a cloudless sky, or doing battle with the vapours which threaten to blot his light out of the heaven, is in each case presented even to our minds as a distinct image, with its own peculiar associations; and we have ready to fall back on what Mr. Tylor would call the animistic stage in the history of mankind in order to see that to the primitive men every one of these images would denote a living person, whose fortunes might be made the subject, not merely of a mythical tale, but of a complete epic. With them the forms of these living beings were determined by the conditions of their own life; or, as Professor Gubernatis puts it, the ancient Aryan tribes were essentially pastoral, and the ideas suggested by this life were transferred to the heavens. Their great wish was "to increase the number of the cows, to render them fruitful in milk, and prolific in calves." The bull, therefore, was to them "the type of every male perfection, and the symbol of regal strength." Hence the man who stole or drove off the cows was the worst enemy of the ancient Aryan, while he who recovered them was the best and the most illustrious of his friends. But in the heaven "there is a beneficent fruitful power which is called the cow, and a beneficent *fœcundator* of this power which is called the bull." That the rain-giving clouds would naturally be spoken of as the milk-giving cows is perhaps universally conceded; but Professor Gubernatis argues that, if this be granted, the comparison of the dark clouds which give no rain to thieves which carry off the cows, or to monsters who keep them shut up in their prison-house, is equally natural and equally necessary. If the cows are to be brought back, there must be a battle, and this battle is the struggle of the bull Indra to set his herd free; nor can this task be done until he has slain the black monster, who spits fire and hurls thunderbolts from his den. But if to the ancient Aryan the prosperity of his herds was of the first importance, the horse was also an animal whose splendid qualities he keenly appreciated. It was therefore natural that the sun climbing up the heaven should be compared with the invincible war-steed. Thus at once the sun becomes both a horse and a bull, and may, by a not less natural process, become the rider or charioteer who guides both horses and bulls at his will; and a starting-point is furnished for legions of myths which may pass into shapes strangely unlike those which they had worn at starting.

It is clearly on this point that the controversy turns: and on this ground it must be fought out. Unless the opponents of the new science can say definitely that the sun and the clouds were never compared to bulls, cows, or horses, or to any other animals, whether brute or human, they must lay down a line beyond which mythologists are not to advance, and they must assign a scientific reason for so doing. Failure to do this is a virtual confession of defeat. Our neutral position frees us from this necessity. We are quite ready to weigh the evidence which may be urged in favour of the mythical origin of the stories of King Lear, Hamlet, or Othello, or, as the remarks of Professor Gubernatis on the legend of the two brothers Cienzo and Meo (I. 329) would seem to imply, of Shakspeare's *Comedy of Errors*; but critics who are not content to be neutral must either give reasons for denying that myths are flexible, and that the attributes of ancient mythical personages are in many cases interchangeable, or they must give place to those who assert that they are, and who bring forward the evidence on which their conclusions rest. That the arguments of Professor Gubernatis are fortified by evidence formidable at least in quantity can scarcely be doubted when we find a reference to passages in the *Rig Veda* for every single phrase in the following sentence:—

The two Hindu Dioscuri—that is, the Açvinâu, the two horsemen, derive their name from the açvas, or horse, as being the swift one; and they are very probably identical with the two fair-haired, amiable, splendid, and ardent coursers of Indras, of Savitar (the sun), and proper and worthy to bear heroes, who yoke themselves at a word, are maued, adapted to make fruitful, full of life, having eyes like the sun, made by the Ribhavas who, as they made the cow out of a cow, also made a horse out of the horse, black, with white feet, drawing the chariot with the golden yoke, revealing the beings; the rapid ones, the most rapid ones; plunging into the inebriating drink before Indras yokes them; beautiful, by means of which the chariot of the Açvinâu is as swift as thought; who carry Indras, as every day they carry the sun; are the two rays of the sun; who neigh, dropping ambrosia; the very pure horses of the bull Indras, inebriated, who illumine the sky; with manes the colour of a peacock; bridled sixty times; beneficent, winged, indefatigable, resolute destroyers (of the enemies).—I. 286.

When the Vedic hymn-makers tell us that the horses of the Açvinâu are the rays of the sun, it seems as difficult to deny that they made the comparison as to call in question the interpretation which the witch herself gives in one of the Russian stories of Afanasieff. The girl in this tale sees, as night comes on, a black horseman who disappears underground, at dawn a white horseman on a white horse, and as the sun rises a red horseman on a red horse. She is told by no less an authority than the witch that the black horseman represents the dark night, the white horseman the clear day, and the red horseman the little red sun (i. 298). If this be so, some strong reason must be shown for denying that the tradition of the twelve old men round the fire, or of the twelve ruddy daughters of the King of Light, in the Gaelic Lay of Magnus, in Campbell's *West Highland Tales*, refers simply to the months of the year; but it is not for us to say that this strong reason may not be forthcoming.

Whatever again may be the fate of our Homeric traditions as a whole, it will need some skill to show that the steeds of Achilleus who speak and weep are not the horses who weep in the Râmâyanam, when their master Ravanas comes forth to his final conflict with Rama, and who appear again even in the graver histories of later ages:—

Suetonius in the life of Cæsar writes that the horses consecrated by Cæsar to Mars and then set at liberty, after the passage of the Rubicon, refused to eat, and wept abundantly. Note that this legend of the horses that weep is connected with the passage of water—of the Rubicon, a river which no geographer has been able to identify with any certainty, probably because the legend of Cæsar relating to it is a fable of mythical origin.—I. 350.

It will be even a harder task to prove that in the wide regions of the mythical world the same effects, or rather the same phenomena, may not be ascribed to wholly different causes. When in the beautiful fragment of Stesichoros Helios Hyperionides sinks peacefully into the golden cup which is to take him to his home, to his wife and his children, the radiance which he sheds around him is clearly regarded as his own; but Professor Gubernatis maintains that in some Hindu myths the glories of sundown are described as the work, not of the sun, but of his enemy:—

Varunas is called in the Râmâyanam the god who has in his hand a rope; his dwelling is on Mount Astas, where the sun goes down, and which it is impossible to touch because it burns, in an immense palace, the work of Vicvakarman, which has a hundred rooms, lakes with nymphs, and trees of gold. Evidently Varunas is here, not a different form, but a different name of the god Yamas, the pâçin, or furnished with a rope, the constrictor *par excellence*, for we are to suppose the magic display of golden splendour in the evening heavens not so much the work of the sun itself, as produced by the gloomy god who sits on the mountain, who invests and surprises the solar hero and drags him into his kingdom.—I. 72.

In Professor Max Müller's belief a magnificent sunset looms in the story of the death of Herakles. We have to remember that the blood-red conflagration which lit up the heights of Oita was the work, not of the hero, but of his enemy Nessos. Whether any, or what, inference is to be drawn from this fact, we need not say, but we may recommend these volumes of Professor Gubernatis as full of matter of the deepest interest both for those who may agree with him and for those who may be most opposed to him. That the science of Comparative Mythology carries with it an astonishing charm there can be no question; and over Professor Gubernatis it has exercised to the full its magic power.

SPORTING MANUALS.*

LARGE as is the supply of books of this class, the demand for them is apparently inexhaustible. Those who can ride over five-barred gates and bring down rocketers with unerring precision are never tired of reading how similar feats have been performed by others; and, oddly enough, worthy people who have never crossed a horse, and who could not hit a haystack except by chance, seem equally delighted with interminable histories of fox-hunting and pig-sticking and deer-stalking and duck-shooting, and

* *Unasked Advice.* A Series of Articles on Horses and Hunting, reprinted from the "Field." By "Impecuniosus." London: H. Cox. 1872.

The "Idstone" Papers. A Series of Articles and Desultory Observations on Sport and Things in General. By "Idstone," of the "Field." London: H. Cox. 1872.

all the varied modes and incidents of sport. Pleasure, it appears, is obtainable in some cases without the necessity of comprehending that which pleases; an idea, by the way, that must often have struck the intelligent observer in picture galleries and at concerts of classical music. Imagination prepares the way for this sort of pleasure; vague hopes support the toiler in his struggles; and dogged determination does the rest. It is quite possible to be drilled into pleasure; and we make no doubt that the old lady whose life was at last made happy by the possession of that blessed word Mesopotamia was sorely exercised through many a half-hour of unintelligible dreariness before the crowning joy came. No one grudges the rewards fairly earned by powers of great endurance; yet we must always remember that the bliss of ignorance is purely passive, and cannot be quoted as an index of the patient's potential activity. This consideration has a special bearing on the case under our immediate notice, because the constant succession of sporting treatises, manuals, reminiscences, and the like, the liberal space accorded to sporting matters in the periodicals and magazines of the day, the extensive circulation of papers specially devoted to sport, and the zest with which the details of all its varieties, from racing to rat-catching, are devoured by an immense circle of readers, have led to a widespread conclusion that we English are an especially sportsmanlike nation, and stand in that respect on ground much exalted above our fellows. We doubt very much whether our claim to this title can be satisfactorily sustained. *Gaudet equis canibusque* may be the Englishman's motto; but his rejoicing has little to do with any knowledge of the animal he bestrides, the quarry he pursues, or the dog that acts as go-between. Rather he rejoices, as the ploughman whistled, for want of thought. What—without attributing undue importance to a pursuit which in a civilized country is little more than a means of killing time—is involved in the term sportsmanship? First of all, we take it, the possession of certain physical gifts without which no man can excel as a sportsman; and, secondly, an accurate knowledge of the natural history and habits of the animals concerned—not only those whose capture or death is compassed, but those also which are employed as assistants to man. We may concede the first of these points to our countrymen, whose courage, endurance, and physical strength are undeniable; though something more than strength and courage—in horsemanship, for instance, to take one branch of sport—is required; and it will not be denied, we think, that though very many Englishmen ride with pluck, and very many with luck also, only a select few ride with skill and judgment. This is odd when we consider for what length of time, with what assiduous labour, with what unsparing outlay of money, and with what ingenuity of appliances, the art of riding has been practised in England; but it goes far to disprove the title of Englishmen to be considered horsemen in the sense in which the South Sea Islanders would be considered swimmers, or the Swiss mountaineers. Laboriously, and after much patient perseverance, they have been educated into a certain amount of riding ability, the highest point of which is that they and their horses do not readily part company; but the natural gift of riding they have not as a rule, and the acquired art they usually exhibit clumsily and awkwardly. Is not this attributable partly, if not entirely, to their deficiency in the second requisite of a horseman—knowledge of the noble animal itself that ministers to their daily uses and luxuries? It is not too much to say that ninety-nine out of a hundred Englishmen who ride or drive are utterly ignorant of the anatomy of the horse, and of its proper treatment in health and disease. They are at the mercy of the horsedealer and the groom, with the veterinary surgeon as supreme arbiter in case of need. Money is no object, the horse has been well broken to his business before he leaves the dealer's hands, and all that the purchaser cares about is to stick on his back if he is riding, and not to be run away with if he is driving. The sympathy that exists between the horse and his rider when the servant feels himself in the hands of an intelligent master, and the master understands every indication of weakness and lassitude on the part of the servant and can supply prompt help when help is needed, is altogether wanting when the rider only looks on the horse as a useful and somewhat expensive machine, and the horse regards the rider as an unavoidable and somewhat awkward encumbrance. Not that we mean to claim for owners a monopoly of ignorance. Horsedealers and grooms are pillars of empiricism; the business of the first is to dress up their animals for the market; the business of the second is to dress them up for the day; and as long as they can have recourse to any temporary shifts for accomplishing these ends, they are well satisfied; for what more do their customers require?

It is impossible to enter here into minute details, but let us instance the art of farriery in illustration of the densely ignorant treatment of the horse. The farrier starts with this fixed conviction, that however well Nature may have managed the creation of the world generally, she made a signal mistake in the construction of the horse's foot, which mistake he, the farrier, will forthwith proceed to rectify. Accordingly, having laid down the axiom that the foot must be altered to suit the shoe, not the shoe shaped to suit the foot, he rasps, and shaves, and pares the hoof of his unhappy victim, until the natural protection of the foot is materially diminished, and then he nails into what is left of it a great lump of iron, the hammering and forging of which he views as a considerable triumph of art. When the poor animal falls lame, there is something the matter with the shoe; and more hammering and forging goes on, and more rasping and paring of the hoof, and a fresh instrument of torture is forced on the foot, and the lameness increases, till at length it becomes incurable. In the words of "Impecuniosus," who writes with extreme good sense on this subject, the groom and the blacksmith

> are never satisfied until they have altered the natural foot into a form of their own, which they think the right one; and though lameness usually attends their efforts, they ascribe it to every cause but the right one, and indeed resign themselves complacently to the presence of many diseases confessedly caused by their treatment.

And again:—

> Navicular disease is an affliction common to all horses, and it will be so as long as the frog, which is meant to protect the navicular bone, is pared away, or allowed to diminish of its own accord, which it will do when the foot is improperly treated and shod.

The writer passes in review the principal varieties of shoes that have been introduced during the last half-century, and pronounces strongly in favour of the Charlier shoe, as being the only one that "places the foot at once in the position of unshod nature." Without anticipating the decision which can only be given by long experience as to the excellence of this shoe, the soundness of its principle, that the horse's foot is to be left as it is, and that the artificial protection must be shaped to suit it, cannot be denied. And if the conviction of the eminent veterinary surgeon, Mr. Stanley of Leamington, that "horses shod *à la* Charlier will never have navicular disease," is correct, there can be no two opinions about the superiority of this particular shoe to any that has been hitherto introduced. We do not exactly gather whether the Charlier shoe, as at present constructed, is suitable to harness horses, more especially in towns; but we are satisfied that, if once the monstrous system of hacking and hewing the foot is abolished in the case of riding horses, their brethren in harness will not long be subjected to a similar fate. The importance of the subject is proportionate to the importance of the horse to our daily life, whether for business or pleasure.

We often wonder, when looking over books of this description, how it is that their writers are content to repeat the oft-told tales of racing and hunting and shooting, without ever seeming to be aware that some of their favourite sports are likely to receive a rough handling before long, and that it might be worth while to state the case in their favour to the best of their ability. Here is racing, year by year degenerating more and more, year by year less worthy of the support of men of honour and integrity, year by year retaining fewer claims to consideration as a national amusement; here are the Game-laws, soon certainly to be altered, possibly to be abolished; here are the Scotch deer-forests, vigorously denounced by land reformers; and yet sporting men go on living in a fool's paradise, and write as if everything would continue as it was in the days of Lord George Bentinck and Osbaldeston. Can none of them discuss, for instance, in their own interest, the game question? There is much to be said on their side; there is a good deal to be said as to the value of game as a contribution to the food supply of large towns; and there is a good deal to be said as to the real character of the poacher, who, so far from being a martyred agriculturist and a victim to the tyranny and oppression of landlords, is an idle skulking vagabond, by profession a thief, and with no objection to commit murder if interrupted in his robberies. The public, we are sure, will readily listen to the sportsman's statement of his case, if it is properly put forward; but if the sportsman is too indifferent to plead his own cause, and leaves all the talking to be done by his opponents, he may thank himself if he loses the battle. We have looked in vain through the pages of "Idstone," who has had for some time past unusually favourable opportunities of addressing an intelligent circle of readers interested in sporting matters, and who, if our memory serves us, has invented a shooting boot, for any arguments or information calculated to serve his side in the day of trouble. We can find nothing, save a casual word of reprobation of the practice of having live pheasants down from London one day to be shot the next. Of the degrading foolishness of this method of securing a heavy bag there cannot be two opinions; but, as far as concerns the question of the over-preservation of game, it is quite innocuous, inasmuch as the five hundred pheasants that arrive on Monday night and are blown to pieces on Tuesday morning have not time, even supposing they have recovered from their bewilderment, to do much damage to the crops. We do not pretend, however, to put forth a regular review of *The Idstone Papers*, for an author who professes in his title page to publish desultory observations on things in general is beyond the reach of the ordinary critic. We have looked into the book sufficiently to agree with the writer that his observations are very desultory, and that they embrace a considerable variety of subjects; we must add a supplementary opinion of our own, that they are not always very much to the point. When now and then an opportunity offers of furnishing some information not altogether second-hand or hackneyed, as in the case of the chapter on Lord Ilchester's unique and jealously guarded swannery at Abbotsbury, not much advantage is taken of it. There is a great want of anecdotes also, and a sporting writer without some power of anecdote is poor indeed. But it appears from "Idstone's" preface that his papers have given satisfaction to a great many people, both within and without the circle of his own acquaintance; and we may therefore congratulate him on having obtained the ear of friends and strangers of a contented disposition and who are thankful for small mercies.

SEETA.*

IT is not unpleasing by way of change to light upon one of those old-fashioned historical novels which would seem to have almost entirely given way to the modern sensational school. It too often happened, indeed, that a man pretended to write an historical novel when he was quite ignorant of history; but, on the other hand, there were writers who made a more or less careful study of the period of which they treated. Sir Walter Scott certainly greatly increased the range of the ordinary Englishman's historical reading, who, till he wrote, had had, according to the well-known story, but one history of England—namely, that written by William Shakspeare. The *Fortunes of Nigel*, for instance, in its description of the apprentices of London, must have given to a vast number of readers a knowledge of bygone times which they scarcely could have got even if they had been readers of the regular histories. Again, *Woodstock*, *Peveril of the Peak*, and *Old Mortality*, must have helped to open up a century which, while Lord Macaulay's History, more interesting than any novel, was as yet unwritten, was to the mass of ordinary readers almost unknown. It may be quite true that the only history that can be safely studied in Shakspeare's plays is the history of the Elizabethan times, and that, diligent student though Scott may have been of antiquity, he has nevertheless cast over it an air of romance in which the truth by no means stands forth as sharply and as clearly as it ought. Nevertheless a man who knows his Shakspeare and his Scott has on the one hand gained a real insight into history, and has on the other hand, in all likelihood, become eager to know more of times which the play-writer and the romance-writer have brought so near to him. So long, indeed, as a writer of stories really understands that form of human nature which he is trying to delineate, we do not know that it is of much importance whether the characters whom he brings on his stage ever played their part in the world's history, or are the coinage of his brain. A character which from its contradictions is altogether impossible is almost equally offensive whether it be called historical or is acknowledged to be fictitious. A character like the Cromwell in Mr. Wills's play of *Charles I.* would equally excite our laughter if the scene had been laid in some Arabian Court where the author had pretended to represent some leader of those Puritans of the East, the sect of the Wahabees. And yet when we consider how carefully most people are spoilt for the enjoyment of history by the dull and worthless books that are forced on them in their childhood, it is perhaps a happy thing when a writer who really knows something of his subject manages, under the disguise of a storyteller, to afford not a little historical knowledge. Just as there are many people who always associate sleepiness with sermons, so are there others who always associate dulness with histories. It may perhaps be almost a hopeless task to cure people of this feeling as regards sermons, but there is a chance that the great novelists may do something for history.

At all events there is one service which can be rendered by competent writers at the present day. While our Empire is so vast, and the nations that we have to deal with are so many, our sympathies, necessarily imperfect as they must be, with the various races that are subject to us, may be quickened, while our knowledge may be no less widened, by the skilful and judicious story-writer. It would be difficult to estimate the services that the novelist has rendered in making different classes of Englishmen understand each other. No doubt, with all the good done, a great deal of harm has been also done by writers who wrote in all the prejudice of ignorance. Nevertheless, very much of the kindly feeling which, in spite of strikes and lock-outs, exists between all classes in this country, must in justice be assigned to those authors who, before they began writing, first studied the classes about which they wrote. We are always glad to see the novelist's art not confined to this country, but taking a wider range. Especially are we glad to see this when it is what we call an inferior as well as a subject race that we find carefully described. The storyteller can set before us a life which neither the historian, nor the writer of Government Reports, nor the newspaper Correspondent, ever represents; and by following the fortunes and painting the hopes and fears, the joys and troubles, the everyday life of one family, he can give us a considerable insight into a whole nation. Who can tell what Defoe did towards giving the civilized world a kinder and a juster appreciation of savages by his *Robinson Crusoe*? He disguises nothing of the hideous side of their character, he sets forth their cannibalism in all its hatefulness. But by his exquisite picture of Friday's love and faithfulness—cannibal though he too had been—he made men feel that there was many a Friday to be found, if only there were Robinson Crusoes to find him. We cannot but be glad, therefore, that a man who has Colonel Meadows Taylor's knowledge of India should have written a story of Indian life which, while by its interest it will attract the general reader, will at the same time go far to correct in him the vulgar notions which he has most likely formed of the races that we rule in that vast country. What Dr. Hunter's admirable works will do for the student, such a story as *Seeta* will to some extent do for those who are willing to read, but scarcely willing to think. We would especially commend it to the attention of those young men who, while pretending to help their country in ruling India, are by their insolence, which arises from foolish prejudices, rendering the task of government tenfold as hard as it need be. No man can be a greater enemy to his country than he who in India treats a native with insolence merely because he is a native. Men who, like Colonel Taylor, have for years taken part in governing India, are but rarely, if ever, heard, even among Englishmen, to speak harshly of those whom they have governed. But young officers, silly women, and commercial men, young and old, too often treat their fellow-subjects of the Queen in such a way as to go far to excuse, if not to justify, a mutiny. Among those too who never go to India, though the prejudice against the natives is not nearly so strong, it nevertheless exists alongside with that ignorance whence it springs. How many there are who only know of the treacherous side of the Indian Mutiny, and altogether forget the faithfulness, not only of men here and there, but of whole tribes and whole nations. How many there are who look upon the Hindoos as universally plunged in the grossest idolatry, and are utterly unaware that in their case too might be written a *Tale of a Tub*: and that, though they have a Peter whose coat is overgrown with ornaments, the coat itself is sound and simple enough, while they have also had their Martin and their Jack. In an ordinary lecture-room, or before a congregation listening to a missionary sermon in a church, nothing, we would venture to say, would be too wild to assert of the natives of India. Every person present in all probability believes that the natives are all Hindoos, and every person present in all probability believes that all Hindoos are alike. He has in his mind some indefinite notion of a man who combines outside submissiveness and gentleness with inside cruelty and treachery. He is utterly unaware that India is inhabited by races far more distinct than French and German, and with his want of imagination he cannot bring home to himself that among each race are to be found men of all characters. He would stare to be told that some of the greatest races that we govern in the East are our own kinsfolk, and that the Hindoo, whom he perhaps calls a "nigger," can claim a blood relationship with us which the Hungarian noble does not possess.

Such facts as these it is that Colonel Taylor in the course of his narrative brings home to his readers. Though his story is laid at the time of the Indian Mutiny, he yet, we are glad to say, has "purposely avoided the sickening details of pitiless massacre and suffering." He has done wisely in leaving to the historian to tell that horrible story which must indeed be told, and has himself kept to a scene where the tide of mutiny did indeed break, but broke with far lessened force. In his younger days, when he wrote his *Confessions of a Thug*, we doubt whether he would have been so moderate. The more real suffering a man has seen the less he cares to talk or write about it; and while a young writer delights in imagining horrors which he has never known, an old writer, so far from calling on his imagination, is unwilling to call even on his memory for representations of what is to him full of pain. Colonel Taylor's old admirers, however, need not fear that his story is of too gentle an order. It opens with a murder, "a case of Dacoity tried by me," as he says, "in my district court in 1855." Seeta, the young widow of the murdered man, a wealthy Hindoo goldsmith, is the heroine of the tale. It is in the following manner that she is described at the time she appeared to the Hon. Cyril Brandon, the hero:—

> The large dewy eyes were soft and pleading, but not irresolute, and the girl was quite calm. Seeta had dressed herself in a rich silk saree of a green colour, shot with crimson, which had heavy borders and ends of gold thread, and the end, which she had passed over her head, fell on her right arm and contrasted vividly with its fair colour and rounded outline. If her features were not exactly regular, they were very sweet and full of expression; her eyes were large and soft, of that clear dark brown which, like a dog's, is always so loving and true. If the mouth were a shade too full for exact symmetry, it was mobile and expressive, and the curves of the upper lip constantly varied. For a native woman, Cyril Brandon had never seen any one so fair or of so tender a tone of colour. Such, he remembered, were many of the lovely women of Titian's pictures—a rich golden olive, with a bright carnation tint rising under the skin—and Seeta's was like them. One in particular came to his memory like a flash—the wife of the Duc d'Avalos, in the Louvre picture; or Titian's Daughter, carrying fruits and flowers, at Berlin. He could not see much of Seeta's figure; but the small, graceful head, the rounded arm, the tiny foot, the graceful movement of the neck, and her springy lithe step as she had entered the tent, assured him that it could not be less beautiful than the face.

He falls in love with her and marries her, to the great disgust of most of the English ladies of the station, and to the regret of his best friends. Those, however, who, regardless of race, could discover in Seeta the noble qualities with which she was gifted, came more and more to see that Brandon had chosen well, while all doubt passed away when she thrust herself between her husband and the arm of a fanatic and received the fatal stroke of a dagger that was meant for him. At the same time we must confess that we wish that the assassin's stroke had not served the double purpose of showing the faithfulness unto death of a Hindoo woman and also of clearing her out of the way for a second and an English wife for the hero. Interesting as is Seeta, scarcely less interesting are that "grand old man" her father, and her good old Aunt Ella. In fact, with the exception of the parts where the fanatic is brought in—which are somewhat overdone—the whole account of the natives will be found full of interest by the general reader. The least satisfactory part of the story is the description given of some coarse Englishwomen, whose vulgarity is dwelt upon till it becomes wearisome. The author has made a mistake, too, in introducing in the last chapter a new

* *Seeta*. By Meadows Taylor, C.S.I., M.R.I.A., M.R.A.S., &c., Author of "Confessions of a Thug," "Tara," "Ralph Darnell," &c. 3 vols. London: King & Co. 1872.

character, simply with the view of killing him off. Any one who is to die in the third volume should enter at latest in the second. If it was necessary for the dignity of the story that the Hon. Cyril Brandon should become Lord Hylton, surely his elder brother might have been killed off in a paragraph. However, we must not end by dwelling on the defects of a work which has great merits as a story, and which will, we trust, in the author's words, lead many who read it "to follow Cyril Brandon's example in professing a faith in the people they govern, which leads to kindliness and courtesy of speech and of manner."

GERMAN LITERATURE.

THE name of Herr von Mühler *, late Minister of Worship in Prussia, has long been notorious for illiberality of every kind. Such a character, at all events, implies the merit of consistency—a quality always respectable, and not the less likely to be regarded when it is not the consistency of an isolated enthusiast, but of a Minister, or even an ex-Minister, with a considerable section of public opinion at his back. We are glad, therefore, that Herr von Mühler should have availed himself of his present exemption from official cares to expound in his clear and methodical style his ideas respecting secular and ecclesiastical polity, thus enabling us to judge for ourselves touching the evil report which has gone forth concerning him. We find the antagonism of Liberals most fully justified; but, in spite of the occasional unction of his phraseology, we find at the same time Herr von Mühler less of a pietist than we had anticipated, but more of a lawyer—formal, exact, and pedantic. Going back to the origin of things, he bases his whole system on a maxim more consonant to law than to equity, that the creature has no claim upon the Creator. From this edifying principle, which we should have supposed to be confined to Mr. Palgrave's Wahabees, the rest follows naturally enough. The sole admitted fountain of right being the unrestrained will of arbitrary and irresistible power, the only pure and perfect system of administration is the theocratic. But, theocracy being for the present in abeyance, we are fain to make a shift with absolutism, so guided and prompted, however, by a divine code drawn up with the minutest precision, as scarcely to be distinguishable from theocracy itself. The observance of this body of regulations discriminates absolutism from despotism. Legitimacy and divine right are things of course. Constitutional monarchy (Herr von Mühler himself having sworn allegiance to it) is acknowledged as an authorised form of government; but the degree of Herr von Mühler's attachment to it may be estimated from the vehemence of his objections against administering the constitutional oath to the army, and from his repudiation of Ministerial responsibility, except to the ruler. He admits that the sovereign himself may commit wrong, but he is silent as to the remedy. As for persons who reject the author's views, they are simply nuisances. If their opposition extends to the length of rejecting his religion, they may be tolerated in the State, but can have no share in the administration of it, nor can they enter into intimate relations with their fellow-citizens. The marriage of a Christian with a non-Christian, for example, cannot be permitted on any account. In fact, the author seems to have not the smallest perception of natural right, or of the binding force of obligation other than as created by the enactment of external authority. A clear-headed, narrow-souled literalist, consistent, logical, and by no means contemptible as a writer, he is exactly the man to render the world the undesigned service of forcing into prominence the irreconcilable contrariety between the mere prescriptions of tradition and the entire genius of modern civilization.

A preface to the last edition of Strauss's recent work † has also been issued as an independent publication. If we may credit recent reports from Germany, "The Old Faith and the New," though extensively read, has encountered disparagement from society, and contradiction from the press. The author's candour has stood in its way; conservatives in politics dislike his religion, and sympathizers with his advanced theology, who would otherwise have made a hero of him, are offended by his political conservatism. The apparent consequence is, that while Herr Strauss may pride himself upon a wide circulation, he has hardly obtained a single individual suffrage on which his good sense will allow him to place any considerable value. The matter will not be mended when the professional theologians take him up, and point out the sweeping character of many of his assertions, and his habit of assuming as proved what is in fact still the subject of investigation. With all this, a sufficient balance will remain to his credit to have justified a more dignified consciousness of the fact, and we might have expected less wincing of mortified irritation under the attacks of assailants of inferior note. The assaults which he appears chiefly anxious to repel are not those proceeding from the side of dogmatic orthodoxy, but from that of philosophical nescience, of which Du Bois-Reymond's recent scientific deliverance has supplied the text. The style is distinguished by the writer's usual purity and felicity; his candour and conviction are unmistakably apparent; and the *brochure* might rank as a successful *apologia* but for its too visible self-consciousness.

Keim's *Jesus of Nazara* * is probably an object of disdain to Herr Strauss, yet he might learn from it the inestimable worth of the power to reproduce details in a concrete form. Strauss, in his preface, refers to the objections urged against the paleness and feebleness of his biographical portraiture, and excuses himself by the imperfection of his materials. It does not seem to occur to him that the fault may be in himself, that the analytic and the constructive faculties do not necessarily coexist in the same person, that it is possible to be much of an historical critic and too little of an historian. Dr. Keim is not, like Strauss, a man of genius. Yet, while conceding most of the demands of criticism, he has produced a really vital delineation of his subject. This remark is even more applicable to the present abridgment of his work than to the book in its original form, the sense of reality being favoured by condensation, and the spirit of the professional theologian, from whatever cause, being less apparent.

Dr. W. Gass's "Symbolik" of the Greek Church † is a valuable book, to be recommended both on account of the copiousness and the judicious distribution of its material. It takes the leading articles of the Oriental creed seriatim, dwelling more particularly on those which have formed the subjects of important ecclesiastical controversies. Perhaps the most generally interesting portion of the work is the full exposition of the views put forth by leading Greek controversialists, such as Photius, Metrophanes, and Petrus Mogilas, who are but little known in the West. The general tendency of the work is favourable to the Greek Church as representing the principle of nationality in religious organization, and it has evident affinities with the course of thought which has given birth to the Old Catholic movement.

The late Carl Tweaten ‡, distinguished as a public man of remarkable spirit and independence, left behind him a work of considerable extent upon the religious, political, and social ideas of antique civilization. Intended to have also comprised the Hellenic world, the book did not advance beyond a summary of the leading principles which determined the organization of India, Egypt, and the Persian and Assyrian peoples. The introduction shows the author to have written in the spirit of the Positive philosophy, but the substantial accuracy of the facts he adduces seems indisputable, and no school of thought is likely seriously to impugn the general accuracy of his conclusions. The work, in a word, though less strikingly original than was intended by the writer, or is supposed by the editor, is commendable as a general view of an extensive and interesting field of inquiry.

Although the names of Grotefend and Lassen are recorded in the list of the scholars by whom the decipherment of the Persian cuneiform inscriptions has been promoted, the Assyrian department of the subject, which is by far the most interesting, is as yet little indebted to the scholars of Germany. This neglect, unaccountable on the part of a nation usually so forward in every department of philological research, seems at last about to yield to a spirit of inquiry. Dr. Eberhard Schrader's volume, the "Cuneiform Inscriptions and the Old Testament" §, is a most intelligent and acceptable exposition of the mutual relation of these venerable documents, taking up one by one all the passages in the latter which have been in any way illustrated by the former, and giving, not merely a version of the inscription, but its *ipsissima verba* according to the best system of transliteration. All these inscriptions have been already published; but the collection of them with especial reference to the Scriptures is the especial merit of Dr. Schrader, and while his translations substantially agree with those of his predecessors, he proves himself no servile copyist. The general result of his investigations is highly favourable to the substantial historical accuracy of the Old Testament, the miraculous element apart. Biblical chronology, indeed, is found to some extent irreconcilable with the monuments, Ahab being placed about forty years too early; the difference, however, continually diminishes until the two lines of dates finally converge. On the other hand, the much impugned accuracy of the Chronicles as regards the captivity of Manasseh derives considerable support from the inscriptions, though the question is not yet beyond controversy. One of Dr. Schrader's most interesting chapters is that on the expedition of Sennacherib against Hezekiah, where he argues with great force against the hypothesis of *two* invasions. Another relates to the famous inscription of Nebuchadnezzar upon the occasion of the restoration and completion of an ancient unfinished tower—the Birs Nimrud no doubt, in which Oppert imagined himself to have discovered an allusion to the story of Babel. The words, however, which this eminent scholar interpreted of the universal deluge merely refer to the dilapidation of the bricks of the edifice by exposure to the weather. An appendix contains a very useful list of the Ninevite archives, which would have been more useful still if the accessions of the contemporary sovereigns had been registered in a parallel column, and a glossary of Assyrian words in Roman and Hebrew characters.

Dr. Otto Gilbert's investigation into the period of the Athenian festival of Dionysus * is very abstruse; but his theory fortunately admits of being summed up with brevity. It is "that the Lenæa and Anthesteria are identical, and belong to the rural Dionysia."

H. Heydemann's † description of the antique vases in the National Museum of Naples must be a work of extreme value to archæologists. More than four thousand objects are described with all desirable fulness, yet in a highly condensed style. The value of the work is much enhanced by an excellent index.

H. Schiller's "History of the Roman Empire under Nero" ‡ is a heavy book in every sense of the word; but it is also one eminently distinguished by diligence, knowledge, and good sense. The author finds little reason to depart from the traditional estimate of Nero's character, only that he justly lays more stress upon his congenital weakness than upon his possibly fortuitous depravity. He finds the Empire to have been in the main well administered under him, and rationally accounts for the phenomenon by supposing the Emperor to have in general abstained from meddling with the government. The most interesting part of the book is the copious and discriminating survey of the general condition of the Roman world under Nero—political, social, and intellectual.

The purpose of Dr. Rauch's work on the unity of the human race § is to assert this theory, and to extenuate the numerous physiological objections which seem opposed to it. Little value can be attached to the book, which, though skilfully arranged to simulate a result attained by independent research, is in reality little else than a compilation from such observations of travellers and naturalists as appear favourable to the writer's views. His decided antagonism to Darwin at first seems singular when it is considered that the unity of the human race is more defensible on the Darwinian hypothesis than on any other, if it be not a necessary consequence of it. The fact is, however, that Dr. Rauch is entirely actuated by theological considerations. He is also, we are sorry to add, unfair enough to produce isolated passages from authors opposed to him when these seem to make for his views, without giving any hint of the general tenor of their opinions.

Paranaguá ¶, a large bay in the south of Brazil, according to the native geographers, is "picturesque, enchanting, sinuous, adorned with islands, encircled with verdant mountains, abounding in precious woods, full of game of all descriptions, and the resort of foreigners attracted by the mildness and hospitality of the inhabitants." Herr Julius Platzmann's record of his long residence in this fascinating spot, cast in the form of letters to his friends at home, may be deemed as a series of variations upon this alluring description, with a large infusion of the element of natural history. In fact, for a traveller of modest pretensions, simple tastes, and active habits, Paranaguá would appear to be one of the most delightful residences in the world. Beauty crowds upon beauty in the author's pages, and the effect of such accumulated opulence is bewilderment, almost intoxication, such as must usually attend the attempt to render the gorgeous luxuriance of tropical nature. It is a relief when this oppressive splendour is chequered by scientific details concerning rare plants and animals, or notes of sport, although these are frequently romantic enough, as when the writer describes an expedition to shoot tapirs in myrtle groves by moonlight, close upon "the beached verge" of the measureless Atlantic. On the whole, the general impression is that Herr Platzmann has had a rare piece of good fortune, which he has most thoroughly deserved. His energy and cheerfulness, his love of science and keen sense of natural beauty, produce the most favourable impression. He appears to have found the natives kind, helpful, and hospitable people, and if the recently exported Warwickshire agriculturists fare as well as he has done, they will not do amiss. Dinner, he says, usually consists of black beans (*feijoes*) stewed along with sun-dried beef, bacon, the crown of the palmetto (with the look of a Jerusalem artichoke and the flavour of asparagus), roots, and slices of gourd. Oranges are never wanting, and wild fowl, fish, and oysters are frequent additions to the meal. The climate would seem to be by no means insalubrious.

Julius Rodenberg's little volume of English travel ** is a collection of miscellaneous papers published at various periods, all characterized by a lively style and a cheerful spirit. Some of them, such as those on the Canterbury pilgrimages and London in Shakspeare's time, are of a partly historical character; others, such as the pleasant sketch of an autumn trip to the Lakes, describe the writer's own impressions as a tourist in this country.

It was a happy idea of Herr Moritz Thausing's †† to render the letters and diaries of Albert Dürer into modern German. The simplicity of the original being rather innate in the writer than depending on mere peculiarities of diction, and the translation having moreover been performed with excellent taste, the result is a perfect reproduction of one of the most characteristic examples of a period of transition from comparative barbarism to high culture—the dewy freshness of a clear dawn. As painted by himself with transparent sincerity, Dürer is one of the most attractive figures in the history of art; his purity and earnestness of character shine through all he writes, from the homely details of his incomings and outgoings to the impassioned strain of his agitated forebodings respecting the fate of Luther. The volume is beautifully printed, and the editor's annotations are pithy and pertinent.

H. Kruse's tragedy, *Maurice of Saxony* *, is a highly respectable performance, but does not attain the level of the poetic drama. *Conrad I.*, a tragedy by F. Walther †, is little more than a creditable dramatic exercise.

* *Die Festzeit des attischen Dionysien.* Von Otto Gilbert. Göttingen: Vandenhoeck & Ruprecht. London: Williams & Norgate.

† *Die Vasensammlungen des Museo Nazionale zu Neapel.* Beschrieben von H. Heydemann. Berlin: Reimer. London: Asher & Co.

‡ *Geschichte des Römischen Kaiserreichs unter der Regierung des Nero.* Von Hermann Schiller. Berlin: Weidmann. London: Asher & Co.

§ *Die Einheit des Menschengeschlechtes.* Von P. M. Rauch. Augsburg: Rutsch. London: Asher & Co.

¶ *Aus der Bai von Paranaguá.* Von Julius Platzmann. Leipzig: Teubner. London: Trübner.

** *Studienreisen in England. Bilder aus Vergangenheit und Gegenwart.* Von Julius Rodenberg. Leipzig: Brockhaus. London: Williams & Norgate.

†† *Dürer's Briefe, Tagebücher, und Reime, &c.* Uebersetzt von Moritz Thausing. Wien: Braumüller. London: Williams & Norgate.

NOTICE.

We beg leave to state that we decline to return rejected communications: and to this rule we can make no exception.

THE SATURDAY REVIEW

OF

Price 6d.

CONTENTS OF No. 903, FEBRUARY 15, 1873:

The Abdication of King Amadeo.
The [illegible] University Bill. The Negotiation with Russia.
The Lord Chancellor's Plan. American Emancipation.
The Parliamentary Notice-Paper. The Commune and M. Thiers.
Deceased Wife's Sister. The Surrender of the Parks.

Harmony. Invective as an Ornament of Debate.
[illegible]. A Local Paper a Hundred and Fifty Years Back.
The Protest of the Prussian Bishops.
Coals, Cold, and Climates. Police Magistrates. Free Library Catalogues.
The Committee on the Endowed Schools Act. Author and Critic.

Thomson's Electrostatics and Magnetism. Sir John Burgoyne.
Our Fashionable Ethereal Connoisseurs. Metaphysic.
Dr. Newman's Historical Sketches. A Pocketable Book upon Domestic Law.
Life and Death of Sir Roger B. P. Gubernatis's Zoological Mythology.
Sporting Manuals. Novels. German Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS. THIS DAY and NEXT WEEK.

Saturday (February 15)—Sixteenth Saturday Concert, at Three. First day of Great Bird Show, Open at Twelve.

Monday to Thursday, Pantomimic Interlude "Rosella," by the Payne Family, &c., at Three; followed by the New Musical Clown and Jack and Jill up to the Transformation Scene.

The Great Bird Show each Day.

Friday.—Pantomimic Interlude (the Payne) at Three, followed by "Jack and Jill" (by command).

Saturday.—Seventeenth Saturday Concert, at Three.

The Fine Arts Courts and Collections, including the Picture Gallery (the Works on Sale), the Architectural and Natural History Collections, all the various Illustrations of Art, Science, and Nature, and the Gardens and Park, Always open. Music and Fountains daily.

Admission: Monday to Friday, 1s. Saturdays, 2s. 6d. Guinea Season Tickets free.

WEDNESDAY NEXT.—LONDON BALLAD CONCERTS, St. James's Hall. Under the Direction of Mr. John Boosey. Wednesday Evening next, at Eight o'clock, Vocalists: Mrs. Edith Wynne, Miss Jenny Pratt, and Madame Patey; Mr. Sims Reeves, Mr. Wadlow Wells, and Mr. Santley; the London Orpheus Quartett. Pianoforte, Mr. Benedict Lachich. Conductor, Mr. J. L. Hatton and Mr. Lutz. Stalls, 5s.; Family tickets (to admit four), Balcony, 21s.; area, 12s.; gallery and orchestra, 1s. Tickets of Chappell & Co., New Bond Street; Austin, St. James's Hall; Keith Prowse, & Co.; Hays, Royal Exchange Boddington and Boosey & Co., Holles Street.

WAGNER SOCIETY.—FIRST CONCERT, February 19, 1873, at 3 o'clock precisely.—Queen's Concert Rooms, Hanover Square.—Orchestra of Eighty Performers. Vocalist, Herr Ludwig Bleser. Conductor, Mr. Edward Dannreuther. "Tannhäuser" Overture and Bacchanal. "Rienzi" Selection. "Lohengrin" Overture and Introduction to Third Act. "Die Meister-singer von Nürnberg." "Kaiser Marsch." Tickets Reserved, One Guinea; Unreserved, Half-a-Guinea.—Chas. Lucas, Weber, 84 New Bond Street; Schott, 159 Regent Street; A. Hays, 4 Royal Exchange Rooms; and usual Agents; also at the Hanover Square Rooms.

BY SPECIAL DESIRE.—SIXTH and LAST BRITISH ORCHESTRAL CONCERT, Thursday, February 20, St. James's Hall. Patron, H.R.H. the Duke of EDINBURGH. Conductor, Mr. G. Mount. Madame Florence Lancia, Madame Patey, Mr. Vernon Rigby, and Mr. Santley. Pianoforte, Mr. J. Francis Barnett; Clarionet, Mr. Lazarus. Stalls, 10s. 6d.; Tickets, 5s., 2s., and 1s., at usual Agents.

ROYAL ACADEMY of ARTS, Burlington House.—The EXHIBITION of WORKS of the OLD MASTERS, together with WORKS of DECEASED ARTISTS of the BRITISH SCHOOL, in Oil, Water-Colour, and Sculpture, is NOW OPEN. Admission (from 9 A.M. till Dark) 1s. Catalogue, 6d. Season Tickets, 5s.

JOHN PRESCOTT KNIGHT, R.A., *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRAETORIUM," with "Triumph of Christianity," "Christian Martyrs," "Francesca da Rimini," "Neophyte," "Titania," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

ROYAL SCHOOL of MINES, Jermyn Street.—Professor RAMSAY, LL.D., F.R.S., will commence a COURSE of THIRTY-SIX LECTURES on GEOLOGY, on Monday next, February 17, at Two o'clock; to be continued on each succeeding Tuesday, Wednesday, Thursday, and Monday, at the same hour. Fee for the Course, £3.

Professor GOODEVE, M.A., will also commence a COURSE of THIRTY-SIX LECTURES on APPLIED MECHANICS, on Tuesday next, the 18th instant, at Eleven o'clock; to be continued on each succeeding Wednesday, Thursday, Friday, and Tuesday, at the same hour. Fee for the course, £3.

TRENHAM REEKS, *Registrar.*

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS. Two, £30; Six, £40; Four, £20. Election, Second week in May.—Apply to the SECRETARY, The College, Cheltenham.

THE SPANISH REPUBLIC.

THE confident expression, after an experience of three or four days, of an opinion that the last Spanish Revolution was creditable and successful indicated the levity of recklessness or inexperience. No prudent politician will venture to prophesy the fate of the Republic, although the dangers which beset it from within and from without are obviously formidable. In some rare cases a leap in the dark is safely accomplished; and it may possibly appear that Spain was fortunate in attaining a result which the great majority of the population, including nearly the whole of the upper and middle classes, had deliberately and repeatedly deprecated. At the time when an unexpected eulogy on the Republic was published in England the scanty information on Spanish affairs seemed to ordinary observers not altogether encouraging. It was true that a few days had elapsed without general massacre or spoliation, and that, except in the Northern provinces, no civil war was raging. Experience, which has of late years not been scanty, shows that immediately after a revolution the party which has succeeded to power is on its good behaviour, while the adherents of the former Government are, in the reaction from the first panic, surprised and grateful to find that they have not been yet seriously molested. It is not on the morrow of the catastrophe, but on the day after, that its true bearings and consequences become gradually disclosed. The partisans of the new system soon become clamorous for their reward, and the defeated party, especially if, as in Spain, it forms the great majority, begins to regard with resentment and shame the supremacy of its adversaries. The scattered accounts which were at first received from Spain were not in themselves reassuring. The workmen of Barcelona turbulently expressed their interpretation of Republican institutions as a machinery for providing them with higher wages and with shorter hours of work, and for promoting the doctrines of the International Association. It was reported that the Cortes had decreed the abolition of titles or rank, and that some municipal bodies were distributing arms to the people. In such cases the people mean the violent and disorderly portion of the populace, which is perhaps more bloodthirsty in Spain than in any other part of Europe. All prisoners in custody on the charge of participation in Republican disturbances have been let loose; and officers who, in defiance of law and military duty, had refused to take the oath of allegiance to the KING, have been restored to the rank which they had justly forfeited. The most gloomy anticipations of the tendency of the Republic have thus far been fulfilled, although it is possible that ulterior disasters may by some unforeseen method be averted.

The triumph of the Republicans, whatever may be its ultimate consequences, was only rendered possible by incapacity and by the general absence of political instinct. The late PRIME MINISTER, when he became aware of the KING'S determination to abdicate, allowed the secret to transpire without taking any precaution for the safety of the State, or for the maintenance of legal order. It was the business of the Government, as soon as the throne was vacant, to propose the appointment of a Regency; and perhaps under capable leaders the Cortes might not have been too much frightened to discharge their plain and obvious duty. From their constituents they had, with the exception of the small Republican minority, received the mandate to support the Monarchy which had been established or recognized by the Constituent Cortes only three years ago. Since the Revolution of 1868 there have been three general elections, and in all these the principle of monarchy has been affirmed. The present Cortes derived its legal existence from the Constitution which it has now in a panic, and in spite of the convictions of a majority of its members, lawlessly overthrown. The Constituent Cortes had not only decreed the maintenance of a Monarchy, but it had by a large majority summoned to the throne the Prince who has now been worried into abdication. Señor ZORRILLA and his colleagues, following the example of their opponents of every jarring faction, inflicted on the KING the affront which finally determined his abdication. It is possible that they may have been justified in accepting the resignations of the Artillery officers; but the appointment of HIDALGO was highly injudicious. The Republicans who have seized upon the Government are alone exempt from the charge of political poltroonery; but, unless their audacity is justified by the use which they may make of their power, they will be primarily responsible for a revolution which, if it ends in failure, will have amounted to a crime. The promoters of a Spanish Republic are bound to take notice of the various meanings which different classes of Republicans attach to their common designation. A few political dreamers understand by a Republic an orderly and responsible Government not encumbered with the trappings of royalty; but to the populace of the large towns, and to the inhabitants of many rural districts, the Republic implies confiscation or community of property; and a large section, if not a majority of the party, desires to split up the State into a loose Federation. For all the acts of the Republican factions their nominal leaders who now form the Executive Government are primarily answerable.

Notwithstanding the lamentable origin of the Republic, it may perhaps be the duty of a good citizen, if indeed honest men ever take part in the political affairs of Spain, to support the new Constitution as long as it is found compatible with the protection of property and the maintenance of order. The Ministers in their published utterance display a nervous anxiety to dispel the universal dread of impending anarchy. The Government, with unconscious irony, affects to rely "on the "respect for the laws which is inherent in the Spanish people," at the moment when it has been ostentatiously disregarded by the Cortes in the establishment of the Republic. "With all "the authorities calmly fulfilling the duties of their offices, "all the public powers in full possession of their rights, the "Cortes, united in one National Assembly, voted the Republic." In other words, the authorities were powerless to defend the rights which were betrayed by the representatives of the people. Spanish Ministers abroad are enjoined to assure foreign Governments that "this Republic represents the na- "tional will, and represents public order." It remains to be seen what guarantee for public order will be effectual when the populace has been armed by the local authorities. While Señor CASTELAR strives to impress on his countrymen and foreigners the convictions which he holds himself, he is evidently conscious that the establishment of the Republic depends on the assent of the army. In one short Circular he recurs several times to the subject of his chief anxiety. Spain has a "tranquil people and an obedient army." The Government relies "on the fidelity of the army." "The Spanish army is "resolved to maintain our authority." Of the fidelity and obedience of the army, and of the resolution to maintain the authority of the present Government, Señor CASTELAR as yet knows little, and he evidently fears much. The generals and officers of the army, with few exceptions, detest the Republic; nor can there be a doubt that, if they can reckon on the obedience of their troops, they will take the first opportunity of effecting a counter-revolution. It is possible that Republican emissaries may succeed in creating a division between the lower and the higher ranks of the army. At the beginning of the French Revolution the rabble of Paris was led and directed by mutinous soldiers of the French Guard and of other regiments which had thrown off the authority of their officers. General HIDALGO, who was appointed to his present

post by the actual Minister of War, won his promotion by sharing in a conspiracy of the non-commissioned officers of Artillery against their superiors. The extreme Republicans propose to disband the regular army, and to entrust the defence of the country to lawless volunteers. It is possible that the privates would be glad to accept their discharge; while the officers will to the utmost of their power resist a measure which would be fatal to their interests. General CORDOVA himself has never hesitated to desert a falling Government; and it is possible that he might in case of dissension throw in his lot with the army rather than with the Republic. The recent conduct of SERRANO and of the other military chiefs is wholly unaccountable. They cannot but have anticipated that their studied rudeness to the KING might at any moment cause his abdication; yet it would seem that they were utterly unprepared to profit by the success of their policy. SERRANO had quarrelled with the KING because he was not allowed as Minister to exceed the limits of the Constitution in dealing with the Republicans and other disaffected factions. It is impossible that he should approve of a result which he thought that the KING would be justified in preventing even at the cost of a constitutional irregularity. SERRANO himself and SAGASTA are now said to have disappeared through fear of popular violence, while ZORRILLA himself, who was a fortnight ago the undisputed leader of the Radical party, has found it prudent to take up his residence in Portugal. The clerical party, which had done its utmost to render the position of the KING untenable, now sees its whole possessions in danger and apprehends an active persecution. SERRANO and TOPETE must bitterly regret their share in the ill-fated revolt against ISABELLA II. In Spain, where, according to PRIM, no Republicans were to be found after the Revolution of September, a Republic is now formally established. Any statesman who prefers a Monarchy to a Republic ought to beware lest, in overthrowing a dynasty, he may disturb the foundations on which the institution rests. It was better to tolerate for a time the caprices of an unprincipled sovereign than to place the community at the mercy of conspiracy and clubs. King AMADEO, in declaring his resolution to abdicate, delivered a just criticism on the political character of the nation which had called him to the throne and then refused to fulfil the implied conditions of his acceptance. The prospects of Spain are more gloomy at the present moment than at any time since the termination of the civil war which followed the death of FERDINAND VII

THE LORD CHANCELLOR'S BILL.

WHEN Lord HATHERLEY, now three years since, produced his Bill for the fusion of Law and Equity, we, as ardent and almost fanatical worshippers of that idea of Law Reform, felt bound at once to express our profound disappointment at the projected scheme, and to anticipate the failure which ultimately befel it. Much discussion followed, which threw a flood of light on the causes of that deplorable miscarriage, and in considering the Bill of the present LORD CHANCELLOR it may not be amiss to recall the errors, more of policy than purpose, which made his predecessor's effort abortive.

Lord HATHERLEY's measure failed mainly for three reasons. The first and most important, in the eyes at any rate of thoughtful and sincere reformers, was that the fusion which he desired to introduce was more nominal than real. The second blot was that he offended at once against practical common sense and constitutional feeling by proposing to delegate to an outside Committee the filling up of a skeleton scheme far too momentous to be left to any hands but those of Parliament itself. The third element of failure—one of tactics merely, but not on that account the less perilous—was that he offended the susceptibilites of the LORD CHIEF JUSTICE and the great majority of the Common Law Bench. And it must be remembered that all this was done by a man of unparalleled acuteness, moved by the most single-minded desire to remodel our system of judicature on the purest and the soundest basis.

Lord HATHERLEY has been succeeded in his office and his ambition to effect a great work of legal reform by a CHANCELLOR who adds to legal acumen a far greater measure of political experience than the late Chancellor could boast; and all who know anything of the bent of Lord SELBORNE's mind know that in sincere devotion to the cause of Law Reform he is not surpassed by any one on the Bench or at the Bar. These were good grounds for hoping that the difficulties which have baffled all former efforts in the direction of a comprehensive reform would yield to the genius, the energy, and the tact of the present LORD CHANCELLOR. We indulged in these anticipations more freely perhaps than most, and we are the more grieved to confess the blank disappointment with which the CHANCELLOR'S Bill has filled us. One may almost despair of ever seeing done what Lord HATHERLEY and Lord SELBORNE have successively failed to accomplish, or even adequately to conceive. To all who still hope against hope for the thorough reformation of the administration of justice, who are still bent on struggling for complete unity against the influence of professional prejudice and personal susceptibilities, it may not be wholly useless to compare the Bills of 1870 and 1873, and seek the reason why the last state of Law Reform seems even worse than the first. Of the three errors of Lord HATHERLEY's tactics, the LORD CHANCELLOR has—at no small cost to his scheme—entirely escaped the last; he has in some degree, but more in appearance than in reality, avoided the second, and has grievously aggravated the first and most fatal objection to the earlier measure. Mindful, no doubt, of the extreme vivacity of the LORD CHIEF JUSTICE's attack upon Lord HATHERLEY, Lord SELBORNE has carefully guarded against exposing himself to the blows of so formidable an antagonist. In the speech in which he introduced his Bill he mentioned that he proposed to retain the designation and the constitution of the existing Courts "as a concession to sentiment." Until we saw the Bill we had no idea that this "concession to sentiment" was the key-note of the whole composition. But it is so, as we shall presently more fully show, and the measure may be aptly described as a scheme for merging Law in the larger jurisprudence of Equity just so far as the sentiment of the Common Law Bench will allow and no further. This policy will have its reward, and however much the Bill may be deteriorated by it, its chance of passing will be materially increased by the tact with which the sword of the LORD CHIEF JUSTICE has been parried. Whether the Bill will be worth passing on such conditions is a graver question, on which thoughtful law reformers may not agree with the verdict of experienced politicians.

With equal prudence, though with scarcely equal skill, the LORD CHANCELLOR has taken much pains to escape the imputation of leaving the essentials of his measure to be fashioned by the delegated authority of an extra Parliamentary Committee. It was obvious that, after the indignant protests of Lord CAIRNS and others, it would be hopeless to bring forward a Bill which might be made to mean anything or nothing, at the will of a Select Committee of Judges or Privy Councillors. In order to meet this objection, which was the immediate cause of the defeat of the Bill of 1870, the LORD CHANCELLOR promised to include in a schedule to his Bill the rules of procedure by which he proposed to work out his scheme. He has accordingly added such a schedule, but its provisions are so crude and incomplete that he has found it necessary to introduce clauses in the Bill itself for the purpose of perfecting it. One of these, the 69th, coupled with the following clauses, gives to the Judges a power, which clearly must be vested in some authority, of modifying the rules of practice and procedure from time to time, after the Act shall have come into operation, and working defects shall have disclosed themselves. This is quite right; but there is another clause, the 68th, which delegates to a Special Committee the power of filling up, before the Act comes into operation, the skeleton schedule of rules which is added to the Bill. Practically it is obvious that the real procedure of the Courts will be the creation of this Committee, and, to the extent to which this is so, Lord SELBORNE will have fallen into the very same error which proved fatal to Lord HATHERLEY's Bill. Whatever has to be done before the commencement of the Act can be as well done before the vote of Parliament is taken as afterwards, and ought to be so done, in order that the mind of Parliament may be expressed upon the subject. The usual provisions for laying the rules on the table of both Houses are contained in the Bill; but every one knows how little protection is ever derived from arrangements of this kind. If the Government are not prepared to make their Bill complete in the first instance, it would be much better that the schedule should be perfected by a Select Committee of the House of Lords before the measure is passed than that this duty should be left to the proposed Committee, which is composed of the CHANCELLOR, four Common Law Judges, one Equity, one Admiralty, and one Bankruptcy Judge—not a wholly satisfactory Committee, even if a Committee were wanted at all. But these, in some sense minor, criticisms sink into insignificance compared with the supreme defect of the whole measure.

Lord HATHERLEY introduced a scheme under which the fusion of Law and Equity would have been much more

nominal than real, and those who have taken a deep interest in this great question will not perhaps forget that Lord PENZANCE, his only thorough supporter in the House of Lords, justified his policy on the ground that it was idle to dream of a real fusion of Law and Equity, and that to create a nominal unity which should in practice leave existing discrepancies almost unchanged was the utmost that could be rationally attempted. Lord SELBORNE has improved on this opinion, and his scheme is not only almost but, with a very slight exception, altogether a nominal fusion. To call the aggregate body of our existing Courts by the sounding title of the Supreme Court of Judicature is in itself of course only a change of name. To say that the Court of Queen's Bench shall also be called Division No. 1, the Court of Chancery Division No. 2, and so on, is in itself equally a nominal change. To say that the business shall, as a rule, be distributed among these divisions exactly as it is now, is to exclude all real union. And these are the main provisions of the Bill, so far as they bear on the great central question. That the Bill contains some positive enactments is true, but they are provisions not so much for blending the dissevered jurisdictions as for crippling and mutilating that branch of English jurisprudence which alone has shown itself capable of vitality and growth during the last two or three centuries. Apart, however, from those provisions, which will require some detailed consideration, we are profoundly convinced that Law and Equity never can be fused except in name by any Act of Parliament which groups all the Common Law Judges in one set of Courts and all the Equity Judges in another, and rigidly preserves to each section in practice the special jurisdiction which it has been accustomed to exercise. What is the use of saying that each Court shall have universal jurisdiction if rules are framed for distributing the business in precisely the same grooves which it has hitherto followed? And this is in the main what the Bill is intended to do. No one can believe that this is Lord SELBORNE's ideal of a comprehensive reform, no one can doubt that a project so suicidal is merely the result of that "concession to "sentiment" which prompted the retention of the ancient designations. Whatever large-phrased enactments may be introduced declaring that Law and Equity shall be administered by every Court, the essence of the project is nothing but what Lord PENZANCE described as his narrow ideal—a nominal fusion which should leave things to go on as nearly as possible after their old fashion.

If we consider for one moment what the system is with which a reformer has to deal, it will be obvious that it cannot be righted by any such method as this. It must not be forgotten that Law and Equity are not merely two rival codes of jurisprudence existing side by side on equal terms. With the solitary exception that, under the influence of one great Common Law Judge, the custom of merchants has been assimilated by Courts of Law as well as by Courts of Equity, the Common Law has been destitute of growing vitality since the days of COKE. The jurisprudence of every country must grow with the needs of growing civilization, or it soon ceases to adapt itself to the wants of men. Our jurisprudence has grown during the last two centuries more vigorously than it ever grew before. Each generation has seen whole chapters of new law gradually created out of chaos, but with trifling exceptions the growth has been manifested exclusively by the gradual development of the principles of Equity, which now form the modern supplement of the mediæval law which the Common Law Courts administer. The difference between the rival systems is not a mere matter of jurisprudence or procedure. It is of the very substance of the law as affecting rights of property and rights and obligations arising out of the contracts and enjoyments of mankind. In the instances in which Equity effects equal justice by enforcing rights and obligations unknown to the Common Law—in the matter of Trusts, Conversion, Election, Performance, Satisfaction—in dealing with the rights and liabilities of married women with reference to separate estate (a branch of Equity which has wholly grown up within the memory of living men) —in the distribution of assets—in short, in the numerous instances in which Equity practically conflicts with and controls the Law, the matter is not one of jurisdiction and procedure, but of substance; and as such alone can it be effectually dealt with if it is desired to reconcile the two conflicting systems. Add to this, that when Law and Equity differ, the principles on which justice is administered in Equity are confessedly more consonant with rational justice than those of the Common Law, and it follows that the Law ought to be adapted to the standard of Equity. The so-called fusion of Law and Equity must take place at the expense of the Law. In other words, the hard, coarse doctrines of the Law must be merged and swallowed up in the higher, broader, and more refined principles of Equity.

Does anyone imagine that we have given too exalted a description of the nature of Equity as contrasted with that of Law? We need only answer that the whole substance of what we have just said is taken from the famous letter of the LORD CHIEF JUSTICE, and that very much of it is in his own eloquent words.

These being confessedly the conditions to be dealt with, how would any rational man, if unfettered by the fear of opposition, set to work to infuse into all our tribunals the essential principles of Equity? These principles have become the sole inheritance of the Court of Chancery, for no other reason than that the ancient spirit and traditions of the Common Law Courts refused to recognize the march of civilization, and to create for themselves, or to accept at the hands of a more enlightened series of judges, the new developments of principle which the progress of society demanded in the administration of justice. The antagonism began in what the LORD CHIEF JUSTICE himself condemns as the unseemly struggle of Lord COKE and the Court of Queen's Bench against the CHANCELLOR's jurisdiction. It went on to our own times in obedience to the same spirit and the same traditions. Meanwhile the Court of Chancery grew, in spite of it, till it had developed a great system of jurisprudence, formed on large and enlightened principles, which secures for us at this day the essentials of justice according to right and reason. The spirit and traditions of the Court of Chancery are therefore, according to the highest Common Law authority, the spirit and traditions which have to be infused into all our Courts. There is one way, and one way only, in which this can be done. The spirit of a law and the tradition of a Court live in the minds of living men and are guarded by the associations connected with old institutions. You cannot transplant them if you would by Act of Parliament. The Common Law Courts cherish alike the noble traditions of order and liberty which are their just pride, and the narrow traditions of hard technical law which made the Court of Chancery a necessity, and which can only be tempered by infusing into them the higher tradition of Equity jurisprudence. While the names, the constitution, the special jurisdiction, and the *personnel* of the old Courts remain unchanged, the old traditions, good and bad alike, will, as Lord CAIRNS has justly said, still linger about them. Equity jurisdiction may be given by statute in larger measure than heretofore, but it will be used as it has been used heretofore. The spirit of Equity will be wanting in the future as it has been wanting in the past, and the old repugnance of COKE and his successors, the old traditions which prevented the Courts of Law from developing Equity for themselves, will sway the judges in their own despite. The remedy is easy if once personal considerations are postponed and personal compromises rejected. Let the judges who are the living depositaries of the principles of Equity be associated in due proportion with their brethren of the Common Law in all the Courts (as indeed is proposed in the Court of Appeal); let each division of the united Court learn to look upon itself as the heir of the Chancellors no less than of the Chief Justices, and there will be some prospect of a real assimilation of Law and Equity. But this is the very reverse of what the CHANCELLOR's Bill proposes. Old prejudices against Equity are to be preserved by concessions to sentiment, and the only Court which is to be shorn of its powers and forbidden any longer to grow is that to which we owe all the doctrines which it has become an imperative necessity to engraft upon the law.

Such a Bill may be an easy Bill to pass, but it will become an impossible Act to work. The principles of Equity will perish in an uncongenial atmosphere, and the very source from which alone they can be renovated is to be choked with restrictions on its flow. The considerations on which we have dwelt seem to us too grave to be mixed up with criticism of details, but there is much in the machinery of the Bill to which we hope to call attention at a future time. With the deepest regret we must say—Better no reform at all than a merely nominal reform. Better no Bill than such a Bill as this.

MR. HARCOURT ON PUBLIC EXPENDITURE.

MR. HARCOURT'S motion for the reduction of expenditure has been rewarded by unexpected success. Mr. GLADSTONE seems to have wished for an opportunity of perfecting the control of the Treasury over the other public departments; and the Committee which is to be nominated by the Government will not fail to recommend through its official

Chairman any regulations which may approve themselves to the judgment of the PRIME MINISTER and the CHANCELLOR of the EXCHEQUER. The Report of a Select Committee of this kind sometimes furnishes a convenient though cumbrous substitute for a Ministerial explanation. In accordance with established custom, the Government is represented on the Committee by a majority, and its proposals are therefore ultimately adopted. In Mr. GOSCHEN'S Committee on Land Taxation, the Opposition members voted against the Chairman on every important question, and possibly some of the majority might have been equally recalcitrant if they had not been restrained by their party allegiance. In the end a clever and one-sided pamphlet, composed by Mr. GOSCHEN himself, was adopted as the Report of the Committee. In the following year a Ministerial Bill embodied the substance of the Ministerial Report, and the same scheme will probably be reproduced in the Local Taxation Bill of the present year. If Mr. GLADSTONE thought fit to disclose his intentions, he could at this moment anticipate the conclusions which his Committee will draw from the evidence which they will formally receive. Mr. HARCOURT or other members may perhaps propose alternative Reports, but the recommendations of the Government will be finally accepted by the Committee. The general control of the Treasury is on the whole beneficial, though in some instances it is exercised with perverse and shortsighted pedantry. The Treasury clerks who refuse grants of the necessary expenses of prosecutions cause great inconvenience to the community, but the losses which may result from their indirect encouragement of crime are not included in the Estimates. It may be doubted whether the Committee will discover any opportunity of saving money. As Mr. WHITE plaintively remarked, the last Committee of the kind only struck off a few hundreds a year, and in one instance of reduction they seem to have committed an oversight. It is the business of the Government or of the heads of departments rather than of the House of Commons to supervise the details of expenditure. The concession of a Committee on the Civil Estimates offered the Government the double advantage of facilitating the introduction of an official or administrative change, and of avoiding a troublesome and useless discussion on naval and military expenditure. Mr. HARCOURT has taken an active part in agitation for the reduction of the army, having even with remarkable courage undertaken to prove that an invasion of England is impossible. Mr. GLADSTONE, though he may perhaps have sympathized with Mr. HARCOURT'S opinions, was on sufficient grounds unwilling to submit to a Committee the question of the strength and organization of the army, which ought, if Mr. AUBERON HERBERT is in the right, to be reduced to 5,000 men.

Mr. HARCOURT earned much applause by an elaborate and eloquent speech which proved absolutely nothing. In some years the total expenditure had increased, in other years it had diminished, and, on the whole, after making proper allowances and deductions, the expenditure of 1872 is about the same with that of 1862. Within that interval nearly all the conditions by which public expenditure is necessarily regulated have been fundamentally changed. Two great European wars have produced a revolution in the military establishments of all countries; and at home the Government has been required to undertake functions which necessarily involve a corresponding outlay. The Education Estimates have, through a policy which has been universally approved, increased by about a million. The mode of providing for penal and police administration has been in many cases readjusted, and the prices of all commodities have largely increased. It is of course possible that necessary additions to expenditure may have been further augmented by extravagance or carelessness; but Mr. HARCOURT'S statistics suggested no reason for expecting that any reduction could be advantageously effected. If he had examined into the expenditure of any one public office, and had shown a *primâ facie* case of excessive expenditure, he would have laid a solid foundation for his demand of inquiry. It may possibly be useful from time to time that Committees should inquire into the public expenditure; but if the House of Commons thinks such investigations expedient, they ought to be repeated at regular intervals.

No member of the House of Commons excels Mr. HARCOURT either in capacity to acquire special knowledge, or in the industry which is indispensable for the purpose; but it is evident that he has not yet troubled himself to master the details of finance. Among the payments which he condemned as collectively excessive was the annual sum which is invested in Terminable Annuities for the reduction of the Debt. It is sufficiently obvious that the conversion of a perpetual into a temporary annuity must involve a larger annual payment; but, although well-founded objections may be raised to the particular process, the House of Commons has deliberately, on the proposal of successive Governments, adopted the system of commutation. Mr. LAING, in the most instructive speech of the debate, pointed out the fallacy of Mr. HARCOURT'S statements of the comparative reduction of taxes in two different periods. During the inflation of trade in 1862 and 1863, and at a time when the arrears of the Chinese war had been paid off, Mr. GLADSTONE was able to take off a large amount of taxation. After the collapse of 1866 the revenue was comparatively stationary, and the process of reduction became necessarily slower. Although Mr. LOWE has intimated that there will be no considerable surplus in the ensuing year, the Government is as fully entitled to credit for the payment of the *Alabama* damages out of revenue as for any reduction of burdens which might in other circumstances have been effected. If the damages had been admitted and paid at the time when, in the opinion of the Geneva Tribunal, they were incurred, Mr. GLADSTONE would have effected smaller reductions in 1863, and Mr. LOWE would have been better able to take off taxes in 1873. The rise or fall of the revenue or of the surplus which may be applied in relief of taxation has little connexion with moderate or excessive expenditure. In prosperous as in unfavourable times, waste ought to be prevented, and the public service to be maintained in the highest state of efficiency.

The abstract question whether abstract Parliamentary resolutions are expedient is unprofitable and barren. Mr. HARCOURT was enabled to meet his critics with the triumphant answer that his abstract resolution had produced the concrete result of a Select Committee. Whether any of the objects which Mr. HARCOURT proposed to himself will be attained by the appointment of the Committee or by its investigations will appear hereafter. A private member who extorts even an unprofitable concession from the Government is like a soldier who has captured a flag. The article which he has acquired may not be intrinsically valuable, but it is a proof of victory. The Committee will be debarred from entering into inquiries as to the Debt and the Civil List, the army and the navy. It will be difficult to examine the Estimates for Education while a Government Bill for the alteration of the Education Act is pending; nor could any Committee attempt to interfere with the recent and deliberate legislation of Parliament until the results have been tested by longer experience. Two or three members naturally congratulated the House on the prospect of the services which Mr. HARCOURT might render the Committee when they inquired into the costs of legal and judiciary establishments; but while the LORD CHANCELLOR'S Bill for the reorganization of all the Superior Courts is pending it would be absurd to examine in detail a head of expenditure which must necessarily be affected by the measure. Mr. HARCOURT has sometimes proposed the suppression of the office of Revising Barrister; but the Committee will scarcely inquire into the evil of a system which by another Bill the ATTORNEY-GENERAL proposes to remodel. If the inquiry is confined to the staff and salaries of the Civil Service in general, it is not probable that any feasible reductions will be discovered. The opposite conclusion that some public servants are underpaid might possibly have recommended itself to the Committee, if Mr. GLADSTONE had not providently limited their functions to the means of reducing the expenditure. Possibly it may occur to the Civil Servants themselves that a body which may perhaps hold that they receive too much ought also to have been authorised to inquire whether they receive too little. On the whole, there can be little doubt that the only object of the Committee is to tighten the bonds of official discipline by conferring some additional power on the Treasury. Mr. HARCOURT is fully entitled to erect his trophy, but the spoils with which he will be decorated are likely to be rather ornamental than costly or saleable.

IRISH UNIVERSITY EDUCATION.

THE defects of the Irish University Bill spring directly out of one of its principal merits. It recognizes that a main function of a University is to teach; that a University which only examines students who have been taught by others may be a highly useful institution, but is still something less than a University. In Ireland, however, the foundation of a new teaching University is surrounded with special difficulties. Mr. FAWCETT and his friends will probably object that there is no need to found a new University. The existing University of Dublin is, they will say, sufficient when

once tests have been abolished to fulfil every useful purpose' The answer to this is, that whatever other purposes the existing University may serve, it will not serve the only purpose for which legislation is really required. An Irish University Bill which did not aim at enabling Roman Catholics to obtain the benefit of a University education would be as appropriate as the Irish Land Bill would have been if it had made no change in the position of the tenant farmer. As it is, Roman Catholics cannot obtain a University degree for their sons without giving up what they consider the advantage of an education associated with their own religion. Those who regard Mr. Fawcett's Bill as an adequate settlement of the question must be prepared to maintain either that this is not a grievance or that it does not exist in Ireland. In the first case they differ from the Government on a question of principle; in the second case they differ from the Government on a question of fact. On the assumption therefore that this is a grievance if it exists, and that it does exist in Ireland, some reconstitution of the Irish University system is indispensable. On the assumption that a merely examining University cannot give a complete University education, provision for teaching must be an element in the reconstruction. The special difficulties of the situation must be faced, not passed over. The fact that there are now two Universities in Dublin, and the peculiar constitution of one of them, create one of these difficulties. It would be impossible to add a third University, and it is not easy, in remodelling one or both of the two already in being, to ignore the peculiar features which characterize the younger of them. The Queen's University is composed of colleges geographically separate. To an examining University this is no inconvenience, but to a teaching University it is a very great inconvenience. If the lectures given by the University Professors are worth anything, students who have not had the opportunity of attending them will be at a disadvantage as compared with students who have made good use of that opportunity. It will appear to some persons that if so large a deduction has to be made from the value of the new University, regarded as a teaching body, it may be as well to reduce it to the level of an Examining Board. But, beside all the educational objections to which this solution is open, there is a political objection which might be fatal to the prospects of the Bill. All the endowments of the two Queen's Colleges and the greater part of the endowments of Trinity College are to be left untouched, and none of these can be of any benefit to the class of Roman Catholics for whose case Parliament is asked to make provision. If the University of Dublin were made a mere Examining Board, while the Roman Catholic colleges were excluded from endowment on the score of their denominational character, the Roman Catholics might complain that they had no share, direct or indirect, in the money spent on the higher education in a country in which they constitute three-fourths of the population. The only way in which any such share can be extended to them is by the foundation of professorships from which no Roman Catholic need be excluded by religious scruples. That in the latest as in the earliest form of the Bill the new University will contain a teaching element may, we think, be safely predicted.

It follows from this that the difficulty about the geographical diffusion of the colleges must either be submitted to or be met by the concentration of the Queen's Colleges. Unless there is some unknown obstacle in the way of this latter course, it would decidedly be the preferable alternative. According to this plan the endowments in arts belonging to the Queen's Colleges at Belfast and Cork would be transferred to a new Queen's College at Dublin, the provincial colleges being retained, if it were thought expedient, as professional schools. The objection in the way of this arrangement would be that it would make University education more costly. At present in the two largest of the provincial cities of Ireland a student can obtain a degree without leaving his home, whereas the proposed transfer of the colleges would make it necessary for every student to reside in Dublin during the academical year. No doubt the cheapening of University education is in itself a good thing, but it must not involve a deterioration of the article supplied. It is very questionable whether the system of local colleges, having no relation to the University beyond that of supplying students for its examinations and candidates for its emoluments, does not involve such a deterioration. It may be said that, as attendance at Professors' lectures is to be voluntary, it will matter little whether a student passes his University life in Dublin or out of it. But, wherever the lectures are worth attending, they will, at all events in those subjects which enter into the University examinations, be sure to attract listeners. At Oxford and Cambridge it has been found that, even in subjects which lie outside the ordinary course of University studies, a competent teacher has rarely any difficulty in getting a class together. Nor does the essence of University training lie exclusively in the lectures. Much of it is in the air, in the life the students lead, in the atmosphere of discussion they breathe, in the constant intellectual friction to which they are subjected. A student reading for his degree at Cork or Belfast, and mixing only with men whose antecedents and prejudices run for the most part in the same local groove with his own, will be altogether outside this subtle influence. Putting these two losses together, they amount to a very serious deduction from the value of a University education. The class of students for whom the ability to live at home while keeping terms for their degree is especially intended are the class which will be chiefly attracted by the bursaries and exhibitions to be attached to the new University. If necessary, these might be increased in number, and even in value. It is much better to enable students by judicious endowments to get a really good education than to enable them to get an inferior education without endowments. If the Presbyterians wish to maintain a College of their own in the University, there would not be much difficulty in moving the Magee College to Dublin; and the Roman Catholic institution at Carlow, which is expected to put in a claim to be included in the schedule of colleges, might be merged in the college at present known as the Catholic University. Looking at the question from a merely denominational point of view, it would certainly be wise for the Roman Catholics to concentrate all their strength in improving to the utmost a college which will have to contend in the University arena with the wealth, the experience, and the traditions of Trinity.

The two clauses relating to religion are the 11th, which empowers the Council to punish teachers or examiners who, when in discharge of their functions as University officers, give wilful offence to the religious convictions of any members of the University; and the 12th, which prohibits the University Council from appointing Professors or Teachers in Theology, Modern History, or Moral and Mental Philosophy. To the former clause it has been objected that there is no subject of human interest which may not give occasion to a teacher to offend some tender conscience, and consequently that no teacher of any merit will consent to work under such restrictions. This view of the case involves, as it seems to us, an exaggerated view of the theological thorniness of University studies. No doubt ancient history or physical science may be so treated as to give very grave offence even to consciences which are not especially tender, but, in so far as they are so treated, the offence will usually be found to lie in the extension of the teacher's views to subjects lying outside his proper sphere. A Professor of Geology does not give offence to the conscience of a believer in the Mosaic account of the Creation by setting out the evidence in favour of assigning a very high antiquity to man, or by stating his own belief in its conclusiveness. But he would be justly reprimanded under the 11th Section if he made this an excuse for telling his class that the Book of Genesis is a forgery or a fiction. No doubt, if the 12th Clause were away, the 11th Clause would be very hard to work. It would require a delicacy of handling almost superhuman to ensure that the treatment of moral and mental philosophy should never give offence to scrupulous persons of a different religion from that of the Professor. But, with this subject excluded, the difficulty of avoiding offence is much diminished. It must be remembered also that the offence is to be wilful, and that, even where it has been given, a mixed and highly representative Council will have to decide whether it was wilfully given. This seems to be of itself some security against the clause being perverted to close a teacher's mouth as regards the unfettered exposition of his own subject.

The exclusion of Philosophy and Modern History from the subjects taught by the University is open to more objection. It will, it is said, lower the value of Dublin honours by the side of those of the English Universities, and it brands the University course with an obvious note of incompleteness. It is important, however, not to overrate the importance of a flaw the existence of which cannot be denied. In the first place, an education in ancient and modern languages and history, in ancient history, in mathematics pure and mixed, and in natural science, will embrace all that is even now imparted to the most eminent Cambridge men. It is true that, in the latter case, there is a Moral Science Tripos for those who wish to be examined in philosophy. But Senior Wranglers and Senior Classics are still held both in the University and in

the world outside to be the most genuine and distinctive products of Cambridge training, and as regards both of them Dublin will be free to turn out the same or better. In the second place, the excluded subjects are excluded only from University teaching, not from college teaching. Trinity College, the Queen's College—should one be set up in Dublin, instead of those now existing in the provinces—and the denominational colleges will all be at liberty to teach philosophy in their several fashions, and in this way there may eventually be as healthy a rivalry in philosophical opinion as can possibly be desired. Readers of the *Dublin Review*, for example, will not need to be told how valuable a controversy on first principles might be looked for if Mr. MILL were to be teacher of philosophy in Trinity College and Mr. W. G. WARD in the Roman Catholic College. It is a mistake, we believe, to suppose that all Roman Catholics object to philosophical discussion, or to their sons knowing that there are philosophers who deny the freedom of the will, or who maintain that there is no essential difference between thought and digestion. What they do object to is the sending forth of these theories with the imprimatur of a University on them. In fact, their position is pretty well identical with that of Protestants who do not object to their sons knowing that the Pope is held by many persons to be infallible, but might not care to send them to lectures in which the truth of the doctrine would be assumed or maintained by the Professor. This class of scruples might perhaps be met by the expedient of a double Chair of Philosophy, which we suggested last week. As regards Modern History, we are not without hope that it may be found possible to reconsider the decree of exclusion. But, in considering this and every other provision, the point to be steadily borne in mind is that the Bill does not profess to be an ideally perfect measure, and that the true test of any criticism to which it may be subjected will be the ability of the critic to suggest anything better adapted to the peculiar circumstances which it is designed to meet.

THE END OF THE COMMITTEE OF THIRTY.

THE Committee of Thirty have from first to last been consistently inconsistent. If their one purpose in life had been to falsify public expectation, they could not have achieved this end more completely. They have been lions when everybody thought they were going to be most lamb-like. They have been lambs when they were supposed to have pledged themselves irrevocably to play the part of lions. Last week their changes of character seemed to have come to an absolute end. They had discussed and voted upon all the subjects submitted to them, and they had entrusted the Duke of BROGLIE with the task of embodying their conclusions in a final Report. In the ordinary course of business the adoption of this Report would have been a mere process of course. Parties in the Committee were not so equally balanced as to leave a chance that the death or defection of a single member might convert the minority into a majority. Two-thirds or so of the Committee had held together with admirable unanimity through all the changing scenes of the Committee's life, and the majority which had told the Duke of BROGLIE what to say in his Report was the same majority that would have to give it the seal of formal acceptance as soon as he had said what he had been told. The position which the Committee seemed at length to have taken up was sufficiently intelligible. They had abandoned the attempt to silence M. THIERS. It was plain that M. THIERS did not mean to be silenced, and the Committee had probably ascertained that on this point at all events he would have a majority in the Assembly with him. Failing in their first design, they had determined to resist at all hazards the attempt of the Government to make them instrumental in giving form and permanence to the Republic. They had refused to recommend the Assembly either to create a Second Chamber, or to pass an electoral law, or to provide for the continuance of the Executive power after its own dissolution. If the Assembly was to undertake these tasks, it would have to do so under the direct influence of M. THIERS. The Bills would be Government Bills, and in all essential respects they would be the mere expression of the PRESIDENT'S wishes. The Committee were not willing to expose the Assembly to this trial. They preferred to keep the work of legislation in their own hands. Accordingly the resolution at last voted provided that the first two points should be referred to them for further consideration, and that the last point should be put aside altogether. The Committee would by and by set to work upon a Second Chamber, and when the Electoral Bill had been prepared they would consider whether it met their views. As to the continuance of the Executive power, they would have none of it. It was not easy to say precisely who should have the management of the elections, but they found no difficulty in settling that M. THIERS should not have it.

M. DUFAURE'S proposal was thereupon rejected, and a series of resolutions embodying these conclusions was handed to the Duke of BROGLIE as the materials from which to construct his Report. By Monday last the Duke had got through his work, and the Report was read to the Committee. With some forebodings, it may be, of what was to come later in the week, the Session was declared secret; but the *Times'* Correspondent, who usually knows what the Right knows, has told us that, though mild in form, the Report firmly maintained the conclusions of the Committee. On Tuesday morning the Report was communicated to the PRESIDENT. In the course of the day a Council of Ministers was held to consider its terms, and later in the afternoon the Duke of BROGLIE had an interview with M. THIERS. On Wednesday morning the Duke of BROGLIE appeared before the Committee a changed man, and, which is more wonderful, found that he had to deal with changed men. The discussion turned upon the possibility of coming to an agreement with the Government on the basis of a new Report upon M. DUFAURE'S proposals. It soon appeared that, the will not being wanting, the way would not be wanting. A fresh Report was constructed at a moment's notice and sent to M. DUFAURE, who laid it before the Council of Ministers. It does not appear what the contents of this Report were, but they were such as to encourage the Government to suggest further modifications, which were accepted by the Committee the same afternoon. In its final shape the Report is in substance M. DUFAURE'S rejected proposal over again. The Assembly is recommended to declare that it will not separate until it has provided for the organization and working of a Second Chamber, for a new electoral law, and for the transmission of powers, while the Government is made to promise to present laws in conformity with this declaration. There is no trace of compromise here. It is an absolute and unconditional surrender. The Government asks the Committee to adopt a certain recommendation. The Committee, after full debate, refuse to adopt it, and proceed to adopt a different one. Having done this, they next ask the Government whether there is no means of coming to an agreement with them. The Government answer, Yes, by throwing over your own proposal, and substituting ours for it. Whereupon the Committee do as they are bidden.

It is very much easier to describe this singular proceeding than to explain it. The explanation which seems to be most generally accepted connects it with the failure of the recent attempt to bring about a fusion. According to this theory, the Right at the moment of their parting company with M. THIERS were sanguine as to their chances of being able soon to do without him. If the Count of PARIS could be got to pay a visit to the Count of CHAMBORD, Royalty would be looking up in the market. The Legitimists and the Orleanists would pull together in the Assembly; the Conservative majority would become homogeneous; all good men would rally round a restoration in which the old BOURBON wine would be poured once more into a new constitutional bottle; and the wounds of France would be healed. With such prospects as these before them, it was not in human nature that they should think it worth while to keep M. THIERS in good humour. But between the preparation of the Report and its final adoption came the news that the fusion had again come to nothing. The Count of CHAMBORD and the Count of PARIS were as far apart as ever. So long as the heads of the rival branches cannot find a middle term upon which to agree, their followers must not be more ingenious. They are bound to go on weakening one another until such time as their respective chiefs give the signal for laying down their arms. In this way M. THIERS became again indispensable. With a fusion, the Monarchists would have substitutes ready in the event of his throwing up his office. The Count of CHAMBORD would take the part of Constitutional King which has been rejected by the *petit bourgeois*, and the Duke of AUDIFFRET PASQUIER would be ready to serve as First Minister. But without a fusion M. THIERS was plainly master of the field. The influences which have made him supreme in the Assembly, and still more in the country, from the day that peace was signed would still be in full force. In that case there was nothing to be done except to make their peace with him once more, and so very disagreeable a dose could not be swallowed too quickly. If this is the true account of the matter, some

more presentable excuse will have to be invented by the time that the Report of the Committee is laid before the Assembly. The form which this excuse will take will probably be that, in the interview between the Duke of BROGLIE and the PRESIDENT, the latter gave such satisfactory assurances as to the manner in which he proposed to carry on the Government, that the hostility of the Committee had been disarmed. Their paramount desire had been to obtain some security for the maintenance of Conservative principles. They had in the first instance endeavoured to arrive at this by keeping as much power as possible in the hands of the Assembly. With this view they had rejected the proposal of the Government to take the initiative in constitutional legislation, and had recommended that any projects of the kind should be submitted to the Committee for consideration. M. THIERS's frank assurance of the substantial identity of his views and wishes with those of the Committee had at the eleventh hour worked a change in their plan. They became suddenly convinced that the Conservative party had nothing to fear from him, and they had consequently given up all thought of tying his hands. It is conceivable of course that this may be the real explanation of what has happened. But, considering how wide a gulf has of late separated the PRESIDENT from the Right, it seems all but impossible that any genuine reconciliation can have been effected between them. That M. THIERS was conciliatory and diplomatic may readily be believed. That the Committee, when they found themselves really pledged to a stand-up fight with the PRESIDENT, took fright at their own boldness, may readily be believed. Out of these elements it may not have been difficult to devise a colourable pretext for surrender. This commonplace hypothesis may perhaps come nearer the truth than the theories which assign the collapse of the Committee either to despair at the failure of the fusion, or to a late conviction of the soundness of M. THIERS's policy.

THE GALWAY PROSECUTIONS.

THE Galway prosecutions have ended, as might have been expected, in the acquittal or escape of all the defendants. Those who are anxious to form an opinion on the conduct of the inculpated priests and prelates are at liberty to choose among three verdicts successively delivered by as many different tribunals. The Judge who was entrusted with the duty of investigating the validity of the Galway election unseated the sitting member on proof satisfactory to his mind that some of the Roman Catholic bishops and clergy had practised the most open and shameless intimidation. In some instances the priests had even been present when actual violence was offered to supporters of the candidate whom they had disapproved; and the Judge satisfied himself that both priests and bishops had in numerous cases threatened with spiritual penalties any elector who might resist their dictation. It was unfortunate that Justice KEOGH's indignation was too eloquently expressed; but even his most unscrupulous assailants have never ventured to dispute the substantial justice of his decision. Dublin juries have now declined to convict some of those who were denounced by the Judge as the grossest offenders; and a Roman Catholic bishop has been acquitted. If the balance of authority as to the evidence were equal, it would perhaps be inclined in favour of the earlier decision by the informal judgment of a volunteer Court of Appeal. The Dublin rabble frantically applauded the defendants, not because they regarded them as innocent, but because they believed them to have prostituted their spiritual influence to a factious purpose. One of them, in an address to the mob, instead of repudiating the infamous language of which he had been accused, boasted that his conduct had been perfectly legitimate, and that on any future occasion he would adopt the same course. There can be little doubt that he will keep a promise which may be performed without the smallest danger as a set-off against the popularity which will be incurred by a breach of the law. It is impossible to punish turbulent Irish priests except by prosecuting them before Irish juries; and the recent experiment is not assuring. If infallible personages were bound to be consistent, the POPE, in his periodical comminations of Liberals and opponents of authority, would perhaps find a word of censure for priests of his own communion who rival in lawless violence the most troublesome secular demagogues. In one of his speeches Mr. BUTT reproached the Government for trying the priests before a court of law, instead of leaving them to the jurisdiction of their ecclesiastical superiors. It would be as reasonable to refer a traveller who had been robbed by a highwayman to the disciplinary powers of the captain of the band.

The Government had no choice in deciding on the prosecutions after the judgment on the election petition. It is a constitutional assumption that juries will give verdicts in accordance with the evidence; and there could be no doubt that, unless Justice KEOGH had been altogether mistaken, grave offences had been committed. The result of the trials was probably foreseen from the first, but the Government could scarcely have declined to prosecute on the ground that justice was unattainable in Ireland. The trials might, as the result has shown, as well have been held in Galway, where some of the jurors would probably have been accomplices in riot and intimidation. The Irish Court of Queen's Bench held, notwithstanding the arguments of the defendants' counsel, that a local trial would be too absurd; and, by removing the cases to Dublin, they furnished the Crown and the defendants with the only chance of a fair trial which it was in their power to secure. The CHIEF JUSTICE appears to have done his utmost to confine the attention of the jury to the evidence; and the ATTORNEY-GENERAL and Serjeant ARMSTRONG have not shrunk from discharging their duty. The advocate who is charged with the vindication of order and electoral freedom must be prepared in Ireland to encounter forensic ribaldry and insult. Mr. HERON would have incurred a grave responsibility if his invective against Serjeant ARMSTRONG had excited the howling mob around the court to acts of violence. After the verdicts which have been delivered, the Government will probably abandon the remaining prosecutions. No one is bound to perform impossibilities, and there is evidently no hope that the Galway delinquents will be brought to justice. At future elections the Ballot, though it may perhaps confirm and extend the power of the priests, will in some degree rescue independent voters from personal danger. Clerical agitators will still rave and curse from their altars, and some of their disciples will yield to spiritual intimidation, but it is impossible to determine how far the fear of temporal consequences is combined with religious submission. The Irishman who only half believes that his priest can consign him to eternal perdition for giving an honest vote is fully aware that, if he defies the threat, he is in danger of more practical molestation.

In one case the jury seems to have been justified by the evidence in acquitting a defendant. The language attributed to Bishop DUGGAN was only proved by a single witness, who had, unluckily for himself, in jest or earnest, at one time tampered with the Fenian conspiracy. It is easy, even without the aid of the newspaper reports, to appreciate the opportunity which was offered to Mr. BUTT of displaying his faculty of sarcasm, of abuse, and of virtuous indignation. The witness declared that the Bishop had uttered an anathema on any elector who should disobey the injunctions of himself and his clergy. In spiritual jurisprudence an anathema closely resembles the *præmunire* of old English law, as a penalty which is rather vaguely apprehended than distinctly understood. There is no doubt that, if spiritual intimidation is forbidden by law, bishops and priests have no right to anathematize political opponents. The defendant produced ten witnesses who swore that the word anathema had never been said; and although their evidence was open to Serjeant ARMSTRONG's remark that it had not been given on the inquiry at Galway, it can scarcely be said that where a doubt must be allowed in favour of an accused person the jury were bound to prefer one witness to ten. Heretical friends of rational liberty may perhaps find some consolation in the reflection that an Irish Roman Catholic Bishop repudiates the use of menacing language, and takes issue rather on the facts of the case than on his own spiritual privileges. In the other trials the counsel for the defence endeavoured to perplex the jury by the casuistical argument that the clergy are justified in advising their flocks on the discharge of a moral duty. It is allowable to warn a man that he is walking along a path which ends in a precipice; and if the consequence of voting for Captain TRENCH was eternal perdition, a conscientious priest could hardly shrink from the duty of indicating the formidable danger. The answer to the argument is simply that a sceptical Legislature has distinctly forbidden the practice of intimidation, without regard to the possible dictates of religious duty. The jury was impanelled to try the facts according to the law; but juries, and especially Irish juries, take a liberal view of their functions. In the case of Dr. DUGGAN, Mr. BUTT and Mr. HERON had the simpler task of vituperating the witness for the prosecution, and of endeavouring to satisfy the jury that their client had not used the words which they would perhaps in other circumstances have justified.

The supporters of Home Rule or separation are in the habit

of complaining that under the Imperial Government the affairs of Ireland are administered according to English doctrines under English institutions. It must be admitted that a national system which is founded on certain traditional assumptions operates strangely on a dissimilar community. Irish elections and Irish political trials by jury place a heavy strain on popular institutions. It is an anomaly that a set of factious priests should have the power of electing a member of Parliament; but among the rights of the inhabitants of the United Kingdom is the liberty of following the most mischievous guidance. The Roman Catholic clergy, who in every other European country are the advocates of absolute government, perhaps display a want of foresight when they become leaders of a disaffected and revolutionary rabble. It is at least possible that Irishmen may in course of time direct against their ecclesiastical rulers the same spirit of antagonism which they have learned to cultivate to lawful temporal authority. In the United States, where there are no landlords to denounce, the Irish Roman Catholic often regards the instructions of his priest with dangerous indifference. Rebellious or mutinous habits of mind are not favourable to the maintenance of abject intellectual submission. The most plausible defence which has been suggested for the Galway denunciations is the probable statement that the electors voted in accordance with their own wishes, although they were urged to the poll by threats of spiritual penalties. The time may come when the priests will be on the less popular side; and then they will perhaps find that the malcontents whom they have encouraged and stimulated will have courage to look an anathema in the face. For the present the Galway priests have obtained a kind of triumph; and they care little for the remote public opinion which they defy. Mr. BUTT also and his colleague have obtained a series of easy victories; they find their reward in the applause of a disaffected multitude. It will be useless to furnish them with additional opportunities of persuading willing juries.

JURIES.

THE Juries Bill is one of those odd projects of legislation which almost tempt one to a momentary belief in the doctrines of astrology. It would seem as if their existence could be accounted for only by the influence of some fatal planet which overpowered reason, common sense, and even self-interest, and compelled those who were under its baneful direction to indulge in all sorts of incomprehensible and foolish freaks. There are some practical grievances connected with the jury system which ought to be remedied, and nothing could be easier than to put an end to them. But under pretext of doing this the Government wantonly seizes the opportunity of turning everything topsy-turvy, and of proposing a general revolution of the existing system. The nearest approach to the Juries Bill as sketched out by the ATTORNEY-GENERAL would be a measure providing that henceforth all the BROWNS should be called SMITHS and all the SMITHS BROWNS, just for the fun of the thing, and by way of relieving the monotony of existence. Nobody asks for such a Bill; nobody wants it; nobody likes it; it is about as certain as anything can be that it will never be passed; and assuredly no credit will be gained by an attempt to pass it. Short cuts are proverbially treacherous, and the House of Commons would certainly have saved both time and trouble hereafter if, on the second reading of this extraordinary Bill, it had applied itself in earnest to a discussion of the principle or principles on which it is supposed to be founded. Unfortunately the House of Commons has of late years shown an increasing disposition to wander from the good old rule on this point. Bills are frequently read a second time *pro formâ*, and then there is either a debate on going into Committee which might just as well have been taken at the previous and proper stage, or discussions on principle break out in Committee and lead to great confusion and waste of time. When the principle of a Bill has been thoroughly threshed out and settled, the details, or at least the greater part of them, are practically settled too, and may almost be left to take care of themselves. In any case the issues to be disposed of in Committee are simplified and narrowed, and some guarantee is provided for the consistency of the measure. No doubt there is sometimes a difficulty in determining exactly what is the principle of a Bill. In the present instance the preamble sets forth that it is expedient to consolidate and amend the laws relating to jurors and juries, but this can hardly be considered a principle. The principle of the Bill relates rather to the manner or direction of the amendment which is to be undertaken: and on this point the House of Commons would seem for the present to be lost in a fog. The ATTORNEY-GENERAL has put before the House the Bill of last Session as amended by the Select Committee to which it was referred; but he intends to propose some important alterations in it. It would have been more natural and convenient if he had at once produced his own draft of the Bill in the shape in which he means to stand by it. The Bill will have to be reprinted, and until it is reprinted we shall not know precisely what it is to be. There are two ways in which the jury system might be amended. One way would be to try to remedy the practical grievances of the existing system, while making as few changes as possible in the general character of the arrangements. The other way would be to turn everything upside down, and to make as many changes as possible. The latter would seem to be the principle on which the present Bill has been, or is to be, framed, and it is a principle as to which the House of Commons would do well to come to some understanding before it plunges into the maze of Committee.

What are the crying grievances of the present jury system? That it is capriciously and corruptly administered, and presses unfairly on particular classes of people. In order to remedy these grievances, it is necessary to define with greater precision the conditions of service on juries, and to put the execution of the law into the hands of competent and trustworthy persons, acting under proper checks and supervision. This the Bill does, and, on the whole, as far as we can judge, it seems to do it in a satisfactory manner. The qualifications of jurors have been revised, and provision is made for the preparation, publication, and correction of the lists of jurors at suitable intervals. If the Bill stopped here, it would be a very useful and serviceable Bill, and it is not improbable that this is the shape in which it may finally be passed. Whether it is desirable to go any further, and to make a change in the constitution of the jury, is obviously a question which should be settled before going into Committee. The ATTORNEY-GENERAL agrees with the majority of the Select Committee in thinking that the number of jurors to be impanelled should be reduced from twelve to seven. The only ground on which this change is recommended is that it would be a relief to jurors. The ATTORNEY-GENERAL observed very truly that the great hardship of service is not so much the actual sitting in the jury-box during the trial of a cause, as the time spent by jurors kicking their heels in court, day after day, on the chance of their being wanted. It is necessary to keep a sufficient number of jurors always in attendance in order that successive juries may be impanelled without delay, and also that provision may be made for cases of illness and absentees. A reduction of the number required to form a jury would therefore afford an amount of relief to the classes from whom jurors are drawn far beyond the number released from actual service in the box. While, however, it is well that the obligations of the system should be made to press as lightly as possible on the classes affected by it, it is also necessary to take care that, in giving relief to jurors, no injury is done to the interests of the community at large.

It is proposed that in civil cases, and in all criminal cases except treason, treason-felony, and murder, the number of a jury should in future be only seven. Lord COKE has observed that the law delighteth in the number twelve, which was the number of the patriarchs and apostles. But if that were all, equally good reasons might no doubt be adduced for setting up the number seven. Were there not seven lamps to the golden candlestick of the Temple, and seven trumpets sounded seven times round Jericho, and are there not seven days in the week? There is, as the ATTORNEY-GENERAL said, no magic in twelve, but it has at least one strong practical recommendation at the present day; and that is, that it is a number to which everybody is accustomed, and which has acquired a kind of semi-sanctity through use and wont. The nation has been brought up in the faith of twelve, and that is in itself a very good reason for sticking to it. For centuries Englishmen have been in the habit of believing that the opinion of twelve men on any question of fact might safely be accepted as a sound and trustworthy conclusion, and a new-fangled number would not command the same respect. The ATTORNEY-GENERAL could give no better reason for adhering to the old number in cases of treason and murder, while adopting seven in other cases, than a deep-rooted feeling that the sanctity of life required to be guarded in this way; but sentimental considerations of this kind supply an equally strong argument against making any change in other cases. Even supposing that we had for the first time to decide what

is the proper number for a jury, there would be a great deal to be said in favour of twelve. What is wanted is to fill the jury-box with a fair sample of ordinary human nature, and the chances are that the majority of a jury of twelve will be more likely to answer this description than the majority of a smaller body. As you lower the number the greater is the risk of getting an accidental preponderance of crotchety, prejudiced, or eccentric persons. On the other hand, there would be a practical inconvenience in going above twelve. A larger number could not conveniently take counsel together, and there might be some difficulty as to providing accommodation for them. The opinions of practical lawyers appear to be decidedly adverse to the proposed change; and, even if any change were desirable, from twelve to seven would be a rash leap to take all at once.

The most serious, as it is also the most wanton, unnecessary, and inconsiderate, of the changes now proposed is that the unanimity of the jury should be dispensed with, and that the majority should be allowed to vote a verdict. The Attorney-General denounces the existing law in this respect as barbarous, but to us it seems to be not unreasonable. The advantages of the rule are obvious. It compels a jury, if any differences arise, to go over them carefully, to discuss them, and to reconsider the whole case in their minds. If the vote of a majority would settle the matter, the vote could be taken with a light heart, and the minority, instead of standing up for their opinion, would throw all the responsibility on the other side, and go off with an easy conscience. Yet minorities are often right. It is true that the Judges have power to lock up jurors who disagree, without meat, drink, fire, or candle, and, as the old law books say, to carry them about the circuit from town to town in a cart. Practically of course what happens is that, if a jury, after being locked up for an hour or two, cannot agree, it is discharged. It is easy to make fun of starving juries into unanimity, but in practice the system, as enforced mildly and discreetly by the Judges, works very well. It is at least a protest against hasty and careless verdicts, and obliges juries to act deliberately. The Attorney-General asks why one pertinacious, wrong-headed, cantankerous man should be able to veto the reasonable conclusion of the rest of the jury; but a system of this kind cannot be fairly tested by exceptional failures. Not only a single juror, but sometimes a whole jury, is wrong-headed and unreasonable; yet this has never been held to be a sufficient argument for abolishing trial by jury. It is a question of the balance of advantages and disadvantages, and, on the whole, trial by jury and unanimous verdicts have the best of it when tested in this way. The Attorney-General differs from the Select Committee in regard to the question of unanimity, and also in regard to the advantage of having mixed juries of common and special jurors. In favour of the mixed system Sir J. Coleridge can cite the recommendation of the Common Law Commissioners, and the more recent Judicature Commission. The danger is lest class jealousies and divisions should influence the different orders of jurors; but the experiment is said to have been tried in various parts of the country, and with satisfactory results. The provision enabling criminal cases to be tried by special juries is useful and important. There is one point upon which the Bill seems to be very inadequate, and that is as to the remuneration of jurors. Nothing can be more monstrous than the way in which poor common jurors in country districts are kept hanging about an assize town for days together in order to try causes at eightpence a piece. They have to pay their fares to the town, to pay their expenses there, and all the while their shops or farms are perhaps left to take care of themselves. The Bill proposes that common jurors should receive two shillings, and special jurors a pound, for each cause; but a cause may last over several days, and it is clear that, as far as common jurors are concerned, an allowance of this kind is a mockery of remuneration. It was, we believe, the opinion of the late Mr. Justice Willes that jurors, who are judges of facts, should be paid by the State as well as the judges of law; but, even if they were paid by the suitors, as at present, it would add very little to the costs of litigation to pay them properly.

MR. FORTESCUE'S RAILWAY BILL.

MR. CHICHESTER FORTESCUE'S Bill for appointing a Railway Commission or Tribunal is a necessary consequence of the Report of the Joint Committee on Railway Amalgamation. The provisions of the Bill will require the most careful consideration, but the general principle is probably sound in itself, and it is supported by high authority. The Joint Committee proved its good sense by confining itself, with two or three exceptions, to negative conclusions. The nostrums which were submitted to its approval by private or official theorists were successively rejected. The reduction of rates is not to be enforced as a necessary condition of amalgamation, at a time when the Railway Companies are suffering from a great increase in their working expenses. The absurd demand for equal mileage rates failed to approve itself to the judgment of the Committee, nor was any value attached to the wild statistics and arbitrary speculations which were adduced in support of the project of a transfer of railways to the State. Captain Tyler assured the Committee that the profit which would accrue from the annexation of the railway system would cover the interest on the National Debt. It happens that the whole value of the goods traffic in the country is almost exactly equal to the interest on the Debt. It may therefore be said that Captain Tyler undertakes to carry the goods traffic for nothing, inasmuch as the profit which he may anticipate from passenger traffic would certainly not pay interest on the purchase money of the railways. The proposal of referring all Amalgamation Bills to a Joint Committee is of doubtful expediency. It seems an anomaly that the most important measures should be exempted from the liability to a second investigation which attaches to ordinary Bills. It is doubtful whether the new Railway Board will enjoy any special facilities for determining questions of amalgamation between railways and canals, but it will be better qualified than the Court of Common Pleas to provide for the removal of vexatious obstructions to traffic. Experience alone can show whether it will be possible for any extraneous authority to compel Companies to time their trains in connexion with the trains of their neighbours and competitors; but the principle was affirmed in the Act of 1854, and the experiment of enforcing the liability of the Companies may fairly be tried.

The Joint Committee proposed that the Tribunal should undertake the settlement of all differences between Railway and Canal Companies which are, under the provisions of general or private Acts, now submitted to arbitration. The arrangement would probably be beneficial if it would work, for the delay and expense which result from frequent adjournments of arbitrations would be avoided; but it is not certain that any single body of arbitrators would be able to dispose of the whole mass of business. The proceedings themselves can scarcely be accelerated, as inquiries before arbitrators almost always involve a complicated mass of details. Under the provisions of the Bill, which in this instance departs from the recommendations of the Joint Committee, the reference to the Tribunal will only be made on the application of the parties, who in many cases will probably prefer arbitrators of their own selection. The terms on which running powers are to be exercised, the mode of fixing through rates, and the extent of facilities to be afforded are, under the provisions of various Acts of Parliament, to be settled in case of difference by arbitration. It fortunately happens that in the majority of cases the parties render litigation unnecessary by coming to an understanding; but the arrangement of similar details and the construction of ambiguous agreements will furnish the Tribunal with ample occupation. There is some novelty in proposing that a Court shall be established for the determination of a limited class of issues of fact, and for the interpretation of certain special documents. The members of the body, unless they have had previous experience of railway arbitrations, will be compelled to ascertain by inquiry from experts some of the ordinary rules of practice. Thus, according to ordinary custom, the payment for the exercise of running powers is so arranged as to leave no margin of profit to the running Company, except from the additional traffic which may be brought over its proper system. The difficulty, if any, will only occur at the commencement of the new system; and if it is found that inquiries become more tedious or more expensive, it will be easy to return to the present form of arbitration. The chief reason for investing the new Board with quasi-judicial functions was perhaps the desire of providing it with sufficient employment. It is impossible to foresee the extent of the duties which will be imposed on the Tribunal or Commission by the operation of the Bill.

The Government agrees with the Joint Committee that the Board ought to have the power of compelling in all cases the establishment of through rates between contiguous railways. Mr. Fortescue intimates that in the majority of cases the division of the rates will be regulated by mileage; but the Board will have power to modify the rule in consideration of

special circumstances. At present Railway Companies as a general rule make through rates with their neighbours to all non-competitive stations; and it is evidently for the interest of a Company owning part of a route to encourage to the best of its ability the transmission of traffic for the entire distance. No compulsion is necessary to ensure that the North-Eastern Company will assist the London passenger traffic of the Great Northern, or to facilitate the exchange of goods between any part of its system and the Midland district. On the other hand, competing lines are in every possible way favoured by their owners with the aid of their allies; nor is it probable that any Board or other authority will succeed in compelling Companies to extend to their rivals in trade exactly the same facilities which they provide for themselves. Under some modern Acts of Parliament competing Companies have a right to facilities as large as it will be possible for any Board to provide or to enforce; but the Company which first takes hold of traffic seldom lets it afterwards pass out of its hands as long as it passes through its district. It would be at the same time unjust and useless to require any Company to send any description of traffic either by the shortest route, or even by the route which might seem to a bystander the most convenient. As the rate is always regulated by the length of the shortest route, it matters nothing to freighters whether their goods are sent by a circuitous line, provided they arrive in time for the market to which they are despatched. Passengers may be trusted to select the better and the quicker of two competing routes. In the majority of cases it is greatly for the public interest that two or more routes should be kept open, although one may be far longer than another. Vast sums have been spent in the construction of competing lines which would often become useless or burdensome to their owners if they were compelled to hand over to their competitors a portion of the traffic which they convey. The numerous competing lines of this Session and the last are of course designed exclusively for the benefit of their promoters; but those schemes which have been or will be recognized by Parliament as legitimate undertakings may be supposed also to produce great public benefit. If a Company which proposes to construct a branch across some rival line could be compelled to hand over its traffic to its competitor at the junction, the branch would never be made. With through rates the Companies will find means of dealing; but through rates uniformly enforced might perhaps seriously injure railway enterprise.

The Joint Committee, and Mr. CHICHESTER FORTESCUE as its Chairman, had ample opportunities of ascertaining, not only that previous attempts to legislate for railways have proved abortive, but also that the failure of the various projects was fortunate. Additional experience has probably diminished the difficulties of legislation, but Parliament and the Tribunal which it is about to constitute ought to proceed with the utmost caution. Notwithstanding recent commercial prosperity, the railways of this kingdom as a whole scarcely realize any trade profit, after paying interest on the capital expended. A dividend of four or five per cent. represents only interest on capital, and leaves no margin as a remuneration for labour and for risk. If railways were constructed and worked by single capitalists, the moderate or insufficient amount of their returns would be generally recognized. The subdivision into shares held by dormant partners, though it makes no real difference in the character of the enterprise, produces the illusion that dividends are analogous rather to interest than to profit. The recent increase in the cost of labour, of stores, and of coal has eaten up the gains which would otherwise have been realized by the great increase of traffic; and there is much reason to fear that the same causes will soon seriously affect the general industry of the country. Injudicious interference might inflict serious damage on railway proprietors; and it is obviously impossible to compel Companies to carry traffic at a loss. One serious difficulty which will meet the Board at the outset of its proceedings will be caused by the numerous and complicated agreements which are equivalent to treaties among Companies, resulting from diplomatic negotiations, and sometimes from trials of strength. Many, and perhaps most of the agreements, have a Parliamentary sanction which places them beyond the reach of any revising authority. Difficulties of this kind are not necessarily insuperable, but they will deprive Mr. FORTESCUE's legislative experiment of the simplicity which might perhaps have been in itself desirable.

MAN AND WIFE (LIMITED).

ALL that is wanted to complete the Married Women's Property Bill which was read a second time in the House of Commons on Wednesday would seem to be a clause requiring married couples to register themselves under the Limited Liability Act, and to paint up on the doors of their houses in conspicuous letters a statement of their respective possessions for the information of tradesmen and other persons with whom they may be desirous of entering into business transactions. Perhaps some little alteration will also have to be made in the marriage service, so that it should not jar on the feelings of ladies who are about to enjoy the advantage of the new doctrine of matrimonial responsibilities. The "for worse" had better be omitted. Hitherto man and wife have been held to be one, with interests in common, and sharing the same fortune. But, now it seems, we are going to change all that. One of the advocates of Mr. HINDE PALMER'S Bill said it would be a good thing to have the law based on a simple consistent principle. We have certainly no fault to find with the measure on that account. It is as simple and consistent as could be desired. The value of consistent and uncompromising adherence to a principle depends, however, somewhat on whether the principle is good or bad. The Bill provides that a married woman shall be capable of holding property and of contracting precisely as if she were unmarried. She may acquire property, or give it away, or go into trade or speculation, just as if she were a single woman, with nobody to think of except herself. She may sue or be sued without the slightest reference to her husband, who will henceforth cease to exercise any legal control over her actions. Her earnings, like her other property, will be absolutely her own. Under the new law, there will apparently be nothing to prevent married couples from living together in the same house, if they choose to do so, but they will be in the position of independent lodgers. The wife will be responsible for her husband's debts only in so far as she allows him to act as her agent, and the husband's liability for his wife will be put on the same footing. When the tradespeople come round to collect their accounts, they will no doubt find the investigation of the exact circumstances under which furniture, coals, joints of meat, or haberdashery, were ordered extremely entertaining. They will have the satisfaction of knowing that they are at liberty to sue the wife, as surety for her husband, if it can be shown that she gave her orders as his agent; but this satisfaction may be diminished by the discovery that unfortunately the lady has no assets. The solution of these domestic mysteries will no doubt present an amusing resemblance to the well-known game of the pea under the thimble. Artists in swindling will derive great encouragement from the change in the law, and a variety of new branches of this line of business may be expected to spring up. When a Bill very similar to this one was before the House of Lords, Lord PENZANCE observed that, if it passed, it might be doubtful how far there would remain any inducement to the male portion of the community to enter into so perilous a contract as matrimony would then become. For an honest man who was prepared to stand by his wife, and to make good her debts as if they were his own, the prospect would certainly not be very encouraging; but a rogue with a taste for safe and easy cheating might find marriage a lucrative profession. All he would have to do would be to make over his money to his wife, and testify his devotion to her by continually presenting her with costly gifts obtained from confiding tradesmen, at whom, as he would take care to have no funds of his own, he could snap his fingers.

Nobody who is acquainted with the peculiarities of the Women's Rights people will be surprised to learn that children are too trifling and insignificant a detail of matrimony to be worthy of the notice of a superior mind. It has not been thought necessary to make any provision for the maintenance of offspring. This, we suppose, will be left to chance or charity. It is interesting to observe what will be the practical operation of this remarkable piece of legislation. The wife may either go into business with her husband, or, if she likes, she may start a rival shop and carry off his customers. If she provides the greater part of the capital, she will no doubt claim priority in the firm, and "SMITH and HUSBAND" may possibly become a familiar sign. A lady who finds the dull routine of domestic duties wearisome will be at liberty to seek excitement on the Stock Exchange, or to go shares with cousin CHARLEY in a racing stable. If the family accounts get into confusion, husband and wife will have the opportunity of bringing actions against each other. Each will of course have a separate banker and solicitor. It is said that this Bill will do for all women only what is already done for those who are

in good circumstances by settlements and the Court of Chancery. In point of fact, this is very far from being an accurate statement of the case; but, even if it were, it may be doubted whether the system of settlements has been found to be so admirable that it should be made universal. Settlements are sometimes the cause of a vast deal of mischief, and operate in a very different way from that which was originally contemplated. But at least they are a purely voluntary agreement, the terms of which may be adapted to particular cases, not a rigid and absolute rule imposed without qualification or exception on every class of the community. What the Court of Chancery will do only on cause shown and in certain cases is by the Bill to be made a universal law. Everybody is agreed that some provision should be made for the protection of the property of women who have the misfortune to be married to dissipated or rapacious men. But this is the case only of a section, and we should say of a very small section, of the community, and the great body of people, who do not happen to be in this unhappy position, have also some right to be considered in the matter. If the effect of a Bill of this kind will be, as Lord PENZANCE said, to subvert the principles on which the marriage relation has hitherto stood, and to cause increased discord and separation among married people, it is important to consider who, on the other hand, will be benefited by it. It is obvious that it will be of no service to married women who have no property. Neither will it be of service to married women who possess property, but who are either protected by settlements or married to husbands who are not rapacious and dissipated. How many women, then, are there who, having both property and bad husbands, are in a position to require the protection of the law? They are a mere handful in the midst of the nation, and it might surely be possible to find some means of protecting them without converting marriage into a mere commercial partnership with limited liability. The objection to Mr. PALMER'S Bill is that it goes far beyond the necessities of the case, and does a great wrong in order to do a little right.

It seems to be forgotten by the advocates of this sweeping change in the law that marriage is a transaction in which other people are concerned besides the particular married couples. If it were only a question of a man and wife arranging their private money matters between themselves, a plausible case might possibly be made out for enabling the latter to deal with her husband on an independent footing. But there is the world outside, which has also an interest in the matter. Hitherto it has been understood that a married couple represented a single household, and that the husband was responsible for its engagements. To some extent this principle is qualified by the operation of settlements, and it is notorious enough that a vast amount of dishonesty is continually practised under cover of such arrangements. But, as a general rule, husband and wife are at present, as far as the outer world is concerned, practically one, and the joint property of the household is a guarantee for any debts that may be contracted. If this bill passes it will be impossible to ascertain which of the two is responsible for the liabilities of the household. How is a tradesman to know whether in a particular instance a husband is giving orders on his own account or as his wife's agent? And people who wish to take a dishonest advantage of this state of things may be trusted to arrange that, if it is the husband who gives the orders and is liable to be sued, it will be the wife who holds the money-box. If it were the general rule in this country that women brought money to their husbands, there might be something to be said for such a protection. But this is not the general rule, and among the classes where the practice does prevail it is already provided for by settlements. In the great majority of marriages the wife has no property whatever, or only a trifle not worth mentioning—a little purse that goes in the first year's dresses. We are thus threatened with legislation to be forced upon the whole community which applies only to the circumstances of a small minority. The Bill proposes that no husband shall be liable to damages for any wrong committed by his wife. If his wife has property, she can be sued; but if she has none, the injured person will have no redress whatever. In the course of the debate the remark of a "clever woman," that by the law of England husband and wife were one person, and that person was the husband, was quoted as if such a statement of the law at once proved its injustice and absurdity. We are ready to accept the description as literally accurate, and to maintain that it is the description of a common-sense and necessary rule. It is an old saying that when two people ride a horse one must ride behind; and in a partnership one partner must have a casting vote, unless there is to be an opening for separation in case of a difference of opinion. Divorce for incompatibility is the natural corollary of that disruption of the marriage tie in its old sense which is now contemplated. For our own part we do not believe that any legislation will practically make very much difference in the relative position of the sexes, because that position depends upon solid and substantial grounds which will continue to exist. It is well known that there is no more common cause of violence and cruelty by the husband than the possession by the wife of some little money which she has a legal right to keep from him. The best security that women can have is to be a little more cautious as to the character of the men they marry before they commit themselves to their care. In the nature of things, while the world remains as at present, men will be tolerably certain to have the upper hand in domestic rule, simply because they are stronger and more resolute, and because as a rule the support of the family mainly depends on them. But it does not follow that an increased amount of mischief and misery may not be done by rash and reckless attempts to tamper with the unity and sanctity of marriage.

THE PHILOSOPHY OF LOVE.

IN the last instalment of Mr. Herbert Spencer's exposition of the philosophical system which is to give us an explanation—so far as an explanation can be given—of the whole universe, we meet with an interesting passage upon the passion of love. The advocates of the evolution hypothesis are sometimes called materialists. That word is too often used, as "atheist" is used in theological, or a good round oath in popular discussion, simply to indicate disagreement coupled with moral disapproval. The fallacy which it involves in this case might be easily exhibited. The genuine materialists of the last century were in fact given to maintaining that our loftiest sentiments were merely modifications of the most earthly instincts.

> Lust through some certain strainers well refined
> Is gentle love,

according to Pope; and some very equivocal sermons have been preached upon his text. Superficial readers have fancied that, because Mr. Darwin or Mr. Herbert Spencer believes that man has been evolved by inconceivably minute changes from some inferior organism, therefore our emotions and thoughts are nothing but transformations of the blind sensations of the lowest forms of life. The misconception is palpable. Science might conceivably show under what conditions intellect first manifested itself, but it would not be one step the nearer to discovering what was the essence of intellect. It might explain the how, but can throw no light upon the what. Thus we find that Mr. Herbert Spencer's description of the passion called love has nothing in it calculated to shock the most spiritual philosopher. It is, he says, an emotion of the highest complexity, and consequently of the greatest strength. Around the purely physical elements gather all varieties of powerful emotions which blend and unite in the closest harmony. First come all the impressions which are produced by the beautiful, the explanation of which would involve a long and most difficult analysis. Then we have the sentiment of affection, which may exist between persons of the same sex, but which undergoes a special exaltation when existing between lovers. Next come the sentiments of admiration or reverence; and, beyond them again, the love of approbation, which is keenly excited by the knowledge that we are preferred to all the world, and preferred by one whom we admire beyond all others. Allied to this is the sentiment of self-approval, when we are flattered by the sense of the great merits to which we owe so great a triumph. Beyond this is the "proprietary feeling," or the pleasure of mutual possession. And, finally, there is an exaltation of the sympathies when our pleasures are heightened by the close participation of another person in all our enjoyments. We need not inquire whether the analysis is complete or accurate; at any rate it illustrates pretty fairly the amazing complexity of a passion which we are apt to describe as simple. When a young gentleman at a ball sees the young lady who is above all other young ladies enter the room, he is conscious only of a keen thrill of emotion, so vivid and powerful as to displace every other sentiment for the time. If Mr. Herbert Spencer were standing by him, and were to propose to give him a lecture on the constituent elements of his passion, we fear, though we mean no disrespect to Mr. Spencer, that he would consider the philosopher to be a bore. But perhaps a few years afterwards, or possibly on the next day if his suit should have come to an untimely catastrophe, he might be inclined to take his passion to pieces, and he would recognize the justice of most of the remarks which we have summarized. In that case he would perhaps find the explanation of some phenomena which are a little puzzling to bystanders, though the lover himself has not the leisure to attend to them.

Thus, for example, everybody is puzzled by the extraordinary caprices of love-making. The ladies who say in novels that they cannot understand "what he could see in her" are generally held up to ridicule as obviously blinded by jealousy. And yet their want of perception is not only sincere, but is shared by perfectly impartial spectators. When we see the way in which marriages are brought about in the world, we wonder that the pursuit of match-making should be found so interesting by amiable persons.

Of course match-making as a variety of fortune-hunting is only too intelligible; but there is a match-making of a much less sordid variety. All amiable women take the keenest delight in attempting to pair off their friends and relations according to their own views of the fitness of things. And yet they are always meeting with the strangest and, at first sight, the most unaccountable disappointments. The man of intellect has an extraordinary taste for stupid women; the handsome man of fashion is carried off by a poor, ugly, and commonplace woman ten years older than himself; the pompous prig secures the brightest and liveliest of her sex: foxhunters attract poetesses, and poets marry wives who can do nothing but mend their shirts. Such strange contrasts have led to the development of the plausible theory that people are attracted rather by qualities complementary than by qualities similar to their own. This doctrine, however, fails by being too comprehensive. We must admit that like often attracts like; and if we add that like also attracts unlike, we have a theory which explains nothing, because it explains everything. Every match that ever was or ever will be made may be brought under one category or the other; but until we can give some reason for telling beforehand which set of causes is likely to be operative in a given case, we are no nearer an explanation than we were before. The only general rule at which we have been enabled to arrive by experience is the rather discouraging one that people whom we like always marry people whom we dislike. Friends seem to have a perverse delight in forming new combinations which may be as discordant as possible with their ancient ties. We do not, however, see our way to erecting any philosophical theory upon this experience, unless as it goes to illustrate Artemus Ward's doctrine of the "cussedness" of things in general.

Mr. Herbert Spencer's analysis may perhaps help us to understand some of the conditions of the problem, though the philosopher has yet to arise who will be able to tell us from the inspection of a young lady or gentleman what will be the character of his or her future partner. In the first place, it is to be remarked that some of the elements which he describes do not enter into the passion in many cases, or at least do not enter into its earlier stages. Self-esteem, for example, is the reward of successful love-making, and strengthens the passion when it has once been formed; but it cannot be the primary cause. Mere contiguity is very often a sufficient explanation of the phenomenon. A man and woman brought together in Robinson Crusoe's island would almost inevitably fall in love, however unpromising their characters might be. And, though London is very unlike a desert island, there are frequently situations, even in the most crowded societies, where conditions substantially similar are reproduced. There are circumstances under which it would be almost a breach of good manners not to indulge in a little flirtation. A human being has such a variety of strong feelings in a state of solution that any object will be sufficient to determine their crystallization. This is, indeed, the primary axiom on the subject. We have all a vast amount of disposable emotion; we all long to admire and to be admired; we are grateful for compliments; we wish to have something to call our own; we want our sentiments to be confirmed by sympathy; and therefore, when once any accident has, so to speak, drawn the sluices, a whole torrent of emotion rushes into the channel provided for it, and we attribute to the one external and assignable cause what really results from our own states of feeling. Because a particular match has exploded the magazine, we absurdly argue that no other match would have done equally well. We set up the first idol that comes to hand, and suppose that its perfections are the sole cause of our worship, when, in fact, the desire to worship something has prepared us to prostrate ourselves before any shrine that offers itself. Love being a compound of so many forces, any one which is set in action draws all the rest after it by the principle of association. But all this does not answer the question as to how our choice is first determined. A young gentleman in London may see some hundreds of young ladies before he is brought down by one who is perhaps amongst the least apparently attractive of the whole number. That is the puzzle which is constantly recurring; and a solution of it would be of immense value to all match-makers, whether of the loftier or the baser variety. What is the most promising method of attack? Which of all the causes that may precipitate the passion is the most generally available? If philosophers could tell us that, they would have taken the first step towards placing an occupation, now pursued on purely empirical principles, upon true scientific grounds.

To such a question we can of course give no satisfactory answer. It may be observed, however, that it has been very much obscured by the labours of novelists. Novels are supposed to be the embodiment of the authors' knowledge of human nature; a supposition to which there is the trifling objection that very few novelists know anything of human nature, and that at most they are familiar with particular instances and not with general principles. They of course go upon the general assumption that their hero and heroine are to be as attractive as possible; and they lay particular stress upon the merit most easily described—that of personal beauty. *Jane Eyre* for a time set the fashion of ugly heroines, but we have long since reverted to the old system. Accordingly an exaggerated estimate is placed upon the charms of beauty and upon the amiable qualities of mind and person which form part of the ordinary ideal of feminine merit. The error involved in this doctrine is that it lays far too much stress on the objective as distinguished from the subjective causes of falling in love. It assumes that the passion is determined by the external rather than by the internal impulses; that a person falls in love because an attractive object is presented to him or her, and not because he or she is prepared for a passion of some kind. When the true principle is firmly grasped, it is obvious that the most successful match-makers must be those who adopt a different line of attack. Amongst the passions, for example, which go to form the aggregate is the desire for sympathy. Suppose, then, that a young gentleman has a taste for political economy or pigeon-shooting. He may be assailed more effectively by a plain young woman who will submit to hear him lecturing on the theory of rent and the incidence of taxation, or who will applaud his successful slaughter of birds, than by the most beautiful girl who will not condescend to take an interest in his pursuits. The great art of flattery provides the most efficient instruments for bringing down game of this kind. A clever man often prefers a fool to a clever woman, because the fool has the one talent of listening, and the clever woman may have the vanity to keep opinions of her own. The brilliant man of fashion is attracted by the apparently uninteresting old maid, because nothing is more flattering than that humble adoration which other women are too proud to bestow. Almost all cases of perverse matches may be explained after the event by the skill or the accidental felicity with which a commerce of reciprocal flattery has been established. Once put two people in that relation, and all the associated emotions may easily be introduced. It is as easy to produce an æsthetic admiration by working upon the desire for sympathy as to proceed in the inverse method; and the assumption that we should always begin with what is supposed to be the natural beginning is the cause of half our perplexities. But though these seem to be the first principles of the science, we admit that its complexity baffles all attempts at a systematic deduction of its remoter doctrines. Luckily or otherwise, some people have developed so much practical skill in applying the most efficient methods that a philosophy of the art seems to be superfluous as well as chimerical.

MR. CAMPBELL'S ADMINISTRATION OF BENGAL.

WE have before us the first part of Mr. George Campbell's "Report on the Administration of Bengal, 1871-72." It contains a great deal of valuable information, and deserves to be carefully studied by all who are interested in Indian affairs. Two years ago Mr. Campbell, then a member of the Bengal Civil Service, was nominated to the Lieutenant-Governorship of Bengal, in succession to Sir William Grey, whose term of office had not quite expired. Mr. Campbell was at the time in England, where he had passed three years in studying English politics, in offering himself as a candidate for election to Parliament, and in writing a pamphlet which not a little contributed to the settlement of the Irish land question. The selection of Mr. Campbell was due to Lord Mayo, who had never seen him, and only knew his nominee as a public servant of varied experience and original views. Many able Indian rulers pass through the Secretariat and the Imperial Council to the posts of governors of provinces, and make up for want of minute knowledge of details by breadth of imperial views. Mr. Campbell's early training was different. He had served in districts in the North-West Provinces and the Punjab. He was chosen by Lord Canning in 1858 to be the head of Law and Police in the province of Oudh, still smouldering with the embers of the mutiny. He sat for four years in the newly formed High Court of Calcutta, as one of the colleagues of Sir Barnes Peacock, and thus gained a considerable insight into the questions there argued as to the powers of landholders, the exact position of middlemen, and the rights of occupants and tenants. He was head of the Commission appointed to provide some remedy against the recurrence of such disasters as the famine in Orissa. And for a few months he held the post of Chief Commissioner of the Central Provinces. In Anglo-Indian circles he has been long noted for skill in controversy and for the command of a vigorous and incisive style; and his work *Modern India*, published in 1853, at the last renewal of the Company's charter, is still known as compressing into one volume the greatest amount of accurate information regarding the whole system of British government. It must then be conceded that, although not regularly trained to understand the Bengali character, or to speak the Bengali language, the new Lieutenant-Governor brought to his task a wide range of official knowledge, acquired during a service of more than a quarter of a century, in which he had given abundant proofs of independence and honesty of purpose.

The kingdom over which he was set as a ruler comprises the three great provinces of Bengal, Behar, and Orissa, besides Assam and some tributary and protected States. It is one of the oldest, as well as one of the richest, of our acquisitions. Its revenue has been usually estimated at fourteen or fifteen millions of our money. But, taking imperial and all provincial receipts together, we derive from it, in reality, a sum of nearly eighteen millions a year. In the same way the population was roughly estimated as at between forty or fifty millions. The recent census gives a return of sixty-seven millions, of which sixty-five inhabit districts directly administered by our own officials. The climate of the larger part of this tract, speaking generally, is divided between three months of cold, four months of hot, and five months of rainy weather. Macaulay, in his picturesque and gorgeous phrases, has told us of the rich mould

formed by the hundred channels of the Ganges, of the inexhaustible supply of fish caught in the network of its rivers, of the sugar, the salt, and the spices, and of the "immense rice harvests," which were never gathered securely into garners until "the Children of the Sea" protected the inhabitants from the raids of the Marattas. All this and even more is true. The plains of Bengal and Behar appear to produce almost anything, from rice, the daily food of some forty millions, and coarse cereals and pulses, the food of twenty more, to indigo, which takes the highest rank in London competition, and to jute, opium, saltpetre, and tea. Then, in certain localities, there are forests of timber not yet exhausted by the reckless treatment of Asiatics; and, although walled towns are unknown, and historical cities are few, there are villages by tens of thousands which, on the edges of inundated rice fields, are embosomed in magnificent breadths of productive fruit trees and feathery palms. The rainfall is abundant, and varies from about 100 inches in the Eastern districts to 60 or 65 in the West. A fair average is from 75 to 80 inches in the year, the larger portion of which falls between June and October. An endless traffic is daily carried on over the whole of these three provinces, in one mode or other; either by a natural water communication which rivals the canals of Holland, or by roads not yet quite sufficient to meet the requirements of the country, or by two railways, one of which bisects a populous division and connects the Hooghly with the Eastern Ganges and its tributaries, while the other links Calcutta to Bombay, and to all the places which in Upper India have an interest for the politician, the pilgrim, or the merchant. English enterprise and energy have in Bengal found ample scope. No one now questions the propriety of opening up rich Indian fields to an overcrowded community in England, or refuses to welcome Englishmen at factories, country houses, and marts in the interior, as guarantees for the exposure of abuses in times of peace, and as rallying points for loyalty in seasons of peril. But this fact certainly increases rather than lessens the difficulty of governing Bengal impartially and firmly, and the ruler is weighted additionally with the task of managing the port and city of Calcutta, which are little kingdoms in themselves. The national character of the population is alternately a source of weakness and a source of strength. Macaulay doubted if a hundred genuine Bengalees could be found in the British army. It would be strictly correct to say that no Bengalee was ever yet turned into a sepoy, though, of late, attempts have been made to drill and discipline the native police of Bengal. On the other hand, no province in India, for its extent and population, is held by so minute a military force. It has none of those huge cantonments where there is always something wrong about the barracks, where the Brigadier and the General in command of a division are of more social importance than judges and collectors, where idle subalterns envy their companions who are "on leave at the Hills," and where privates are driven to get up *Box and Cox* as a relief from sheer monotony. On the whole, it may be said that, though educated Bengalees are somewhat pretentious, the native press carping, and the masses weak, no part of India contains less of the elements of political combustion or more of loyal submission than the plains of the Lower Ganges. We admit that there is reason to watch a local sect of Mahommedans, known as the Ferazees, and that we have ere now seen the population roused from inactivity to vehement self-assertion in defence of its invaded rights and privileges. But controversies between landlord and tenant, Englishman and native, usurer and borrower, manufacturer and cultivator of indigo, if not settled for ever, are now thoroughly understood, and are less cause for anxiety than our own strikes. In civil administration, when duly stimulated and controlled, Bengalees have rendered valuable service. As policemen they are active and successful; as accountants unrivalled; their penmanship would do credit to a writing master; the Hindoos amongst them have appropriated the whole trade of banking and money lending; and they possess a natural aptitude for legal argument, which, though occasionally leading them into hair-splitting subtleties, has turned out some advocates and judges of no ordinary merit. Other provinces of India have their special difficulties, advantages, and merits. One has a warlike but manly and industrious population. Another boasts an unrivalled natural harbour. A third is favoured by a less enervating or a more bracing climate. A fourth can be governed by a more simple procedure or a strictly paternal discipline. A fifth is conspicuous in the political panorama from its proximity to wild tribes or its geographical situation as the boundary of the Empire. But no province has so large and orderly a population, such a magnificent revenue, such a long official history, and, as a consequence, so many administrative problems, as that which is entrusted to the Lieutenant-Governor of Bengal.

For eighty, if not for one hundred, years we have here been endeavouring to mould the traditions and usages of centuries by a higher and better code of ethics and law. And no measure conceived by an English statesman has had such a lasting influence as what is known as the Permanent Settlement of Lord Cornwallis. In 1793 that nobleman fixed for ever the demands of Government on the soil. At the same time he permanently recognised the status of some ancient Hindu Rajas; and others, Hindus and Mahommedans, he converted from collectors of the Land-tax, with some privileges, into Zemindars or landholders, with definite functions and valuable superior rights. But he never gave away to any class an absolute property in the soil, as the term is understood in England, or as it has been viciously contended for in India; nor did he extinguish the separate properties of ryots and agriculturists. No measure, we repeat, has had results so remarkable and unexpected as this celebrated Settlement. In a short time the huge Zemindaries changed hands, or were divided and split up. An extraordinary labyrinth of sub-tenures has been created, each adding a new burden to the back of the ryot, and each removing the superior holder one step further from any sympathy with the masses. Against this we must set the fact that a thriving middle-class has thus sprung up, connected with the land, and yet not prevented from following other professions. In three generations of unbroken peace population has multiplied; lands have been reclaimed from the swamp and the forest; recent legislation has interfered on behalf of the ryots, and has done that which Lord Cornwallis fully intended; and the great Settlement, while identifying more classes than one with the stability of the British power, has taught statesmen to beware how they cut off their successors from all participation in the increments of extended agriculture and unchecked prosperity. The name of Lord Cornwallis was, however, till lately used as a bugbear to frighten English administrators, and to mislead public opinion; and the neglect which Bengal experienced in the mere form of government contributed to make matters worse. For many years Bengal had no separate administration. It was governed, at odd moments, by the Governor-General as Governor of Bengal, and without a Council. When the English statesman was absent on the frontier, influencing Cabul politics, watching the Sikhs, or fighting them, Bengal got on as well as it could under the senior member of Council, who was termed Deputy-Governor, and who might be a gallant and grey-haired general officer, versed in war, but, as Dominie Sampson said of Colonel Mannering, possessed of "erudition" only through "imperfect opportunities." Lord Dalhousie put an end to an intolerable grievance, and procured for Bengal in 1854 a separate Lieutenant-Governor, such as the North-West Provinces had enjoyed ever since 1842. Four able and distinguished men filled the office in succession up to 1871. They each had their trials, but under each Bengal made certain strides in advance. On taking charge of his office, Mr. Campbell saw at once that it was desirable to alter and improve a condition of things which had silently grown up, and which arose neither from any one act of mistaken policy nor from any individual error or failing. Under the Perpetual Settlement natives looked to the courts of justice for everything, and the art of governing Asiatics vigorously was on the decline. We should state, in palliation, that in other Presidencies there exist more native functionaries who are links between the high British officials and the native community; that by their means the Executive can reach downward to the masses; that the magistrate in the North-West, the Deputy-Commissioner in Oudh, have more instruments at command and have been more encouraged to restrain or to repel native originality, and to direct the current of indigenous forces. But it had become too much a fashion to say that Bengal could only be governed by the courts of law. Every measure was liable to be tested by a litigation in the local tribunals. The Perpetual Settlement became a cloak for every dereliction of duty, and an impediment to every desirable reform. Mr. Campbell, with pardonable sarcasm, says, that "at one time to ask a ryot his name anywhere but in a court of justice would have been considered by some people contrary to the principles of the Permanent Settlement." Now it cannot be a sound and healthy state of things that a quick-sighted community should have no test of public or national duty but the four corners of legal enactments. One nation may submit to be outwardly governed by insolent deputations to Ministers and by defiant meetings in public places, while what is wanting to executive vigour is supplied by the good sense and the self-government of the majority. Another nation may bow to a benevolent despot, who rules the masses as if he had descended from a more enlightened planet, and who, like Augustus, *omnium munia in se trahit*. But an administration halfway between these extremes, and not tending to either, is in a rather sorry plight. It cannot be right that all moral feeling of public duty on the part of the people should slumber, and that at the same time the arm of the Executive should be impotent or weak.

Mr. Campbell, in order to wake up the administrative agency, has restored to the district officer some of the functions of which he had gradually been deprived. The magistrate will henceforth be not merely the nominal head of the Executive, but he will have that control over the local public works which he ought to have had long ago, as well as the supervision of the gaol and the police, which he ought never to have lost. There will still be agencies for these branches of the public service; skilled inspectors to track criminals; medical officers to combine penal discipline with sanitation; and district engineers to build offices that will resist tornadoes, and bridges that will not tumble down. But these will be the subordinates and not the jealous antagonists of the magistrate; and he, in his turn, will be supreme over everything but the courts of justice, and responsible to the Government as the guardian of order and the interpreter of native opinion. While thus galvanising the various agencies into life, Mr. Campbell had matured two elaborate schemes for municipal or communal self-government. One of them is known as the Road Cess Act, and it has received the assent of the Viceroy. The other was intended to establish various forms of municipality, each with a choice of taxation, in towns and villages. But we learn by telegram that Lord Northbrook has been induced to withhold his sanction from this enactment; probably from a feeling that the measure, however excellent, can afford to wait. It would require more space than we can spare to give an adequate idea of other reforms in progress or

actually carried out. The keystone of the policy, in Mr. Campbell's own words, is greater vigour and activity "in compelling the honest performance by each class of the obligations which undoubtedly attach to it by law, but which are too often evaded in practice." But decided steps have been taken with such grave matters as the improvement of the estates of minors, the cure of the epidemic known as the Burdwan fever, the adjustment of civil and commercial jurisdictions and their boundaries, the equalization of salaries, the establishment of model farms, land and water communication, the conservancy of forests, the collection of accurate statistics, and the education of the masses.

Of course all this could not be even attempted without arousing hostility. Nor would it be safe to predict a triumph for every one of these reforms, or a cessation of all disparaging comments about overworking the district officers and attempting too much. But we have rarely seen a Report or Blue Book which is so superior to the average of such operose chronicles. It is throughout attractive, animated, and even pungent; not overweighted with statistics, and nowhere justifying Lord Brougham's sarcasm about the "eloquence which evaporates in scores of paragraphs." There is, in places, a controversial tone and colouring, but the writer has for a year and a half been persistently criticized and misrepresented, and this is just such an excellent vindication on paper of a distinct line of policy as a badgered English Minister might rejoice to make in a speech before a crowded House. Some paragraphs exhibit an earnestness which would do honour to Mr. Gladstone, and others an epigrammatic terseness of which Mr. Disraeli himself would not be ashamed. A good deal of the opposition which Mr. Campbell has encountered is due, we are assured, not to the substance and scope of his measures, but to the mode in which he presents them for the acceptance of his subordinates, whom he must carry with him, and of the public, whom he ought to try to please. And he should recollect that even Indian officials are not exempt from the frailties of human nature, and have angles in their bodies and corns on their toes. But we have no reason whatever to doubt that the Lieutenant-Governor of Bengal is justifying his selection, is worthily striving for the best interests of a splendid province and an intelligent people, and will leave behind him legacies of political thought and creative energy which future administrators will be very glad to adopt.

THE WORKING-MAN.

PEOPLE are beginning to look back upon the worship of the working-man—that queer sort of political religion which prevailed for a year or two—with some degree of contemptuous amazement. The spell is broken, and the idol stands revealed in its coarse and common clay; indeed the danger now is lest the current of opinion should run into the opposite extreme. Nothing of course could be more absurd or preposterous than the notion that the working-man was the great mainstay of the commonwealth; the model citizen who alone was pure, high-minded, and disinterested, and who possessed a kind of native sagacity which enabled him to solve offhand the most intricate and difficult problems of society and government. Recent events have not quite borne out this view, and a reaction has set in. It may be admitted that of late the working-man has been rather tiresome and exasperating. He not only insists upon high wages, but demands leisure in order to spend his wages and enjoy his prosperity. Of course no other class of the community was ever known to do anything of this kind. It is notorious that shopkeepers, barristers, merchants, country gentlemen, all work as hard as they can, because they know it is for the good of the country, and that they never think for a moment of their own ease and pleasure. It is only coal-hewers who refuse to labour continuously for their country's good, and who are unscrupulous enough to take advantage of a rising market to serve their own selfish ends. For our own part, as we never supposed that the working-man was an angel, we are not particularly surprised at his want of angelic attributes. It is just as well to look facts in the face and to take the working-man as he is in real life, not an angel certainly, but then not exactly the reverse. What has always puzzled us is why there should be any mystery about the character of the working-man. We have most of us at some time or other seen one, and in all probability spoken to him and had some sort of business transactions with him. Up and down London—and we have a notion it is the same in the country—working-men are about as common as anything can be. But who ever met the ideal working-man of the Radical Philosopher? If a traveller assured us that in a distant land, never before explored, he had found men of an extraordinary type, we might perhaps be disposed to believe him; but if he declared that these strange men were constantly walking up and down Piccadilly, we should surely wonder why we never saw any of them. Anybody can see and judge for himself what sort of a being the working-man is; yet there are apparently people who, although they see him every day of their lives, are prepared to believe almost anything they are told about him. In reality he is by no means a bad fellow; good-natured, kindly, simple-minded, though without high notions of honour, and with anything but a high standard of work; loyal to his fellows and suspicious of other classes; ignorant and prejudiced; leading a rough life, rough in his ways, and fond of his pot and his pipe. In his ignorance of political economy he fancies that masters can afford to pay almost any wages that may be demanded from them, being sure to get back the money from the public. In his place no doubt we should be much as he is. No class has a monopoly either of virtues or vices, and to be honest we must admit that circumstances have often a good deal to do with moral and immoral qualities. The three great defects of the working-man—his intemperance, his improvidence, and his reckless readiness to fling up work—are in a great measure due to his want of education. We may be willing to make every allowance for the working-man; but it would be idle to shut our eyes to his weak points, and to endow him with all kinds of imaginary qualities which he does not possess. It is possible to have the deepest sympathy with the working-man, and to be most sincerely anxious to promote his welfare, without pretending to believe that he is a very superior and perfect being. In the same way, without any hostility to Trade Unions, as combinations of working-men to promote their own interests, we may be permitted to doubt whether they are ever likely to succeed in establishing the artificial system of trade profits on which all their hopes are bent, or whether it would be good for them if they did. On the other hand, it is unnecessary to attribute the follies and failings of the working classes to moral turpitude.

The truth is, the working-man is wonderfully like other men. There is a vast deal of human nature about him. He laughs when tickled, and cries out when pinched, and is in most things subject to much the same impulses, affections, and passions as the rest of us. He thinks of himself first, and of other people afterwards, or not at all. He has a notion that the world should be ordered to suit his convenience, and that there must be something wrong about things he does not like, and which interfere with his projects. But we are not quite sure that other classes of society are altogether exempt from these failings. The working classes are sadly ignorant, and in their ignorance self-willed, and they are doing themselves and others a vast amount of mischief; but this is folly rather than wickedness. The great mistake which is made about the labouring population is in supposing that it is something quite apart from the rest of the community, and either exempt from ordinary laws and duties or subject to special ones which do not operate elsewhere. There is one point, however, in which the working classes differ very much from other classes, and it deserves to be especially noted, for it goes far to account for their restlessness and discontent. This point is the uncertain and fluctuating conditions of their employment. A clerk or a shopman, if he is steady and fit for his work, and if his master prospers, keeps his situation from year to year. He is liable to be thrown out of employment by a variety of accidents, but these are the exceptions and not the rule. In a general way he remains for at least a year or two in a place, and when he contemplates a change, he takes care not to lift his foot till he sees another spot where he can put it down. But the life of the working-man is usually one of uncertainty and change. Even in large establishments the number of permanent hands is comparatively few, and the great body of men are liable to be sent adrift at a week's notice. A "Journeyman Engineer," who has written a series of exceedingly interesting and instructive papers on the condition of the working classes, under the title of "Our New Masters," states that, as a rule, the permanent staff in manufacturing establishments is not more than ten per cent. of the number of workmen the place is capable of employing; and in very slack times this small nucleus will alone be kept on—the rest will be disbanded. He adds that the calculations of observant working-men are that a "flush" of trade and subsequent slack time occur every seven years. The gradual rise from the average to the "flush" condition occupies a year, and the flush lasts six months; then the decline down to slackness also lasts a year, and the slack six months. During the other four out of the seven years things will be in the average state, which is from ten to twenty per cent. below the full-handed condition; and "even in ordinary times there are considerable fluctuations, hands being habitually discharged or stopped, as the passing exigencies of work may require." This is, no doubt, in the main a true picture. If during the flush period the men put by their surplus earnings, they would be able to equalize their income, and provide against the hardships of the slack times, which come round, it would seem, only too regularly. But this is just what, as a rule, they don't do. They subscribe, perhaps, to the Union, and trust to that and to their luck, and get as much enjoyment out of the sunshine, while it lasts, as they can. The "Journeyman Engineer" gives the following ideal sketch of what men of his class would consider a fairly good condition:—

> That every man who was willing and able to work should be able to obtain employment at such wages and with such a degree of constancy as would enable him, by judicious management, to secure for himself and those depending upon him a sufficiency of plain food and clothing and a dwelling with, say, the same sanitary conveniences and air-space per person as a model prison cell, and to make provision during a working-life of from forty to forty-five years for passing the remainder of his days without the necessity of hard work; not so much with a view to his mere personal ease, as to the contingency of his being no longer able to find a market for his labour, by reason of the physical deterioration that age and so many years of wear and tear must bring.

There is a touch of clumsy satire in the reference to the prison-cell, but otherwise the picture is prosaic and moderate enough. It is because the pension is almost their only help towards the attainment of this ideal that the men cling to it so, and submit to so much for the sake of its aid. It is their only plank; all they have to trust to when cast out upon the waves. Strikes and Unions are unknown except among working-men. Men in regular employment never dream of resorting to such expedients; and this is because regular employment holds them fast on the other side. Undoubtedly the working-men would do better if

they trusted more to themselves and less to the Unions, of which there will probably be a grand crash one of these days, most of them being, according to actuaries' calculations, hopelessly insolvent. If the men would only learn to save, they might become comparatively independent: and, as education spreads, habits of providence may be expected to come too. On the other hand, employers should take to heart the reason why the Unions command such influence, and consider whether by any means they cannot put themselves in the place of the Unions, and attach their men by similar ties.

Those who desire to understand the composition of that part of the community which is known as the working classes will find a graphic description of it in the pages of the "Journeyman Engineer." The working classes, he shows, are not a homogeneous, unanimous body. They are practically distinct classes, between which there are differences quite as patent and strongly marked as between other classes of society. There is an educated and really intelligent section, and an uneducated and ignorant section; a political section (broken up again into several sub-sections), and a non-political section; a Trade-Unionist, and a non-Trade-Unionist section; a sober, steady, saving section, and a drunken, unsteady, thriftless section; and, "with the labour market habitually overstocked, there is fast arising a sectional difference of mode of life and feeling between the regularly and irregularly employed classes." Between the artisan and the unskilled labourer a gulf is fixed. While the former, we are told, resents the spirit in which he imagines that those engaged in "genteel occupations" look down on him, he in his turn looks down upon and despises the labourer. The artisan view with regard to labourers is that they are an inferior class, and must be made to know and to keep their place. "In the eyes alike of Unionist and non-Unionist mechanics, any clever or ambitious labourer who shows a desire to get out of his place by attempting to pick up or creep into the trade to which he is attached as an unskilled assistant is guilty of deadly sin, and deserving of the abhorrence of all right-thinking members of the craft." Artisans' wives either patronize or ignore the wives of labourers. While the artisan is anxious to level down society so as to improve his own social rank, the labourer would like to carry the levelling process a stage further down. Educated and uneducated workmen also stand apart; "no one has so impatient a contempt for the uneducated working-men as have the educated working-men," and the former naturally resent it. There are three great schools of working-men. There is the working-man of the old school, who prides himself on being "rough and tough," despises fine manners and soft ways, and has rather a contempt for book learning. He is usually self reliant, industrious, and independent; distrusts other classes, and thinks that working-men had better avoid having anything to do with anybody but themselves. There is another type, more intelligent, and, if not much better educated, at least appreciating education, and anxious for it for their children; more given to amusements, holiday-making, and dress than the man of the old school. Then there is what the "Journeyman Engineer" calls the coming or rising school, composed of fairly educated men, with broader views and sympathies than the other two schools, but perhaps somewhat priggish and conceited. Through all three classes—though it is less conspicuous among the last—runs a kind of Ishmaelite feeling, a feeling that the hand of every one is against them, and that in self-defence they must stand up against every other class. For the present the different schools and sections of the working classes appear to be so divided in feeling as to be incapable of united action for a common object. Whether they will gradually coalesce among themselves, while holding aloof from other classes, remains to be seen.

Of the home life of a large body of the working classes the "Journeyman Engineer" draws a black and painful picture, the tints of which are, we fear, only too true. Only those who go about among them can have any idea of the overcrowding which prevails in their dwellings, and of its melancholy and appalling consequences. This overcrowding is not confined to what are sometimes called "low" districts. It is to be found also in many respectable and cleanly looking streets; nor does it always stop short even at a room for each family. The "Engineer" says that he knows parts of London where not only houses, but even single rooms, are sub-let, so that when families fall out they tell each other to keep, not their own room, but their own corner. Horrible and dangerous as this state of things is, it is easier to point out the evil than to suggest a remedy. No effectual impression can be made on it without the co-operation of the working classes themselves, and unfortunately this is not readily to be obtained. They grudge the price of decent lodgings, even when they can afford to pay it, and cram as many inmates as possible into stifling rooms. Mr. Lowe said very truly, some years ago, that if the poor were willing to pay a rent sufficient to provide them with decent and healthy dwellings, capital would flow into the business just as it does into the business of building public houses and gin-shops. In any case, the question is one of which it is impossible to exaggerate the gravity, and which deserves the attention, not only of philanthropists, but of statesmen.

THE ECCLESIASTICAL CONTEST IN SWITZERLAND.

THE backwater of the ecclesiastical tempest raging in Germany, to which we have frequently called attention of late, has already reached to Switzerland; for some weeks past a religious quarrel, with Geneva and Soleure (Solothurn) for its centres, has been rapidly developing itself, which almost recalls, as well from its bitterness as from several names of the same localities being prominent in both cases, the civil war of the Sonderbund. The dispute about Mgr. Mermillod, Bishop—or, we should say, Vicar-Apostolic—of Geneva, has attracted a good deal of notice in the English newspapers, though its intrinsic importance is small as compared with the controversy between rival parties of Catholics in the diocese of Basle. We will first, however, speak of the Geneva affair, which has just reached what may be considered the end of the first act of the drama, in the expulsion of Mgr. Mermillod by the Cantonal authorities, acting under the full sanction of the Federal Council. As the origin of the quarrel is at first sight somewhat obscure, it may be convenient to premise that during its annexation to France under Napoleon I., Geneva, which had then a mainly Protestant population, formed part of the French diocese of Chambéry; but on its restoration to Switzerland it was transferred, at the request of the Council of the newly-formed Canton, and with the sanction of a Papal Brief, to the Swiss diocese of Lausanne and Freiburg. So matters remained till a few months ago, when the Pope, for reasons never explained, but popularly connected with the personal ambition of Mgr. Mermillod, who is a zealous infallibilist and brilliant preacher, took on himself to constitute a separate Vicariate of Geneva, thus severing it from the episcopal jurisdiction of the Bishop of Lausanne, without consulting the civil authorities at all in the matter, or, it is said, taking any account of the wishes of the Catholic inhabitants. The Council of State, not unnaturally, declined to endorse this summary proceeding by recognizing Mgr. Mermillod in his new capacity of Vicar-Apostolic; while, on the other hand, the Bishop of Lausanne was compelled, under orders from Rome, to decline acceding to the wishes of the Government by continuing to exercise episcopal functions in Geneva. What were the motives of the Curia in this high-handed policy, or in the studied discourtesy, and indeed illegality, of the method of carrying it out—for the Concordat of 1819 was arbitrarily violated—it is difficult to understand, unless it be a sufficient motive to prove what, if we recollect rightly, was announced the other day by Cardinal Antonelli to the Prussian Government, that Concordats do not bind the Holy See, but only the Powers which become parties to them. The Council of State retaliated by a Bill which, after undergoing certain modifications at the hands of a special Committee chiefly formed of Catholics, has now become law, and which enacts that no episcopal or parochial jurisdiction shall be allowed in the Canton without the approval of the State, and that for the future all parish priests shall be elected by the Catholic inhabitants, and removable by the State for sufficient cause. A proposal to submit the existing incumbents to the process of election was rejected, as was also the proposal for an entire separation of Church and State. Meanwhile the new Bishop continued to act as such, though his salary—formerly paid to him as parish priest of Notre-Dame—had been withdrawn, and a Papal Brief of January 16, 1873, announcing his appointment, was read in the Catholic churches of Geneva. When this Brief was communicated by Mgr. Agnozzi, the Papal Nuncio at Berne, to the Federal Council, they declined to acknowledge its validity, or the right of the Holy See to dismember Swiss dioceses without the consent of the civil power, in accordance with the arrangement of 1819. And the Cantonal Council was directed to communicate this decision to Mgr. Mermillod, and in doing so to inform him that he must either resign his illegal dignity within a certain fixed period or leave the country. They named two o'clock on the following Saturday (February 15) as the time, and the Bishop then sent in a letter defending the procedure of the Holy See in appointing him, as a necessary and provisional measure which violated no political rights, and declining to lay down his office. On the Sunday he preached at Geneva, and on the Monday morning was arrested by the police, and conveyed beyond the French frontier to Ferney, where he has elected to remain for the present. The great majority of the Catholic population are understood to have been opposed to the ecclesiastical changes and to side with the Government in the matter. As far as appears on the surface, no doctrinal questions are involved, but Mgr. Mermillod is well known, as we before observed, to be a red-hot Ultramontane, and it was he who preached at Rome during the Vatican Council on the Pope as an incarnation of the Deity. On the other hand, there is evidently, if we may judge from the invitation sent to Father Hyacinthe, a strong body of Old Catholics at Geneva.

In the diocese of Basle the quarrel had its origin directly in the conflict of the two parties in the Church. Mgr. Lachat, the Bishop, is an infallibilist, and has been during the last two years—for he did not venture before February 1871 on publishing the decrees of the Vatican Council—in constant trouble with the members of his flock, who took an early opportunity of protesting against the Council in a Diocesan Conference of the seven Cantons which are embraced in his diocese, and with the civil authorities who supported them in their resistance. We referred some weeks ago to the vigorous and popular discourses of Reinkens during the first week of December at various places, including Soleure, where the Bishop himself resides, and the adhesion of several Catholic parishes to the movement. During the present month Friedrich and Michelis have been addressing assemblies of three thousand persons on "the classical soil" of Constance, and in the very Council Chamber where the

great protest against Papal autocracy was solemnized four centuries ago by the deposition of John XXIII., and they appear to have been received with the most unbounded enthusiasm, the crowd thronging the entrances and outskirts of the hall to hear them. The Bishop, on the other hand, has been suspending and excommunicating anti-infallibilist priests right and left, and hence matters have at length come to a crisis. On November 19 of last year the Diocesan Conference of the seven Cantons again assembled at Soleure to condemn his arbitrary and illegal proceedings; and on January 29 they met a third time and announced, in a document addressed to the Catholic population, the deposition of the Bishop for having violated the law requiring the *placet* of the Government before promulgating Papal decrees, issued irregular sentences of excommunication and deposition, and in other ways disregarded ecclesiastical and civil rights, which his predecessors had always been careful to observe. He was also charged with taking part in a political agitation against the Government. The Conference communicated their decision to the Federal Council, who were requested to take steps in concert with the Holy See for filling up the vacancy, and also to the Chapter of the diocese at Soleure, inviting them to name a temporary administrator of the diocese. The Chapter met on the 4th of February, and determined not to accede to this request, on the ground that the see was not vacant. Meanwhile the Bishop himself, in an elaborate protest, the conclusion of which alone occupies a column of close print in the *Allgemeine Zeitung*, denounces the charges made against him as "crying and abominable calumnies." Its leading points are a denial of any acts of civil insubordination, and a haughty repudiation of all right on the part of the civil authorities to interfere in any way with his episcopal jurisdiction; as, for instance, in the promulgation of Papal decrees, or the appointment and removal of parish priests—a plea the validity of which of course depends entirely in the case of an Established Church on the character of the existing arrangements between Church and State, which the Bishop is accused of systematically ignoring. He appeals at great length, against the insulting sentence of the incompetent Diocesan Conference, to his conscience, to the Catholic people, to the tribunal of the successor of Peter, who is his supreme judge, and to the just judgment of the Almighty; and winds up by declaring his fixed resolution to continue to rule his flock—who do not seem quite to appreciate the privilege—and his readiness to die for them, which is not likely to be put to the test. This protest was addressed in the first instance to the Governments of the five Cantons of Soleure, Berne, Aargau, Thurgau, and Basle, but an identical or similar document has since been forwarded to the Federal Council. Both the episcopal protest and the reply of the Chapter, which is very temperate and conciliatory in its language, declining to name an *ad interim* vicar, were to be laid before the Diocesan Conference on February 14, but the results do not appear to have yet transpired. Meanwhile the Bishop has been ejected from his palace at Soleure, but continues to reside there, at the Diocesan Seminary.

It will be at once perceived that there is much in common between the Swiss and German complications in matters ecclesiastical; with this difference however, that the anti-infallibilist Catholics have presented a more united front in Switzerland, and the action of the Government has been more rapid and consistent. In all the stages of the Basle controversy, till the last, the delegates of every Canton in the diocese worked together; but the Cantons of Zug and Lucerne held aloof from the final act of deposition. At Geneva also the Catholic representatives approved the action of the Government in contesting the pretensions of the new Bishop. On the other hand, no names as yet stand out prominently, like those of Friedrich or Michelis or Schulte in Germany, among the opponents of infallibilism, and the fact of the German leaders having twice within a few months been invited to give their personal assistance to the movement looks as if there were a scarcity of native energy or talent available for the purpose. The next move in the game will be watched with much curiosity by both parties, and it will be interesting to observe whether the accustomed tact of the Roman Curia, which seems of late to have been strangely at fault, will be equal to the emergency. Meanwhile the regretful apology of a Swiss representative at the Cologne Congress of last September, for so little having as yet been achieved by his countrymen for the Old Catholic cause, will certainly not need to be repeated. If the Germans have shown more readiness, as becomes their national reputation, to defend it by learned argument, the Swiss have at least earned the praise of being prompt in arriving at their practical conclusions, and resolute in applying them. And the Pope himself appears at length to have gained some inkling of the gravity of the religious crisis. In a highly characteristic letter to Mgr. Mermillod, who is compared to the bishops and martyrs of the first ages of the Church, he exhorts him, with significant reference to the dogmatic controversy which lies at the root of the quarrel, to "teach the people committed to your charge to observe all that you have been commanded to enforce"; but His Holiness at the same time admits the perilous consequences of such a course. For he observes, not without reason, that Switzerland is "threatened with a terrible schism." And he might well have added, not Switzerland alone.

OUR MASKS.

WE should do badly, as things are ordered, if we went about the world with our natural faces. Even stopping short of the extravagance of betraying our most important secrets, as in a Palace of Truth, and frankly telling men and women that we think them fools or bores, it is difficult in society to do without something of a mask in regard to minor matters. The old quarrel between nature and art, and where the limits of each should extend, has not yet got itself arranged; and it is doubtful whether it will during the present dispensation. It may be arranged in some future state of human development, when the Spiritualists have it all their own way and tell us exactly what we ought to do and what we ought to believe; but, pending this forecast of the millennium, we are obliged to have recourse to art for the better concealment of our natural selves, and especially, too, for the maintenance of that queer bundle of compromises and conventions which we call society.

The oddest consequence of the artificial state in which we find ourselves obliged to live is that nature looks like affectation, and that the highest art is the most like nature of anything we know. It is in drawing-rooms as on the stage. A thoroughly inartificial actor would be a mere dummy, just as in the Greek theatre a man in his natural face would have seemed mean and insignificant to the spectators accustomed to fixed types of heroic size and set intention. But he whose acting brings the house down because of its "truth to nature" is he whose art has been the most profoundly studied, and with whom the concealment of art has therefore been the most perfectly attained. So in society. A man of thoroughly natural manners would pass as either morose or pert according to his mood—either stupid because disinclined to exert himself, or obtrusive because in the humour to talk. He would mean no offence, but he would make himself disagreeable all the same. Such a man is the pest of his club, and the nuisance of every drawing-room he enters. It matters little whether he is constitutionally boorish or good-natured; he is natural; and his naturalness comes like an ugly patch of frieze on the cloth of gold with which the goddess of conventionality is draped. Natural women, too, may be found at times—women who demonstrate on small occasions, sincerely no doubt, but excessively; women who skip like young lambs when they are pleased, and pout like naughty children when they are displeased; who disdain all those little arts of dress which conceal defects and heighten beauties, and who are always at war with the fashions of the day; who despise those conventional graces of manner which have come to be part of the religion of society, contradicting point-blank, softening no refusal with the expression of a regret they do not feel, yawning in the face of the bore, admiring with the *naïveté* of a savage whatever is new to them or pleasing. Such women are not agreeable companions, however devoid of affectation they may be, however staunch adherents to truth and things as they are, according to their boast. The woman who has not a particle of untrained spontaneity left in her, and who has herself in hand on all occasions, who gives herself to her company, and who is always collected, graceful, and at ease, playing her part without a trip, but always playing her part and never letting herself drop into uncontrolled naturalness—this is the woman whom men agree to call, not only charming, but thoroughly natural as well. On the other hand, the untrained woman who speaks just as she thinks, and who cares more to express her own sensations than to study those of her companions, is sneered at as silly or underbred, as the current sets, or perhaps as affected; her transparency, to which the world is not accustomed, and to which it does not wish to get accustomed, puzzling the critics of their kind. Social naturalness, like perfect theatrical representation, is everywhere the result of the best art; that is, of the most careful training. It simulates self-forgetfulness by the very perfection of its self-control, while untrained nature is self-assertion at all corners, and is founded on the imperious consciousness of personality.

All of us carry our masks into society. We offer an eidolon to our fellow-creatures, showing our features but not expressing our mind; and the one whose eidolon, while betraying least of the being within, reflects most of the beings without, is the most popular and considered the most natural. We may take it as a certainty that we never really know anyone. We may know the broad outlines of character; and we generally believe far more than we have warranty for; but we rarely, if ever, penetrate the inner circle wherein the man's real self hides. If our friend is a person of small curiosity and large self-respect, we may trust him not to commit a base action; if he has a calm temperament, with physical strength and without imagination, he will not do a cowardly one; if he has the habit of truth, he will not tell a lie on any paltry occasion; if he is tenacious and secret, he will not betray his cause or his friend. But we know very little more than this. Even with one's most familiar friend there is always one secret door in the casket which is never opened; and those which are thrown wide are not those which lead to the most cherished treasures. With the frankest or the shallowest there are depths never sounded; what shall we say, then, of those who have real profundity of character? Who is not conscious of an ego that no man has seen? In praise or blame we feel that we are not thoroughly known. There is something infinitely pathetic in this dumb consciousness of an inner self, an unrevealed truth, which bears us up through injustice and makes us shrink from excessive praise. Our very

lovers love us for the least worthy part of us, or for fancied virtues which we do not possess; and if our worst enemies knew us as we are, they would come round to the other side and shake hands over the grave of their mistaken estimate. The mask hides the reality in either case, for good or for ill; and we know that if it could be removed, we should be judged differently. For the matter of that it never can be removed. The most transparent are judged according to the temper of the spectator; and the mind sees what it brings in our judgment of our fellows as well as in other things.

But, apart from that inner nature, that hidden part which so few people ever guess to exist in each other, the masks we wear in society cover histories, sufferings, feelings, that would set the world aflame if betrayed. No one who gets below the smooth crust of conventional life can be ignorant of the fierce lava flood that sometimes flows and rages underneath. In those quiet drawing-rooms where everything looks the embodiment of harmony, of tranquil understanding, and where the absence of mystery is the first thing felt, there are dramas at the very time enacting of which only the exceptionally observant catch the right cue. Ruin faces some whose ship of good fortune seems sailing steadily on a halcyon sea; a hideous secret stands like a spectre in the doorway of another. The domestic happiness which these covenant between themselves to show in the full sunshine to the world is no better than a Dead Sea apple displayed for pride, for policy, and of which those who eat alone know the extreme bitterness. The prosperity which makes men bow down is a sham, and tottering to its fall. Here the confessing religionist hides the scepticism which he dares not show by the fervour of his amens; there the respectable moralist denounces in his mask the iniquities which he practises daily when he lays it aside; to the right the masks of two loving friends greet each other with smiles and large expressions of affection, then part, to push the friendly falsehood aside, and to whisper confidentially to the crowd what scoundrelism they have mutually embraced: to the left another couple of unreasoning foes want only to see each other in unmasked simplicity to become fast allies for life. The world and all its disguises play sad mischief with human affections as well as with truth.

Everything serves for a mask. A man's public character makes one which is as impenetrable in its disguise as any. The world takes one or two salient points, and subordinates every other characteristic to these. It ignores all those subtle intricacies which modify thought and action at every turn, producing apparent inconsistency, but only apparent; and it boldly blocks out a mask of one or two dominant lines as the representative of a nature protean because complex. Any quality that makes itself seen from behind this mask which popular opinion has created out of a man's public character is voted as inconsistent, or, it may be, insincere; and the richer the nature the less it is understood. So it is with us all in our degree; a thought which might lead us to gentler judgments on each other than it is the fashion to cultivate, knowing as we do that we each wear a mask which hides our real self from the world; and that if this real self is less beautiful than our admirers say, it is infinitely less hideous than our enemies would make it to appear.

WARNINGS TO EMIGRANTS.

A GREAT deal of money has been made in Mexico, Brazil, and the old Spanish colonies of South America, and it is certain that there is a great deal more to be made there. It was from the silver mines of Peru and Mexico that those treasure galleons of Ferrol and Cadiz were freighted which enriched many a bold English adventurer as well as the grandees and merchants of old Spain. The diamond mines of Minas Geraes were rich in their yield when those of Golconda had begun to be worn out, and at this moment English companies are working at a profit by the help of modern machinery the gold deposits which had been abandoned by native Brazilians after great returns had been drawn from the surface veins. It is easy to see how those countries should be still enveloped in the vague haze of their former golden reputation—a reputation founded much on fact and very much more on fable; it is intelligible that the old legends and romances of the past should have their influence even now on the most practical, prosaic, and uneducated classes of the English people. Even persons who look more closely into the matter may be attracted towards Southern America by temptations less speculative than its mineral wealth. The new Railway Companies of Brazil, which have constructed their lines chiefly with English capital, have been paying increasing dividends, thanks to the rapidly increasing growth of coffee and cotton. The merchants of Rio de Janeiro, Pernambuco, and Bahia have obtained deservedly the reputation of enormous wealth. There is a rich commercial community too at Buenos Ayres, and then to the south of the Portuguese States, on the great plains by the Plata and other rivers, the pastoral element comes into play. There are sheep masters and cattle masters, who, like the patriarchs, have their flocks and herds ranging over magnificent grazing ground that is practically limitless. They live in rude luxury in *estancias* that resemble little towns, and if their flocks suffer occasionally from drought and disease, the lean years are far more than compensated by the fat ones. Undoubtedly there is money to be made in those countries still, if the right people set about it in the right way.

But we suspect that the right people are seldom found among foreigners, and Englishmen especially are exceedingly unlikely to go to work in the right way. Capitalists combining in alliance with native money may have a certain success, as is proved in the case of the thriving Anglo-Brazilian Companies. But even these Companies, notwithstanding the support and advice of native partners, have had their troubles in the beginning of their enterprises almost without exception. They have been constrained to vindicate their claims and the terms of their concessions by aid of the cumbrous machinery of native law courts, and they have often found themselves positively hampered by the acceptance of Government guarantees. It follows, as a matter of course, that the chances of an individual are worse than dubious, even though he may have money, energy, ability, and connexion. What, then, must be the probable fate of the ignorant and helpless emigrant who signs away his freedom of action, and places himself at the mercy of those local authorities or native employers who consider him only in so far as he is likely to serve their purposes? We have little reason to be surprised at the complaints which have recently made their way into the papers, which have been ventilated in Parliament, which have been endorsed by several of our diplomatic agents, and whose substantial truth has been admitted by the chief of the Foreign Office. For years past we have heard pitiful tales of disappointment and suffering, which have been severely commented on at the time, only in the course of things to be speedily forgotten. It is somewhat of a coincidence, however, that in three successive days charges should have been brought successively against the treatment of English emigrants in three separate South American States. In the *Times* of February 14 there appeared a document promulgated officially by the Emigration Commissioners, by desire of the Secretary of State for the Colonies. It states by way of preamble that, in spite of official warning given in last October, emigration has been still going on to Paraguay. It proceeds to state that the emigrants who went out in October found that the promises made to them had been broken, and that no arrangements whatever had been made for their reception. They were detained, half starved, and left shelterless. It is asserted further that the climate of the place of their destination is utterly unsuited to English constitutions. The summer heats are so intense that field labour becomes impossible; the only productions that can be grown are precisely those to which English labourers are altogether unaccustomed, while the country is in a chronic state of disturbance, and there is security neither for life nor property. The *Times* of the following day devotes an article to emigration to La Plata, which gives a picture very similar to the highly repulsive one which the Emigration Commissioners had drawn of Paraguay. It appears that Mr. Macdonell, our *chargé d'affaires* at Buenos Ayres, presumably a dispassionate witness, has written so strongly and frankly on the matter that, should his despatch be made public, he "is prepared to encounter a storm of obloquy in Buenos Ayres, and throughout the Argentine Republic." He considers that neither sheep-farming, cattle-farming, agriculture, mining, nor commerce presents openings to tempt emigrants. The protective financial policy of America has depressed the wool trade; the Guachos are superior to any Englishmen as what the Australians call stockmen, and thus have the call of the cattle-market; the soil is rich, but the climate is treacherous; in rearing cereals you can only count on one good season out of five; while in mining industry and commerce local circumstances are likely to give native competitors the advantage of you. Finally, in the Argentine Republic, as in Paraguay, revolutions are the rule, and a peaceful and orderly state of things is the exception; while, so far as the sanctity of life is concerned, the murder rate there rises to one in 900, as against one in 170,000 in England. Lastly, on Monday the 17th Lord Carnarvon brought the case of some Brazilian emigrants before the House of Lords, and Lord Granville thanked him for drawing attention to the subject. A knot of labouring families from the midland counties had been lured out to Brazil by dazzling official promises and assurances. They had been promised land free or extremely cheap; they had been promised houses all in readiness for them; they had been promised free and speedy transport thither and abundance of good food on the journey. Lord Carnarvon quoted an advertisement purporting to come from the Brazilian Consul-General in Liverpool, which offered a pecuniary advance to any intending emigrant, and an allowance at the rate of two shillings a day while waiting for his first year's crops to come to maturity. It is alleged that the emigrants who responded to these tempting offers received neither money nor houses, and very little food. They had to sleep on the damp ground, were brought to the brink of starvation, if they were not forced over it, and it may be assumed that death and disease made melancholy ravages among them.

We presume that, coming to us on authority apparently so unimpeachable, we may accept these sad stories as strictly true in the main. If so, it is the duty of every one who chances to have the ear of such labouring men as are likely to be deluded to represent the facts to them as they really are. The invitations are made sufficiently seductive, and if they have not met with more general acceptance, it can be owing only to that conservative clinging to familiar scenes which is so strong in the rural districts, or to a no less natural preference for settling among people of one's own speech and blood. What can be more seductive to a labourer toiling in all weathers from morning to night, struggling along on low wages and the occasional help of a parish allowance, than the prospect of settling on a little property of

his own in a superb climate, and on a soil where everything grows spontaneously or for the scratching? He is to fold his hands while his crops are growing, to fare sumptuously on two shillings a day, and for the first time in his life give himself over to the serene enjoyment of idleness. What can be more disenchanting than the reality? In the first place, on disembarking in the land of promise, he finds that his ships have been burned behind him and his retreat cut off. There he is for good or for evil, as much a serf of the soil or a slave of the country, to all intents and purposes, as any Guiana cooly or Queensland Polynesian. He is in debt for his free passage-money, as for any subsequent pecuniary advance, supposing he has obtained one. Is he in a position to appeal to the courts of the strange country against the contractor to whom he is bound, or is his appeal likely to help him much? He knows no word of the language; he cannot even ask for bread or money in the speech of the people among whom he is cast. If he is to live at all, he has to bestir himself and try to work in a climate where we are told that work in summer is physically impossible for his constitution. He may have to sleep shelterless till he builds his own hut, in a country where fever is rife, and where the very atmosphere often seems tainted. In that La Plata and Paraguay country the most trifling scratch is apt to turn to a festering wound, and if once the blood fairly heats, sarsaparilla will do little for you. If you attempt to cultivate the fertile soil which breeds fevers so freely, you will find your crops fail four seasons out of five—that is to say, if you are wise enough to confine your attention to the only kind of agriculture which you have been used to. The lawless semi-savages around you dislike you as an intruder and detest you as a heretic. Your property may be safe, for the excellent reason which encourages the penniless traveller to sing in presence of banditti; but in a country where the murder rate is one in nine hundred, we may be sure that a due proportion of crimes will be committed upon people who have no friends and plenty of ill-wishers. We do not think that any one who has read the statements to which we have referred will say we have exaggerated the prospects of the humble emigrant to South America. We can only repeat the expression of our hope that every possible publicity will be given to disclosures which possibly may save some ignorant victims from chasing an *ignis fatuus* across the Atlantic to their own destruction. It may be a long voyage round the world to the antipodes, but those who make it will at least find an English home and English laws awaiting them at their destination; and New Zealand is just now suffering from a labour famine. Emigration to Canada, as we know, means in nine cases out of ten emigration to the United States; but if our people believe they can better themselves there, we must not grudge to the great and growing Republic citizens whom we may be sorry to part with. It is plainly our first duty to give the best advice in our power to those who are determined to leave us if they can find the means; and we trust that our labourers in future may find better advisers than the agents who have been recruiting for the South American States.

PORTUGUESE ENGLISH.

IT is no doubt improving to us all, as individuals, now and then "to see ourselves as others see us"; and candid friends are seldom wanting to afford the occasional opportunity. But when the mirror is to be held up to us in our national capacity, it is perhaps too sanguine to assume that the process will be equally beneficial. When one nation turns its attention to the habits, or customs, or institutions, or language of another, distance may or may not lend enchantment to the view, according to the pre-existing mood and sympathies of the observer; but it is pretty sure in most cases to produce distortion and misconception. We have all been familiar from boyhood with the sublime caricature which in the ordinary French imagination fills the place of the Lord Mayor of London; he moves about with a more than Oriental splendour in his personal adornments, he is weighted to the ground with cares of State, he is the more than Maecenas of his sovereign. We know also that these, among numberless other English facts, are familiar to the French mind—that the Prince of Wales is Hereditary Grand Master of the Chamber of Peers; that an impenetrable mist covers these islands from January 1 to December 31 in each year; and that, many long years ago, we were favoured with a great national bard, our poet of poets, whose name was the "divine Williams." We smile at these inaccuracies, and make up our minds that a few more years of International Exhibitions and extended Continental travel will supply the requisite correction. There is, however, reason to believe that, painfully wide of the mark as France may yet be with reference to our general characteristics, she is nevertheless accuracy itself when compared with some other nations of Europe. We are the more disposed to entertain this fear from having recently studied a very careful and painstaking little volume, designed to familiarize the Portuguese nation in general, and its youth in particular, with the most idiomatic twists and turns in our national speech. Now we are all aware that the language of a nation is very closely intertwined indeed with its institutions and its corporate life. This must be so from the very nature of the case; and the bare idea of a traveller attempting to investigate on the spot the social or political machinery of a country without a fairly scholarlike command of its language is justly held to be an absurdity. We are thus forced to believe that to see ourselves as the Portuguese see us—their knowledge of ourselves being inferred from their knowledge of our language—might be an extremely odd diversion, but would scarcely bring solid instruction or salutary correction with it.

We must begin our extracts by observing that the author of the work before us holds a mean opinion of his predecessors in the same line. They have, he thinks, been careless in the extreme; it was therefore certain that their works would be imperfect in style; to say nothing of the fact that the printers did not do their duty. Perhaps we had better just say that the words "to say nothing of" have inadvertently got mixed up in the Portuguese writer's mind with the phrase "in spite of." Now let us hear him tell his own tale:—

> It was resulting from that carelessness to rest these works full of imperfections of style: *in spite of* the infinite typographical faults which sometimes invert the sense of the periods.

In the author's own work these faults and imperfections have been happily avoided; and he confidently anticipates public approbation in the following extract. We shall do well to announce beforehand that genders, which in English nouns are almost non-existent, are by the large hearted Portuguese author used with a pleasing liberality of conception; and that "who" is employed for "that" with the same venial inaccuracy with which an English writer might, when using the French language, write "qui," by a slip of the pen, in place of "que":—

> We expect then, who the little book (for the care what we wrote him, and for her typographical correction), may be worth the acceptation of the studious persons, and especially of the youth, at which we dedicate him particularly.

Let us now see how we strike the Portuguese observer in our eminently national character as lovers of field sports. Here, if anywhere, we are at home; and here, if anywhere, we should be a little annoyed to find ourselves misconstrued. Well, language may not be everything; but we have a serious misgiving as to whether the framer of the following sentences would be the right man in the right place when he came to interpret our ways and doings to his fellow-countrymen. Let us hear him speak as he thinks that we speak:—

> Load ours gune.
> Look a hare who run! Let do him to pursue for the hounds! It go one'self in the plou ch si land!

On a careful collation of this last phrase with the Portuguese original, which is printed *sic-sic*, a glimmering of the intended signification becomes apparent. The translator was racking his brains for the idiomatic expression "to go it"; and, having meant to say "how he is going it over the ploughed land," he produced the quoted phrase as the result. We may append a few more remarks made by the sportsmen:—

> I have put down killed.

This, in the purest English is, it seems, the same as if a man should say, "I have knocked him over." The next gentleman is not so fortunate:—

> Me, I have failed it; my gun have miss fixe.

Later in their conversation his thoughts glance with a genuine sportsmanlike transition from the field to the kitchen:—

> If we kill nothing, we will have not any venison. I do flatter me to bring at my cook at least a wild boar head.

If Archbishop Trench has not written in vain, it will be generally admitted that the proverbs of a nation are sure to convey a good deal of its vital movement in things which concern the heart and the intellect. Nor has this truth escaped the framer of the very compendious handbook which we are now admiring. Page after page of proverbs he has given us—proverbs not of the exclusive and peculiar, but of the cosmopolitan and universal class, like "Quot homines, tot sententiæ" in the ancient world, and "A rolling stone gathers no moss" in the modern. We subjoin a few specimen quotations.—

> So many heads so much opinions.
> The necessity don't know the low.
> Every one for him, and God for all.
> The stone as roll not heap up not foam.
> Help thy, that God will aid thee.
> Spoken of the wolf, one see the tail.
> In the country of blinds, the oneeyed men are kings.

It is, as we all know, our pleasing duty to inquire, ever and anon, after the health of a friend's wife when she has recently been placed in an interesting situation. This is all very proper, and all very natural; we expect the sort of answer that almost invariably comes; our friend accepts the attention, and both mother and child are fortunately doing well. But this is not to see ourselves as the Portuguese are intended to see us. By them we are supposed to put the question and answer in the following shape:—

> Your wife is it brougted to bed?
> Yes, sir, and too fortunately.

Now, considering the high price of coals, and the very decided increase in our population, we cannot avoid the prophetic warning that some Bentleian emendator will by and by make his appearance, and that he will effect a considerable alteration in the answer to this friendly question. It may be quite true that "too fortunately" (as it stands) is intended to express a complete and happy satisfaction at the manner in which the crisis has been passed; but our Bentley of the future will know better; he will divine that the happy father is in reality lamenting his ill-destiny in the advent of twins; he will say that "too" must

have been written "two" in the original MS.; and that, in accordance with a frequently recurring *lacuna*, "*un*fortunately" should be restored for "fortunately"; so that the entire rejoinder will stand, "Yes, she is; and, worse luck, there are twins this time."

The following is the usual language of Englishmen when they are playing at cards:—

That bad game, there is not a trump.
What is to play?
It is madam.
Play, if you please.
The heart's aces.
I cut.
Trump.
I have no it, I have it.
I am very unhappy; alwes I lose.
This time, I have a great deal pack.

Our doctors, as we very well know, do not invariably follow their own prescriptions. On this head the Portuguese compiler has a good story to tell, and he tells it in his own idiomatic way:—

A physician eighty years of age had enjoied of a health unalterable. Theirs friends did him of it compliments every days. "Mister doctor," they said to him, "you are admirable man. What you make then for to bear you as well?" "I shall tell you it, gentlemen," he was answere I them: "and I exhort you in same time at to follow my exemple. I live of the product of my ordering, without take any remedy who I command to my sicks."

Let us select two more instructive narratives, each of which will in its own way illustrate the directness of conception with which the Portuguese mind has mastered our English mode of expression. We only hope that ere long the Portuguese author may think it advisable to familiarize his countrymen with our national debates in the House of Commons, and that he may favour us with the result:—

A judge having ordered at any gendarms to arrest a criminal, this, conducted at her presence, was shamness enough for to tell him that he was semed to Pilatus.
The judge was answered him, "Condemning so great rogue as thee, I shall not have at less to wash my hands."

It will be scarcely necessary, perhaps, to observe that, "ordered at" means "ordered," that "any" means "some," and that "was semed to" means "was like." There is almost a Chaucerian complexion about this last construction. We will wind up with one more anecdote:—

A patrol had meeted during the night a individual what had carried a wine bottle. This having asked what he had under her cloak, he answered jesting, "A poniard." "We will look it," replied the others. Our man present immediately her bottle. These had taked possession of it, and they had given back it empty, telling "Here, as thou art one of our friends, we deliver the scabbard."

THE THEATRES.

IT was no objection to a piece lately performed at the Globe Theatre that the title was borrowed from a poem of Tennyson which was quoted in the course of it. If the words "Tears! idle tears!" appearing in the playbill attracted a single visitor to the house, so much the better, although they are curiously inappropriate to a piece of avowed French extraction. A "romantic legend" has been produced within the last few days, called *Oriana*, and as Tennyson's ballad of that name would be wholly inapplicable to the character and situation of the heroine, one naturally expected that it would be quoted before the curtain fell. The name Oriana is pretty and uncommon. There are, we believe, some living persons who bear it, and possibly its appearance in theatrical advertisements may procure for it an introduction to baptismal registers. Fashion prevails at the font as well as everywhere else when women are implicated, and as regards names for girls a little novelty would be desirable, as will be admitted by every one who has happened to encounter "Ada" in the kitchen or "Florence" wielding a brush upon the stairs. We therefore hope that the example of Mr. Albery will be followed by other parents, especially as the remark that a rose called by some other name would smell as sweet is undeniably true in the case where the rose takes the name of "Oriana." It is perhaps surprising that, although this name has now been adopted on the stage, the character to which it properly belongs has never tempted any actress in recent years. The play of the *Knight of Malta* would perhaps prove incapable of adaptation to the modern stage, but there is much in the character and situation of the heroine that might tempt an enterprising manager. A "conventicle" of the Knights of St. John, in the Palace of the Grand Master at Malta, would be just the sort of scene that would bear any quantity of embellishment. Oriana, the sister of the Grand Master, is seated in a gallery. It is proposed to confer knighthood upon a noble Italian, Miranda, before sending him on an expedition against the Turks. But Miranda asks time for consideration before taking upon himself that honour, for which not only modesty, but his love for Oriana, makes him doubt his fitness. His parting words show the condition of his heart:—

Gracious mistress—
Oh, that auspicious smile doth arm your soldier!
Who fights for those eyes and this sacred cross
Can neither meet sad accident nor loss.

And her answer proves that she is not insensible of his love:—

The mighty master of that livery
Conduct thee safely to these eyes again.

No sooner is Miranda gone than another aspirant to the Order, a Spaniard of equally good birth, Gomera, declares that the same impediment stands in his way:—

I am in love. Laugh not! Though Time hath set
Some wrinkles in this face, and these curl'd locks
Will shortly die into another hue,
Yet, yet, I am in love. I'faith, you smile.
What age, what sex, or what profession,
Divine or human, from the man that cries
For alms in the highway to him that sings
At the high altar, and doth sacrifice,
Can truly say he knows not what is love?

It is a pity that the whole of the play is not as well adapted for family reading as this scene. On the principle that *les absents ont toujours tort*, Miranda is put aside for Gomera when the Grand Master declares his sister shall marry. Hereupon a wicked knight, a Frenchman named Mountferrol, having a design against Oriana's person, and desiring to prevent her marriage with Gomera, charges her with treason. Gomera challenges Mountferrol, and a regular trial by battle is appointed. Oriana dressed in white goes up a scaffold hung with black, and delivers a speech beginning

Thus I ascend nearer, I hope, to Heaven—

by which a gifted actress might make an indelible impression on her audience. Then follows the combat, in which Gomera fights as champion of Oriana against Miranda, who has assumed Mountferrol's arms. In the result Gomera claims the lady as having won, and Miranda claims her as having intentionally lost the fight. The Grand Master decides that Gomera shall marry Oriana, and that Miranda shall be wedded to the Order. The subsequent part of the play is hardly suitable to modern taste. Miranda, although he accepts the Grand Master's decision, cannot wholly relinquish his passion for Oriana, and, being accidentally thrown into her company, an impressive scene occurs:—

Sit, brightest Oriana! Is it sin
Still to profess I love you, still to vow
I shall do ever?

And after some debate she answers:—

Miranda's deeds
Have been as white as Oriana's fame,
From the beginning to this point of time:
And shall we now begin to stain both thus?
Think on the legend which we too shall breed,
Continuing as we are, for chastest dames
And boldest soldiers to peruse and read—
Ay, and read through, free from any act
To cause the modest cast the book away,
And the most honour'd captain fold it up.

We certainly prefer this old legend of Oriana to the new one which has been produced at the Globe Theatre. Wherever else Mr. Albery may have resorted for his story, he is certainly guiltless of any inspiration from Beaumont and Fletcher's play. Indeed the effeminate character of King Raymond is as far as possible removed from the bold types of vice in which the old dramatists delighted. It may be ascribed partly to the author and partly to the actor that we feel convinced that it can matter only in the smallest possible degree whether the King or the Queen wearing the King's armour leads the Royal troops. It would be unfortunate if an actor capable of better things should become identified with a class of character which no skill in delineation could preserve from liability to contempt. The attempt of Mr. Albery in an entirely new line commands rather sympathy than applause. In spite of all that can be said in praise of *Oriana*, its permanent success is doubtful. At the same time it is an undeniable novelty, and is well acted and prettily put upon the stage. If the author had designedly made a story which goes back to the age of fairies a vehicle for satire on modern life, he would probably have more fully elaborated the character of the demagogue Oxeye. But his work is very good as far as it goes. There is much natural humour in the rustic maid of mature years, Chloe, who is willing to marry a king, but would like a monarch of domestic habits who would clean himself and put on his crown when he comes home from work. There are many pretty lines effectively delivered in this play, but the whole result is somewhat disappointing, and we should think that the promise of Mr Montague's reappearance in *Tears! idle Tears!* is likely at no distant period to be fulfilled. No doubt the groups and accessories of *Oriana* are pretty, but if you come to that *Babil and Bijou* must have nearly killed any theatre that would depend upon that prettiness which appeals merely to the eye. The diversions of King Raymond in the forest rather remind one of those Eastern princes who are said to divide their time between dancing-girls and narcotics.

It is said that any form of advertisement is useful to a theatre, and it is to be hoped that that most expensive form of advertisement, a trial in a court of law, will be found proportionately profitable. A good while ago it was rumoured at the West End of London that one of the best things out was *Geneviève de Brabant* at the Philharmonic Theatre. Thereupon arose the question, "Where is the Philharmonic Theatre?" and vague suggestions to coachmen to steer a north-east course were the answer. Glimpses of an unknown world have been obtained by visitors to the Cattle Show, and it would appear that this theatre is regarded by some of those who know it best as being as distant from the Strand as Ancient Britain was from Rome. We believe that adventurous residents in the Temple have been known to go in cabs to the Philharmonic Theatre and to return; but a recent discussion makes it doubtful whether there is any postal or newspaper intercourse between the

two neighbourhoods. It has been stated that a principal performer at the Philharmonic having ceased, on medical certificate, to appear, the interval of leisure thus obtained was utilized for an appearance at the Gaiety. The proprietor, having closed his house, would have been able to devote his leisure to the perusal of a very interesting book called *Other Worlds than Ours*. He was assured that it was a good thing for him that his principal performer should appear at another house, but he perhaps had a lingering idea that it would be a better thing for him to keep that performer at his own house. There has been another recent trial in which a performance at the Gaiety Theatre was the subject of discussion, and some remarks which we made upon it have produced a letter from Mr. John Hollingshead, the manager, of which the material part is as follows:—

As long as the Government burdens me with a Lord Chamberlain, I must decline to take any moral responsibility in connexion with the plays produced at my theatre. I paid two guineas, the official fee, to the Official Censor of plays for his official certificate of purity as regards *Shilly Shally*.

It is a comfort to be able to lay the blame, if there be any, for the language of this play upon so broad a back as that of the Lord Chamberlain. It is possible that the Official Censor may not be quite as keenly alive to the possibility of words being taken in a double sense as are some frequenters of theatres. It is possible also that words which on paper look harmless may be made disagreeably significant by the manner of their delivery. It was said that the Lord Chamberlain entertained the idea of prohibiting *Nos Intimes*, but, being persuaded to go and see it himself, he found nothing but the strictest propriety in the performance. It was also said that the actors were aware that the Lord Chamberlain was coming. We should have thought that the Official Censor was intended as a protection to the public, but that the public had still the right of taking care, to the best of their power, of themselves. However, division of labour is the secret of effective work. The manager does his business, and expects the Official Censor to do his. Morality is not in the managerial department.

REVIEWS.

GEORGE SAVILE, MARQUIS OF HALIFAX.*

HISTORY has done ample justice to the Marquis of Halifax as a statesman and as a speaker. His critical faculty and temperate genius recommended him to Hume. His literary accomplishments and the practicality of his politics made him a favourite of Macaulay. The great fame of his gladiatorial triumph over Shaftesbury, when he caused the rejection of the Exclusion Bill by the House of Lords in 1680, has created an exaggerated impression of his oratory; for he was rather an able, witty, and ingenious dialectician than a moving orator. But his literary productions have met with undeserved and surprising neglect. Macaulay, who may be too partial to him as a politician, has not overrated his literary powers in saying that "his political tracts well deserve to be studied for their literary merits, and fully entitle him to a place among English classics." There has never been a collected edition of his writings, which are anything but voluminous. We read in one of the lately published letters of a young politician of promise, snatched away at the beginning of a hopeful career (Mr. Edward Denison), that, wishing to study Halifax, for whom Macaulay had inspired him with admiration, he had "long sought in vain to get hold of his writings, which are few and scarce." Halifax published nothing but small prose essays, and most of them were essays on political subjects of the day. But the political subjects which he chose were of prime importance, and his political essays are always far above the level of party pamphlets, general in their treatment of occasional topics, free from passion and personality, and full of reason and of wit. They are the condensed and sparkling productions of an accomplished and thoughtful man, who is also a man of the world and a man of action. In the last years of the reign of Charles II. Halifax was at the head of a third party, which stood between Whigs and Tories, and which was nicknamed Trimmer. He was as strong as Shaftesbury against Popery, but he preferred maintaining the regular succession to the throne with limitations of a Popish successor to exclusion of the Duke of York. He believed as strongly as Shaftesbury in Titus Oates; but he was not satisfied with the evidence against Lord Stafford, and he voted him not guilty. In his little treatise, "The Character of a Trimmer," Halifax took up in pride the name thrown at him in derision, and vindicated the middle way philosophically, historically, and practically. "If men are together in a boat," he said, "and one part of the company would weigh it down on one side, another would make it lean as much to the contrary, it happens there is a third opinion of those who conceive it would do as well if the boat went even without endangering the passengers." His uncle, Sir William Coventry, a very distinguished Parliamentary man, was also a Trimmer, and gave a similar account of his party; to Coventry, indeed, rumour ascribed the authorship of Halifax's work; but this he has denied, avowing himself to be a Trimmer in the sense of "one who would sit upright, and not overturn the boat by swaying too much on either side." There was another way which Halifax adopted of justifying a Trimmer as pursuing the happy mean between two extremes; and the conclusion of the treatise has been paraphrased by Macaulay in brilliant sentences, but in no way improved:—

Our Trimmer thinks fit to conclude with these assertions; that our Climate is a Trimmer between that part of the world where men are roasted, and the other where they are frozen; that our Church is a Trimmer between the phrenzy of Platonic visions and the lethargic ignorance of Popish dreams; that our Laws are Trimmers between the excess of unbounded power and the extravagance of liberty not enough restrained; that true Virtue has ever been thought a Trimmer, and to have its dwelling in the middle between the two extremes; that even God Almighty himself is divided between his two great Attributes, his Mercy and his Justice. In such company our Trimmer is not ashamed of his name, and willingly leaves to the bold champions of either extreme the honour of contending with no less adversaries than Nature, Religion, Prudence, Humanity, and Common Sense.

When James II. ascended the throne which he owed to Halifax, he began by humiliating his benefactor, and soon rudely dismissed him from office. Though Halifax had turned the scale against the Exclusion Bill, he was firm against Popery and arbitrary government. James early made known his intention of obtaining the repeal of all tests and penal laws against Roman Catholics, and, if he could not obtain the repeal, of acting as if they were repealed. In James's subsequent endeavours to gain his end by promising compensation or "an equivalent" to Churchmen, and by cajoling the Dissenters into coalition with the Roman Catholics against the Church, Halifax put forth his literary energies in two consummately skilful tracts. In "The Anatomy of an Equivalent" he brought wide reasoning and large illustration to bear on the impossibility of treating on equal terms with a King or securing his observance of a treaty; and, having explained what circumstances were necessary for making a good bargain, and for ensuring an equivalent, pithily concluded that, "where distrusting may be the cause of provoking anger, and trusting may be the cause of bringing ruin, the choice is too easy to need being explained." Of the "Letter to a Dissenter," published after James's Proclamation of Indulgence, published anonymously, and at first generally attributed to Temple, twenty thousand copies are said to have been distributed immediately by post. The effect was prodigious in rallying the Protestant Dissenters to the support of the law and contemptuous rejection of benefits offered, not in justice or in kindness, but to aid the advancement of Popery. But Halifax, firmly opposed to James's policy and acts, was very slow to espouse the cause of William and revolution. His long hesitation increased his power when he at last threw his weight into the scale against James. He was made Speaker of the Lords in the Convention Parliament, and was the hero of the Revolution, as eight years before he had been the hero of anti-exclusion. To him was assigned the great duty of tendering the crown to William and Mary in the name of all the Estates of England. In the formation of the new Administration he was restored to the office of Lord Privy Seal. For nine months he was virtually Prime Minister, for in those days ostensible Prime Minister there was none. Harassed by the toils and cares of arduous office, having sustained and by great exertions vanquished a bitter persecution in Parliament, borne down also by private sorrows (for he had lately lost in quick succession two sons, and he was the tenderest of fathers), he retired in October 1689 from his post of Speaker of the House of Lords, and soon after resigned the Privy Seal. For his wise and well-balanced mind power and dignities had never had engrossing charms; greatness had always followed, rather than been sought by, him; and the exercise of his fine intellectual faculties supplied diversion and employment in quiet retreat at his loved estate of Rufford. He remained a diligent observer of political events, and his pen was from time to time employed on politics. On the eve of the general election of 1690 he issued his "Cautions for the Choice of Members in Parliament"; they are admirably terse and witty. Naval disasters and Admiralty mismanagement, the frequent subjects of Parliamentary debates, provoked him into writing "A New Draught of a Model at Sea," in which he strongly argued for Tarpaulins against gentlemen as officers—men bred to the sea and trained by service against persons of quality who went in for amusement and for profit. An extract from this little treatise is a good illustration of the wit and wisdom and apophthegmatic manner of his political essays:—

Mankind naturally swelleth against favour and partiality; their belief of their own merit maketh men object them to a prosperous competitor, even when there is no pretence for it; but when there is the least handle offered, to be sure it will be taken. So in this case, when a gentleman is preferred at sea, the Tarpaulin is very apt to impute it to friend or favour; but if that gentleman hath before his preferment passed through all the steps which lead to it, that he smelleth as much of pitch and tar as those that were swaddled in sail cloth, his having an escutcheon will be so far from doing him harm that it will set him upon the advantage ground; it will draw a real respect to his quality when so supported, and give him an influence and authority infinitely superior to that which the mere seaman can ever pretend to.

When a gentleman hath learned how to obey, he will grow very much fitter to command; his own memory will advise him not to inflict too rigorous punishments. He will better resist the temptations of authority, which are great, when he reflecteth how much he hath at other times wished it might be gently exercised, when he was liable to the rigour of it.

When the undistinguished discipline of a ship hath tamed the young

---

* *Miscellanies.* By the late Lord Marquis of Halifax. London. 1704.

A Character of King Charles II., and Political, Moral, and Miscellaneous Thoughts and Reflections. By George Savile, Marquis of Halifax. London. 1750.

Savile Correspondence. Letters of Henry Savile, Esq., &c., &c., including Letters from his brother George, Marquis of Halifax. Edited by W. D. Cooper, F.S.A. Printed for the Camden Society. London. 1858.

mastership, which is apt to arise from a gentleman's birth and education, he then groweth proud in the right place, and valueth himself first upon knowing his duty, and then upon doing it.

To expect that quality alone should waft men up into places and employments is as unreasonable as to think that a ship, because it is carved and gilded, should be fit to go to sea without sails or tackling. But when a gentleman maketh no other use of his quality than to incite him the more to his duty, it will give such a true and settled superiority as must destroy all competition from those that are below him.

This is wisdom for all time, and even now this preaching would not be altogether useless. Halifax's mind was peculiarly fitted for apophthegms.

We have now exhausted the list of his political essays. There are others of a general character. The "Maxims of State," and the "Political, Moral, and Miscellaneous Thoughts and Reflections," are collections of aphorisms of which it is not too much to say that they combine the wisdom of Bacon with the wit of Rochefoucault. We give a few instances at haphazard:—"The Court may be said to be a Company of well-bred fashionable beggars." "A man had as good go to bed with a razor as to be intimate with a foolish friend." "Men should do with their hopes as they do with tame fowl, cut their wings that they may not fly over the wall." "Anger is never without an argument, but seldom with a good one." "It is a self-flattering contradiction that wise men despise the opinion of fools and yet are proud of having their esteem." It would be expected that such a writer as this would be skilful in perception and description of character. His character of Charles II., and another of Bishop Burnet, are delightful delineations, acute as can be, true and yet kindly. Burnet's son, who published Halifax's sketch of his father, says that Halifax had himself given it in his own handwriting to the Bishop; and Lord Dartmouth has ill-naturedly suggested that Halifax was accustomed to ridicule and criticize Burnet in conversation, and that the sketch was more probably written by Burnet himself. But the humorous Halifax might in private dwell on Burnet's faults and foibles, while, in writing a sketch of his character which was to remain, he would be careful to do full justice to the substantial virtues and merits of the vain and bustling, but excellent and true-hearted, Bishop. It remains to mention—and we have no space to do more than mention—Halifax's "Advice to a Daughter"—the advice of a kind, clever, and sensible father, full of practical wisdom, and free from cant and exaggeration. The daughter, Lady Elizabeth, to whom this advice was addressed, became mother of the famous Earl of Chesterfield, whose worldly-wise lessons to his son are well known.

Halifax died at the age of sixty-two, in 1695. He had been a leading statesman and Minister in three reigns. It is known that he made a diary from which he wrote out memoirs of his time. There has been a story that two copies only of these memoirs existed, and that both were burnt, one by the Earl of Nottingham, the father of the wife of Halifax's eldest son and successor, and the second by his granddaughter, the Countess of Burlington acting under the advice of Pope, who had read the memoirs and found them very unfavourable to the Roman Catholics. It was, however, positively stated in 1781 by Mr. Tyers, the author of *Political Conferences*, that the original diary was, with the Duke of Shrewsbury's papers, in the hands of Robertson the historian for use; and it has been further stated lately, in 1858, on the authority of Mr. J. Payne Collier, that the diary had been seen some years before in the Duke of Devonshire's library. It is strange that by this time the question of the existence of this diary should not have been settled. It is time that it should be, and it is to be presumed that the present Duke of Devonshire will be eager to give every facility for the discovery of so precious an historical document. The Duke descends from Halifax's granddaughter, Dorothy Countess of Burlington, the lady accused of burning her copy of the memoirs. An abler or more interesting diarist of public affairs cannot be conceived. What letters of his have been published are charming in style, frank, acute, and lively. His correspondence with Henry Savile, his brother, not long since published by the Camden Society, presents a delightful picture of fraternal friendship. He was much loved by his relations. His mother-in-law, the clever Countess of Sunderland, Dorothy Sydney, the sister of Algernon, raved in admiration of him. His fine temper and exuberant wit made him a charming companion. His wit gave him a strong hold in council on Charles II.; it was thrown away on James and on William. He had a humorous way of treating every subject, which was not discreet with all, and which often gave him the character of levity. On a memorable occasion he was the triumphant champion of the royal succession, but he was known privately to speak lightly of hereditary monarchy, asking, "Who takes a coachman to drive him because his father was a good coachman?" He gave serious offence to Danby by burlesquing a piece of evidence intended to favour him, which was to the effect that a bribe had been offered him and he had civilly declined it, saying that it would be strange if a man should ask another for the use of his wife and the latter refuse, but with great civility. Burnet twitted him with his love of titles, for from a baronet he was made successively baron, earl, and marquis. His ready reply was that, if the world were such fools as to value those matters, a man must be fool for company; he considered them but as rattles, yet rattles please children, and these titles would be of use to his family. So he wrote seriously to his brother Henry, when he was made an earl, that he valued the promotion because it might bring a better match for his son when he was called Lord Eland than if he were only Mr. Savile, and went so gravely into the point of marriage prospects as to argue that Lord Eland was a better title than Lord Savile, as Lady Savile might be mistaken for the wife of a knight. He was a free-thinker in religion; he did not profess to be a saint, and was not a hypocrite; and he pleasantly replied to Burnet's professional admonitions that he hoped that God would not lay it to his charge if he could not digest iron as an ostrich did, nor take into his belief things that would burst him. A Life of Halifax should be written as well as a collected edition of his works published. In many respects there has been a very great resemblance to him in a recent statesman, one of the most interesting of our Prime Ministers, Viscount Melbourne—in literary taste and accomplishment, in wit, in a speculative and analytical turn of mind, in a *laissez-faire* disposition, in moderation, in fine temper, equanimity, and worldly skill; but both Lord Melbourne and Lord Halifax were rather fitted for the delight of friends and to please refined minds than to lead a party or move a nation, and were subtle and dainty rather than vigorous politicians.

HULL'S BUILDING AND ORNAMENTAL STONES.*

THERE has long been felt the want of a good book upon building and ornamental stones. A certain amount of information upon the nature and varieties of this class of natural products has of course been available in ordinary treatises on geology, besides being scattered up and down in many of the existing works on architecture, masonry, and engineering, such as Gwilt's and Cresy's Cyclopædias, as well as in manifold Transactions and technical serials. But little has been hitherto done in a complete manner, or with much attempt at scientific arrangement. The admirable *Technologie du Bâtiment*, by M. T. Chateau, is full of correct details of the nature and uses of such materials, especially as they are found in France, as is also the valuable work of B. von Cotta, of which an English version has appeared entitled *Rocks Classified and Arranged*. A good model of the kind of work required has been supplied for the sister island in the *Ancient Architecture and Practical Geology of Ireland*, by Mr. G. Wilkinson, M.R.I.A., &c. Had the author of this excellent work extended its scope so as to comprise the resources of the British islands, and the more important building materials of other lands, there would have been no need, Mr. Hull feels conscious, for the treatise he has lately put forth upon the *Building and Ornamental Stones of Great Britain and Foreign Countries*. This work, obviously compiled with care, and based upon the writer's wide and accurate study of the rocks as Director of the Geological Survey of Ireland, and Professor of Geology in the Royal College of Science in Dublin, is fitted in a great measure to fill the void thus existing. It took its rise, we are given to understand, in the author's design of delivering a series of lectures, with the assent of the Council of the College, during the evenings of 1870-71. Circumstances occurred to prevent the delivery of the course, but with the collection and arrangement of his materials the subject grew in interest, until it at length developed itself into the form in which it is now presented to the reader.

A preliminary difficulty in seeking for a scientific as well as a practical basis for a work of this kind was felt by the writer to lie in the absence of a generally received mode of classification of rocks, and a system of nomenclature founded both upon origin and composition. The microscope has of late years been turned to greater account even than chemical tests for determining the ultimate structure of rock masses. Truer views are thus gradually being formed regarding the basis of classification, and such distinctions as those between igneous and metamorphic rocks. In his introductory observations Mr. Hull rightly expresses his preference for the system of Durocher and Bunsen, who make the proportion of silica the basis of classification, over that of Dr. Zirkel, who makes it dependent upon the varieties of felspar. It is far easier, he argues, in analysing the structure of rocks, to judge of the comparative richness or deficiency in silica than of the nature of their felspathic bases. The analysis of a large number and variety of deposits led Durocher to the conclusion that the basic rocks, which are poor in silica, have been derived from a deeper *magma* or envelope within the earth than that of the acidic or highly silicated rocks. Silica he somewhat fancifully considers to hold the same essential place among the rocks that carbon does among the products of vegetation. As a practical matter, at all events, the division of both eruptive and sedimentary rocks into basic and acidic is as good a one as our author could have adopted, although no sharp line of demarcation can be made to separate the subordinate classes of stone which come under these primary characteristics.

Of the igneous and metamorphic class, which naturally head the series, as they form the earliest and most fundamental elements of the earth's structure, the group which stands first as the acidic or most highly silicated is of course that of the granites. True granite, as understood by petrologists, is defined as a rock of a crystalline granular texture, igneous or metamorphic in its origin, made up of at least three constituents—quartz, felspar, and mica. It is often found as a quaternary compound, from the occurrence of two felspars (orthoclase and oligoclase, or orthoclase and albite), or two micas; less frequently as a quinary. When containing

* *A Treatise on the Building and Ornamental Stones of Great Britain and Foreign Countries, arranged according to their Geological Distribution and Mineral Character.* By Edward Hull, M.A., F.R.S., Director of the Geological Survey of Ireland, &c. London: Macmillan & Co. 1872.

large and distinct crystals of felspar, it is known as porphyritic granite, and when presenting a foliated structure and thus verging into gneiss, it is called foliated granite. When the mica disappears and the rock is finely crystalline-granular, it is known as eurite. Syenite, which is often popularly confounded with granite, is a ternary compound of quartz, felspar, and hornblende. When the free silica in the quartz disappears, the rock passes into diorite, where, in addition to quartz, felspar, and mica, hornblende appears. As Mr. Hull instances, in part of the Sleeve Croob range, County Down, this quaternary compound is called syenitic granite. In the analytical tables compiled by our author, the proportion of silica varies from 65·81 per cent., or even 62·08, according to Dr. Haughton, to 81·77, in the case of the Teufelsmauer, near Krems, as determined by Dr. Zirkel. From the fact of the felspar and flakes of mica being visibly embedded in the free silica (or quartz), it has been inferred that the silica, being the most difficult to fuse, was the last to solidify, retaining a certain degree of viscosity after the other minerals had assumed the crystalline form. The action of water in the deposition of granite has been suspected of late to a degree unthought of while these rocks were referred to a purely igneous origin. Where silica is found in great excess, instead of having been injected volcanically into the veins which traverse the granitic rocks, it may have been deposited, Dr. Sterry Hunt and others have held, from aqueous solution. Minute cells containing water having been observed under the microscope in the quartz of granite, Mr. Sorby and Dr. Zirkel have inferred the presence of steam under great pressure and a high temperature during the process of deposition. From the proportions of watery fluid in the cavities of various specimens, Mr. Sorby has even sought to reach certain conclusions as to the relative depths at which these granite beds have been formed. Thus the granites of the Scottish Highlands indicate a pressure of 26,000 feet of superincumbent rocks above those of Cornwall, the elvans or granitic dykes of the Highlands one of 28,700 feet above those of Cornwall. But these pressures, as Mr. Hull remarks, depend in part upon the temperatures of consolidation. Although, on the whole, underlying all other rocks, granite is by no means to be limited to one, and that the remotest, age. It is known to have been formed at several geological epochs, from the Silurian down to at least the close of the Cretaceous period. The granites of Cornwall and Devon are instanced by Mr. Hull as being more recent than the Carboniferous period, those of the Alps of Savoy later than the Jurassic, and those of the Eastern Pyrenees than the age of the White Chalk. In these more recent instances it may be conceived to have been in part irrupted amongst strata occupying a higher zone, after undergoing fusion or metamorphic action in the interior of the earth's crust; in part also, as suggested by Professor Haughton, formed under fusion and immense pressure from sedimentary rocks such as grits and slates or shales. This careful enumeration of the granites, not only of the British Isles, but of Europe in general, Egypt, and North of the American Continent, makes clear in most cases the relation of these rocks to the stratified beds by which granite is bounded or enclosed, as well as the mineral constituents and other characteristics of each variety, and its adaptation to building purposes, by virtue of its texture, cohesion, and durability under different conditions of climate.

The historic instances which Mr. Hull has brought together illustrate the use of this material from the earliest times, and serve to throw much light upon the causes which affect its permanence. The syenites of Egypt, both red and grey, imperishable in their all but rainless climate, their age running back to four thousand years at least, have not been found when transported to more humid climates to retain anything like the same quality of durability. Such specimens exist in the monoliths of the Piazza of St. Mark, Venice, brought, it is said, from Tyre by the Doge Michielli in A.D. 1127; some of those of the portico of St. Peter's and the columns of the Pantheon at Rome, and the obelisk of Luxor in the Place de la Concorde, Paris. In all these, comparatively less humid as the climate is than our own, the progress of weathering may be observed to mark an approximation to the period of their exposure. Amongst ourselves we have only to look to the numerous examples of quite modern date which meet the eye for proof of the rapid disintegration to which this material, notwithstanding its hardness of texture and the polish of its surface, is subject in an atmosphere alternately wet and dry, especially when laden, as in London and the greater towns, with carbonic acid and other products of the consumption of coal. Nor does the durability of granite under the action of fire come up to the standard which Mr. Hull is disposed to assign to it in that important particular, if we may judge from the reports of the great fire at Boston. What most struck our builders and architects in that terrible catastrophe was the rapid way in which massive walls of granite crumbled and disintegrated, when limestones, sandstones, and brick stood comparatively scatheless, or even vitrified and became harder under the flame. For hydraulic works, such as docks and sea walls, for the most part permanently under water, and consisting of broad masses, granite is in its most appropriate place. In situations alternately exposed to air and water, or calling for broken or angular surfaces, its granular texture no less than its chemical composition renders it less fit. Under climatic conditions of much moisture in combination with sulphurous, hydrochloric, and other acids, limestones and dolomites are even more subject to disintegration; witness St. Mary Redcliffe, Bristol, Henry VII.'s Chapel, and the Houses of Parliament, Westminster. In the last-named instance much of the mischief was traceable to the want of care in passing none but the harder strata at the quarry—a fault, like many others in connexion with that much-abused pile, due, there is no doubt, to a senseless parsimony on the part of the higher authorities concerned. Upon the importance of care in this respect, as well as in regard to the proper bedding of the masonry, judicious remarks will be found in Mr. Hull's pages. For wet and smoky climates, such as our architects and builders have in the main to provide for, he insists upon the superiority of the siliceous sandstones, formed of grains of quartz cemented together by a siliceous or felspathic paste. Such rocks are widely distributed amongst the Lower Carboniferous formations of Scotland, the North of England and Wales, made up of the disintegrated gneissic and granitic beds which formed the land at the period of deposition. Being all but destitute of carbonate of lime or magnesia, they are able to defy the action of the acids which pervade the atmosphere of our manufacturing towns in those districts, and are found practically indestructible. There is, indeed, Mr. Hull remarks, in the natural distribution of building stones a noteworthy suitability to the wants of each district. Thus, amongst the mining and manufacturing regions of mid-Scotland, and the North and centre of England, siliceous substances are plentifully developed in the Carboniferous and Triassic formations, while the soft calcareous stones of the Jurassic or Oolitic series are distributed amongst the comparatively smokeless and less watery districts of the South and East. It is at the same time in the numerous exceptions to this rule that the necessity of a guide like the present is felt, in order to supplement what nature has left deficient. Of instances like these none can be thought more conspicuous than that of slate, to which our author devotes a prominent and instructive chapter. Few materials are so limited in the range of their distribution, while few are of such general or varied necessity for both building and other purposes. In the British Isles cleaved slates are confined to the Palæozoic formations, from the Cambrian down to the Carboniferous, inclusive. On the Continent it is otherwise. Both in the Pyrenees, the Alps, and Apennines strata belonging to the Mesozoic and even Tertiary periods present the phenomenon of cleavage, which is altogether independent of geological age. In a valuable synopsis Mr. Hull brings together the various slate formations of Great Britain and Ireland, with analyses of their chemical composition, strength, power of resistance to weather, and similar points of importance to the practical builder. The special attention of capitalists is directed to the Lower Silurian rocks north of Killary Harbour, and along the valleys of the Erriff and Doo Lough, County Mayo, where there are certain beds which, if opened up at sufficient depth, might be found to yield excellent pale grey or blueish roofing slate.

The class of marbles seems likely in this country to be limited in the main to purposes of ornament rather than of construction. Still, as an all-important accessory to the arts, it is not to be held less worthy of consideration than substances of more utilitarian scope. The marbles of Devonshire, Derbyshire, and Sussex, those of Anglesea, the Isle of Man, Scotland, and Ireland, various in their texture and their hues, stand fairly well in contrast with the variegated products of other European quarries. It is in the pure and lustrous blocks which supply the art of the sculptor that Italy and Greece still maintain the monopoly they have had since the rise of the finer forms of statuary. Mr. Hull has to speak of promising specimens having been obtained from Ardes, in Donegal, where the bands of limestone are found converted into crystalline marble in proximity with the granite. But it remains uncertain how far these beds may prove sufficiently homogeneous and pure for statuary purposes. From the reports which have reached us, we should be inclined to look with more hope to the partially explored beds of New Zealand. We do not perceive that our author's attention has been drawn to the mineral resources of our Southern dependencies at large, though he does not fail to do justice to the magnificent yield of malachite which has distinguished the Burra Burra mines. In Canada the crystalline limestones of the Laurentian series yield marbles pure enough for decorative purposes, but not for statuary. They are quarried at Calumet Falls, on the Ottawa, Portage du Fort, and Fitzroy Harbour. Large and fine blocks are obtained from Elzevir and Marmora, and the statuary marble from Burrie would, we are assured, scarcely yield to that from Carrara, were it not marred by occasional grains and specks of tremolite and quartz. White marble is met with among the metamorphic schists of Five Islands, Nova Scotia, together with coloured serpentinous varieties. In the United States, where marble is so plentiful as to form a common building material, there is little that is not more or less striated or clouded. The finest statuary marble spoken of by Mr. Hull comes from Stoneham, but seldom in blocks of any size. Among the themes of most recent interest to petrographers and lovers of art, the most prominent perhaps is the introduction, or rather rediscovery, of the quarries in Algeria whence the "onyx marble" was supplied of old for the decoration of Rome and Carthage. Since the reopening by M. Delmonte in 1849 of the tertiary limestones of Blad Recam ("marble country"), near the ravine of Oued-Abdallah, much attention has been directed to this beautiful material. In combination with bronze it has been made to tell with striking effect as an imitation of drapery. Translucent, faintly white, and iridescent, of uniform texture and stalagmitic in origin, it has taken its name from its superficial resemblance to onyx, which of course belongs to a different petrologic group. Nor, though long and widely known as Oriental alabaster, is it to be confounded with the alabaster of the present day. Oriental

alabaster, so called, was also largely derived from Egypt, and was employed in works of art, though not in statuary, both in ancient and early mediæval times. Its mamillated structure, characteristic of filtration and percolation, combines with its arrangement in folds or wavy parallel bands of amber or yellowish brown to indicate its stalagmitic origin. Besides numerous smaller examples of the antique, chiefly mortuary jars or canopi from Egypt, large and splendid cinerary urns of this material are in the museums of Florence and Naples, the finest of all being that in the Vatican Museum at Rome, measuring nine feet in height and four in depth. Writing in the interests of science or practical utility rather than of the fine arts, it is not Mr. Hull's business to go deeply or systematically into the history or the æsthetic value of the works which have come down to us in stone, although he has given us a number of interesting facts relating to the material in use at various stages of art, or characteristic of different schools. As a matter of taste many might demur to his speaking somewhat slightingly of the Venus de' Medici, and giving apparently to the Farnese Bull the palm of supremacy in sculpture. Of his classical attainments we should be very sorry to judge from his allusion to the conquering goddess of the Acropolis as Athene "Nyke," nor have we much to say from a literary point of view of the grace or polish of his style. Keeping in sight, however, the scope and object of his book, we have to thank him for a great deal of valuable information, collected with great industry and pervaded with much accurate research and special knowledge.

NEVER AGAIN.*

WE might very easily have thrown this novel aside without serious attention. Its outward form is by no means attractive. The illustrations with which it is very needlessly provided are amongst the worst which it has ever been our fortune to encounter. Moreover we must confess that the names which meet us upon turning over the pages are calculated to prejudice us against the story. It may be said by severely rational critics that the system of nomenclature adopted by a novelist is of little importance for artistic purposes. And yet when we find that some of the leading performers in the little drama are called Hamilton Boggs, Whoppers, Stichen, and Ledgeral, we are affected by an involuntary prejudice. We are inclined to jump to the conclusion that the story is one more imitation of Dickens; and though Dickens was a man of genius, it is so much easier to catch his mannerisms than to acquire some of his really excellent qualities, that we are not prepossessed in favour of any one marked by these external signs of his school. However, we have read *Never Again* in spite of these unfavourable symptoms; and we may freely confess that we have been encouraged to undertake the task by the very emphatic praises of some of our contemporaries. One literary journal informs us that it will in future remember the name of Dr. Mayo "as that of one of the wittiest of modern writers, and greatest of living masters of human character." This is tolerably strong language; but it is confirmed by another journal of equal critical pretensions. Though the writer in this case gives a rather more modest estimate of *Never Again*, he nevertheless compares Dr. Mayo to Dickens and to Thackeray, and seems to give him in some respects the preference. *Never Again*, we are assured, is "a perfect mine of good sayings," and though everybody says good things, nobody speaks out of character. Such glowing eulogies, which have naturally been quoted in various advertisements, warned us that we might be receiving an angel unawares. Dr. Mayo, it seems, is the author of a book called *Kaloolah*, of which we have been hitherto ignorant, and we suspect that our ignorance is shared by most of our readers. As it appeared some twenty-five years ago, Dr. Mayo's claim to be a second Thackeray or Dickens should by this time have either been confirmed or confuted; and as we were scarcely conscious that any such author had ever existed, we might naturally assume that he was after all no literary phœnix. On seeing such enthusiastic praises, however, we called to mind the cases of Keats and Wordsworth, and remembered that critics are after all fallible, especially when they allow themselves to be prejudiced by first appearances. Accordingly we have read *Never Again* conscientiously from the first page to the last; we have endeavoured to make up our minds as to its merits with the most conscientious fairness, and we are prepared to deliver our verdict. As, however, we do not entirely agree with the very warm eulogies which we have quoted, we think it only fair to mention the fact that other critics are more enthusiastic than ourselves, and, to enable our readers to judge for themselves, we will quote one of the passages which have been singled out for our admiration. Here is a fragment intended to show us that Dr. Mayo possesses "the most astounding acquaintance with all the ins and outs of human meanness":—

> Yes, Stichen was dead! and he had the finest funeral that had been seen in a long time. The sententious sexton of Grace Church was heard to say that it was a pity he hadn't lasted till Lent. Such an agreeable funeral would have come in so nicely to relieve the gloom of the season when balls and weddings are prohibited by—by fashion, he was going to say, but he caught himself in time and said—the Church. Stichen's funeral was magnificent—so magnificent that the idea occurred to more than one of the pall-bearers (all men of mark, nothing under a bank-president) that it was a pity he couldn't come to, just for a few minutes, to enjoy it.

Does this passage show any remarkable powers of delicate sarcasm, or is it on the whole rather commonplace? As selected by a fervent admirer, we presume that it must be taken for a fine specimen of Dr. Mayo's humour. We shall not undertake the responsibility of pronouncing upon it; though we may venture to say that, in our opinion, there are some better passages to be found in the recognized masters of English humour. However, we admit that it is scarcely fair to judge of a clever writer by a fragment separated from its context, even though the person who selects it be one of the discriminating few. And therefore we will proceed to give our own view of Dr. Mayo's merits, simply observing that other persons see more in him than we can profess to do: and further admitting that we are fallible.

In the first place, then, we will venture to say that extravagant eulogies seem to us to be very unfair to Dr. Mayo. The puff direct is not so desirable as some young authors may fancy. When one has been assured that the last new poet is equal to Shakspeare, and the last new novelist to Thackeray or Balzac, we are apt to be cruelly disappointed on turning to the writer himself, and to avenge ourselves upon him by lowering him as much beneath his true level as others have exalted him above it. We protest involuntarily against very daring claims upon our enthusiasm. And, glad as we should be to assure our readers that a Transatlantic novelist had arisen worthy to provide a successor to *Middlemarch*, we are a little amazed by the sudden shock of discovering that the new performer does not attract us so forcibly as we had been led to expect. We will, however, try to dismiss these irrelevant considerations, and to judge *Never Again* as we should have judged it had we been the first discoverers of this American treasure. And when we have thus placed ourselves at the proper point of view, we have no hesitation in saying that *Never Again* is really a meritorious book: though not, in our opinion, destined to set the Thames or the Hudson on fire. We have no fault to find with Dr. Mayo except that he does not reach that standard by which the extravagant eulogies lavished upon his writings might lead us to measure him. He is not a first-rate performer; and indeed we should be disposed to say that he is not second-rate; but *Never Again*, though rather long, and though much of it is decidedly tiresome, may be read with interest by any one who does not expect too much. Dr. Mayo himself appears to be a perfectly modest as well as a clever writer; he does not, even by implication, put forward any exorbitant claims; but he tries to follow the footsteps of Balzac and Thackeray in describing the society of New York instead of the society of Paris or London. He has not, we may say at once, the faculty which is characteristic of the higher class of novelists. There is no character of much originality or excellence throughout his pages. There is a tolerably long list of persons very fairly described, and, we dare say, very respectable portraits of existing people in New York. But none of them show the unmistakable mark of genius even in a moderate degree. The lover is one of the lads, more common at the present day in America than in England, who come up from a country district with the conventional half-crown in their pockets. Luther Lansdale—that is his name—luckily falls on his legs by an introduction to a rich merchant in New York, and ends, after due vicissitudes, by becoming the merchant's partner and marrying his beautiful daughter. But Luther, though introduced with a considerable flourish of trumpets and intended to excite our warmest sympathies, is in no respect a remarkable young man. In fact, he is simply the conventional lover of ordinary novels, and the object of his admiration is like unto him. There is a captain of a merchantman who lards his conversation to an intolerable extent with nautical metaphors, and an editor of a New York newspaper who has an equally marked propensity for execrable puns, and a fashionable young man who talks the slang of New York society; and we must confess that the hero, and the captain, and the editor, and the man of fashion all seem to us to be remarkably alike at bottom. There is a little more of special idiosyncrasy about the merchant who is tempted to cheat in order to save himself from ruin, and the eccentric old gentleman who discourses upon queer theories borrowed from Darwin and Herbert Spencer; and yet the most striking peculiarity of all these persons is their strong family resemblance.

Perhaps this is due to the American character. Philosophers of the Tocqueville kind are always assuring us that in democracies men become more and more like each other; and the novelist certainly has a difficulty in discovering those materials for picturesque description which are provided by the varieties of European society. It is equally true, indeed, that there is a good deal of human nature on both sides of the Atlantic. Dr. Mayo finds as much opportunity for satirizing snobbishness amongst his countrymen as we could find in England. American snobbishness, indeed, has a character of its own, arising from the peculiar conditions of the country. Popular orators here talk a good deal of nonsense about American equality; and, on the other hand, English describers of American manners are apt to express a very unreasonable surprise on discovering that unworthy subserviency to fashion and struggling for social eminence are common even in a democratic Republic. The truth of the matter is obvious enough. An American gentleman is as much revolted by coarseness and ignorance as his English parallel. Unluckily or luckily, as the case may be, he cannot defend himself by the same means. There are not such distinct lines of social demarcation as with us. Poor men, as Dr. Mayo shows us by example, are constantly

---

* *Never Again.* By W. J. Mayo, M.D. London: Sampson Low & Co. 1873.

making fortunes, and rich men sinking to be poor. There is an ascending and a descending current which tends to obliterate all fixed lines. It therefore becomes necessary for the more refined classes to form a tacit combination for keeping the less refined at arm's length. They cannot rely upon those obvious signs of hereditary cultivation which divide the different strata of society here; but they are all the more anxious to keep up a distinction by less openly avowed means. The raw Irishman in America treads upon the toes of the descendants of the Pilgrim Fathers or the old Dutch families on railways and at hotels; his vote is as good as his neighbour's; and the road to political distinctions is equally open to him. And, for that reason, there is formed an inner circle of the "upper ten thousand," who are the more jealous of their privilege because it does not rest upon any palpable or generally recognized distinctions. The struggle to get within this hallowed circle is as keen and as favourable to the development of snobbishness as the struggle to acquire rank and social consideration in England. And thus Dr. Mayo can transfer to American conditions the same fund of satire which passes current in England with very little change of language. It is true that the difference in the conditions of the struggle produces many differences upon which we have not space to dwell. The absence of any counterbalancing power to mere wealth makes a great difference, though we may admit the truth of Dr. Mayo's doctrine, that Americans do not worship the dollar more devotedly than Englishmen worship pounds or Frenchmen francs. To trace out the various modifications of the social forces would be a task altogether beyond our space or our means of information. It is enough for the present to say that Dr. Mayo has abundant opportunities for exercising his talent for satire, and that he avails himself of them with no inconsiderable skill. The general tone of these parts of his book—and to us they are by far the most interesting—reminds us more of Dr. Holmes than of any other writer. He has the same kind of ingenious humour, and kindliness mixed with keen sarcasm, and though his language has at times a decidedly foreign flavour, we can enjoy his wit, and generally sympathize with his sentiments. Altogether we find him an agreeable companion; and we could quote a good many passages which show much wit and keen powers of observation. We part with him in a very good temper, and can fairly commend him to our readers, though we do not feel convinced that he deserves all the fine things which have been said about him by our contemporaries.

SIR JOHN BURGOYNE.*

(Second Notice.)

IT would be difficult to exaggerate the interest of Burgoyne's letters from the Crimea. Remembering the senseless clamour against veterans which grew out of the disasters of the Russian war, we remark with satisfaction that whatever was at once prudent and vigorous in the operations of the Allies was either suggested or adopted by Burgoyne. Disapproving the expedition, he did more perhaps than any other man to render its success possible. He could not understand "on what sound principle it is undertaken," and he considered it "the most desperate enterprise ever attempted." He would not have been sorry if circumstances had caused it to be deferred until the next year. He dined with Marshal St. Arnaud, who said that there were *des difficultés*, but "we were gone too far; the enterprise was pressed upon us in a manner not to be resisted with honour." This is probably as true an account as could be given. "Put yourself," said the French Marshal, "in mine and Lord Raglan's position." This, as Burgoyne remarks, was the pith of the whole argument. The landing-place was chosen in accordance with Burgoyne's opinion. The battle of the Alma was fought, and "We are all," writes Burgoyne, "in high spirits at present appearances." The moral effect of the victory was worth twenty thousand additional troops. Burgoyne suggested and urged the flank march to Balaclava. Lord Raglan desired him to discuss it with Marshal St. Arnaud. All the French staff officers, including Colonel Trochu and General Bizot of the Engineers, opposed this project, and brought forward one trivial objection after another, until the Marshal broke up the conference by saying that he thought General Burgoyne was right, that difficulties which appeared great at a distance often disappeared on nearer approach, and that it was *un mouvement en avant*, and he would undertake it. The army marched accordingly, and Burgoyne thus records his first impression of Sebastopol as seen from the south. "The fortifications," he says, "are poor concerns, but the situation is favourable for the enemy. They have an immense force of artillery mounted, and a large garrison." But he hoped the operations would not take long. Two days later he says that the heavy guns and siege equipments have been landed, and dragged eight or ten miles over a mountain. This, and having to work on rocky ground, causes much delay, and he fears it will be a week yet before the walls and works will be so battered as to justify an assault. "Still, I feel that it is, as now circumstanced, an enterprise in which we ought to succeed." He adds that before that letter arrives in England he trusts there will be some decisive work. But a week later he is less hopeful. "We are in difficulties," he says, "that I do not see what prospect we have of getting out of." The place was found to be surrounded by detached loopholed towers, crenelled walls, and earth bastions, with a good many guns mounted, and a tolerable garrison. The allies began and had continued landing and getting up siege guns and train, but meanwhile the enemy had introduced large reinforcements, had increased their works diligently, and mounted an enormous number of guns. The British army was immensely reduced by cholera. The infantry were not now more than 16,000 or 17,000 men, and no reinforcements to look to. Next day he writes that "it would have been unjustifiable to have stormed Sebastopol when we first arrived before it, and obstacles against our taking it increase every hour." Burgoyne adds that he was much elated by the success at the Alma, and its immediate results, and is grievously disappointed at this bad prospect after it. The object is to ruin the defences as much as possible, and then he sees nothing for it but a desperate assault.

On the 17th of October the batteries opened. The explosion of a magazine paralysed the French fire, and postponed the contemplated attack. Burgoyne regards the naval attack as "a little interlude," and rejoices that no very serious injury happened to the men-of-war. He was much disgusted amid these anxieties to receive newspapers from England, "complacently deciding that Sebastopol is taken." There will be, he says, no flinching, but the task is desperate, and "in case of failure our greatest enemies, I have no doubt, will be in London." All the English engineers considered that the place would have been assaulted on the 17th of October if the French fire had not been silenced. The fire of the Russian works in front of the English batteries was completely reduced. Four days later Burgoyne writes, "I am ready to try a storm, having good trust in our troops." Indeed the army which had fought at the Alma, and which was soon to fight at Inkermann, as long as there was any of it left, was capable of great things. Much of the glory of this army belonged to the men themselves, and much to their officers. They not only gained battles, but, as Burgoyne says, they took "excessive liberties" in the trenches, having as much to do as the French with less than half the force. He thought the French were over-cautious, and too much bound by system for pressing circumstances. "It is before them that the work is to do. We cannot urge them to do what they may deem rash." A letter of Sir George Cathcart of the 2nd November conveys to Burgoyne his idea of how to assault the Redan. "Thus," he says, "some of us will get in, and if well backed up will stay there." He anticipated the honour of giving the *coup de grâce* with his division; but three days later the battle of Inkermann was fought, and Sir George Cathcart was killed. Burgoyne calls this battle "a very heavy affair." The advantages of the success were not so great or striking as if the Allies could have advanced upon the Russians and driven them forcibly from their base of attack. "This we could not do, and the French did not seem to think it prudent." The history of this campaign brings forcibly to the mind the saying that the English infantry is the best in the world, but there is very little of it. With another ten thousand soldiers of the same quality Sebastopol would have been taken, and the sufferings of the winter would have been avoided. The loss at Inkermann was nearly one half of the force engaged. "This is a test at least of the exertions of the army; the leaders will, I presume, be the victims."

But Burgoyne did not forget that this slender force had triumphed. Almost from the day of the victory he urged that it should be improved. He was invariably opposed to submitting to be bullied by the field army of the Russians, who, as he reasonably contended, must be worse off than the Allies. On November 10 he writes, "We are hanging back in too defensive a line of conduct," and he wants to mix up offensive measures with defence. Two days later he writes "that he is anxiously urging the propriety of forward movements, and endeavouring to show that they are the safest." He thinks that many liberties may be taken with an enemy when he is under the depression of a defeat; but at all events it is not a time for submitting to delays and inconveniences by using extreme caution. He considers that many advantages have been lost by over-caution and not pressing harder on the enemy. Much of this has been owing to the want of one sentiment in the management of a combined force. The Allies might have been a shade more enterprising, but he has never desired any assault on the place which would have been an act of desperation. He complains of the "moral timidity" of some officers in the ordinary proceedings of a campaign, and contrasts it with their heroic courage when absolutely in action. "The Russians, by sheer show and bullying, confine us," he says, "to inconvenient limits. Our people do not understand where their strength lies, and to what extent we can enforce what we desire." In consequence of remarks in this strain by Burgoyne, a commanding officer was induced to turn away a set of Russian *tirailleurs* who had lodged themselves within two or three hundred yards of his advanced trench, and had been very troublesome. This was done in a very handsome and creditable way, and would tend, he hoped, to check the bullying impudence of the enemy. Throughout the winter he held the same encouraging language, and never ceased to urge that the Allies had come into the Crimea to besiege Sebastopol, and not to be themselves besieged. Our people, he says, and the French also, conjure up bugbears and report impossibilities that the enemy are doing against us. "It is astonishing how little they all calculate what the enemy can attempt, and what, if we know our relative strength and circumstances, they dare not think of." This mistake was being made

* *Life and Correspondence of Field Marshal Sir John Burgoyne, Bart.* By his Son-in-Law, Lieut.-Col. the Hon. George Wrottesley, Royal Engineers. 2 vols. Vol. II. London: Bentley & Son. 1873.

in the elaborate works on the right to prepare against a similar attack to that of the 5th November, without adverting to the infinitely superior position which the army now held. Again, he writes, "We hang back with all sorts of defensive measures, when time and circumstances require that we should push on." A combined army is not worth three-quarters of the force under absolute command. "Three-quarters of our united force, all British, could do wonders, while our little addition is to the French of far greater value than their numerical strength, for the same number of French could not do half what we do." He thinks that people at home will fear that the army is in danger of being overwhelmed; "we are, however, not so bad as that yet; nor, I confidently trust, ever will be." It will appear presently that when the British public and Parliament became seriously alarmed, and appointed some new Ministers to carry on the war with vigour, their first act was to recall Burgoyne. Yet to him, more perhaps than to any other man, it was due that the army held its ground during the winter. His large experience of war enabled him to put the true value upon circumstances which caused alarm to those who imperfectly understood them. "I find," he says, "a few congenial spirits who encourage the lodgments in advance that I and the engineers desire." To use a favourite phrase of Napier's, he knew war well. Without assuming that he was always right in the advice he gave, it is manifest that he looked upon the position in the only way that was likely to bring the army honourably out of it. The time for caution was before the army embarked for the Crimea, but after landing there the boldest course short of rashness was the best.

It was indeed hardly possible to expect too much from the army which fought at Inkermann, but that army became terribly reduced. On the 23rd December, when the excitement in England was at its height, and the *Times* was just making its vehement demand for "Head," we find Burgoyne quietly proposing a plan for attacking the Russians in the field. The favourite phrase of Marshal St. Arnaud, "un mouvement en avant," would have been eminently applicable to this plan, which, however, from want of transport and inefficiency of artillery horses, could not be at that time attempted. But not the less do we admire the spirit of the plan. "It would be taking the initiative, and showing a spirit of enterprise, which always creates a useful moral effect. It would be giving the law instead of receiving it, as we have been now for too long a time compelled to do." It was for those who were in mass near their resources to take the offensive against those who might be far from theirs. The weather and the condition of the country must affect the enemy in the field much more than the Allies. This was a precious time for the Allies to seek some opportunity of profiting by their advantage. When the frosts should set in, the Russians would be able to receive reinforcements and supplies; but without allowing time for them to do so, Burgoyne would advance and drive them to a distance from Sebastopol, and compel them to leave the fortress to its fate. This programme looks infinitely more attractive as well as more promising than the endless work of trenches and batteries which the French generals preferred. At the same time Burgoyne urged incessantly that the true point of attack of the fortress was the Malakoff Tower. The controversy between him and the French engineers on this point was only terminated by the arrival of General Niel, who, being sent by the French Emperor to examine the state and prospects of the siege, declared in favour of Burgoyne's view. The attack on the Malakoff Tower was then commenced and vigorously prosecuted, and finally succeeded, with the decisive effect which Burgoyne had anticipated. Burgoyne wishes that he had the old Light Division of the Peninsula to do the outpost duty—"The Russians would be handsomely punished for excursions they sometimes make." But as regards fighting he does full justice to the Crimean army. Our allies, he says, have frankly acknowledged, with respect to specific feats, that their men could not have done them. "Our cool, steady advance, in contradistinction to their own rapid, impatient way of making an attack, is what they cannot understand." But the French in midwinter were singing and gay, whereas for months Burgoyne had not witnessed so much as a smile on the face of a British soldier, who, although suffering and serious, makes no complaint. Burgoyne deprecated the foreign enlistment, as likely to lower the reputation of the army of which he thus wrote. If we had had foreigners at Inkermann, he says, we should never have gained the credit we did there. "They will never rise to our scale, but we may drop to theirs."

The British nation became aware during the last years of Burgoyne's life that he had been very ill treated by their rulers during the Crimean war. His recall by Lord Panmure was not only unreasonable, but almost absurd. We could not compete with our allies in number of soldiers, but they felt the superiority of our officers alike in technical skill and in moral force. Burgoyne has described the French officers whom he accompanied in seeking a landing-place on the Crimean coast as "thinking very badly of the whole concern, and proposing one wild or temporizing scheme after another, which we had to refute." Lord Raglan, Sir George Brown, and Sir John Burgoyne were all veterans of the Spanish war, and they were able, in spite of their disapproval of the invasion, to propose and carry a plan of operations which made success possible. Lord Hardinge, after reading certain papers upon this war, remarked that "the comments of Sir John Burgoyne had more vigorous good sense in them than the vaunted science of our French allies." Sir Harry Jones, who became head of the British Engineers after Burgoyne's departure, wrote to him on September 15, 1855, that "Sebastopol was taken by the point he always indicated, the Malakoff." He goes on to say that the British attack on the Great Redan succeeded; but, after having established ourselves in force, the men could not be got to advance, and subsequently fell back, after losing about two thousand killed and wounded—a very large proportion of officers. It is remarkable that Burgoyne's disinclination to assault the Redan was justified by the failure of two attempts upon it after he returned home. It may be suspected that if Burgoyne had been present he would have employed a larger force in these attempts. He would not have forgotten his own experience of the value of "heavy columns" at Badajoz and St. Sebastian. It is remarkable that Sir George Brown, writing from his retirement to Sir John Burgoyne on the second failure at the Redan, says that "he shall always regret that Simpson did not slip another division at the work and capture it at any price." This was the spirit in which such a campaign should have been carried on, and we cannot say that the successors of Burgoyne and Brown improved either upon their intellectual or moral fitness for the task of capturing Sebastopol.

EASTLAKE'S HINTS ON HOUSEHOLD TASTE.*

BY some accident or other the first edition of this most useful and opportune book escaped our notice. We are very glad to make acquaintance with it now in its enlarged and revised form. Its great value seems to us to consist in its simplicity and persuasiveness. Mr. Eastlake expresses what are the general, not to say universal, convictions among all who have paid much attention to questions of practical art. There is no novelty in his remarks or criticisms. They are neither original nor very brilliant. But they are well timed, and very suggestive and instructive. He has, moreover, a broad artistic sympathy and plenty of good humour. Many readers who would be repelled by an array of stiff principles and a code of austere canons of taste will be carried along, almost without perceiving it, by Mr. Eastlake's unpretending and familiar disquisitions. It is much the same with æsthetical as with theological propagandism. He makes the most converts who is learning himself while he teaches others, and who makes his disciples feel that every fresh step is, as it were, a new discovery made by them and by himself in common. In this pleasant and informal way Mr. Eastlake goes in detail through most of the minor branches of decorative art, pointing out what seems to him to be wrong and bad, and suggesting what in each case would be more in accordance with truthful and natural principles of design.

A handsome book, well printed and with attractive illustrations, and such that, open it where you will, you light upon some interesting discussion on common matters of taste that affect every one who lives in a house or who uses furniture, is sure to command a large audience. It is purposely meant for the "general public." Those who know anything of art would scarcely be satisfied with the slight and informal manner in which the subject is treated. They would require something more systematic, and in particular would wish for pictorial representations of all the forms and ornaments condemned or commended. It is not easy to express shapes by words only. We confess that we ourselves desiderate many more woodcuts. Nothing is so effective in art-teaching as the appeal to the eye. Indeed it is the eye alone which can judge ultimately of those forms of art with which this volume is concerned. We doubt whether any single book ever did so much to reform public taste and opinion in the matter of architectural style and the decencies of church arrangement as Pugin's famous *Contrasts*. On one side that exquisite draughtsman gave us a Gothic interior in a complete ideal "restoration"; on the other, you saw what that vision of beauty had become by centuries of neglect and ignorance, or of wilfully injurious treatment. Why did not Mr. Eastlake "contrast" in this way all the details of modern furniture? He would have converted hundreds by his pictures, while his letter-press will not persuade more than tens. As it is, the illustrations of the volume before us are arbitrarily chosen and of very unequal merit. Sometimes, we fear, undue prominence has been given to the modern designs of such artists or manufacturers as may have offered woodcuts to the work. For some of these, we fancy, are already familiar to us. At other times we confess that, on looking at the cuts, we are not always sure whether we are meant to approve of them or to execrate them. Occasionally we are even inclined to think that the author's own designs, though they avoid many faults of design, have new defects of their own. But, after all, as we have said, this inequality of the book is perhaps one of its most useful features.

Mr. Eastlake, by his own personal predilections, would seem to be a strict mediævalist. His own designs at least are always of the straitest sect of the school. We observe, however, that in his preface he disclaims any exclusive allegiance to the Gothic style, and only argues for the true spirit and sound principles of ancient design. Here he is quite right. In household furniture especially the types of design may allowably vary according to individual taste, so long as the construction is honest and good and appropriate, and the details are fitting and truthful. The eminent French architect and *littérateur* M. Viollet Le Duc has expressed

* *Hints on Household Taste in Furniture, Upholstery, and other Details.* By Charles L. Eastlake, F.R.I.B.A. Third Edition, revised. London: Longmans & Co. 1872.

the true law that ought to regulate design in those branches of art so admirably in the sentence chosen by Mr. Eastlake for his motto that we venture to transcribe it:—

Parmi ces splendeurs à bon marché, ce faux goût et ce faux luxe, nous sommes ravis quand nous trouvons un banc bien fait, une bonne table de chêne portant d'aplomb sur ses pieds, des rideaux de laine qui paraissent être en laine, une chaise commode et solide, une armoire qui s'ouvre et se ferme bien, nous montrant en dedans et en dehors le bois dont elle est fait, et laissant deviner son usage. Espérons un retour vers ces idées saines, et qu'en fait de mobilier, comme en toute chose, on en viendra à comprendre que le goût consiste à paraître ce que l'on est, et non ce que l'on voudrait être.

Incongruity and falsity of design, dull mechanical uniformity of detail, in which every individual touch of the living artist is destroyed, and general degeneracy of manufacture, are the patent faults of almost all the common furniture and implements which we are obliged to use in daily life. Is there any remedy? We are not so hopeful on this point as we once were. At any rate, the only possible remedy consists in the wider spread of true artistic feeling and culture. It is easier to supply at a low price a vulgar article, multiplied *ad infinitum* by machinery, than to produce on moderate terms objects of art-workmanship in each of which skilled design and the skilled labour of the individual artificer are to be combined. And therefore our manufacturers, with a few honourable exceptions, compete with one another in mere cheapness of production of the meanest types of form and ornament. When our art teachers have created a demand for better workmanship, we do not doubt that it will be supplied. Meanwhile there has been no serious attempt, except in ceramic manufacture, to produce articles of good design and execution at such low prices as shall compete with the base patterns which have present possession of the markets. Mr. Eastlake gives many most telling instances of the prohibitive cost of any improvement whatever upon the common types. He tells one story in which an upholsterer asked considerably less for a chair overburdened with a quantity of expensive ornamentation than for the same design before any ornament at all was added. Undoubtedly the vicious principle which deliberately tries to promote trade, as it is called, by producing articles which are not strong enough to last and must soon be replaced, has much to do with many of the absurd changes of fashion in matters of household furniture and decoration. We believe that in this matter our tradesmen and artisans would find that the old proverb is true, and that honesty is the best policy in the long run.

We now propose to give some idea of Mr. Eastlake's method of treating his subject. After a few introductory remarks, he proceeds to discuss in a general way our street architecture; and then, going indoors, he examines in detail the several rooms of an average modern house, with their fittings and furniture. He ends with supplemental chapters on Crockery, Table Glass, Dress, Jewelry, Plate, and Cutlery. The entrance-hall first invites notice. Our author here inveighs with almost needless warmth against *graining*. Surely graining is in its way a nearly harmless sham: for it makes no pretence to be oak. Its practical advantage, in a London house, is its cleanness and brightness, and its fitness for varnishing. Preserve us from the muddy stains—chocolate or umber—with which so many of our mediæval architects defile the deal which they use for cheapness sake! After all, what is wanted in a smoky town is light and cleanliness; and this is not given, so far as our experience goes, by the flatted colours affected by the extreme mediævalists. Common sense is, as we have always argued, at the bottom of really good taste. We observe that Mr. Eastlake pleads for the retention of the knocker on the hall-door of a London house. There is a school which advocates its supersession by the bell, as carrying the sound away from the living-rooms to the offices where the servants live whose duty it is to open the door and who say, let knockers be reserved for fashionable doors behind which a hall-porter lurks in readiness to open them at a moment's notice. On the other hand, the knocker has a practical advantage over the mechanical, monotonous bell which appeals to the master and the mistress of the smallest no less than of the largest household. One great object of the premonitory noise is to afford the *visitee* full opportunity to be in or out of the way as he judges most convenient, and, in concert with an experienced ear, the knocker seldom fails in this duty. But the bell is totally deficient in tact, and gives the same stereotyped tingle to the dun, the bore, the tax-gatherer, and the friend of one's bosom. Among the few articles of modern furniture which have preserved traditionally a good method of design and construction, Mr. Eastlake singles out the bucket, the bedroom towel-horse, and the common "Windsor" chair. Here we quite agree with him. We do not remember that he points out, in his remarks on chairs, the extreme folly of abandoning cross-pieces and stays to strengthen the legs. Nothing can be more absurd than a chair with its four legs unconnected by any tie or bond. The leverage on each leg is excessive; and the chair must break sooner or later unless it is unnecessarily unwieldy. No one can deny the picturesqueness or the sound construction of the old carved high-backed chairs and sofas such as Mr. Eastlake figures from Cothele and Knole. But can he seriously advise us to revive them? We are luxurious enough to think that a modern easy-chair is really an improvement on the furniture of our forefathers. One has only to go into Filmer's, or Howard's, and see the rows of easy-chairs of fifty or sixty different patterns, and try to choose the one which shall best suit oneself, to find out how much one person's idea of comfort differs from another's, and how much may be done, and has been done, to provide comfort and ease. It would seem to be a safe conclusion that in the good old times all were uncomfortable alike. Surely, too, the stiff old high-backed sofas of the seventeenth century are equally unsuitable for reproduction. Is there any more pathetic sight than to see the very aged poor, or perhaps some consumptive patient, living, and at last dying, in chairs in which they cannot even recline? Why, there are few London parishes, we suppose, in which easy-chairs are not kept to be lent out to the sick. We argue then that the easy-chair is a true comfort; and it is preposterous to wish to bring back an article of furniture like a Jacobean chair, that has been fairly improved off the face of our homes. Mr. Eastlake ought rather to have shown us how to lend to our modern chairs and sofas better and more artistic forms. Agreeing with our author as we do in most of his criticisms, we naturally select for notice points in which we differ from him. Among these is the telescope dining-table. We confess we think this modern invention a most ingenious and useful device, only second to the expanding circular table. Provided that it is well made, it really provides us with a firm solid table, of which we can, with very little trouble, vary the size according to the numbers who are to be seated at it. Now, not to speak of the smallness of London rooms, is it not desirable to be able to dine four, or six, or eight persons, as it may be, all within reach and hearing of each other? Mr. Eastlake positively recommends us to bring back the long Jacobean tables such as remain in college halls and in some old farmhouses. In the first place, an average-sized dining-room would be always blocked up with such a table; and, in the next, a party, unless the whole table were occupied, would always seem scattered and incomplete. Next we must dissent from Mr. Eastlake's own design for a library bookcase. There seem to us three conspicuous faults in it; cupboards with clumsy doors which leave useless and objectionable corners behind them; shelves of the same depth for quartos, octavos, and duodecimos; and, worst of all, a prodigious waste of space in the cornice with a meaningless, unapproachable cupboard in the pedimented roof. Once more we object to chimney-pieces so high that it is difficult to reach them; and we contend that mirrors are a beautiful and fitting ornament of living-rooms; and we protest against bed-hangings under any form whatever. But these after all are very unimportant matters. If they provoke discussion and suggest thought, a great deal has been gained. When people begin to argue on matters of taste, it will go hard but that sound principles will win their way with the more intelligent.

We heartily commend then Mr. Eastlake's genial and suggestive book to those who are about to marry or to furnish. They need not agree with all he says; but they will learn from him many a true and useful lesson. And the mere cultivation of their taste in the homely matters of household furniture and ornamentation will be the source of much pure and healthy enjoyment.

RECENT EDITIONS OF THE ODYSSEY.*

IN explanation of the fragmentary appearance of his commentary on the narrative of Odysseus, Professor Mayor informs us that "many schools are this year employed upon the Ninth Book of the Odyssey"; and this is tantamount to an assurance that a goodly number of young heads are in a fair way to make acquaintance with what is in fact the fertile prototype of all fairy tales. *Felices ter, et amplius!* are those who enter for the first time this land of adventure and marvel—who enter it too with abundance of light for their path, and not, as in their fathers' school days, with the bare farthing rushlight of a text and a lexicon. Those were the days when our Orbilii thought that bricks should be made without straw, as far as interpretation and illustration of Greek authors was concerned; and the results are patent in a number of hard-headed elderly gentlemen with whom it is an article of faith that there is not, and never was, any sense in a Greek Chorus. But all this is changed by such guides and lively companions as those whose helps to the interpretation of the Odyssey we purpose to notice in the present article. Each in its measure elucidates the text, and disencumbers the language of Homer of all possible perplexities; all are more or less helpful in making the study of the adventures of Odysseus a pleasure instead of a task. Mr. Merry's work indeed confines itself more rigidly than the others to the explanation of Homer's text, and, following for the most part the commentaries of Nitzsch and Crusius, is often serviceable in the unriddling of a stiff passage by neat "construes" and clear statements of the syntax. Professor Mayor is conspicuous here, as in his Juvenal, for the masses of annotatory lore which he piles up in illustration of any given Homeric topic or custom. Dr. Hayman aims at the most comprehensive undertaking of the three, and into his wider limits throws abundant matter to bear upon the critical and explanatory study of the Odyssey, and to illustrate the old-world bard from stores of modern literature, at the same time that he keeps in view throughout his commentary the vexed question of authorship. On this subject we have already had something to say. At present it will be our pur-

---

* *The Odyssey of Homer.* Edited, with Marginal References, various Readings, Notes, and Appendices, by Henry Hayman, D.D. Vol. II. Books VII.—XII. London: Nutt. 1873.

The Narrative of Odysseus. Od. IX.—XII. With a Commentary. By John E. B. Mayor, M.A., Fellow of St. John's, Cambridge. London: Macmillan & Co. 1873.

Homer. Odyssey. Books I.—XII. By W. W. Merry, Fellow and Lecturer of Lincoln College, Oxford. Clarendon Press. 1870.

pose rather to consider the merits of the commentary itself, and this by comparison with those of two able compeers.

The common ground trodden by all three editors is not indeed large, for Mr. Mayor begins with the Ninth Book and breaks off in his commentary at the 266th line of the Tenth. But even within that space there is field for comparison and contrast; and though we have an affection for Mr. Mayor's occasional piles of welcome lore, we are bound to say that it is Dr. Hayman who at every turn supplies us with parallels from subsequent fable and fairy-tale. Thus in the Ninth Book (274-80) he suggests the comparison of Sindbad's encounter with the black cannibal giant, and his mode of dealing with him, with the story of Odysseus and the Cyclops. In the Tenth he points out—what is beyond Mr. Mayor's limit—the manifest obligation of Milton to Homer's episode about Circe, not only for the plot, but for the incidents and details, of his *Comus*. Where Hermes meets our hero, as he goes over rock and through thicket towards Circe's palace, his address beginning—

πῆ δ' αὖτ', ὦ δύστηνε, δι' ἄκριας ἔρχεαι οἷος (281)

finds an echo in the speech of the attendant spirit, "Alas, good venturous youth," &c., in *Comus*; and our scholar poet made allegoric use of the Homeric "moly" for the small unsightly root which is the counterspell in the same masque. No one can exaggerate the value of such parallels, especially in these days when inducement is needed to entice the mass of young readers into the delightful but neglected paths of their own classical poetry. We must, however, not forget that oftentimes Mr. Mayor also reflects this sort of light upon the poet he is annotating; and the upholders of Homer's antiquity have to thank him for a casual extract from Thirlwall's "Greece," designed to illustrate the expression ἠέλιος μετενίσσετο βουλυτόνδε, which traces up to a primitive and simple age the description of times of the day by the civil occupations belonging to them. When names came to be given, they would supersede such archaic descriptions. Anent the Lotophagi, and the flowery food which was their diet, he contributes very curious information on ix. 93, and cites Polybius, Pliny, Theophrastus, and Shaw's "Travels" in reference to the leaves, flower, fruit, and taste of the lotus. It is shown by Dr. Hayman that ancient commentators were divided between its identity with the medlar fruit and its likeness to the lotus or Lily of the Nile, whilst the testimony of Herodotus points to a fruit like that of the mastick tree. The authorities referred to by Dr. Hayman tend to fix the African coast near the Syrtes as the country of these lotus-eaters. At ix. 209 both Mr. Mayor and Dr. Hayman contribute a fund of information respecting the proportions of water to wine in the cups of the heroes. The Ismarian wine was celebrated and potent; and Dr. Hayman suggests that the poet must have meant to exaggerate its strength by making it affect the Cyclops as it did, after it had been so drowned in water. The water appears to have been customarily poured in first, and, however the passage is translated, it was one part wine to twenty parts water. Dr. Hayman says, and his references bear out his statement, that ἀνά in the passage in question implies "proportion," not mere affusion. "He would pour one cupful of wine *to* twenty measures of water." Mr. Mayor, on the other hand, denies that ἀνά is distributive, and translates it by our preposition "on." Mr. Merry supports the former and more probable view. Here and there the Doctor and the Professor, approaching a passage from a different point of view, club their information in a very pleasant picnic fashion; as where, on the name which Odysseus gives himself to the Cyclops, Οὖτις ἐμοί γ' ὄνομα, and the Cyclops' promise to eat Outis last, by way of a guest-gift, Dr. Hayman recalls the burlesque or parody in the *Wasps* of Aristophanes, where Philocleon borrows a leaf or two from the book of Odysseus. But Mr. Mayor is more recondite when he quotes the later Greek proverb of "the Gift of the Cyclops" to imply "a graceless boon." It is preserved by Lucian and Plutarch; and Gregory Nazianzen says that "Julian had done him and Basil 'a Cyclopean honour' in reserving them as the last victims of persecution." Another of these erudite and pleasant notes of Mr. Mayor is on the bag containing the adverse winds (ἀσκὸν βοός, x. 14) presented by Æolus to Odysseus. After ransacking antiquity for notices of wind-bags and wind-layers, he comes to the Norwegian witches who unloose at will the storms out of their sack-prison, the South-African rain-makers, and the witches of Lapland, who sell knotted strings, of which the first untying produces a moderate breeze, the second a gale, the third a tempest.

The difference between Dr. Hayman and Mr. Mayor as purveyors of this kind of collateral information is that with the former it is reserved chiefly for the purpose of making his author consistent with himself or with his assumed date and age. On the 110th line of Book IX., where the spontaneous crops of the Cyclops are said to include πυροὶ καὶ ῥιβαί, he shows that this need not be a poetical embellishment, and from the development of something very like our oat from the *avena fatua* by cultivation he argues for a wild wheat and barley existing in Homer's day. "Ten distinct cereals (five wheats and two barleys among them) were cultivated in the Stone period by the inmates of the pile-houses in the Swiss lakes; and oats are said to have come under culture later in the Bronze period." The pertinence of this observation is not diminished by the fact that the annotator is indebted for it to Mr. Darwin on "Variation of Animals." Again in ix. 345 the drinking cup wherein Odysseus presents the potent wine to the Cyclops is called κισσύβιον, and a suspicion of comparative modernness might attach to a word which in Theocritus (i. 27) means, as its apparent derivation would independently lead us to conclude, "a cup with ivy carved on it." The scholiasts give both senses—the cup of ivy wood and the cup with ivy wrought on it; but Dr. Hayman, holding as post-Homeric the connexion of ivy with Dionysus, which gave currency to each, seeks the root of the word in some form of κίβισις or κίβωτὸς, a *receptacle* generally. "From this by metathesis (κιβύσιον, κισσύβιον) the word probably comes, in the sense of a rustic cup." The statement of Cato, *de Re Rustica*, "that an ivy wood vessel would not contain wine," makes for the argument that κισσύβιον, as a wine-cup, has no connexion with κισσός.

In other places Dr. Hayman's research throws curious light on phrases and expressions, and subserves incidentally his vindicatory purpose. In reference to the people spoken of in the speech of Teiresias to Odysseus, "who do not know of a sea, nor mix salt with their food" (xi. 123)—expressions intended to denote outer barbarism—he gathers that in Homer's day the sea was the source of that condiment, and presses Varro and Sallust into his service to confirm this note of the poem's antiquity by evidence that rock-salt is an advance in civilization upon sea-salt. Upon the words ἰτέαι ὠλεσίκαρποι, "the fruitless willows withering fast," which in x. 510 are given by Circe as an index to the Grove of Persephone, he accumulates various authority for the incompetence of this tree to ripen its seed and fruit. In a note to his learned and exhaustive appendix on the νεκυία—which may be regarded as a well-considered examination of the soundness of that book as a whole and as to its parts—he cites from Stobæus a passage of Porphyry to the effect that the willow sheds its fruit before maturity, and that mixed in wine this fruit produces barrenness. The commentator surmises that some such tradition may lurk under the "wearing the willow" and the "sing willow, willow, willow," of forsaken damsels.

In the Tenth Book (vv. 82-4) occurs a somewhat difficult passage, more fully explained by Mr. Mayor and Mr. Merry than by Dr. Hayman. It relates to Odysseus's account of his reaching Læstrygonia, where, as he shows, the courses of night and day well nigh touch. The poet's way of expressing this is as follows:—

ὅθι ποιμένα ποιμὴν
ἠπύει εἰσελάων, ὁ δέ τ' ἐξελάων ὑπακούει·
ἔνθα κ' ἄϋπνος ἀνὴρ δοιὼς ἐξήρατο μισθούς,
τὸν μὲν βουκολίων, τὸν δ' ἀργυφα μῆλα νομεύων.

Mr. Mayor translates, "Where the shepherd as he drives in his flock calls to the oxherd, and he, as he drives out, replies; there a sleepless man would have earned double wages, the one by tending oxen, the other by pasturing sheep"; and he explains the passage of the drivers coming within earshot of one another in the short nights, as the sheep are driven home late and the oxen afield early. "This," says Mr. Mayor, "suggests to Homer the merry thought that, if the shepherd could do without sleep, he might at once take charge of the herd of oxen." "Day dawned," explains Mr. Merry, "almost the instant that night fell. The twenty-four hours of day and night are roughly divided into two halves of twelve hours' daylight. A man who could do without sleep could spend half this time in feeding sheep, and the other half in minding cattle, and so get double wages for double work. He would drive home the first batch at nightfall, and be ready to take out the second batch directly daylight reappeared, which happened so immediately that the outward-bound and homeward-bound herdsmen actually passed one another in the gateway." It is added by both annotators that the poet is only contemplating the nearness of dawn to night. Though Dr. Hayman does not go so fully into all this, yet his note upon the passage is fraught with equal interest, for he adduces in illustration of it Hesiod's account (*Theog.* 748, &c.) of the coincidence of the going forth and coming in of night and day, and points out the resemblances and the discrepancies of either passage. In a number of minor points of interpetation we have come upon a difference between the annotators we have been examining, and in most instances we find ourselves constrained to adopt Dr. Hayman's view. He passes over indeed the words σηησάμενοι δ' ἐμάχοντο μάχην (ix. 54), where Mr. Merry wrongly joins σηησάμενοι with μάχην, whilst Mr. Mayor, more correctly, takes ἐμάχοντο μάχην as an instance of the cognate accusative σηησάμενοι being, *i.q.*, "acio instructâ"; but, in ix. 214, ὅσσατο θυμὸς ἀγήνωρ ἀνδρ' ἐπελεύσεσθαι—ἄγριον, he disagrees with Mr. Mayor's notion that ἄνδρα is the subject, and takes it for the object—*i.e.*, "that it would overcome the wild man." At 239 of the same book it is simpler with him to let alone the reading βαθείης ἐντοθεν αὐλῆς, and to take αὐλῆς of the cavern itself, than with Mr. Mayor and Mr. Merry to adopt Rumpf's conjecture, ἐντοθεν. All three render differently the words χεῖρ' ἀνιμασάμενος (ix. 302). Dr. Hayman's interpretation, "Feeling for it with the hand," is the interpretation which approves itself to our acceptance; and in ix. 398, where the Cyclops flings from him the stake (ἔρριψεν ἀπὸ ὃο χερσὶν ἀλύων), we cannot doubt that χερσὶν belongs to ἔρριψεν, and that Mr. Mayor is mistaken in joining it with ἀλύων ("raging with his hands"). There is probability in Dr. Hayman's connexion of ἀλύων (a word expressing mental aberration) with "hallu-cinor." In 540 of the same book—

καὶ δ' ἔβαλεν μετόπισθε νεὸς κυανοπρῴροιο
τυτθὸν, ἐδείσησεν δ'—

all three concur in the comma after τυτθόν. Dr. Hayman alone gives the *coup de grâce* to the reading τυτθὸν ἐδείσησεν δ'—"*and failed by a little*"—with a convincing reason. "To join it with

ἰδώμην would be a violence to the particle ἔτ, which is later than second in a Homeric sentence only when a proposition and its case, or an article and noun, precedes."

In x. 32 we are persuaded that the sense requires Dr. Hayman's interpretation of πόδα νηὸς as equivalent to πηδάλιον in the sailor's vernacular, though the other annotators adhere to the commoner but less apt sense of the "foot-ropes." In v. 548 of the same book he derives ἀωτεῖτε, in spite of Buttman, from ἄωτος, and happily translates it "Indulge in fleecy sleep," or "sleep as soft as wool." One more instance, and we have done with comparisons. In the Eleventh Book, v. 366, Alcinous is represented as distinguishing Odysseus from the class of promiscuous impostors:—

ψεύδεά τ' ἀρτύνοντας ὅθεν κε τις οὐδὲ ἴδοιτο.

This line Mr. Merry interprets, "fashioning falsehoods out of things which one can never see with one's eyes." ὅθεν here would be equivalent to ἐκ τοιούτων, ἅ. But much better than this, or than the same annotator's other alternative, is Dr. Hayman's resort to an ellipse of ἔνθεν with ἀρτύνοντας before ὅθεν—*i.e.*, "trumping up falsehoods no one can even tell from what source." In truth, the greater number of his interpretations are recommended by simplicity and likelihood; guiding points which influence his acceptance or rejection of such plausible various readings as ἐκπαγλεῖν, which, according to Eustathius, precisians proposed to read for ἐκταμεῖν in ix. 320, because brute force was more natural than the use of edge-tools to a monster like the Cyclops. This emendation loses its plausibility when, in the same book, art and constructive skill are expressly predicated of the implements and utensils of the Cyclops' dairy. It is, we think, rightly suspected by Dr. Hayman of being "a scholar's afterthought."

Of these three helps to the pleasant reading of the Odyssey—"the most delightful," as Mr. Merry puts it, "of all Greek books"—we rate highest Dr. Hayman's work, as being the most thorough, exhaustive, and available for every need. When complete, his Odyssey will be an English edition of a classic calculated to command respect. The two lesser works with which we have compared it do not profess so high an aim, perhaps; still they exhibit scholarship and ability in their particular ways. But Dr. Hayman's is a work which no scholar should omit to add to his library. The proofs of erudition which it exhibits in the preface, notes, and appendices ought to represent henceforth to candid and qualified minds the very highest and most convincing form of testimonial.

THE BURGOMASTER'S FAMILY.*

THIS book is in one sense a novelty. Seldom does a Dutch work of fiction put on an English dress and present itself for our criticism, and the public is by no means familiar with the tales which find acceptance in Holland. From time to time, indeed, a translation does make its appearance, and some years ago a collection of sketches, some serious and some humorous, which depicted the life of a pastor in the Netherlands, and was called the *Manse of Maasland*, was received with a certain degree of favour, principally on account of the unfamiliar nature of the scenes and the life described. That book was, however, rather an autobiography than a novel; the author, though writing anonymously, described the place in which he himself ministered and the occurrences in which he bore a part; moreover, he treated more of Church affairs than of the proceedings of ordinary life, and looked at things very much from one point of view. On meeting with the *Burgomaster's Family*, therefore, we naturally sat down to it with pleasurable anticipations, hoping for once to get rid of conventionalities and stereotyped characters, and to find some racy descriptions of Dutch life which, though they might perhaps now and then savour of coarseness, would nevertheless form a pleasing variety in the dreary round of novel-reading to which the critic is condemned.

Great then was our disappointment on finding a story singularly devoid of local colouring. If, instead of Burgomaster Welters, the master of the house had been called Alderman Tomkinson; had but one letter been appended to the cognomen of Lieutenant Smit; and had the names of other personages and places been slightly changed; the tale might have perfectly passed for an English one. It really contains scarcely an incident which might not have occurred in any of our country towns in middle-class society; so that it is difficult to understand what the translator means when he talks of "the faithful delineation of Dutch character and Dutch family life, which can only be clearly discerned by Dutch critics." Sir John Shaw Lefevre has, however, in his neat little introduction to Madame Van Walrée's story, provided us with a critic's compendium, pointing out all the subjects in it which he thinks worthy of admiration, so that if after reading it we should chance to go astray our error will be unpardonable. Nevertheless we prefer to find out for ourselves the merits and defects of any work; and we may venture to assert that high praise at the outset is injudicious on the part of an editor, and more likely to be prejudicial than favourable to his bantling. We cannot on this occasion complain, as we have often before found it needful to do, of being left in the dark as to the prefix which should accompany the name of the authoress; for we are favoured with an account of the birth, parentage, and education of the writer; nay, the fact of her having had five brothers, of whom three died in infancy and one subsequently, is duly chronicled, although it is not easy to see what these pieces of information have to do with the lady's capability for producing a good novel. "Christine Müller"—for under this *nom de plume* the *Burgomaster's Family* was brought out—is not wanting in a sense of humour, as she shows in her portrait of Mr. Welters, whose rule of life it was "to let God's water flow over God's field," and who had one idol on whose altar he would, in case of necessity, have sacrificed everything belonging to him. But the notion that every country symbolized itself to the good Burgomaster by the special delicacies which it could furnish for the table, and that the idea of the birth of a child came before his mind in the form of a christening dinner, and a marriage in the form of a *déjeûner*, is by no means new. Indeed the *Burgomaster's Family* is not in any respect new, either as to the plot, of which there is very little, or the types of character represented; but these latter have the merit of being well sustained and naturally described. There is also a quaintness in the mode of writing, quite distinct from affectation, which the translator has done well to preserve, while yet he has put the story into very readable English.

It would not be correct to say of this book, as one can do in a few rare cases, that it does not read like a translation, but we may acknowledge at least that it reads like a good translation. There are three principal female characters in the tale, and of these Emmy, the Burgomaster's daughter, is the chief; although we can hardly call her a heroine, for she not only does nothing heroic, but she is a girl whose quiet existence has hardly any events in it of marked interest except the affliction which befalls her lover, and who does not possess the one virtue which might have been expected from her gentle steady character—namely, constancy. She is told that her lover has married in a foreign land, and, without any proof of the fact being adduced, except that he had been seen coming out of a theatre with a lady on his arm, she believes that he is false, and is content to marry for a home a widower cousin. Heroine No. 2 is certainly not commonplace; she is a young lady who had been born and brought up in Java, but who, with her father, Mr. Arnold, resides in a mysterious manner near Dilburg, and who, having by her beauty withdrawn Otto Welters from his allegiance to his betrothed, Mary Van Stein (another quiet damsel, who, however, has plenty of dignity and force of character), marries him, to their joint misery. Otto, having succeeded in penetrating into Beckley, the jealously secluded residence of the Arnolds, being employed by the master of the mansion in putting forward certain claims to a very large estate to which he believed himself to be the heir, sees Celine Arnold "in a long black silk dress, without a trace of crinoline . . . . her beautiful hair in picturesque confusion, half hanging down behind and half fastened up by a little gold dagger with a diamond handle," and, notwithstanding his engagement to Mary, falls violently in love with her. The young lady is both unconventional and uncompromising; she smokes a cigar after luncheon with her father and his guest; and when she is asked to play something, refuses peremptorily, on the ground that she is not inclined for music; further adding, "And what I have once said that I won't do, I don't do." Yet neither these evidences of the possession of a strong will, nor the exposition, on a later occasion, by the fair one of her religious creed, or rather want of a creed, have any weight with Otto, although he is represented as being quite a model young man; and he succeeds in persuading Celine to become his wife, though, as is only natural, he is sadly tormented almost immediately after their union by the breaches of Dilburg etiquette which his lovely bride insists upon committing. Celine's passionate love for her dog Cæsar, her wild rides upon her white horse Schimmel, and the fury with which she meets the smallest opposition from her husband, are traits of her almost savage nature; she is a graceful, half-tamed tigress, who resents as imprisonment the smallest restraint even from the hand whose caresses she occasionally endures, and who chafes against the decencies of society as so many inflictions specially devised against herself. But this Arnold family can hardly be regarded as a bit of Dutch portraiture; Javanese might have settled anywhere else as well as in Holland, and their modes of proceeding are as unlike those of their steady neighbours as it is possible to conceive. The tragic end of the wilful beauty is scarcely natural, although very touching; and it is a great mistake to give us no means of knowing what was the future of the faithful Cæsar after his mistress had left him for ever. The most interesting people in the book are decidedly the Eversberg family; Eversberg himself, however, is too sketchy and slightly drawn, no hint being given of the nature of the phantom which is dimly seen occasionally appearing by his side. His dignified wife, still beautiful, although the mother of a grown-up son, is a loveable character, and so is Bruno, the frank young sailor, so loyal in his devotion to the playfellow of his childhood. The arrest of Eversberg during the ball at his own house is managed with some dramatic power, and Bruno's subsequent behaviour is in keeping with his character; but that Emmy should lose confidence in her lover because his letters had been suppressed, and should so willingly accept cousin Siword, and that without telling him of her engagement when she was so near doing so, appears an improbable arrangement altogether. The revenge of William de Graaff for her refusal of his affections is, on the contrary, just such a piece of mean spite as a low creature of this kind would be likely to perpetrate. The joint household of De Graaff and Welters is a tolerably good picture of a family

* *The Burgomaster's Family; or, Weal and Woe in a Little World.* By Christine Müller. Translated from the Dutch by Sir John Shaw Lefevre, K.C.B., F.R.S. London: Longmans & Co.

which is governed by an unacknowledged head in the person of vulgar and disagreeable woman, with whose own children she seems to be no greater favourite than with her step-children, who behave to her in an irreproachable manner. The old Burgomaster is a glutton, and nothing more.

Had the author been writing for the English public, she would probably have made great capital of the peculiar features of her country, and have brought out in an especial manner the oddities of her compatriots; but she has not apparently had any such end in view, and probably never expected that her tale would attain to the honour of translation. She has therefore merely dealt with society as she herself saw it; and this is in itself a recommendation, as it is too much the custom with authors in search of entertaining material wherewith to fill their volumes, to attempt to describe social circles of which they can have no personal knowledge—circles either above or below, or otherwise totally removed from, the one of which they themselves form a part. Such attempts necessarily result in failure. If our recommendation were attended to, every novel-writer would place his *dramatis personæ* in circumstances which he himself could thoroughly understand, so that he would be fully competent to show the various influences which mould his characters, and the motives which guide them, without having to introduce what is manifestly forced and unreal. Madame Van Walrée might, however, have made a great deal more of Eversberg; in him she had the means of producing a grand character study; in the hands of George Eliot, for instance, what would he not have become! A man who for twenty-seven years lived prosperous, respected, and wealthy, having for a wife the loveliest woman in Dilburg who, sprung from an old and proud family, had not disdained to marry the rising manufacturer—this man, revered and loved, whose munificence was proverbial, with a son who on reaching man's estate was everything that fond parents could desire—yet all this time having a gnawing grief at his heart, remorse and fear of discovery never ceasing to torment him in the midst of all his successes. How much more artistic than the sudden revelation of his crime would have been the glimpses which might have been given of the unfortunate man's life of concealed misery! A fine opportunity for subtle analysis was here thrown away. Instead of that letter to his son in which Eversberg after his imprisonment reveals to him the fatal secret, and explains not only the causes which led to his crime, but the sufferings which for seven-and-twenty years he has had to endure on account of it, why was not the reader allowed to gain from the study of his character, at all events, a suspicion of the dark fate hanging over him? There is an inconsistency, too, in the character of Joseph Müller, the son of the murdered man, who is represented at first as heartless, base, and dishonourable, so as quite to justify his father in disowning and disinheriting him, whereas on his return to Dilburg to denounce the murder of his father he appears as a kindly, generous man, actuated by no spirit of revenge, and considerate to an unusual degree for the wife and son of the man who had supplanted him. On the whole, however, the *Burgomaster's Family* is a readable story of what it is the fashion to style the "quiet" type, although it is a mistake to represent it as being in any especial manner a portraiture of Dutch life. It will probably have many readers, and deserves them far more than the greater number of novels which pass through our hands.

AMERICAN LITERATURE.

MR. FROTHINGHAM'S "Rise of the Republic"* is, to a great extent, like most American histories, a political pamphlet under the form of history. Up to 1860 these works were mainly written against Great Britain, and their special object was to justify and glorify the revolt of the Colonies, as being the first assertion of the supreme right of a people to choose its own Government, and to "cashier" that Government if it ceased to correspond with popular wishes and feelings, without considering whether there were any adequate grounds of complaint, or recognizing the right of self-defence, which must be asserted by every authority that is to fulfil any useful purpose in the world. Their business was to uphold the right of revolution, not to magnify the grievances which had led to its exercise; and some of them, therefore, stated not unfairly the real nature of the comparatively trifling encroachments which were employed by the leaders of the revolutionary party to excite agitation in the first instance, and afterwards to ripen agitation into rebellion. On the other hand, their argument required that the Revolution should be represented as the spontaneous act of an entire and unanimous people, and the so-called Tories or Royalists as an insignificant and factious minority. Since 1860 the tone of this class of writers has changed. The right of revolution is one which they can no longer afford to acknowledge, since it was so distinctly and so unanswerably invoked against the Union. The late Horace Greeley alone of Northern Republican writers and politicians remained constant to his old faith; and he only contrived to reconcile his theoretical creed with the practical requirements of party allegiance and Federal patriotism by denying the plainest facts of the case, and disputing the reality of the Secessionist majority in the teeth of the evidence afforded by a four years' war in which, a few districts on the frontier excepted, the whole South united as one man in a desperate resistance to the Federal Government. The present object of such writers as Mr. Frothingham is to vindicate the American Revolution on grounds which will not justify the secession of the Southern States; and accordingly the basis of argument must be changed, and the case of the "patriots" rested not on the will of the people, but on the offences of the King and Parliament of the mother-country. Consequently, as the former mode of reasoning brought out one side of the truth—the extreme triviality of the injuries inflicted on the Colonies by Imperial legislation, especially when compared with such violations of the fundamental constitution as the agitation against slavery in the States, the attempts to exclude new Slave States from the Union, and the forcible nullification of Federal law by the action of State authority in the North, not to speak of such outrages as the invasion of Virginia by John Brown, endorsed and applauded by Massachusetts and her Puritan sister—so the new argument shows the other side of the truth; namely, the extreme reluctance with which the majority of the American people were induced to sever themselves from the Empire, and the adroitness of the steps by which they were led, unknowing to what their action tended, whither the revolutionary chiefs meant to proceed. The valuable part of Mr. Frothingham's work is the account of the gradual development of the colonial theory of self-government by which he prepares the ground for the discussion of the disputes which culminated in war, and the history of the internal counsels of the extreme party, chiefly consisting of the Puritans of Massachusetts and the neighbouring colonies, during the agitation which preceded the outbreak. His view is altogether partial and one-sided; but he nevertheless does more justice than he himself is aware of to the other side, as when he acknowledges that the War of Secession has taught him and his countrymen to understand the tenacity with which the rulers and people of a great Empire resist its dismemberment. He admits that after the quarrel had once taken the shape of open resistance to Imperial authority, George III. and his Ministers only represented and gave effect to the national will—nay, only acted up to the necessities and duties of their position in resisting to the uttermost the severance from the Crown of its most precious foreign possessions. With the war in its military aspect he deals very slightly indeed, his subject being the political development of the "Republic of the United States," and not the general history of the struggle by which that development was rendered possible. He also gives some interesting particulars of the debates of the Convention which framed the Union of 1787; though, like other writers of his party, he is compelled to twist and distort that history not a little in order to make it square with the novel doctrine which denies the sovereignty of the States. It is not a little remarkable that the war of 1861 caused the triumph of the theory of Federal supremacy and national unity of which Hamilton and the party that was signally defeated in 1787 were the unsuccessful exponents; as also that the idea of the sacredness of the national territory and the primary obligation to maintain the integrity of the Empire for which Great Britain fought in 1777 is now appreciated and asserted in America, just as the predominant school of British statesmen are beginning to abandon it.

Only those who are sufficiently acquainted with the author's writings to know how thoroughly his mind is possessed by one sole idea, and how he finds evidence of its truth in every department of human thought and experience, in every fact and fallacy with which his memory is stored, would expect to find in a treatise on the Unity of Law*, even though that treatise bears the name of H. C. Carey, a vigorous, elaborate, and passionate glorification of Protection. One would think that the recent experience of America must have staggered the most ardent Protectionist unconnected with those trades which are enabled by the existing tariff to levy an enormous tax for their own benefit on the industry, commerce, and consumption of their countrymen. But Mr. Carey has no misgivings; nay, more, he cites the history of the last fifty years, under the varying course of a fiscal policy now rigidly protective, now tending towards Free-trade, as proof that the prosperity of America depends not on population or capital, not on her vast agricultural resources and her unlimited area of unappropriated land, not on her energy and her intelligence, her gold and silver, not even on her political institutions, but primarily and chiefly on her protective policy. He contrives to press all writers and all facts into his service, and cites them, we must say, with an apparently profound indifference to the authority of the one or the authenticity of the other. He forces Mr. Mill to testify against Free-trade, and arrays by the side of Parliamentary Blue Books, as of equal value in evidence, some of the most frantic declamations of Mr. Ernest Jones. He fills page after page with a demonstration that the vast amount of mechanical power brought into the service of mankind during the last half-century has been productive of no benefit except to a few millowners and merchants; that it is no advantage to the millions to get calico at sixpence a yard rather than at half-a-crown; that British manufacturers have lowered wages in England, and utterly ruined and degraded "the highly civilized people of India." In short, the factories and ironworks of this country, with all their human and mechanical productive powers, are employed in a perpetual warfare against the comfort, well-being, wealth, and

* *The Rise of the Republic of the United States.* By Richard Frothingham. Boston: Brown & Co. London: Trübner & Co. 1872.

* *The Unity of Law, as exhibited in the Relations of Physical, Social, Mental, and Moral Science.* By H. C. Carey. Philadelphia: Henry Cairey Baird. London: Trübner & Co. 1872.

happiness of our own and all other peoples. If there were any truth in his reasonings, all the world ought to combine to lay waste England north of the Trent, so that not a ton of rails, not a bale of calico, not a square yard of carpet, should again be exported from that accursed region. The unconscious extravagance of Mr. Carey's tirade, the utter nonsense of the conclusions supported by such a mass of well-arranged figures and vigorous argument, the perfect unconsciousness of absurdity when he conducts his own cause to an absolute *reductio ad absurdum*, makes this book, to any one who is fairly acquainted with commercial statistics and industrial facts, a most amusing study. To people as ignorant of facts outside their own range as most Americans are, it might be dangerous from the confident energy of its misstatements and the plausibility of its fallacies; but to an English reader of practical experience or sound education it is, in its way, an intellectual treat of no ordinary kind. Such a specimen of great mental powers rendered worse than useless by the mere absence of that common sense which instinctively discerns the palpably absurd is not seen twice in the literary monstrosities of half a generation.

Mr. Coues's "Key to American Birds,"* somewhat curiously entitled, is a very large and handsome volume, beautifully printed and profusely illustrated with small woodcuts, containing a technical description of every bird found, so far as the author knows, on the Western continent north of the southern frontier of the Union. It is too brief and too purely scientific to have any interest for the general reader; but as a work of reference it seems to have no ordinary value. Every bird's head is given, and the feet of most, with plates illustrating the comparative size and shape of beaks and limbs in different families. Altogether it seems to us that such a volume was worthy of the one thing necessary to render it perfect of its kind; a coloured series of plates showing the form, plumage, and colouring of representatives of every important genus, and thus constituting it in reality a key to the study of American ornithology.

Dr. Rufus Anderson, late Foreign Secretary of the American Mission Board, publishes in two small octavo volumes a *History of the Missions to the Oriental Churches*†, *i.e.* of those whose special business was not to convert unbelievers to Christianity, but to convince Greeks, Armenians, and Nestorians of the superior excellence of its Protestant, and especially of its Congregational, forms. That they did some good we have no doubt; that they committed many indiscretions and provoked much enmity we can venture to affirm without any special evidence; that they incurred for their converts, and now and then for themselves, much danger and suffering, their history assures us, and the thing is probable enough. We find in these volumes, as in too many other missionary records, the same fatal vice which has been at the root of so many failures—the reliance on an arm of flesh in the background. So long as the presence of a missionary always ends in the intervention of a Consul, and the freedom to preach is vindicated, not by martyrdom, but by gunboats, princes and governments will be hostile to missionaries; and in the end those Powers which are called upon to protect or avenge the emissaries of truth will claim the right to regulate the conduct and prescribe the limits of enterprises whose ultimate consequences involve them.

Mr. Murphy's volume on the Mineral Resources of the Territory of Utah‡ contains all that we generally find in the official Reports on such subjects, arranged in a somewhat similar manner, and calculated to be interesting rather to intending speculators or emigrants than to general readers. Somewhat curiously, Mr. Murphy appends to his handbook of mining facts and statistics a brief and fragmentary history of the Mormon community and its earlier fortunes, neutral, if not friendly in tone, and such as might have been written by a Mormon anxious not to offend violently the prejudices of Gentile readers, or formally declare his belief in "the Prophet."

It is not our custom to notice new editions; but there are cases in which these may acquire, from additions or corrections, from new circumstances or new views, all the interest and much of the novelty of recent publication. There are also, among American authors, many instances in which the second or third edition is the first that practically finds its way into English hands. Mr. C. H. Bristed's *Five Years at an English University*§ derives some part of its interest from the very fact that it is an old book. In any case it would have its value, and would attract the attention of University men, and of all who care for University education, as an elaborate account of Cambridge from an American point of view. We have in it a criticism of English schools and colleges, and of the higher education of English youth, by a thoughtful and painstaking observer trained in a different system, and brought up under a discipline and course of teaching very distinct from our own, who had afterwards the opportunity of making himself almost as fully acquainted with ours as we are ourselves; a description of English University life and studies, as they appeared to a stranger who went through the course of the one and shared the other; a comparison between the English and American systems by one who had ample experience of both. But in the fact that the author's experience relates to a bygone period—that nearly twenty years have elapsed since he was a Cambridge undergraduate, during which time changes have taken place that have made the University system of his day to a great extent a thing of the past—lies a new attraction for those who are too young to know for themselves what Cambridge and Trinity were before the days of Whewell, and ere yet reform had invaded their precincts. Mr. Bristed's work is, in short, not only a valuable essay on the English scheme of higher education, on our public school and college life, and on the course of studies of one of our two great centres of learning, as compared with the school and college systems of America, but a vivid and minute picture of Cambridge as it was twenty years back such as only an American could have given. A foreigner would hardly have been able to enter so thoroughly into every particular of the life around him, to understand so quickly and to share so heartily the ideas, the amusements, the work and the play of English students. An Englishman would take much more for granted, and, finding far less novelty in all around him, would have given a far less lively and less complete account of the scenes through which he passed. Mr. Bristed came to them with all a stranger's freshness, and almost all a native's capacity of understanding them, and accordingly he has drawn not merely a vigorous and striking outline, but a minute and highly finished picture, of the whole which is as interesting to Englishmen as it can be to Americans. His remarks on the comparative quality and character of American and English education are candid, thoughtful, and interesting. He is struck with the superior standard of scholarship, both classical and mathematical, in this country; but he justly observes that the earlier age at which American youths pass through college, and their greater eagerness to enter the practical and remunerative business of life, necessarily curtails their studies, and impairs the completeness of their education; while the same spirit leads them to extend the area and limit the depth of their reading, and to be satisfied with a smattering of modern languages, for instance, available for conversation and travel, where an English student, if he learnt the languages at all, might be able to read them with fluency and even write them correctly long before he acquired the power of speaking them or understanding them when spoken. His description of Cambridge examinations and regulations, and of the course of a student's reading and "coaching," is the fullest we remember to have seen, and is a valuable record of a system now materially changed even in some of its vital features.

The "Old Landmarks of Boston"* belongs to a class of books very common, and, we must suppose, somewhat popular, in America—books written to glorify the past or present, the architecture and history, the scenery and climate, the commercial or political importance of particular cities. The absence of a capital gives to every large town a sort of independent position and political life; none need acknowledge in any rival that sort of superiority which a metropolis possesses as the centre of national life. Each American city, as of old each principal German city, is complete in itself; is itself a centre of life and thought, not a mere appendage to some central capital. And thus each American is proud of his own State and city, and takes a patriotic pleasure in its exaltation. Boston in particular has a greater and more characteristic history than any other Transatlantic city possesses; its "landmarks," though to English notions almost too recent in their origin to deserve the name of antiquities, are yet connected with striking incidents, picturesque traditions, and memories of great events and distinguished men; and though few English readers would have patience to peruse this volume from beginning to end, a visitor to or resident in Boston would find it useful as a work of reference, and interesting as enabling him to attach ideas to all the principal sites and buildings, and giving him lively associations well worth cherishing with the chief objects he will pass in his daily walks.

Back-Log Studies† is the quaint and thoroughly American title of a little rambling volume of what an English author might call Fireside Conversations and Reflections; reveries, dreams, and talks over a wood fire, and now and then suggested by it. Many of the former are original and curious; the conversations are lively, and wholly free from that tendency to tediousness which belongs to most printed dialogues; nearly every other sentence of each interlocutor introducing either a pointed expression of an old notion, or an amusing paradox, or some other contribution to the life of social intercourse; still the whole is but a collection of unconsidered trifles, very few of which are likely to be remembered when the book is laid aside.

Of original works of fiction we find this month only three that demand notice. If it were not that Bret Harte's last volume, *Mrs.*

---

* *Key to North American Birds.* Containing a concise Account of every species of Living and Fossil Bird at present known on the continent north of the Mexican and United States Boundary. Illustrated by six steel plates and upwards of two hundred and fifty woodcuts. By Elliott Coues, Assistant-Surgeon, United States Army. Salem: Naturalists' Agency. New York: Dodd & Mead. Boston: Estes & Lauriat. London: Trübner & Co. 1872.

† *Republication of the Gospel in Bible Lands: History of the Missions of the American Board of Commissioners for Foreign Missions to the Oriental Churches.* By Rufus Anderson, D.D., LL.D., late Foreign Secretary of the Board. 2 vols. Vol. I. Boston: Congregational Publishing Society. London: Trübner & Co. 1872.

‡ *The Mineral Resources of the Territory of Utah.* With Mining Statistics and Maps. By John R. Murphy. San Francisco: Bancroft & Co. Salt Lake City: James Dwyer. London: Trübner & Co. 1872.

§ *Five Years in an English University.* By Charles Astor Bristed, late Foundation Scholar of Trinity College, Cambridge. Third Edition. Revised by the Author. New York: Putnam & Co. London: Sampson Low & Co. 1873.

* *Old Landmarks and Historic Personages of Boston.* By Samuel Adams Drake. Profusely illustrated. Boston: Osgood & Co. London: Trübner & Co. 1873.

† *Back-Log Studies.* By Charles Dudley Warner, Author of "Saunterings," "My Summer in a Garden," &c. With twenty-one Illustrations by Augustus Hoppin. Boston: Osgood & Co. London: Trübner & Co. 1873.

Skaggs's Husbands * (a title derived from the first and wildest of the stories and fragments that compose it), must surely by this time be familiar to all our readers, we might think it necessary to describe it at some length. As it is, it will surely be enough to say that here is a new work of Bret Harte's. *Coupon Bonds* † (also entitled from its first story) consists of a variety of tales, rather longer than Mr. Harte's, and also generally of the humorous type. Finally, *How Will It End?* ‡ by J. C. Heywood, is a native romance, whose scene is laid in the midst of the Civil War, and which finds its *dénouement* in connexion with the surrender of the Confederate armies.

* *Mrs. Skaggs's Husbands; and other Sketches.* By Bret Harte. Boston: Osgood & Co. London: Trübner & Co. 1873.

ISSUE of SIX PER CENT. DEBENTURES of the CREDIT FONCIER of ENGLAND, Limited.

Directors.

FRANCIS MOWATT, Esq., *Chairman.*
ALEXANDER FAIRLIE CUNINGHAM, Esq.
General Sir GEORGE HALFOUR, K.C.B. and M.P.
Lieut.-Colonel FRANCIS DOUGLAS GREY.

Bankers.

Messrs. SMITH, PAYNE, & SMITHS.
THE CONSOLIDATED BANK, Limited.
THE NATIONAL BANK OF SCOTLAND.
THE BANK OF SCOTLAND.

Financial Secretary—H. J. BARKER.

The CREDIT FONCIER OF ENGLAND, Limited, is prepared to issue, on application, Debentures to the amount of £350,000. These Debentures are intended, partly, to replace all the outstanding Debentures of the Company - amounting to £175,000—shortly beginning to fall due, and, partly, to supply additional funds required by the great increase in the business of the Company.

They will be issued at the price of £96 per £100, and for a term of seven years; they will bear Interest at the rate of Six per cent. per annum, payable quarterly; and they will be redeemed at par, by equal Half-yearly Drawings, to commence on December 1 of next year.

The payment for the Debentures will be required as follows, viz.:—

10	per cent.	on Application.
10	"	on Allotment.
20	"	on April 1.
20	"	on May 1.
and the balance of £6	"	on June 2;

but the whole amount can be paid, on any of the dates above mentioned, and the interest will commence from the date of such payments.

The Debentures will be for the different sums of £20, £50, £100, £500, and £1,000, as may be desired by applicants, and will be payable to bearer. They will have Coupons attached to them for each quarter's interest.

The Half-yearly Drawings will take place at the Offices of the Company, in the presence of a Notary Public, twenty-one days before the respective half-yearly days on which the Bonds are to be paid off.

Public notice of such Drawings will be given ten days previously, in one or more London daily newspapers, and, immediately after each Drawing, notice will be given, in a similar manner, of the numbers and amounts of the Bonds drawn, and to be paid off.

The Debentures will be issued to the applicants so soon as the payment in full upon them has been completed; meanwhile, scrip Certificates will be granted on payment of the sum due on Allotment.

Application for these Debentures must be made on the prescribed Forms, which can be had at the Offices and at the Bankers of the Company, and must be sent in on or before March 1, after which day no application will be entertained.

The CREDIT FONCIER has, besides a paid-up Capital of £175,000, an uncalled Capital of £350,000, and a Reserve Fund of £100,000. The Company paid a dividend in 1871 of Eight per Cent., and last year of Nine per Cent.

St. Clement's House, Clement's Lane, Lombard Street,
London, February 18, 1873.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.

FINANCIAL RESULTS.

The Annual Income, steadily increasing, exceeds	£317,000
The Assurance Fund, safely invested, is over	£1,810,000
The New Policies in the last year were 3,564, assuring	£575,740
The New Annual Premiums were	19,861
The Total Claims by Death paid amount to	£3,098,829
The Subsisting Assurances and Bonuses amount to	£5,233,799

DISTINCTIVE FEATURES.

CREDIT SYSTEM.—On any Policy for the whole duration of a healthy Life, where the age does not exceed 60, one half of the Annual Premiums during the first five years may remain on credit.

ENDOWMENT ASSURANCES may be effected, without Profits, by which the Sum Assured becomes payable on the attainment of a specified age, or at death, whichever event shall first happen.

INVALID LIVES may be assured at rates proportioned to the increased risk.

PROMPT SETTLEMENT OF CLAIMS.—Claims paid thirty days after proof of death.

BONUS.

The Reversionary Bonus at the Quinquennial Division in January, 1872 (amounting to £323,871) averaged 49 per Cent., and the Cash Bonus 23 per Cent. on the Premiums paid in the five years.

The next Division of Profits will take place in January, 1877, and Persons who effect New Policies before the end of June next will be entitled at that Division to one year's additional share of Profits over later Entrants.

REPORT, 1872.

The Annual Report just issued, and the Balance Sheets for the year ending June 30, 1872, as rendered to the Board of Trade, can be obtained of any of the Society's Agents, or of

THE POSITION OF THE GOVERNMENT.

THERE can be no doubt that the Ministers have been placed in a position of great and unexpected danger and difficulty. Their University Bill, which was at first welcomed with singular unanimity, has excited the most violent opposition. Up to the present moment not a single Liberal member of any weight, representing an English or Scotch constituency, has spoken in favour of it. The few Irish members who have supported it have done so in the most lukewarm manner. The Irish Roman Catholic Bishops have absolutely refused to have anything to do with the scheme of education which it creates. The existing academical bodies of Ireland, including not only the Queen's Colleges and Trinity, but the Catholic University, have unhesitatingly denounced it. Apart from the question of the fate of the Ministry, which is perhaps linked with it, the whole number of members who would willingly vote for it would probably not reach a hundred. No English or Scotch constituency, and, so far as we are aware, no Irish constituency, has made any sign of being ready to support it. This is certainly one of the most singular occurrences in the modern political history of England. A strong Cabinet, a Cabinet with a long experience of the House it has to deal with, a Cabinet that has won two great triumphs by the mode in which it has handled Irish questions, produces a Bill, the sketch of which, when given by the PREMIER, delights every one; and three weeks afterwards it is discovered that the fifteen persons who invented it are almost the only fifteen persons in the kingdom who are prepared to give this invention any effective support. We are not saying that this ought to be so. The Catholics might have been expected, if they understood accurately the interests of the Denominationalism which is dear to them, to have seen in the Bill the elements of the best bargain they are ever likely to get from Parliament. But we are speaking only of facts, and the simple fact is that the Bill has next to no supporters. The Opposition leaders have seen their opportunity, and have used it with a boldness which, as a piece of political cleverness, does them credit. No such language as that used by Mr. GATHORNE HARDY has been heard at Westminster on the Conservative side since the election of 1868. He avowed not only his intention to vote against the second reading, but his willingness to accept the consequences. He challenged Mr. GLADSTONE to take the sense of the constituencies on the subject. The Ballot Bill has now, according to the Ministerial theory, enabled the constituencies to speak their mind freely and fairly. Well then, said Mr. HARDY, let them say freely and fairly whether they like this University Bill. Mr. HARDY, we think, judged quite rightly. It would be the greatest possible advantage to the Conservative party, and the greatest possible disadvantage to the Liberal party, that the prominent issue for the next election should be the acceptance or rejection of this University Bill; for Liberal members, in order to hold their seats, would have to proclaim that they entirely disagreed with their leaders, and there is no enthusiasm or energy in a party thus divided within itself. The Ministry, on the other hand, not wishing to break up their party in this way, might resign instead of dissolving. Either they would have to come back again discredited by failure, and with their hold over their followers sensibly weakened, or a Conservative Government would come into power holding a much stronger position than it could have hoped to hold for a long time. Either it would go on through the Session and pass an Irish University Bill, such as the great majority of the House has shown its willingness to accept, and then it would go to the country with the credit of success, or it would dissolve at once; and then, in addition to the advantage of being able to make the acceptance or rejection of the Irish University Bill the issue between parties, it would have the advantage of being the Government in office at the time of the elections. And this advantage is considerable even now that the Government can no longer directly affect constituencies; for the actual Government can always appeal to have a fair trial given it; and the numerous persons who look on an election simply as a means of promoting some pet project of their own look to those in office rather than to those out of office as the most valuable instruments for their purpose.

The natural reflection on all this is, that as neither the Liberal constituencies nor the bulk of the Liberal party have any wish to quarrel with the Ministry, but, on the contrary, in spite of occasional quarrels, look up to them with gratitude and respect, and as the House of Commons is quite ready to pass an Irish University Bill, if it can but get permission to pass the sort of Bill it would like, far the best thing would be that the Government should stay in office, and mould their Bill so as to suit the wishes of a Parliamentary majority. This would be far the best thing, not only for the Ministry, or for the Liberal party, but also for the country. For an election turning on questions of religious difference would be a deplorable calamity, and the Irish University question is really one that wants settling, and the sooner it is settled in a tolerably satisfactory manner the better for Ireland and for England. There is really nothing whatever in what the Ministers have done that calls for any severe censure. They have made a mistake arising from want of political forethought in a matter where every set of statesmen in their turn have made crowds of such mistakes; but that is all. Every one acknowledges that they prepared their scheme with the utmost singleness and honesty of purpose, holding the balance, as they thought, evenly between contending parties, and wishing to give every one concerned a fair chance. They were quite right, as Mr. HORSMAN and even Mr. HARDY admitted, in resisting Mr. BOURKE's amendment, for they were asked by it to do that which it was impossible for them to do. They were also clearly right in not adopting the course pressed on them by Mr. HORSMAN, and withdrawing the Bill directly they found that the Irish Roman Catholic Bishops had tabooed it. To have done so would have been equivalent to an ignominious avowal that an English Ministry was prepared to bring in and abandon Bills at the dictation of a clerical clique. They had no course to take consistent with proper self-respect except that of going on as well as they could, saying all that they could manage to say in defence of their scheme, and then submitting the second reading to the decision of the House. They have a strong case to appeal to their supporters for so much help as will carry the second reading. They may fairly ask their party not to vote lightly out of existence a Cabinet which has so often led the party to victory, and a PREMIER whose name alone has won so many of their seats. The GLADSTONE Government does not deserve to fall for the mere mistake of thinking that it had hit upon a mode of conciliating sectarian adversaries. Individual members, too, may be allowed to look at their own interests. It will be very disadvantageous to them, and unfairly disadvantageous to them, that their seats should be endangered, and their Conservative rivals in counties and boroughs strengthened, because the Government has honestly made a slight mistake in calculating on the probable feeling of Irish religious factions. The Government, on the other hand, must do something for their supporters. They must not ride a very high horse, and resent obtaining a majority pitiful as compared with the majorities which sanctioned the Irish measures of their two first Sessions. They must be content to stay in office, and do the best they

can with the Bill, if they can only get a respectable majority; and that they may get such a majority is to be hoped for in the interests both of England and Ireland.

The Government has no chance, and knows that it has no chance, of carrying the second reading, unless it proclaims its willingness to admit of many changes in the Bill; and if it stays in office, and tries to pass the Bill, the changes which it will have to tolerate will be very considerable indeed. But the Government has already gone a long way in the path of concession; it has gone so far, indeed, that it is not without some surprise that we observe how far it has gone. In order to understand this, it is necessary to remember what the basis of the Bill was. The Government had, as it thought, got a great and beautiful secret. It had hit on a new, peculiar, and effectual plan of overcoming the difficulties which had baffled all other persons who had attempted to deal with Irish University Education. The secret which was kept so religiously that the Ministry deprived itself of all opportunity of judging from previous criticism how far it had the promise of success, was this:—The problem was how to satisfy the claims of the Catholic Bishops, and yet to keep within the lines in which Parliament is bent on moving. What the Catholic Bishops want is the complete control of education, and money to support the education which they control. They want funds, and they want security against anything being taught which they consider dangerous. The Ministry gave them funds in the only way practicable, by annexing scholarships and fellowships to a University, and letting Catholics compete for them, and, if they could get them, hold them while members of purely Denominational colleges. There was nothing new in this. It was not exactly what the Catholic Bishops wanted in the way of funds, but it was the obvious and only way of getting fervent Catholics as much public money towards the cost of a University career as could be got. But it was not money only or chiefly that the Catholic Bishops wanted. They wanted the control of education, so that nothing dangerous to the Catholic faith might be taught to the tender lambs of their flocks. The secret of the Government, the mysterious device on the efficacy of which they relied, the special peculiarity of their Bill, was the mode in which they satisfied the claim of the Catholic Bishops just up to the right extent.

The Catholic Bishops claimed that nothing dangerous to their faith should be taught in the University. The Ministry agreed that all openly dangerous subjects should be avoided, and modern history and philosophy were altogether cut out. But this is only a small thing. Any subject, even, as an Irish Bishop seems to have thought, the multiplication-table, may be so used as to pervert the meek spirit of Catholic youth. To exclude dangerous subjects is not enough; the control of the study of innocent subjects must be added. The Ministry in effect replied that they could not give the control of the study of innocent subjects to the Catholic Bishops, but that they would give the Catholic Bishops a fair chance of getting this control, or an approach to it, if they and their friends would work for it. The machinery for effecting this was to place a large degree of control over the teaching of the University in the hands of a Council to which the professors should be under strict subjection, and that the Catholics should have a good chance of getting the command of this Council into their hands. The chief means were the suppression of Galway College, the lowering of the position of the remaining Queen's Colleges, and the right accorded to an unascertained number of little Catholic seminaries which succeeded, not in graduating, but merely in matriculating, a certain number of students, to have votes in the Council. To set up this approximation to purely Catholic teaching, giving it still a sort of undenominational character, and leaving Trinity with a position that would satisfy Protestants and the friends of mixed education, was the secret of the Government. It has failed to secure the support anticipated for it. It does not please the Ultramontanes, because, instead of funds, it gives them the chance of getting funds, and instead of giving them the control of education, it gives them the chance of getting this control. It does not please the opponents of the Ultramontanes, because they say that this similitude of an Ultramontane University is not a University worth having or belonging to. The only real question between the Ministers and their supporters is whether they will give up this peculiar device, will own that their mystery is a mistake, and cut out of the Bill its special feature. It is hard for men to do this, and it is not to be expected that they should do so readily and openly and at one effort. But little by little they have so cut into their scheme that they have left nothing much remaining of it. They have successively declared that the extinction of Galway is not of the essence of the Bill, that the "gagging" clauses—that is, the clauses silencing teaching on dangerous subjects, and the dangerous teaching of innocent subjects—are not of the essence of the Bill, that very few seminaries shall be allowed to vote, and that the main qualification for a seat in the Council shall not be ecclesiastical position or power, but academical distinction. These concessions virtually amount to a withdrawal of the peculiar features of the Bill, and if once Liberal members can see that the scheme of setting up a pale copy of an Ultramontane University is abandoned, they have no cause for serious quarrel with the Government. That there should be funds accessible to Catholics residing in Denominational colleges, if they can win them by open competition with the members of other denominations, is quite fair; and such questions as whether there should be one University or two, important as they are, may be perfectly well settled in Committee.

PRESIDENT GRANT'S MESSAGE.

THE American PRESIDENT'S Message to Congress on the commencement of his second term of office seems to be an ambitious document. Several of the domestic objects which he proposes to attain are beyond the competence of the Executive power; and his aspirations for the extension of the territory of the Union, and for the universal diffusion of Republican institutions, would be discourteous to all foreign States but for the obvious unconsciousness of the PRESIDENT that there is anything offensive in his language. The wish for a maintenance of friendly relations both with neighbouring and with distant States may probably be sincere, although several passages in the Message point directly to annexation. Utter incapacity to understand the sensitiveness of others is highly characteristic of American politicians. If an English QUEEN'S Speech were to express a desire for the establishment of Constitutional Monarchy in the United States, the American people would be fully entitled to resent an impertinent interference. General GRANT is perfectly at liberty to hold the opinion that the civilized world is tending towards Republicanism; but it is quite unnecessary to anticipate in a formal State paper the eventual triumph of the DILKES and ODGERS of a country which is fully capable of managing its own affairs. "The Government, and through "their representatives the people of our Great Republic, are," in General GRANT'S opinion, "destined to be the guiding star "of all other countries." Perhaps it would be as well that for the present the guiding star should begin by making its own light a little clearer. The advantage of being governed by TWEEDS, and COLFAXES, and BUTLERS is at this moment but faintly appreciated in England; nor is the cynical acknowledgment that unfounded claims were established at Geneva calculated to attract respect and admiration to the astuteness of the successful litigants. If General GRANT had unfortunately died a month ago, the head of the Government which is to be a guiding star to all nations would have been a person who lately accepted a paltry bribe, and who afterwards concealed his guilt by false statements. A Republican nominee for the Presidency has just been convicted in his absence by a French Court of Justice of a pecuniary fraud. The PRESIDENT himself scarcely displays the complete satisfaction which befits the chief of a perfect and ideal Republic. He complains that during his last electoral campaign he was the subject of abuse and slander scarcely ever equalled in history. He might have remembered that his own friends were at least as abusive and slanderous in their attacks on poor Mr. GREELEY; and that some of the abuse which was directed against powerful Republican leaders has, in spite of their denials, been fully supported by evidence. The habitual employment of personal vituperation in political contests is not in itself an attractive peculiarity of the American guiding star. Economists may be perhaps impressed by the undeniable fact that "the army and navy of the United "States are less in number than those of any European "Power;" but the PRESIDENT'S further assertion that "there "could be no extension of territory on this continent calling "for an increase of military force" seems to require explanation. "Rather," he adds, "might such extension enable us "to diminish it." As the island of Cuba can scarcely be considered a part of the American continent, the suggestion that an extension of territory might facilitate the reduction of the army and navy can only refer to one or both of the two conterminous territories. Continental extension must be effected, if at all, at the expense of Canada or Mexico. Neither the British Empire nor, as far as is known, the

Mexican Republic has any quarrel with the United States; and any other Government would shrink from the rudeness of hinting that annexation might produce a saving as well as a profit.

That the unseemly threat of annexation is not a mere flourish of patriotic eloquence is proved by a later part of the Message, in which the PRESIDENT recurs to his favourite policy of extension. He announces, indeed, that after his previous defeat on the question of San Domingo "the subject "of the acquisition of territory must have the support of the "American people before I recommend it"; but he proceeds to say, "I do not share the apprehension that there is "a danger of Governments becoming weakened or destroyed "by extension. As commerce, education, and the rapid "transit of thought and matter by the telegraph and steam "have changed everything, I rather believe that the GREAT "MAKER is preparing the world to become one nation, speak-"ing one language, a consummation which will render armies "and navies unnecessary, and I will encourage and support "any recommendation to Congress tending towards such ends." The modest taciturnity which has been popularly attributed to General GRANT has apparently covered the wildest dreams of national aggrandizement. The GREAT MAKER has often before been invoked for the sanction of ambition and lawless cupidity; but even the conquerors who have aimed at universal empire have never before announced their intention of simultaneously establishing a universal language. It seems that the American Union is to embrace the world, and that mankind is hereafter to speak only the Transatlantic dialect of English. The accomplishment of so marvellous a revolution would concern France and Germany and Italy more than England, which, as one of the humblest dependencies of the great Republic, will happily be able to understand and imperfectly to speak the dominant language of Bunkum. If bluster of this kind, uttered on a solemn occasion by the chief of a great nation, seems rather undignified than mischievous, the PRESIDENT'S bombastic expressions have one practical application, inasmuch as they bode ill to the colonial empire of Spain. For some months past the American SECRETARY of STATE has by his menacing despatches to the Spanish Government thrown impediments in the way of negro emancipation, and prepared the way for armed interference in Cuba. There is no reason to believe that the urgency of his representations has been relaxed since the proclamation of the Republic which the Government of the United States was so eager to recognize. It is incredible that the PRESIDENT should at this moment meditate any encroachment on Mexico, or on the Dominion of Canada; and therefore it may be inferred that his gratuitous apology for annexation is intended to prepare the way for aggression in Cuba. It remains to be seen whether either Congress or the people of the United States will support the PRESIDENT'S policy. The unsatisfactory social and political condition of Cuba has lately been lucidly explained by one of the ablest Correspondents of the *Times*; and although General GRANT fails to understand how States can be weakened by extension, the degeneracy of the Creole population may well convey a warning to the would-be successors of Spain. If the descendants of Spaniards become feeble and effete in the climate of Cuba, there is no reason to suppose that settlers of Northern blood would be more fortunate in their posterity. The Spaniards from the old country must, in the event of an American contest, be exterminated or expelled from the island; and a million and a half of Spanish creoles and of barbarous negroes would not be an eligible body of citizens. It would be safer to try the first experiment on the worthless carcase of San Domingo, which, notwithstanding his protestations, the PRESIDENT has probably taken steps to acquire through the agency of the Samana Company. When the Spanish part of the island has been seized or bought, it will be necessary also to subdue the savages of Hayti; and before the whole territory is incorporated into the American Republic, the acquisition of Cuba will perhaps not be generally thought desirable.

Of the PRESIDENT'S domestic policy foreigners are disinterested spectators and critics. It is evident from his enumeration of desirable measures that he has learned nothing of political economy from experience in affairs; but nearly all his projects are absolutely subject to the decision of Congress. It will hereafter appear whether American philanthropy is prepared to offer to the Indians the alternative of "civilization under the benign influence of education, or of "war to extermination." It is wrong in aborigines or others to reject the benign influences of education; but it seems a strong measure to exterminate them by arms if they refuse to learn their lessons. In a generation or two the Indians will be effectually exterminated without the necessity of massacre. At present Congress is utterly disinclined to provide for the construction of the PRESIDENT'S "cheap routes," after the fashion of the Pacific Railroad. Cheap routes have come to mean lavish grants and bribes to Senators and Representatives, and it will not be thought expedient to provide occasions for further scandal. "The re-establishment of our commerce, "and the recovery of our share of carrying trade on the "ocean," are phrases used by the PRESIDENT to express subsidies, protective duties, and other elaborate contrivances for counteracting the inevitable results of vicious legislation. In proposing to Congress "the encouragement of manufacturing "industry" the PRESIDENT refers still more directly to the imposition or maintenance of differential duties in favour of domestic products. Although General GRANT is totally ignorant of the principles of commerce, he shows in his advocacy of a narrow and obsolete policy entire fidelity to his party. In the Republican declaration of principles at Philadelphia it was thought expedient to include a declaration in favour of protection to native manufacturers; and the present majority in the Senate and the House will probably adopt the PRESIDENT'S recommendations. It is strange that General GRANT should fail to see the incompatibility of his commercial theories with his political prophecies. When the whole world has, under American supremacy, become one nation, speaking one language, not only armies and navies, but custom-houses, will disappear; yet it will be as ruinous for a Pennsylvanian ironmaster to compete with his fellow-citizens in Staffordshire and South Wales as to encounter the rivalry of the same manufacturers while they are still degraded subjects of a benighted Monarchy. It is scarcely to be supposed that the outlying European provinces of the universal Republic will be excluded from free intercourse with their metropolis of New York. On the whole, the Message displays neither dignity nor statesmanlike wisdom; but, as an exaggerated reproduction of popular prejudices and commonplaces, it is not improbable that it may command approval in the United States.

THE IRISH UNIVERSITY DEBATE.

THE Irish University Bill has come in for an unusual share of the ill-fortune which befalls measures which strive to steer between two extremes. Its adversaries on each side have their whole heart in the matter. The Ultramontanes hate all education which is not exclusively Denominational. The Secularists hate all education which is not exclusively undenominational. But they are content for the moment to lay by their hostility to one another in order to make common cause against a Government which supports a form of education from which neither Denominationalists nor Secularists shall be shut out. The Roman Catholic bishops and Mr. FAWCETT are impracticable and consistent. Those Conservatives who are for the time in alliance with them are impracticable without being consistent. The Roman Catholic bishops are Denominationalists alike in England and in Ireland; Mr. FAWCETT is a Secularist alike in England and in Ireland. It has been reserved for some of the Conservatives to discover that the distance between Denominationalism and Secularism is exactly measured by the distance between Holyhead and Kingstown. Their speeches on the English Education Act might edify the POPE; their speeches on the Irish University Bill must charm Mr. DIXON. The inappropriateness of Mr. BOURKE'S amendment was shown by the fact that after his own speech there was hardly any reference to it in the debate. Mr. GLADSTONE showed by anticipation the impossibility of naming the Council until some certainty should have been attained as to the ultimate character of the Bill. Any number of different opinions may be held as to which parts of the Bill are principles by which the Government ought to stand or fall, and which are details that they may allow to be altered in Committee. At present there is not one of these opinions the holder of which can feel any assurance that it is the opinion of the Cabinet. The eminent persons to whom the Government might apply would hardly care to undertake in advance to manage the affairs of a University concerning the character and composition of which nothing can be certainly known. The doubts expressed by Mr. BOURKE as to the considerations by which the PRIME MINISTER will be guided in filling up the list of names may be perfectly well founded. But, if so, they called for a much stronger motion than that with which he concluded his speech. If the Government cannot be trusted to propose the persons who are to form the University Council in the first instance, they can hardly be trusted to constitute the University which the Council is to control. Even the supporters of the amendment virtually

acknowledged this by declaring that no list of names that could be constructed would remove their objections to the Bill.

The arguments used by the Roman Catholic members are merely amplifications of the resolutions adopted by the Irish Bishops on Friday week. They consist, in substance, of the complaint that Mr. GLADSTONE has recognized the Roman Catholic grievance without providing for it any adequate remedy. With a slight change of phrase this plea would be true. The Bill does recognize that the Irish Roman Catholics have a grievance, and it does not furnish what the Bishops consider an adequate remedy. But the grievance admitted by the Government is not the grievance under which the Bishops allege the Irish Roman Catholics to be suffering, and from this it naturally follows that the remedy provided by the Government is not the remedy demanded by the Bishops. The Bishops now complain that the Roman Catholic College in Dublin is not to be endowed. Perhaps after the review of the large endowments of Trinity College into which Mr. GLADSTONE was necessarily led in expounding the financial side of his measure, the Bishops are more inclined than formerly to think favourably of concurrent endowment. But if concurrent endowment ever had a chance of being adopted by Parliament, that chance has gone by. It would be as easy to make Roman Catholicism the established religion of Ireland, and to give Cardinal CULLEN a seat in the House of Lords, as to endow either a Catholic University or a Catholic College out of public money. It is to be observed, however, that though the Bishops denounce the injustice of giving large University endowments to Protestant Episcopalians, Presbyterians, and Secularists, while none at all are given to Roman Catholics, they do not say that they will have nothing to do with the Bill unless this injustice be removed. They say that, as the legal owners of the Catholic University, they will not consent to its affiliation to the new University unless the proposed scheme be largely modified. But at the same time they pointedly refrain from committing themselves to the necessity of any particular modification. If the Bill satisfies the conscientious scruples of the Roman Catholic parents of Ireland, it will probably be found in the long run to satisfy the Bishops. That the Bill ought to satisfy the conscientious scruples of the Catholic parents of Ireland there can be no question. It gives them the power of sending their sons to a college belonging to their own Church without, as at present, having to forego the benefits of University training and degrees. The antagonism which has hitherto existed in their minds between the spiritual and the intellectual interests of their children will thus be laid to sleep. From the moment the Roman Catholic student matriculates at the University, it will rest with himself whether he shall participate fully in its endowments. He can obtain a bursary on entrance, he may supplement this by an exhibition, and when he has taken his degree he may replace his exhibition by a fellowship. Where is there anything in this process that can be injurious to the faith of any Catholic student? It is true that if he is sent to a Catholic college he will not find those collegiate endowments open to him which he would have found at Trinity College or at the Queen's Colleges. But, in comparison with the other, this is a very small grievance indeed. It is a grievance which touches nothing but the pocket, and as such it is one which it is useless to raise, except so far as the pocket is likely to benefit by the discussion. It can hardly escape intelligent Irish Roman Catholics that the only chance which they have of throwing out the Bill is by acting in concert with the Secularists and the Conservatives. Have they asked themselves to what use they propose to put their victory if they succeed in gaining it by this means? Their allies are opposed to the affiliation of Denominational Colleges on any terms; there is nothing, therefore, to be hoped from a new Ministry, whether Conservative or Radical. They cannot imagine that the Government will at the eleventh hour introduce into the Bill a clause endowing the Catholic College, since it is clear that any such attempt would send the bulk of the Liberal party into the Opposition lobby. All, therefore, that they can propose to themselves is to keep the controversy open, without the slightest chance of its being ever settled in a manner more to their mind.

Mr. HORSMAN has ascertained, since the 15th of February, that the whole end and purpose of the Bill was to satisfy the Irish Bishops, and that as soon as Mr. GLADSTONE discovered that his measure was in this respect a failure he ought at once to have withdrawn it. In the matter of deference to Bishops Mr. HORSMAN is a late convert, and, as converts will, he greatly overacts his part. If the Government had come forward in the first instance with an intimation that they had framed their Bill with a careful attention to the requirements of the Roman Catholic hierarchy, and that if it should prove insufficient for this purpose it would be immediately withdrawn, they would very properly have been sent about their business. No member of the Cabinet has ever said that the Roman Catholic Bishops, as such, have a grievance in the matter of University education; what has been said is that Roman Catholic parents have a grievance. Mr. HORSMAN denies the truth of this latter statement, and from that point of view his vote against the Bill is perfectly justified. But he would have been equally bound to vote against any Bill that the Government could have brought forward. Legislation resting on a falsehood must always be mischievous, and Mr. HORSMAN maintains that the statement that the Irish University system is not in all respects what the Roman Catholic laity wish it to be is an absolute falsehood. In the debates on the Irish Church Bill and the Irish Land Bill the Government were sometimes told that the only class in Ireland who had to be satisfied were the Fenians, and that, as the measure under discussion would do nothing towards contenting them, it would be utterly useless. The answer of the Liberal party used to be, that there was a great deal of discontent in Ireland which was not Fenian, but which furnished excellent material for Fenians to work upon, and that with this material out of the way the real weakness of their position would be apparent. A similar reply may be made to Mr. HORSMAN'S argument that the Roman Catholic bishops are the only persons whom you have to satisfy, and that, since it is clear from their own resolutions that this Bill will not satisfy them, there is no use in going on with it. The supporters of the Bill believe that the absence of facilities for obtaining a University education and a University degree while resident in a College belonging to their own Church is a genuine cause of dissatisfaction to the Irish Roman Catholic laity, and that, if this is removed, one main source of the exaggerated influence which the Irish Bishops possess in educational matters will be dried up.

Mr. LOWE'S announcement that the "gagging clauses" are not of the essence of the Bill was received with ironical cheers. The Opposition are so much in love with the meaning they have chosen to put on these clauses, that they refuse to believe that they could ever have been meant to bear any other. It may be doubted, however, whether even Mr. FAWCETT will maintain on further reflection that he would not retain his professorship for another hour unless he were allowed to give wilful offence to the religious convictions of his pupils. The truth is, that the restrictions involved in this clause and in the clause relating to examinations are tacitly imposed in every University which has students of different creeds. There is no reason to suppose that the Council of the proposed University will specially need to be reminded of them; but the Government naturally considered it of some importance, when dealing with suspicious and watchful adversaries—and for some time to come the Irish Bishops will be such—to give them no excuse for saying that the Roman Catholic religion is insulted in the University lecture-rooms, or that a belief in it weights a candidate unfairly in University examinations.

PROGRESS OF DISORDER IN SPAIN.

THE late King of SPAIN has by his abdication amply avenged himself for the fickleness and the insolence which had rendered his task intolerable. His retreat was consistent with personal prudence, if not with generosity or with heroism; but he may perhaps feel some compunction when he reflects that he is himself the only gainer by the change. The Republic which was proclaimed in sonorous phrases is regarded by its enemies and its most active friends as the equivalent of anarchy; and it would almost seem that Spanish society is in rapid process of dissolution. Even CASTELAR must begin to doubt whether the world can be governed by florid rhetoric. In concert with the other leaders of his party he had the courage to take possession of the Government at a moment when other parties were paralysed and helpless; and in the usual revolutionary fashion they assumed that all difficulties were overcome because the nominal change from a Monarchy to a Republic had been effected without civil war. With the tolerance and good humour of a successful faction in the moment of triumph the Republicans divided office with the Progressists, and they would have been willing for the present to continue the coalition; but the harmony which results from stupor only lasts for a day or two, and before a week had elapsed, the so-called Radicals were dismissed from office on the

demand of the rabble of Madrid. The Republican Government which remains is conscious that it retains the show of power subject to the pleasure of the mob. At the present time supreme authority has been ostensibly vested in the Cortes; but the majority which at first submitted to the Republican usurpation begins to recover courage, and a collision with the Government is imminent. FIGUERAS and his colleagues had resolved on the suspension of the sittings of the Assembly, and on the immediate convocation of a Constituent Cortes, three years after the date of the last Constitution. The members of the majority have resolved to reject the measure, and it remains to be seen whether the Ministers will, after going through the form of resignation, practically submit to a defeat. A Republic controlled by the professed enemies of the Republican system has been found temporarily possible in France, because supreme power is really vested in a PRESIDENT who commands general confidence. In Spain there is no THIERS, nor is the three weeks' old Republic theoretically provisional. It is difficult to understand how the Progressist majority of the Cortes can administer a Republic; and, on the other hand, a Republican Government will refuse to obey the majority. It seems inevitable that the contest should ultimately be decided either by the soldiery or by the mob. Without a leader, and without an armed force at its disposal, the Cortes and its President will be powerless. Of the composition or of the tendencies of a new Cortes it is impossible to form any confident anticipation. Within a year universal suffrage has given one majority to SAGASTA and the Conservatives, and another to ZORRILLA and the Progressists. It is possible that, under the administration of FIGUERAS and CASTELAR, the constituencies may prove to have become suddenly Republican; but the further doubt will remain which of the two Republics will be preferred.

The eventual substitution of military despotism for anarchy seems likely to be delayed in Spain by the dissolution of the army. The Republicans, when they were in opposition, denounced the conscription and all compulsory military service; and it now appears that they have succeeded in rendering the rank and file of the army thoroughly disaffected. An additional impulse to the mischievous spirit was given by the perverse policy of ZORRILLA and his Minister of War in their appointment of General HIDALGO to a command. HIDALGO had earned his rank by fostering a conspiracy of non-commissioned officers against their superiors; and his promotion was not unreasonably regarded by the officers of the Artillery as an insult. On their resignation of their commissions, the non-commissioned officers were appointed to the vacancies; and the same class in the Line are now demanding similar advancement. The officers of the army might be trusted to support the cause of order under the Republic, or under some other Government; but they now find themselves exposed to the menacing insubordination of their men, and desertion is becoming general. Like the Israelites of old, the Spaniards seem to assume that when there is no King in the land every man may do that which is right in his own eyes. The Government has done its best to promote disaffection in the army by ostentatiously distributing weapons among the dangerous classes of the community in the hope of providing the Republic with the means of defence against military conspiracies. The shopkeepers and other respectable inhabitants of Madrid are on their part arming and organizing themselves for the defence of their property against popular violence and spoliation. In several of the large towns and in some rural districts the rabble are denouncing the very existence of property; and many of the families which are threatened with plunder have already emigrated. Marshal SERRANO, though he is said to have offered his services to the Government, has thought it prudent to place his family in safety beyond the frontier. Any domestic inconvenience which he may suffer will have been amply deserved by the affront to King AMADEO which was thought to have been the immediate cause of his abdication. Marshal SERRANO is not known to have professed himself a Republican; but he can hardly contemplate the immediate re-establishment of royalty. The partisans of Don ALFONSO rested their hopes on the army, which is now thoroughly disorganized; and though they may perhaps have many supporters throughout Spain, the moderate part of the population will exercise little influence on affairs.

The Carlists are profiting with commendable activity by the disorganization of the unfortunate Republic. Although their successes are sedulously concealed by the official press of Madrid, and probably exaggerated by the Legitimist journals of Paris, there seems to be no doubt that the range of their operations has been largely extended. Their reported victory at Irun is contradicted, and it seems that they have not yet besieged Pampeluna; but they have active partisans in Barcelona itself. A sentimental proclamation of the Republican Commander-in-Chief will probably have raised their hopes of success; and they can have little to fear from soldiers of the regular army who insist on being accompanied or escorted by Republican volunteers. It is probable that respectable Spaniards who have not the smallest sympathy with the Carlist cause may prefer any Pretender to the supremacy of bloodthirsty Communists. There can be little doubt that the Northern peasants and shepherds, who form the Carlist army, are the manliest race in Spain, if not the most enlightened. They are for the present able to defend their own soil against the demoralized troops of the Republic; but it appears hardly possible that they should march as conquerors into districts where they would be foreigners. If the Federal Republic succeeds in splitting up the Spanish territory into petty States, there seems to be no reason why a Legitimist Monarchy should not establish itself in the North; but a disruption which would be inconsistent with all the tendencies of modern civilization is not likely to be lasting. The Duke of MADRID who calls himself CHARLES VII. might probably succeed in ascending the throne of his ancestors, if he possessed the qualities of a soldier or a statesman; but he has taken no part in the contest which has been long sustained in his name, and the proclamations which he has from time to time published show that he or his advisers think it practicable to re-establish the orthodox despotism of the sixteenth century.

The most serious danger which threatens the Republic is not from its enemies, but from its zealous partisans. A handful of declamatory theorists may have arrived at a disinterested conviction that pure democracy, relieved from the incumbrance of a Court, will tend to purity of government; but the fighting men and the most active section of the party desire, under cover of the Republic, to overthrow all existing institutions. The armed volunteers of liberty will never fight for the maintenance of order, and they will find it pleasanter to intimidate their wealthier neighbours than to expose themselves to the hardships of a campaign against the Carlists. Eventually the better classes will rally against oppression, and they will give power to some vigorous soldier who may have shown himself able to protect them. Even if the existing standing army disappears, anarchy will lead to fighting, and by a process of natural selection the troops which are most efficiently disciplined will ultimately prevail. At the beginning of the French Revolution many regiments rose against their officers, and during the Reign of Terror no regular troops were employed in the suppression of internal disturbances, but at last the whole country found itself at the mercy of a victorious commander. Even the sailors of the Spanish navy are beginning to mutiny in imitation of the army; and for the present the country seems exposed to the risk of being left without defence. There is fortunately no danger of foreign interference, but the domestic prospect is one of unmitigated gloom. The course of revolution is almost always downhill. The days of ISABELLA II., notwithstanding the corrupt and discreditable character of the Court, must now be remembered with regret as an irrecoverable golden age. The revolution which was undertaken by PRIM, SERRANO, and TOPETE proves to have been a blunder, though its consequences were not immediately visible. The elaborately democratic Constitution of 1869 has not produced the smallest beneficial result, and it is now about to be superseded by some newer experiment. It would have been well to retain Queen ISABELLA, and afterwards to make the most of King AMADEO. A year hence a vain regret may be felt for the discontinuance of CASTELAR'S eloquent discourses. With an impoverished Treasury and a mutinous army, the Republican Ministers will find themselves unable to conduct public business; and their places will probably be taken in the first instance by unscrupulous demagogues.

M. THIERS AND THE REPUBLIC.

IF M. THIERS had arranged matters with the express view of showing how indispensable it is that he should not be shut out from the tribune, they could not have fallen out better for his purpose. The debate on the Report of the Committee began on Thursday week, and by the following Tuesday he had been challenged to explain his position by four out of six sections of the Assembly. The Extreme Right and the Extreme Left knew how they were going to vote, but the

moderate men of both parties and the two Centres were in a state of utter confusion. The Right Centre had had time to get over the failure of the attempt to form a united monarchical party, and were consequently racked by doubts whether they had not yielded too much to M. THIERS. M. DUFAURE's speech on Saturday made everything straight with this section of the Chamber, but it did so at the cost of alienating the Left Centre. M. DUFAURE brought the Bordeaux Compact back to life, and as the Bordeaux Compact was understood to have been repudiated by the PRESIDENT in his Message at the beginning of the Session, its resurrection was accepted as involving a recantation of M. THIERS's declarations in favour of a Republic. It is true that M. DUFAURE reminded the Right that, whether they liked the fact or not, they were living under a Republic; that its effigy was stamped on their money; that the laws which they obeyed were promulgated in its name; that it had been as its agents that the Government had treated with all the Powers of the world. But he treated the question whether the provisional Republic should be succeeded by an established Republic or by a Monarchy as still open, and in this respect there was sufficient apparent contrast between his language and the language of the Message to confirm the fears of the Left Centre. On Saturday there was no time for their uneasiness to come to a head. The Assembly divided the same afternoon, and decided by 472 votes against 199 to go into Committee upon the Report. Between Saturday and Tuesday, however, M. RICARD and his friends seem to have determined that they could not continue to vote with the Government unless M. THIERS would clear up the uncertainty in which they had been left by M. DUFAURE. There was no room for a simple repetition of the tactics which were so successful on the occasion of M. DUFAURE's former speech. If M. THIERS merely delivered his Message over again, as he did before the Committee of Thirty, the gain of the Left Centre would at once be counterbalanced by the defection of the Right Centre. M. THIERS's object was to keep both in good humour, and when he left the tribune he had achieved what looked like an impossibility when he entered it. His speech was a masterpiece of Parliamentary skill. He began by making M. DUFAURE's words his own. The KEEPER of the SEALS had expressed the true sentiments of the Government. But the pressing questions which had been addressed to him made it necessary to add something to what M. DUFAURE had said. It was quite true that the Bordeaux Compact was still in force. That Compact found the Republic in being, and it imposed upon all parties the duty of maintaining it. It pledged the Executive to connive at no monarchical conspiracies. It pledged the Right not to abandon their preference for monarchical government, but to hold that preference in suspense so long as the Compact lasts. It pledged the Left not to treat the establishment of the Republic as something that might or might not come to pass, but simply to postpone the proclamation of it out of deference for the conscientious opinions of those of their fellow-countrymen who still prefer Monarchy. The ingenuity of this reasoning is really wonderful. The Left are conciliated by the frankest admission that it was a Republic that was entrusted to M. THIERS's keeping at Bordeaux, and that it is a Republic that he will have to restore intact to the country. Yet the Right cannot quarrel with this way of describing the facts, because it is admitted that they are free to accept or reject the Republic hereafter, and they have never claimed for themselves the right of attempting to overthrow it now. What did the Bordeaux Compact mean, M. THIERS says in effect, if it did not mean what I have told you? It did not purport to maintain an interregnum or period of absolute equilibrium between all forms of Government, for the Provisional Government voted by the Assembly at the same time that the Bordeaux Compact was entered into was christened the Republic. It certainly did not fix any date for a return to Monarchy, for it was called the truce between parties, and the Republican party would never have assented to a truce which was to become a Restoration by mere lapse of time. All it could have meant, therefore, was the maintenance of the Republic in the form in which it then legally existed. This is all that the Right can demand, for it leaves them unfettered as regards the future, and the very notion of a truce implies a certain abnegation of liberty of action as regards the present. It is all that the Left can demand, for it secures the maintenance of the Republic as long as the existing Assembly is in being, and when a dissolution comes they will be in a position to take care of themselves. In the division which immediately followed M. THIERS's speech the numbers were almost identical with those in the former division. But the effect of the speech is not to be measured by this fact alone. The tone of the Republican journals has become much more moderate since its delivery, and there is every chance that the party will continue as heretofore to draw a broad distinction between the majority which supports M. THIERS and M. THIERS himself.

Now that the effort to satisfy both parties has been made, and to all appearance made successfully, it may seem strange that M. THIERS should ever have had it in his mind not to make it. The Paris Correspondent of the *Times*, however, says positively that nothing but a remonstrance from Berlin prevented the PRESIDENT from proclaiming the Republic in a way which would have alienated the mass of the Right Centre, while securing him the united support of the Left. As matters have turned out, he has secured nearly the whole Right without alienating the Left, except in name, and we naturally wonder why he should have thought the other combination better. Two things, however, have to be remembered. In the first place, the work which M. THIERS had cut out for him when he entered the tribune on Tuesday was one of extraordinary difficulty, and while still in ignorance whether it would not prove beyond his power of performance, he might reasonably have preferred to take an easier and less ambitious course. To please all parties is the happiest lot that can befall a Minister, but it falls to the lot of so few that a man may be excused for not aiming at it except under the stress of imperious necessity. In the second place, it is by no means certain that M. THIERS would have been so successful had not the motives which determined his policy been known or suspected. The Left cannot feel any real hostility to a PRESIDENT who would have cast in his lot with them had it been compatible with his paramount duty of liberating France from the German army at the earliest possible moment. They might have distrusted his interpretation of the Bordeaux Compact if he had maintained that Compact of his own free choice; but as soon as it was understood to be forced upon him by considerations of the highest policy, the explanations by which he deprived it of significance were at once recognized as merely ingenious exercises in casuistry. The Right might have been less willing to put up with a distribution of parts which assigns to them a possible future, and to their opponents an actual present, if they had not known that even this concession had been extorted from M. THIERS against his will, and that their power over him depended wholly on the exigencies of foreign policy. The result of these composite influences will probably be to make M. THIERS once more the undisputed master of the Assembly. How long he will remain so must depend in some measure on the nature of the Bills which he has undertaken to bring forward. That these measures will be framed in a sense distasteful to the Republican party is highly improbable. Even the Right are beginning to acknowledge that the present Assembly cannot be kept in being when once the occupied territory is set free; and with a dissolution in prospect, M. THIERS will have every day less motive for gaining the goodwill of a majority which has so short a time to live. The construction of a Second Chamber will certainly be distasteful to the Left; but, with the example of all Europe before him, it will be strange if M. THIERS does not succeed in making it too powerless to provoke serious enmity.

RAILWAY PROPERTY.

SINCE the panic of 1866 railway property has not been exposed to so heavy and so sudden a decline in price as since the beginning of the present year. The fall is out of all proportion to the reduction in the intrinsic value of railway stocks, and those who have not been obliged to sell will probably soon recover the greater part of their nominal loss; but scarcely any department of industry has been so seriously affected by the high price of coal and by the general rise of wages. On some railways the additional cost of fuel for locomotive power has absorbed the whole of the dividend, and in almost every instance it has either reduced the dividend or rendered it stationary, notwithstanding a large increase of traffic. The London and North-Western Company, with an addition to its gross receipts as compared with the corresponding half-year of 1871 of 230,000*l.*, paid a quarter per cent. less dividend, the excess in the cost of locomotive fuel having amounted to almost exactly the same sum. The Great Western Company stands almost alone in the good fortune of paying an improved dividend, in consequence perhaps of the adoption during the past year of the narrow

gauge on the greater part of its system. The rise in the Lancashire and Yorkshire dividend is attributed to the division of profits which has been arranged with the London and North-Western Company, in anticipation of a Parliamentary amalgamation. If the statement is well founded, the allied Company must have suffered in proportion, and any one of its shareholders might enforce a reopening of the accounts by legal proceedings. Moderate fluctuations in the income of railway shareholders would scarcely deserve general attention, if the prosperity of the carrying trade were not intimately connected with the industrial and commercial condition of the country. The railway returns show, not that the amount and profit of business are declining, but that their expansion has been seriously checked. A portion of the increase in gross traffic returns represents the advance in the rates on goods which has been adopted on the principal railways, and nevertheless the percentage of increase is less than in 1871. In the current half-year the still higher price of coal will bear heavily both on the profits and on the traffic of railways, but it may be hoped that the other elements of increased working expenses have reached their highest point. An average rise during one year of fourteen per cent. in the cost of working railways would be alarming if it were likely to be repeated. In the majority of cases the additional expenses have absorbed the whole proceeds of the increased traffic. A continuation of the same process would induce the Companies to diminish the accommodation which is now for the most part liberally supplied.

The complaint that the increase of railway traffic, or of any other kind of business, is checked, affords a curious illustration of the confidence which is felt in the elasticity of the national resources. As the percentage of increase is calculated every year on a larger and larger amount, the maintenance of the same rate would imply that wealth and industry were growing in a geometrical ratio. There is no apparent reason why the demands of consumers should increase year by year, although production is naturally stimulated by previous prosperity. But for the unexpected rise in working expenses, railway dividends for the second half-year of 1872 would have been the highest ever known; and shareholders would have had no reason to be dissatisfied if they had afterwards remained for a time stationary. The recent fall in the price of shares proves, so far as it is not the result of irrational panic, that the market value had included an estimated rise in future dividends. It will generally be found that the ratio of the price of shares to the present return on the capital invested varies inversely with the amount of the dividend. Stock on which no dividend is paid is sometimes worth forty or fifty per cent., while a five per cent. stock is scarcely at par. Some capitalists on both a large and a small scale prefer more or less speculative investments to nominally fixed incomes which are liable to be reduced by a fall in the value of money. If the railways were purchased by the State, only a portion of the present holders of ordinary stock would be contented to accept the Government stocks which would be created for the purpose of the undertaking. Writers on political economy have often noticed the inconvenience which resulted in former times from the want of opportunities for investment in public funds. Similar embarrassments would be caused by a sudden curtailment of facilities for engaging in partially speculative undertakings. It is not the business of a Legislature to provide capitalists with employment for their funds; but in discussing the expediency of vesting the property of railways in the State, it might be worth while to consider that half the capital which now provides railway accommodation might be applied to other purposes if the owners were deprived of all prospect of an increase in the value of their property.

There is no doubt that, if the material progress of the country continues, the value of railway property will, with occasional variations, on the whole tend to advance. The uninterrupted experience of half a century, and the more rapid improvement of the last twenty years, had until lately created an almost universal impression that commercial and industrial prosperity grew by a kind of natural law. The great monetary disturbances which have recurred at intervals of eight or ten years affected the distribution of wealth rather than its accumulation. Manufactures have been occasionally checked because markets have been temporarily glutted; but, as soon as the obstruction was removed, the demand has invariably revived. The extreme depression of railway stock which lasted for three or four years after the crisis of 1866 was principally caused by various financial arrangements, and in some cases by premature prosecution of enterprises which might not be immediately remunerative. Almost all the larger Companies paid in the worst of times a dividend on their ordinary stock; and even when the fixed charges were not fully covered by the revenue, there was generally but a small margin of deficiency. As soon as traffic began to increase, the ordinary proprietors had reason to appreciate the advantage of arrangements under which they reaped the entire benefit of an income which might have afforded but a fractional dividend on the entire capital. The stock of the Great Western Company, which has a large proportion of preference stock, is, even after the recent decline, worth three times as much as in 1867. London and North-Western stock, with a similar increase of traffic, has in the same time risen about thirty per cent. The causes which at this moment have checked the prosperity of railways are more substantial, and may be more permanent, than the disturbances which formerly indicated administrative mismanagement. The wages which have been raised are not likely hereafter to be reduced; and the increase of the staff, which results from a diminution in the hours of work, will impose a permanent burden on the Companies. The danger which was apprehended by the acting Chairman at the London and North-Western meeting from the provisions of Mr. Fortescue's Railway Act is not that the total earnings of railways will be affected, but that some Companies may obtain an unjust advantage at the expense of their neighbours. There is no reason to doubt that a common interest will unite the more powerful Companies against interlopers who may seek to derive undue advantage from the provisions of the Bill. Compulsory through rates can only apply to traffic which is handed over from one Company to another; and litigious claimants will probably find, when they attempt to enforce the rate, that goods are forwarded in some other direction. Parliament would not be unwilling to remedy any practical injustice which might arise from a legislative miscarriage. It would be impolitic as well as iniquitous to discourage enterprise by depriving capital invested in railways of its due return; nor would there be any temptation to favour one competitor at the expense of another. Not a mile of railway in the kingdom has been constructed in expectation of a compulsory through rate with a neighbouring system; nor was any such arrangement contemplated in the Act of 1853, which is to be rendered effective by the institution of the new tribunal.

At nearly every railway meeting during the present year directors and shareholders have protested against the passenger tax, and more especially against the discontinuance of the partial exemption which was allowed in respect of Parliamentary trains. Under the existing law a Company is not liable to the tax on third-class passengers conveyed by a train which stops at every station. Within the last year the Companies have all, following the example of the Midland Company, attached third-class carriages to all their trains. A needy passenger can now travel from Edinburgh or Glasgow to London in ten or eleven hours, instead of wasting more than twice the time on the road. Unfortunately the Inland Revenue authorities have discovered that the improved accommodation deprives the Companies of the exemption from duty, and thus far the Chancellor of the Exchequer has not pledged himself to remove the flagrant anomaly. Ingenious official persons argue that the exemption was conceded on the assumption that third-class traffic would be unprofitable; and they plausibly conjecture that the recent liberality of the Companies is not exclusively prompted by pure benevolence. Sound policy would suggest that taxation should not be so adjusted as to discourage even an interested promotion of the public convenience. The whole of the passenger-tax is an anomaly, inasmuch as no corresponding tax is now imposed on any other kind of locomotion; and Mr. Laing will be fully justified in bringing, in accordance with his notice, the whole question before the House of Commons. Mr. Lowe is unluckily at all times indisposed to part with any item of revenue; and when he proposed two or three years ago to abolish the passenger-tax, he substituted a still more obnoxious burden on railways. He may perhaps feel a doubt whether the remission of the tax would lead to a reduction of fares at a time when Companies require additional funds to meet their working expenses. He may defend his possible obstinacy by referring to the fact that postmasters have not taken a penny off their charges since the abolition of the special duty on post-horses and carriages. Financiers seldom cultivate a passion for symmetry, except when the bed of Procrustes requires to be lengthened and not to be shortened.

DIFFICULTIES OF EUROPEAN GOVERNMENT.

AS the Madrid papers would say, "Tranquillity reigns" in Europe; and it is true that Europe generally is rather better off than Spain in this respect, and that the reign of tranquillity north of the Pyrenees means something rather better than a panic-stricken Government, disordered provinces, and interrupted communications. Yet the tranquillity reigning in Europe is so far like that reigning in Spain that in most parts of Europe it is a tranquillity under the surface of which many causes of anxiety exist. There is scarcely any portion of Europe in which those charged with the conduct of affairs do not feel that they have a heavy burden laid on them. Hope may largely prevail over apprehension, as it certainly does in England and Germany or Russia, and as it may perhaps be said to do even in France and Italy. Still every European State has its difficulties and dangers, and it is strange how very much the aspect of the difficulties and dangers is everywhere the same. We need not go into remote causes of anxiety, or into dangers lying much below the surface; for, although remote and hidden sources of danger, such as the apparent divergence of the interests of capital and labour, or the break-up of old faiths, or the too rapid acquisition of power by persons unfit to use it, are really of very great importance, yet practical statesmen are necessarily content to think of and attend to the dangers which actually press on them, and to provide as well as they can for each day as it passes without being very anxious about the future. The patent and superficial dangers of European Governments, which are everywhere more or less present, are the danger of debt, the danger of religious difference, and the danger of disintegration. We may use these three dangers as a test or standard of the position of each nation in turn, and ask how severely they are pressing, and how far one or two, or all three of them, are making themselves felt. In unhappy Spain all three are presenting themselves at the same time with alarming force. Spain has no money—owing much, and having no available resources; it is torn with a civil war based on religious differences; and it is being propelled in the direction of a Federal Republic. England has no cause of anxiety whatever with regard to money; it has a gigantic debt, but it is a debt which does not press at all in the sense in which the debts of struggling Continental nations press on them. Germany again is free from all pecuniary trouble, but then both Germany and England have the danger of religious differences and the danger of disintegration. They are dangers, in our own country, showing themselves in the mildest possible form, but with a Ministry trembling in the balance on a University Bill designed to compromise religious differences, and with a movement for Irish Home Rule which, if it does no further harm, may cause considerable disturbance in the machinery of party government, we cannot say that we are quite easy on the score of religious differences and of disintegration. Russia, on the other hand, is free from religious difficulties; for it has resorted with success to the simple process of stamping them out. But disintegration and debt are matters which the Russian Government has seriously to consider. Not that there is any but a slight danger to Russia from these sources, but still there is some. France again is exposed to all the three dangers. The new taxes will soon begin to press heavily, the South of France is always giving vague signs of a wish for something like separation, and the quarrel between the friends and the enemies of the Papacy is chiefly repressed by the memories of the recent war. France is a great and strong country full of resources, with a general addiction to centralization, and with many traditions and habits that would make it averse to a war for a religious idea. There is every hope that France will overcome its dangers, but France is in trouble just now because those dangers do press on it, while England and Russia are not in trouble because some of these dangers do not press at all on them, and the others press only very slightly.

It is in a large degree this solidarity, as the French would say, of European countries from being exposed to the same dangers, that contributes to each the chief source of interest in foreign politics. German politics are not, for example, as a rule, very interesting to Englishmen, nor have we much to do with the affairs of Austria. But the politics of Germany become of real importance to us when we find that the most stirring incident in them just now is the great quarrel between the State and the Church of Rome, which is reflected on a small scale in the collision of opinion that the current debate on the Irish University Bill brings to light; and the cry for Home Rule in Ireland is a sufficient inducement to watch the Austrian Reform Bill with attention. The three measures of the Prussian Government, which together formed its great battery against its clerical enemies, had to be delayed in their progress because it was ascertained that they contravened certain parts of the Prussian Constitution. The necessary amendments to the Constitution have now received the sanction of the Lower Chamber, and no apprehension exists as to the willingness of the Upper House, which is about to meet for the purpose, to adopt them with equal readiness. A Committee of the Lower Chamber has already busied itself with the details of the three Bills, and a steady and unvarying majority is sure to support them in that assembly, although there may not improbably be some attempt made in the Upper Chamber to modify them. Still it may be expected that they will pass without much alteration, and then Prince BISMARCK will have got all the means of combating the Ultramontanes which he has been able to devise. A Report has recently been issued showing that all the Jesuit establishments throughout the German Empire have been broken up, and a list has been published of those institutions which the authorities have decided are of a character too allied to that of the Jesuits to remain unmolested. So far, therefore, as the making and the enforcing of stringent laws will carry Prince BISMARCK, he may see his way to proceeding. But the difficulties which he and his friends will have to encounter are perhaps only beginning. We may leave out of consideration those wearisome disputes which the opposition of the priests will foment in every quarter of Prussia, the martyrdom which they will court and make the most of, the pitfalls which they will adroitly dig for their enemies when a harsh measure has to be applied in numberless small instances by minor officials. The Prussian Cabinet has braved the Ultramontanes, and of course has dared them to do their worst. But it is the peculiar annoyance of the religious difficulty that, whatever solution statesmen attempt to find for it, they always run the risk of alienating friends quite as much as they secure the hope of hurting their adversaries. The measures of the Government apply, of course, to Protestants as well as to Catholics; and the Pietist party among the Prussian Protestants, which is very powerful in high places, cries out that it is very hard that it should be placed under a new bondage to the State while it is thoroughly loyal simply because another religious body is supposed to be disloyal. Those, too, who approve theoretically of religious liberty in its extreme form, and want the Church and the State to be disunited, protest against measures which give a disciplinary power over the ministers of religion to laymen who may be utterly unconnected with their communion; while the advocates of complete free thought in the Universities feel an alarm which is not unreasonable at the proposal, forming part of the Ministerial scheme, to force every minister of religion to go through a University training. This might do the ministers of religion good, but it might do the Universities harm; for it is obvious that a pressure might easily be put on the Government not to force the future ministers of religion to have a University training and at the same time to let their training be of a kind which would shake or wound their religious belief.

The Austrian Reform Bill, which has this week been passed by the Lower House of the Reichsrath, is, it is scarcely necessary to say, a Bill for transferring the election of members of the Reichsrath from the Provincial Diets to the body of electors in the provinces. It substitutes direct for indirect election. It also involves a considerable change in the balance of political power by a redistribution of the number of deputies that the several provinces are to return. It is not necessary to enter into the reasons which have induced the Ministry to propose the Bill, so far as they are of a local character; but there are some of these reasons which are of a very wide application, and are well worth studying by those persons whose attention the Home Rule movement has attracted. Austria is a federation of provinces, each having a local Home Rule, and all combining to send persons to a Central Assembly controlling Imperial affairs. The Austrian Government finds that this state of things is very unsatisfactory. It seeks to get away from those disintegrating influences which Federalism fosters, and it does so in a very large degree because it finds that the Empire is sacrificed to its parts. The local Diets absorb the energy of the provinces, narrow their political horizon, and make them regard the whole of which they are supposed to be parts as something non-existent or inimical. If the Provincial Diets fairly represent the provinces, it might seem that the best chance of getting good deputies to the Central Assembly would be to let the Diets elect them. It is in this way that the Senate of the United States is elected, and the method

has been a success. But in Austria there is not enough coherence between the different provinces to make them look on any Central Assembly as superior to their own. The Provincial Diets consequently elect, in many instances, knots of representatives of the majority who go to Vienna to act together as a caucus or clique, to give as much trouble as possible, and, instead of helping to carry on the affairs of an Empire, to make Imperial always subordinate to provincial interests. The population of the provinces knows nothing about the Empire as a whole, and has no notion of Austrian policy or Austrian interests; the deputies of the Diets are only hardened in provincialism by their collision with the Central Government, and the Central Government has to expend its energies in bribing, or overpowering, or cajoling local cliques. A federation safe from external danger, like the United States or Switzerland, might, Austrian statesmen would allow, go on under such circumstances, but not an Empire such as the Austrian Empire must be, to exist at all. For such an Empire it is necessary that there should be something of an Imperialist feeling in the provinces, and therefore, they urge, there must be direct election, so that the humblest subjects of the Emperor may have it brought home to them that their Provincial Diet is by no means the only thing to be considered. Whether the remedy proposed in Austria will be adequate to the evil to be cured is very uncertain; but the dwarfing tendency of federalism, to the detriment not only of the higher forms of the body politic, but still more to that of the bulk of the people, who become absorbed in provincialism, is a point which the current history of Austria brings into strong relief.

MR. PLIMSOLL'S MOTION.

THE best excuse perhaps for the somewhat sensational tone of Mr. Plimsoll's book is that it has apparently answered its purpose. For some years past Mr. Plimsoll has been vainly endeavouring to obtain an inquiry into the loss of merchant ships at sea. He has more than once brought the subject before the House of Commons, but the shipowners were against him, and the Board of Trade could not think of countenancing such an unjustifiable interference with the liberty of the subject. Sir J. Pakington also took up the matter and moved for a Royal Commission; but still the House was cold and the Government hostile. Now, however, we find that everybody has suddenly become convinced that a searching inquiry is urgently required, and it would almost seem as if the only difficulty were how to make the inquiry searching enough to satisfy the impatient shipowners. What has happened to bring about this strange revulsion of opinion? Nothing that we know of except the publication of Mr. Plimsoll's extremely plainspoken book. The practices of which he complains have been carried on for years and years, and are sufficiently notorious. They are attested by the protests of seamen, the complaints of the underwriters, the official records of the Board of Trade, and by an overwhelming accumulation of other evidence from a great variety of independent sources. It may be doubted whether the Commission which is to be appointed will add very much to what is already known, but it will put the information into a more precise and authoritative form, and above all it will stir up public opinion, and so bring an amount of pressure to bear upon the Government which may perhaps compel it to take up the matter seriously. This is, in fact, what Mr. Plimsoll's book has already done to some extent. Whether legislation conceived and carried out under the influence of popular excitement is likely to be a good thing is another question. Mr. Plimsoll may at least plead that the timidity of the Government and the indifference of the House of Commons forced him to appeal to the public out of doors as the only chance of getting anything done, and that he has thus succeeded in obtaining what was previously denied him. The Government has agreed to Mr. Plimsoll's motion for a Commission of Inquiry, with some modifications. The subjects for inquiry will be, as stated by Mr. C. Fortescue, overloading, unseaworthiness—whether from defective construction, condition, equipment, or age—deck-loading, undermanning, and marine insurance; and the Commission is to report as to the best measures for remedying any evils which may be found to exist. Mr. Clay moved an amendment to the effect that the Commission should be empowered to take evidence on oath, but it was pointed out that this could only be done by passing a Bill, which would lead to delay, and that it would be more convenient to set the Commission to work as soon as possible. A sort of half promise was held out that, if the Commission, after it had made some preliminary inquiries, and had felt its ground, thought that power to administer oaths was necessary, the Government would bring in a Bill for that purpose, as well as for compelling the attendance of witnesses, and indemnifying them against the consequences of their disclosures. It must be tolerably obvious, however, that it is hardly worth while to appoint a Commission to go about collecting mere offhand volunteer evidence. If the inquiry is to be of any value, it should be searching and exhaustive, and the only way in which it can be made searching and exhaustive is by giving it ample judicial authority. If the whole affair is not to be an empty form, this will have to be done sooner or later, and it might therefore as well be done at once. The passing of a Bill would take only a week or two, and time would be saved hereafter.

We must confess that the hesitation of the Government with regard to evidence being taken on oath and to protecting witnesses, and the deprecatory remarks which were made as to following up what are called personal questions, inspire us with some misgivings as to the sincerity and thoroughness of the promised investigation. Mr. Plimsoll, if he is not on his guard, will perhaps find that his supposed victory is more nominal than real, and that the inquiry by a Commission is intended rather to screen than to disclose. Mr. C. Fortescue said it was not desirable, in his opinion, to have a semi-judicial inquisitorial investigation into the conduct or misconduct of individuals. Again, Mr. Peel, the Secretary of the Board of Trade, expressly desired the House to "observe that "this inquiry was not to be extended to the conduct of par-"ticular individuals," and he blamed Mr. Plimsoll for having imported personal charges into his book. In order to appreciate the bearing of these observations it is necessary to remember how matters now stand. Mr. Plimsoll asserts that there are certain shipowners who habitually send out crews to be drowned in unseaworthy ships, and that it is the homicidal cupidity of men of this class which causes a large proportion of the losses of life at sea. Now this is a very grave and even terrible charge. If Mr. Plimsoll has made it lightly, on the strength of mere rumour or loose hearsay evidence, he has done the men whom he denounces a grievous wrong. On the other hand, if he can prove his charge, he will, at some peril to himself, have rendered a most important service to the country. It is certainly not desirable that personal matters should be introduced into the discussion of public matters with which they have no sort of connexion; but here the personal matters are the very essence of the case. Mr. Plimsoll is not content with saying in general terms that there is criminal recklessness in sending out rotten or over-loaded vessels; he says that he knows, and that others know, who the men are who do these things, and he even goes very near to naming them. We have already expressed our opinion that, from one point of view, Mr. Plimsoll's book is not quite personal enough. In justice to shipowners against whom he has nothing to allege, as well as in justice to the accused persons, who are entitled to have an opportunity of defending themselves, he should, we think, have specified more clearly the particular "sinners" against whom his charges are directed. It appears that in one instance Mr. Plimsoll will have to defend himself against a criminal information for libel; but the investigation of charges of this kind ought not to be left absolutely at the choice of the accused. It seems to us that the propriety or impropriety of Mr. Plimsoll's charges really turns upon whether they are true; and how their truth is to be tested without going into the "conduct or misconduct of indi-"viduals," it is not easy to understand. What the Commissioners will have to do will be to inquire into the causes of shipwreck, whether such a ship was sound, or sufficiently manned, or properly laden; at every turn they will find themselves running their heads against personal questions. Are we to understand from Mr. C. Fortescue's explanation that it will be their duty, when this happens, immediately to stop short in their inquiry and look another way for fear they should hurt anybody's feelings? Mr. Fortescue remarked that there was no precedent for a Commission with power to summon witnesses and to take evidence on oath, "except where individual misconduct was directly at issue," as, for example, in the case of the Trade Unionists at Sheffield. We should have thought that the case of a shipowner who is charged with drowning five or six crews a year in the ordinary course of business comes very near to being something like "individual misconduct." When the Sheffield Commission was appointed the working-men complained that it was only against their class that such inquisitions were directed. The

Government will now have an opportunity of showing that no distinction is made between gentlemen shipowners and common sawgrinders when alleged criminal practices have to be investigated. Shipowners who do not send out rotten or overladen ships have no reason to resent a searching investigation; those who are suspected of being guilty in this way, but who are really innocent, cannot fail to welcome it. What is wanted is not a nicely balanced Commission of shipowners, shipbuilders, naval officers, and members of Parliament who will just skim over the surface of things and produce a vague report of a highly impersonal character, but a Commission of experienced and independent lawyers who may be trusted to get at the facts, and who will not be afraid of bringing anybody's misconduct to light.

It will be exceedingly unfair to the shipowners if, after all that has been said, the manner in which the inquiry is to be conducted does not inspire general confidence. It must be remembered that the PRESIDENT of the BOARD of TRADE has not ventured to quarrel with Mr. PLIMSOLL's statements. He corrects some of his figures, hints that in some points he may have been misled, but accepts the substance of the indictment as indisputable. Only, he says, let us keep clear of personal questions. Mr. FORTESCUE, like the American politician, is willing to go pretty strongly against wrong in the abstract:—

> But we mustn't be hard on partickler sins,
> Cuz then we get kickin' the people's own skins.

Except for what is called quasi-judicial purposes, there is really no reason for having a Commission at all. For all the purposes of practical legislation a sufficient body of evidence has already been collected. What is required is courage to act on it. There is a clause in the Act of 1871 which, though mild enough in itself, points in the right direction. It is thereby provided that every person who, having authority as owner or otherwise, sends a ship to sea in an unseaworthy state, so as to endanger the life of any person belonging to the same, shall be guilty of a misdemeanour, unless—and here the latter part of the clause proceeds to qualify and neutralize the first part—he proves that he used all reasonable means to make and keep the ship seaworthy and was ignorant of such unseaworthiness, or that her going to sea in an unseaworthy state was under the circumstances reasonable and unavoidable. It will be observed that the clause does not say whether the unseaworthiness includes the weight and stowing of the cargo as well as the condition of the ship, and the permission to send an unseaworthy ship to sea if the owner thinks it "reasonable" opens the door for anything and everything. There would be no difficulty in shaping a short, sharp, and simple clause of this kind which would really fasten responsibility on the owner for the loss of a ship. At present the system of insurance may well render the owner indifferent to the fate of the vessel, sometimes even rather desirous never to see it again. What is wanted is to find some means of making it better worth the while of an owner to keep his ships in a seaworthy condition than to send them to sea in an unsound or overladen state. A limitation of the amount of insurance is impracticable, since it could easily be evaded; but in some other way a penalty might be imposed for the loss of a ship, unless it could be shown to have been due to unavoidable causes. Merchant seamen, as Mr. FORTESCUE observed, are not a perfect race, and it would be dangerous to assume that they are invariably in the right when they question the soundness of a ship and refuse to go in her. It is obvious, however, that the statutory right of a common seaman to claim a survey at his own expense is simply a mockery of protection. It can hardly be doubted that deck loads should be placed under stringent regulations, and the proposal of the Institute of Naval Architects to mark on the side of each ship amidships the point at which a horizontal plane would cut off one-fourth of her internal capacity, as a guide on the question of loading, deserves at least careful consideration.

THE THREE RIGHT HONOURABLES.

THE present Government, as is well known, is a Government that must not be laughed at, and it may readily be conceived that at the present moment especially Ministers are by no means in the humour for a joke. Mr. GLADSTONE remarked at the Croydon dinner that it might perhaps occur to some of his hearers to speculate as to what sort of region the Government lived in; but he was probably not aware that at that very hour a large audience was laughing at an amusing picture of himself and some of his colleagues getting up a democratic revolution in the "Happy Land" of the fairies. Those who remember that a couple of years since the LORD CHAMBERLAIN directed that the slightest allusion to Mr. LOWE and the match-tax should be mercilessly excised from the pantomimes, must have been rather surprised to find that a few days ago a burlesque had been produced at one of the theatres, with the approval of that august but somewhat bewildering functionary, in which there were not only allusions to Ministers and their policy, but in which three members of the Government were actually introduced upon the stage, for the purpose of being chaffed and ridiculed. The three Right Honourables, it is true, were not named in the bill, but their dress, features, and demeanour, as imitated by the actors, left no doubt as to the personages with whom they were intended to be identified. The audience had no difficulty in discovering that the Privy Councillors who had come up to fairy land to try the experiment of popular government in a new sphere were no others than the PRIME MINISTER, the CHANCELLOR of the EXCHEQUER, and the FIRST COMMISSIONER OF WORKS, and the reckless profanity of the audacious dramatists was even carried so far as to represent the solemn head of the Government being whirled about in a wild dance of French origin by scantily clothed fairies. The Ministers who thus invade cloudland in order to bestow on the fairies the blessings of the British Constitution at once set to work to establish a Government party and an Opposition, and to erect a Cabinet by competitive examination, places being assigned to the candidates who prove most conclusively their ignorance of the functions they undertake to discharge. One who innocently asks "What is a *ship?*" finds herself immediately installed at the Admiralty; another is appointed to be the guardian of art, as a reward for her arrogant and overbearing Philistinism. The result is of course that the peace of the aerial kingdom is soon at an end, everything is thrown into confusion, agitators brawl in the public ways, mutinous meetings are held, the mob obey only such laws as they please, and, while parsimony enfeebles the administration and defences of the country, the notorious pusillanimity of the Government provokes contempt and aggression. All this does not strike one as a very cutting or forcible satire. It is only a reproduction on the stage of what is said every day in some of the papers. Nor is it easy to assign a logical reason why a public man may be caricatured in *Punch* but not in a play. It would appear that in the first instance the LORD CHAMBERLAIN, when the manuscript of the piece was submitted to him, saw nothing in it to object to, for he sanctioned its performance; but it is probable that the copy on which he formed this judgment did not include the whole of the stage directions, especially as to costume, and speeches which may have seemed inoffensive enough in themselves would assume another complexion when it was known that they were delivered by actors disguised as members of the Government. After three or four performances the play was suddenly interdicted, and a lively discussion may be expected as to the authority of the LORD CHAMBERLAIN and the right of Mr. GLADSTONE to interfere with the amusements of his own flesh and blood.

In this case the LORD CHAMBERLAIN has certainly precedents to appeal to. Indeed the Act under which he exercises his authority was passed expressly with a view to prevent attacks on public men in the guise of comedy. Political allusions had been discovered in the *Beggar's Opera*, and FIELDING had even undertaken to bring Sir ROBERT WALPOLE and his colleagues personally on the stage. Some years ago Mr. SHIRLEY BROOKS was refused permission to dramatise *Coningsby*, and Mr. BUCKSTONE was forbidden to personate Lord JOHN RUSSELL, though the elder MATHEWS was allowed to imitate O'CONNELL. In one instance a play was sanctioned at the Coburg Theatre soon after GEORGE III.'s death, in which the old KING was represented as being borne up to heaven, while Queen CHARLOTTE, the PRINCE of WALES, SHERIDAN, FOX, and others figured in the course of the piece. This, however, must be regarded as one of those exceptions which prove the rule, and it may be assumed that no such piece would now be tolerated. Although the censorship has always been hostile to political satire on the stage, there is no reason to suppose that in this country the public has ever had much taste for anything of the kind. The difficulty in France and some other countries is to prevent audiences in times of excitement from attaching a political meaning to incidents and characters of a purely social kind, and more than one revolution has been associated with a dramatic success of this nature. Everybody knows the history of the *Marriage of Figaro* and what came of it. *Robert Macaire* lent an impulse to the spirit of contempt which overthrew LOUIS-PHILIPPE; and it is believed that the *Grand Duchess of Gerolstein* helped to drive Queen ISABELLA from the throne. It would be absurd, of course, to anticipate any such

consequences in our own country. It is conceivable that on the eve or in the midst of a general election, when any exciting question was under discussion, and party feeling ran high, appeals to public passions from the stage might not be without their effect; but they could hardly add much to the influence which is already exercised by the press. A Government strong in itself and in its policy has little to fear from lampoons or caricatures, whether printed or acted, and the weapons which are used by one side are open to the other. It is possible, however, that Mr. GLADSTONE does not number among his followers many who are adepts in this kind of warfare, and that his opponents would have the best, if not of the argument, at least of the jokes. The burlesque at the Court Theatre having been allowed to be produced, it may be doubted whether it was wise or prudent to come down upon it with a summary interdict, the result of which will certainly be to magnify the importance of a mere trifle of the hour, and to excite an amount of public curiosity which may possibly find some other means of gratifying itself. The *Happy Land* may still be performed at any theatre out of London, and even in London it is doubtful whether it might not be played at the music-halls with some slight modifications. On grounds of good taste we are disposed to think that such pieces are objectionable, but the enforcement of good taste in a democratic community by the exercise of the authority of the Government requires to be managed with a cautious and delicate hand.

CULPABLE LUXURY.

MR. W. R. GREG writes an article in this month's *Contemporary Review* in continuation of the controversy about the nobleman said by Mr. Goldwin Smith to consume the income of six hundred poor families. In his present remarks Mr. Greg passes with very little notice over the more technical part of the argument as to the truth of Mr. Mill's theorem that demand for commodities is not demand for labour. We shall follow his example, merely making one remark by way of explanation. Mr. Greg said in his last letter to the *Pall Mall Gazette* that we had interpreted a single ambiguous phrase used by him into a contradiction of the theorem in question. Our interpretation did not rest on any single passage, but on the whole line of argument adopted; and, if it were worth while continuing so technical a discussion, we should have to point out that the same error is involved in at least one sentence of the present article. The nobleman, says Mr. Greg, who lives in the height of luxury is to be "quietly conscious" that his expenditure enables "scores of families" to subsist in comfort. His expenditure, so far as it is an expenditure on luxury, does not enable a single family beyond his own to subsist at all; but we will not go again into a question on which we have already said enough, and which besides is fully discussed in all treatises on political economy.

We will come to a question of great importance now raised by Mr. Greg. He attacks Mr. Goldwin Smith by a retort. If the nobleman, he says, with 30,000*l.* a year is consuming the income of six hundred families, the gentleman with 3,000*l.* a year is consuming the income of sixty, and even the tradesman with 300*l.* a year the income of six families. Nay, the poor man who lights his pipe or drinks his dram is doing the same in a smaller degree. This, of course, is true; but it is very far from settling the question. It is obviously possible to maintain that a man is justified in consuming the income of sixty poor families, but not justified in consuming the income of six hundred. Indeed the doctrine is not only possible but plausible, and to some extent, we think, true. Our duty to our neighbour has its limits. Nobody would blame a man for attending to his own comforts rather than to his neighbour's up to a certain point, which it is of course impossible to define accurately. Nobody, that is, is a fitting object of disapproval because he does not carry his liberality to the extent of spending his whole income in promoting the welfare of others. But as his income increases, the objection to spending it all on his own enjoyment increases rapidly, and for a very obvious reason. An expenditure, we will say, of ten pounds on the private pleasures of a man who already spends 1,000*l.* a year adds far less to his comfort than an equal expenditure by a man who only spends 100*l.* a year. As a poor man grows rich, he can employ successive increments of income, first, on securing advantages which are almost necessaries—on objects, that is, which directly contribute to his health and strength; secondly, on objects which may partly be called luxuries, but which still add very materially to his happiness; and, finally, when he becomes very rich, he finds very great difficulty in spending it on himself at all. A man, though ten times a millionaire, has only a limited number of faculties to gratify. When he has secured good air, good food, and good clothing and lodging—when he has bought as many books as he can read, as many horses as he can ride, and as many houses as he can inhabit—when he has obtained full means of satisfying every want to which he is sensible, it becomes exceedingly difficult to spend money in any way calculated to give himself pleasure. Hence it is plain that it may really involve less sacrifice for a man of 100,000*l.* a year to give away half his income than for a man of 1,000*l.* a year to give away a tenth. The first is only depriving himself of means which by no possible exercise of ingenuity can be made to contribute very decidedly to his comfort. The other is compelled to pare off many luxuries the absence of which he would feel most sensibly. It is a difficult problem, on which we have sometimes reflected, how large an income a reasonable man should wish to possess—assuming, of course, that he spends it on himself. Beyond a certain point an increase of wealth is a burden instead of a pleasure; and a man becomes a slave to his own magnificence. And hence it is obvious that Mr. Greg's dilemma is merely verbal. If we do not bid a man of 3,000*l.* a year to give away as large a proportion of his income as a man of 30,000*l.* a year, it is simply because the sacrifice in the first case would be enormously greater than the sacrifice in the second. A peasant who cultivates a few flowers is as objectionable, says Mr. Greg, as a nobleman who keeps the biggest of parks and gardens, because his objection to the last is "evidently based on the assumption that all land ought to be devoted to growing food, at least till every one has food enough." We certainly do not make that assumption; but there is clearly a great moral difference between a man who cheers his dismal life by half-a-dozen dahlias and a nobleman who keeps up vast gardens through which he has hardly time even to walk. Both, it may be, sacrifice their neighbours to themselves; the man who might add a few potatoes to the dinner of a pauper, and the man who might give allotments to a parish. But one only sacrifices his neighbour in a degree which is necessary if we do not insist on everybody coming up to the ideal standard of the purest saint; and the other may be sacrificing the comfort of a district for a pleasure which occupies a scarcely perceptible corner of his time. There is a real difference between a labourer who takes the biggest slice of meat for himself and the man who puts everybody else on bread and water that he may drink champagne. From this point of view there would be nothing absurd—though of course there are abundant reasons against it of a different kind—in fixing a limit to the income which anybody might enjoy. It would be an intelligible proposition that, after a man has spent, say, 10,000*l.* a year on himself, every subsequent addition of income adds so incomparably less to his comfort than it would to the comfort of his neighbours, that he ought to give it away.

We do not, of course, hold this doctrine, any more than we hold any other form of communism. Amongst many conclusive reasons, there is the ordinary objection to gratuitous charity. To say that a man ought to give away large sums of money is generally to say that he ought to demoralize a district; but besides this, there is the strongest objection to making any such matter a question either of law or of strict morality. For reasons which we certainly need not discuss, we fully agree to the importance of preserving a strong sense of the sacredness of private property; and we should therefore think it preposterous to the last degree either to make a law regulating the amount of income which a man may enjoy, or even to fix a rigid moral standard prescribing the proper amount of charity. A man who spends his money in a manner not demoralizing to his neighbours should be exempt from any distinct censure, because otherwise we begin to infringe upon his private rights. In fact, it would be necessary, in order to lay down any definite principle, to decide in what degree a man may prefer his own interests to his neighbours; and we know of no method of calculating that delicate problem. All this, however, is merely saying that the duty incumbent upon a rich man is one of imperfect obligation. He ought to be liberal and generous, but the very essence of generosity is destroyed when you lay down the precise amount of generosity which is to be exacted under penalty of disapproval.

Indefinite, however, as the duty may be, and ought to be, it is not the less binding. We cannot say, you must give away so much according to an accurate sliding-scale, which increases in a greater ratio than the increase of your income; but we may fairly say, every man is under greater obligations to be liberal in proportion as he grows richer, because the sacrifice demanded from him becomes smaller. In fact, this is simply the true conservative doctrine. The formula adopted by Mr. Goldwin Smith has a rather invidious sound, but it contains an element of truth which we should think that Mr. Greg would not deny. Yet, implicitly, he seems to give some countenance to a dangerous doctrine. He says that a nobleman ought to have a quiet conscience when he has spent everything upon himself. He is enabling a number of families to subsist in comfort, and has thus done a great deal of good to others, whilst simply attending to his own interest. No one, whether nobleman or shopkeeper, ought to lay such a flattering unction to his soul. Suppose, in fact, that all English nobles or American millionaires acted on Mr. Greg's principles; that they considered that they had discharged the whole duty of man when they had bought pictures, built houses, preserved game, and attended horse-races. Is it not plain, without much argument, that we should be on the high road to a revolution, were it not that a very large number of noblemen take a very much higher view of their duty? Fortunately for the class and for the country, such men think that they are bound to employ their great revenues and vast influence for rather nobler purposes—for promoting education, building churches, improving labourers' cottages, or encouraging schemes of public interest. Great wealth raises a man above the necessity of contributing by direct personal labour to the satisfactory working of the machinery by which the business of the country is carried on; but it therefore brings with it the duty of devoting

part, though an indefinite part, of his wealth and influence to the public good. Giving away money in direct charity is, of course, the least desirable mode of expenditure; but there are other alternatives between spending it all on yourself and giving it away to beggars. The case is, of course, just the same in America. A rich man who founds a University, like Mr. Cornell, has behaved in a way which deserves the very highest praise. It would be absurd to say that everybody who is equally rich is bound to found Universities or analogous institutions; but we may safely say that the social condition of America will be healthy in proportion to the number of men who approximate to Mr. Cornell's standard, and unhealthy in proportion to the number who think that they have done their duty when they have built fine houses in New York and filled them with every refinement of luxury. The question whether gross corruption is to become the ruling power in the States or a sound public spirit to be generated in its place depends in no small degree upon whether rich men do or do not take a loftier view of their duty than Mr. Greg would exact. How to spend large sums of money for public purposes without doing more harm than good is indeed a very difficult problem; but it is not insoluble, and it is of vital importance to the welfare of society that a satisfactory solution should be obtained. That, again, can only be done if rich men are compelled to study the question by a strong sense of duty.

Other classes, Mr. Greg will say, have the same or correlative duties. Undoubtedly this is true and most important. The citizen's duty, for example, is to do his work in the most thorough and conscientious manner; and it is a duty which he is at least as much inclined to forget as the rich man to forget the duties of his station. But that is the very point. Mr. Greg very properly says that an increase of wages is of little use if the labourer drinks the balance which remains to him. But if a rich man is told that he may fairly spend all his money on himself, the poor man will of course learn the same lesson, if indeed he has not learnt it already. You are perfectly right, says Mr. Greg, to the millionaire, if you spend your whole income on fine houses and pictures. Very well, replies the poor man, then I am quite right if I spend my whole income on gin and tobacco. If the rich man's luxury is venial, why not the poor man's? Mr. Greg seems to say that both are right. We should assert that they are both wrong. The poor man ought to spend his money in the way most likely to conduce to his own welfare and that of the public. As a general rule, that will be by getting his own family decently fed, clothed, and housed, and by having his children sent to good schools. The rich man is bound, we will say, to discharge the same duty. Before he attends to anything else let him see that his family are fitted in every respect to take their stations as thoroughly cultivated members of society, and let him think more of himself and them than of any other human beings. But when he has done all this and spent a few thousands a year in the process, what is he to do with the surplus? Is he to go on perfectly content so long as he can devise new pleasures by taxing his ingenuity to the utmost? Surely it is plain that he has another duty, which hardly exists at all, or only in a most rudimentary state, for his poorer neighbour. He has the means of exerting an enormous influence for good or for evil upon society at large, and especially upon his immediate surroundings. We do not prescribe, and we agree that it is impossible to prescribe, how much influence he should exert or in what ways. But we may safely say that he is bound to take a large and generous view of his position. If he comes to the conclusion that the highest duty of a rich man is to shoot birds, he ought not to be legally punished; but he is certainly encouraging some of the worst evils which threaten society. If he thinks that he should use his superfluous means towards promoting the civilization of the masses, he may be doing much to provide a final remedy for social ills, and it is absurd to say that no duty is incumbent upon him under the circumstances. We do not say that a different code of morality should be enacted for the rich and the poor, but we do assert that the same code prescribes very different lines of action to the man who can gratify all ordinary wants, and still possess a great surplus of pecuniary power, and to the man who can at most provide himself with necessaries, and with just enough luxuries to raise him from the barbarous stage to be more or less of an intellectual being. Luxury, in short, is permissible so long as it tends to elevate a man by awakening the perceptions which are necessarily deadened under the pressure of a hard struggle for existence. It becomes questionable when it means weakening the moral fibre by a painful search after new pleasures. That perhaps is the nearest approach to a test of the degree in which purely personal expenditure is desirable. The real justification of all expenditure on private pleasures is the absolute necessity of keeping up a class with leisure for thorough intellectual cultivation, if we are not all to sink to the level of mere eating and drinking animals. Thus a man who spends money on himself is really contributing essentially to the welfare of society. But the highest standard of culture is reached long before the highest standard of wealth. A man with ten thousand a year is at least as highly cultivated on an average as the man with fifty thousand; and therefore the justification of profuse personal expenditure diminishes rapidly as wealth increases beyond a certain level. And hence it is no paradox to say that you may consume the income of sixty, but that you ought not to consume the income of six hundred, families. In one case the expenditure produces a sufficient return in the shape of a thoroughly trained and intelligent family, which is an important factor in the national life; in the other a much greater expenditure produces no more. A man may be justified in spending the income of six families to procure a University education for his son; but not in order to shoot a few more pheasants.

SILCHESTER.

THE Britain which our forefathers turned into England has, for the most part, to be looked for below the ground. That so it should be was one of the necessary results of the means by which that great change was made. At first sight it might seem as if the phenomena of our own country in this respect differed but little from the phenomena of other countries. Take for example the city which, of all the cities of Northern Europe, is richest in vestiges of Roman dominion. Rich as Trier still is in its remains above ground, its amphitheatre, its basilica, its palace, and the mighty pile of its *Porta Nigra*, there can be no doubt that far more extensive remains of Augusta Trevirorum lurk below. The vaults, the pavements, which are hidden under the mediæval and modern houses must be endless. But this is what always happens in a town which has never ceased to be inhabited. Nothing is so lasting as a street; nothing is so little lasting as the particular houses of which the street is made up. In Exeter, for instance, one of the few towns in England which have been continuously inhabited since Roman days, there are few houses even of mediæval date, but the main lines of the Roman city are there as plain as ever. Not a fragment, to the best of our knowledge, of the Damnonian Isca is standing above ground, but we should be surprised if there is not a good deal of it to be still found underneath. In cases like these the city is destroyed by the fact of its being preserved. It perishes piecemeal, because there was no moment when it was utterly swept away. Now on the Continent, as a rule, the Roman cities have been continuously inhabited down to our own time; in Italy, Gaul, and Spain the Roman life has never wholly died out. If therefore the Roman remains in those countries are on the whole much more scanty than we should have looked for, it is chiefly because they have perished through the wear and tear of ages; mediæval buildings gradually supplanted those of Roman date, as modern buildings are gradually supplanting those of mediæval date. The exceptions are to be found in those parts of the Continent where the circumstances were nearly the same as in our own island, in those border lands of Germany, Gaul, and Italy where the Teutonic conquest or reconquest trod out the remains of Roman life almost as thoroughly as it did in Britain. But, comparing the Continent in general with our own island, especially comparing that land of Gaul which it is most natural to compare with our own island, we find one main distinction to be, that in Gaul, as a rule, the Roman towns have been continuously inhabited, while in Britain, as a rule, they have not. We cannot in every place pronounce dogmatically. We know that Exeter, as not having been conquered by the English till after their conversion, has never ceased to be inhabited. But we know also that Chester, Bath, and Cambridge stood desolate for several centuries, and we know that Anderida has stood desolate till our own time. On the other hand, if Canterbury, York, London, and Lincoln ever stood desolate, the time of their desolation could not have been very long. But the point is that, in marked contrast to the Continental rule, a great number of the Roman cities of Britain were utterly wasted, and that many of them have never been rebuilt. Parts of some sites have been occupied by small villages; other sites stand altogether waste; of some Roman settlements it is even hard to find the site at all. The cases where a Roman town still exists as a considerable English town can hardly be the majority. Those which can be shown to have been uninterruptedly inhabited are a very small minority indeed. In France and Aquitaine, on the other hand, in utter contrast to Britain, the chief Roman towns still remain the chief towns in our own day. In Aquitaine and Provence they even commonly retain their names of Roman or earlier date, not forgetting that the still surviving names of Massalia and Antipolis carry us back to a state of things to which Britain has no parallel at all.

Now this utter destruction of the Roman cities, the desolation of so many of their sites down to our own day, is the most speaking witness of the wasting and exterminating character of the English Conquest. The fact that we know so little about it, the yawning gap between Roman and English history in Britain, a gap which has no parallel in Continental lands, teaches us better than anything else what was the real nature of the settlement made by our forefathers. It is a striking fact that no ornamental Roman building is to be found standing up in Britain. Not a single Roman column remains in its place throughout the whole land. This is not the mere work of time. To say nothing of Egyptian remains, Greece, Italy, and Sicily still keep abundant remains of Hellenic antiquity; it is owing to a mere accident of modern warfare that the Parthenon itself does not remain as perfect as when the Slayer of the Bulgarians paid his thanksgiving within its walls. It is because Britain was overrun by an enemy far more destructive than the Goth, the Frank, or the Turk himself. It is a speaking fact that of what must have been one of the greatest Roman cities of Britain we have absolutely no history whatever. Antiquaries are, we believe, now pretty well agreed that Silchester is the Roman Calleva Atrebatum—in Gaul the place might have been called Arras and its district Artois—and it is so marked in

Dr. Guest's map. But this is merely a geographical and not an historical fact. Calleva is simply a name in the Itineraries; nothing that ever we heard of is recorded to have happened there. Nor do we add very much to our knowledge if we conceive Silchester to have been Caer Segeint of the so-called Nennius; for this one fact, that the elder Constantius was buried somewhere in those parts, can hardly be true, seeing that he died at York. Of the origin of the city we have no account; nor have we, as we have in the case of Anderida, Bath, and other cities, any statement, or even any direct clue, as to the time of its destruction. That we know nothing of its origin is most likely owing to the fact that Calleva seems to have been more of a city and less of a fortress than most of the Roman settlements in Britain. Its polygonal form, which it shares with Durolipons or Godmanchester, stands in marked contrast to the quadrangular form of the camp, and suggests that it arose out of an earlier British settlement rather than out of a purely military post. As to the time of its destruction, it is plain from the discovery of coins of Honorius and Arcadius that the site was occupied as long as the Roman occupation of Britain lasted. The general indications which have been followed by Dr. Guest in tracing out his maps lead us to set it down as having been in English occupation—and English occupation just then was the same thing as destruction—before the great check which the English arms received at the hand of Arthur in 520. The destroyers therefore were Cerdic and Cynric, but we have no such notice of its overthrow as we get in Henry of Huntingdon, and even in the Chronicles, of the overthrow of Anderida at the hands of Ælle and Cissa. The whole history of the site is shrouded in darkness, but it is darkness more instructive than any amount of light.

The place is easy of access, lying from three to four miles from the Mortimer Station of the branch of the Great Western Railway between Reading and Basingstoke. The French name of Mortimer, coming between the two Teutonic tribe names of the Rædingas and the Basingas, and being itself the point of starting for the old Roman city, gives us a lesson in British nomenclature. As usual, the Roman, the Englishman, and the Norman have all left their mark; the Briton alone is utterly wiped out. When we reach the spot, the first feeling is perhaps one of disappointment; the walls do not stand out in the same stately sort as the walls of Anderida, the walls which stood as they stand now when William landed beneath them. We doubt if there is any place in the whole circuit where the outer surface has not been thoroughly picked away. In a country where stone is precious, Silchester walls and Reading Abbey church have alike been found useful as quarries. The wall is there in its whole extent, save where the gates have utterly perished, whether as part of the special work of the first conquerors, or because they supplied a tempting store of good stones in after-times. The wall is there, but it is often sadly broken down; in some places it has to be traced. Nowhere is its Roman character so forced upon the eye as it is at Anderida, and in the smaller fragments at York and Lincoln. But, when we get within the enclosure, utterly unoccupied except by a small church and a single farmhouse in one corner, our feeling is that of amazement at its vast extent. A glance shows that it is far larger than Anderida, than Deva, than Isca, than the original military posts of Lindum and Eboracum. The two largest diameters of the irregular polygon are, one rather more and one rather less, than half a mile. And when we come to examine the treasures below ground which have been brought to light by the zealous care of Mr. Joyce, we find that Silchester is indeed one of the great spots of our island. The excavations have as yet been carried over only a small part of the enclosure, but the foundations of a vast number of public and private buildings have been brought to light. In some cases it is plain that changes took place while the city was still inhabited. An ingenious conjecture has found a name and a probable use for everything that has been brought to light. We cannot enter into all of these; but two buildings of extraordinary interest must be spoken of. The excavations of the Forum, which seems to be almost perfectly made out, have brought to light the unmistakable foundations of a gigantic basilica. The foundations of the two rows of columns are there, and here and there fragments of the columns themselves, with noble Corinthian capitals, have been brought to light. They doubtless supported entablatures; there is no reason to think that the great invention of Spálato, the germ of all later architecture, had been forestalled at Calleva Atrebatum. The internal arrangement of the basilica must have been awkward as compared with that of the ecclesiastical basilicas at Ravenna and elsewhere. In these the semicircle of the apse continues on either side the lines formed by the two ranges of columns. At Silchester it is otherwise. Here the semicircle is greater than a semicircle would be which continued the ranges of columns, so that the ends of the columns, the two ranges of which seem to an ecclesiastical eye to stand strangely near together, must have abutted upon the chord of the semicircle, so as to throw the two ends of the apse itself into obscurity. Any one who remembers Torcello or Classis will feel how utterly the effect of the apse must have been ruined by such a ground plan. Still, though the perfection of the basilican arrangement was not reached all at once, yet the building of Silchester must at least have shown two noble ranges of columns; and it is something to trace, and that on our own soil, the gradual development of the type which is in truth the germ of all ecclesiastical architecture. In the visitors' book at Silchester we marked the name of Mr. James Fergusson more than once. Is it possible that even his craze can make him believe that, in the island, almost even in the neighbourhood, where these noble colonnades have been reared, even a Celt could be so perverse as to go back and build the rude masses of Stonehenge?

Another most remarkable discovery is that of a round temple. Two circular foundations, one within the other, may be clearly seen. It did flash across our mind for a moment whether these could be the foundations of a Christian church, a British St. Vital; for it must not be forgotten that a city which formed a part of the Empire of Honorius could hardly have been without Christian buildings. The absence of the projecting sanctuary is not absolutely conclusive against the possibility of its Christian use; still it is perhaps safer to set it down as a pagan building. It must be remembered that, if it were Christian, the outer circle of foundation would be for a wall, and the inner one for columns; while in a pagan building it would be the other way.

But one relic has been found at Silchester the interest of which, in a certain point of view, is beyond all others. Among the ruins of one of the houses, which had plainly been destroyed by fire, stowed away, it would seem, with care in a secret place, was a legionary eagle, broken away from its stem. This fact would seem to show that the Britons who withstood Cerdic and Cynric still so far looked upon themselves as Romans as to bear the ensign of Marius in their wars, and still to look on it as a sacred thing, which they strove by every means to keep from falling into the hands of the invaders. Such a piece of detail as this brings before us at once the unbroken march of history and the strange ups and downs along which that march has to be traced. We are all used to pictures of the landing of Cæsar, with the eagle brandished before the eyes of the astonished Britons. We have never seen a picture of the Briton keeping the ensigns which had been handed on to him by the conqueror who was also his teacher, and hiding them out of the sight of the conqueror who must have been not his teacher but destroyer. Yet it is the latter scene which most concerns us. It is because Silchester and places like Silchester were left waste without inhabitants—because those who dwelled in them were cut off by the sword or driven to save their lives in remote corners of Britain, perhaps of Gaul—because for a hundred years the faith of Christ was wiped out before the faith of Woden—it is because of all this that Britain has not been as Gaul and Spain, but that we still keep the laws and the tongue which we brought from the mouths of the Elbe and the Eider. Calleva and its people were swept away that the Rædingas and the Basingas might grow up as purely English settlements on the conquered soil.

DEPUTATIONS TO THE ARCHBISHOP OF CANTERBURY.

THE unwearied energy displayed by the Archbishop of Canterbury in receiving all sorts of deputations is no doubt a gratifying proof of his Grace's restored health, but still it may not be wholly superfluous to suggest that a little more discrimination might with advantage be shown in making choice of the deputations to be received. It is not three months since we were led to comment on the visit of the Lord's Day Rest Association to Lambeth Palace, and on Monday last they again waited on the Archbishop, having in the meantime—to do them justice—abandoned some, if not all, of the strange proposals to which he was then induced to accede. Whether the intended meeting at the Lambeth Baths ever came off we are not aware, but the notable plan of the Archbishop and the friends of the Society taking a Sunday walk along the New Cut and "improving the time by talk," as the hymn expresses it, has been definitively given up. Nor have we heard any more of the still more startling suggestion that a Sunday should be fixed early in the year—February 16 was the day named—for discharging a general broadside of Sabbatarian discourses from the pulpits of the Established Church and all the various denominations; this scheme, we may therefore hope, has been also abandoned, probably from the practical impossibility of carrying it out, to the considerable relief both of preachers and congregations. A subsequent proposal that the Bishop of London should make a journey to St. Paul's on foot in order to preach against Sunday cab-driving appears to have similarly collapsed. The remarks of the Archbishop on Monday last were temperate and sensible enough, and the effect of the Evening Hymn, sung by an assemblage of Lambeth tradesmen, led by Mrs. Tait and the Misses Tait, may be presumed to have been very impressive; though the closing remark attributed to his Grace, that "the noble old palace had never been put to so excellent a use before," will perhaps sound to those who are not members of the Sunday Rest Association just a little enthusiastic. It is, however, of another deputation which the Archbishop received on Tuesday last that we chiefly propose to speak here. The Sunday Rest Association has at least a laudable object, and if it is not conspicuous for the wisdom of the serpent, it may claim a large share of the innocence of the dove. But we are by no means prepared to bestow even the same qualified eulogy on the mysterious and anonymous Society which has been for the last thirty years and more sedulously employed in burrowing under the foundations of a great constitutional principle, affecting alike the social, the civil, and the religious interests of the nation. We have so frequently had occasion to expose the hollow professions, the slippery logic, and the reckless assertions of the advocates of what has been not inappropriately termed "the Bill

for abolishing Sisters-in-law," that it may seem almost a work of supererogation to waste any more words upon them. But there is a good deal of point in the advice of Giles Hoggot to Mr. Crawley, "it's dogged as does it," and if dogged pertinacity in reiterating a thousand times what has been a thousand times refuted was ever calculated to produce an impression by mere force of perpetual repetition, it cannot be denied that the arguments for legalizing what are happily still regarded in this country as incestuous unions possess that element of success. Whether it is seemly or discreet for four thousand Dissenting ministers to constitute themselves the apostles of this most unsavoury crusade we shall not stay to inquire here. But it was, to say the least, very unfortunate that the Archbishop should have consented to receive a deputation from them, and we certainly incline to think that Lambeth Palace has seldom been put to a more incongruous use than on this occasion. Nonconformist ministers are of course at liberty to hold their own opinions on the subject, but an Archbishop of Canterbury might have been expected to remember that the table of forbidden degrees printed in every Prayer-Book includes the prohibitions which it was the object of these gentlemen to claim his assistance in removing. And even if he were disposed, as he does not avow, to agree with them in the abstract, and if there were—as there happily is not—the slightest reason for supposing that his support would carry Sir T. Chambers's Bill through the House of Lords, it would still not have been his business to come forward as the advocate of a measure which probably nine-tenths of the clergy and a clear majority of the laity of the Church over which he presides believe to be not only pregnant with the gravest social evils, but directly repugnant to the teachings of Scripture. On the latter point we shall not enter here. The objections to the Bill are overwhelmingly conclusive, quite apart from its religious demerits, and even if it could be shown to be, like polygamy, in entire accordance with the Jewish law, that would be no adequate justification for sanctioning either by the law of England. The reports which have appeared of the speeches of the Dissenting deputation at Lambeth on Tuesday are too brief to give anything but a very general idea of the kind of arguments employed. But the little that is told us is quite enough to show that the usual tactics of the party have not in this instance been forgotten. And, at the risk of repeating facts which to many of our readers must by this time have become wearisomely familiar, we shall once more expose the true nature of the reasoning to which the Archbishop promised to give his "most serious consideration," and which has induced him to take charge of the Dissenting ministers' petition to the House of Lords in favour of the Common Serjeant's Bill.

The principal members of the deputation were Dr. Binney, the Revs. W. Tyler and F. Schandhorst, who represented the Congregationalists; Dr. Vance Smith, from the Unitarians; the Revs. J. L. Witherington, J. Shrewsbury, and E. Workman representing different sections of the Wesleyans, and Mr. Heywood, who headed the deputation. The report of Mr. Heywood's speech is very short, but it embodies most of the leading fallacies which invariably crop out in the monotonous oratory of his associates. "He thought the House of Lords, with the increasing majorities with which the Bill was annually passed in the House of Commons, would ultimately give way to public opinion." To which it must be replied, that of the three assertions contained or implied in this statement every one is directly at issue with the facts. The Bill was neither passed nor introduced annually at all before 1869, and, with one exception, the divisions from 1869 to 1873 have exhibited a constantly decreasing majority in its favour in the House of Commons, though for the last three years a push has been made to smuggle it through the House at the very beginning of the Session before the Scotch and Irish members, who are known to be almost unanimously opposed to it, have come up to town. In 1869 the second reading passed by a majority of 99, but the Bill was withdrawn in Committee; in 1870 the majority had sunk to 70, and in 1871 to 41. Last year it rose to 48, and this year it has again fallen to 39. And, lastly, there is not only no ground for assuming that public opinion is in favour of the Bill, but there is the clearest evidence of this purely factitious agitation being kept up, as it was originally created, by the restless machinations of a small and wealthy clique, whose pretext of relieving the poor from a heavy burden is demonstrably a transparent disguise for their desire to cover by a retrospective Act their own deliberate breach of the existing law. The Commission of 1847, got up and conducted by friends of the proposed innovation, could only discover forty cases of such unions among the poor, while in two large London parishes the most careful scrutiny only detected two. Nor is Mr. Heywood more happy in his implied reproach of the House of Lords for systematically opposing itself in this matter to the verdict of the House of Commons. This is again a favourite topic with the agitators, and at the Indignation Meeting held in February 1871 at St. James's Hall, under Mr. Chambers's auspices, it was proposed by the chairman to facilitate the passing of the measure by ejecting the bishops from the Upper House, while Mr. Odger more consistently advocated its total abolition. What are the facts? The Bill made its first appearance in Parliament in 1842, when leave to bring it in was refused by a majority of 23. On its next appearance in 1849, the second reading passed the Commons by a majority of 34, but the Bill fell through in Committee. The same fate overtook it in 1855, after it had been carried by a majority of 7 only; but it had meanwhile passed the Commons in 1850 by a majority of 52, and then for the first time made its way into the Upper House, where it was withdrawn without coming to a division. In 1858 it passed by a majority of 42, and in 1859 by 58, and was thrown out on both occasions by the Lords. Between that time and its next appearance in the Upper House in 1870, it had been five times thrown out in the House of Commons. Its subsequent history has been already told. The net result, therefore, is this—that three times the Bill has passed the second reading in the House of Commons, and foundered in Committee; five times it has been thrown out, without reckoning its summary extinction in 1842; once it has been sent up to the Lords and withdrawn without a division, and five times the Lords have rejected it. It has also twice been introduced in the Upper House, in 1851 and 1856, and thrown out. This is a very different state of things from what Mr. Heywood's language indicates.

The remaining speeches are less important. Dr. Binney appears to have chiefly occupied himself with the Scriptural aspects of the question, but he also urged that great social evils had resulted from the operation of the present law; and Dr. Vance Smith, who followed him, gave an instance of what is meant by this complaint. He knew of "a man who had left his property to the sister of his deceased wife, and was living in a constant state of alarm lest the authorities should discover the illegality of the marriage, and claim the extra succession duty." If we are to understand that the man had married his deceased wife's sister—and the reference would else be irrelevant—and wished her to inherit as his wife, the authorities would of course be fully justified in law and equity in claiming the full succession duty; in fact, this is simply one of the usual examples of a change in the law being demanded in order to shelter those who have first deliberately broken it from the consequences of gratifying their irregular appetites. Even if the proposed measure were a desirable one, it ought not in common decency to be made retrospective. Dr. Binney also expressed an opinion, the grounds of which we should be curious to learn, that the Scotch laity are almost unanimously in favour of these marriages. Mr. Buckle, it is true, calls Scotland one of the most priest-ridden countries in the world; but until Dr. Binney produces some better evidence than his own *ipse dixit*, we must venture to think his statement hardly consistent with the fact that the Scotch members are almost unanimously opposed to the Bill. The remark of another speaker that the great majority of Roman Catholics are in favour of the Bill is, we believe, equally incorrect. Mr. Maguire stated in the debate last year that in Ireland it was viewed "with loathing and execration." Dr. Cullen is said to be in favour of it, but certainly with no intention of allowing it to be generally acted upon within the limits of his jurisdiction; and Cardinal Wiseman stated before the Parliamentary Committee, what is notorious, that such marriages are allowed with dispensations in the Roman Catholic Church. We believe we are right in saying that such dispensations are restricted to those who can afford to pay for them, and it is certainly true that they are also given, in Catholic countries, for the marriages of uncles and nieces, or aunts and nephews. In Germany, Holland, Austria, Italy, Spain, France, and Denmark, all these unions are allowed by the law, in some cases with, in some without, dispensation. And it is obvious on the face of it that, if once the general prohibition of marriages of affinity is relaxed, it will be neither consistent nor practicable to draw the line at one particular example of the rule. If a man may lawfully marry his wife's sister, it is absurd to forbid his marrying her mother or her niece, and equally absurd to forbid his marrying his deceased brother's wife. Whether the advocates of the one change profess to defend or deprecate its logical consequences matters very little. The present law is based on a consistent and intelligible principle, and is so far from pressing hardly, except on a small clique of eccentric and unscrupulous malcontents, that its abolition would be felt as an intolerable hardship by the great majority of the nation. Not many years ago an English Protestant lady residing at Rome in charge of the children of her deceased sister, who had married an Italian count, was surprised to find herself the subject of unpleasant comment. On applying to her brother-in-law's confessor, she was at once assured that, unless she intended to marry him, she could not with propriety continue to live under his roof. Yet in Italy such marriages require a dispensation; if once the law is altered, there would be no such check, whatever it may be worth, in England. One further remark naturally suggests itself. It was only the other day we were criticizing a new variation of murder, which its admirers propose to legalize under the pretty sobriquet of "euthanasia." If Mr. Tollemache and the Common Serjeant can get their respective proposals sanctioned—perhaps the former, too, may some day invoke archiepiscopal patronage—there will be a fine field open to enterprising ladies who combine an erratic passion for their brothers-in-law with Christine Edmunds's graceful facility in effecting a happy despatch.

It was urged on the Archbishop by some members of the deputation on Tuesday that, as the proposed marriages were not meant to be solemnized in church, no conscientious scruples of the clergy would be violated. This is a subordinate point, though it was natural under the circumstances to refer to it; but the clergy may not improbably consider the proffered concession an inadequate protection to their consciences if they are compelled, for instance, to treat persons married to their relations at a registrar's office as having a claim on their ministrations afterwards. We merely note the matter here as another example of the off hand fashion of dealing with objections

to their darling crotchet which characterizes the supporters of this ill-omened scheme. When the Common Serjeant introduced his Bill last year, he observed that argument on the subject was exhausted, and we quite agree with him. But as long as the barefaced audacity of assertion which distinguishes him and his friends in their pertinacious efforts to unsettle both the legal and the moral safeguards of domestic peace and purity continues to be inexhaustible, it is necessary to expose, for the hundred and first time, the stale sophistries which a hundred previous exposures have not yet shamed into silence.

THE FORGED BILLS.

THE announcement which was made on Monday morning that forged bills to the value of some 100,000*l.* had been discounted by the Bank of England produced, for a short time, something like a panic in the City. Nobody of course supposed that the loss would make much difference to the Bank, but it was felt that a serious blow had been struck at the foundations of commercial confidence and security. That a fraud of such a daring and elaborate character should have been practised on the most careful and cautious of financial bodies naturally excited suspicion and alarm. If the Bank of England could be bitten in this way, who was safe? The Bank, as everybody knows, will have nothing to do with doubtful people, or with rash, speculative transactions; it does only the safest of safe business, and only the most respectable paper has any chance of being looked at in the sacred parlour. A customer must bring good recommendations, must be personally vouched for by a Director or customer, and must prove his substantiality and credit in a variety of ways. If, in spite of all this, bad paper had been passed at the Bank, it was not perhaps an unreasonable apprehension that the rogues who had tricked so wary and circumspect an institution had probably not been idle in other quarters where they would find greater eagerness to do business, and fewer troublesome formalities to be overcome. The result was that for some time almost all bills were suspected. The better the names the more chance of mischief—so men reasoned; for only good names are worth forging, and with the *Post Office Directory* to choose from at pleasure, a forger might be trusted to pick the best. The disappearance of Mr. de Lizardi helped to add to the general uneasiness. Forged bills here, fraudulent bills of lading there, Glyn's swindled one day, the Bank the next—here was indeed enough to shake the nerves of men to whom paper is everything, who buy, sell, and trade in paper, and who, once flustered by suspicion, see fraud and forgery on every side. Commerce has come to be a vast system of credit, a paper world, and a suspicion of extensive forgeries is worse than an earthquake. Happily the fit did not last very long; but it may be taken as an illustration of the extremely delicate and sensitive organization of mercantile affairs.

Enough is known of the forgeries of which the Bank of England has been made the victim to show that they were planned and executed in the most deliberate and systematic manner, with great daring, ingenuity, and skill, and with a command of financial and other resources which is certainly the most startling circumstance in the whole affair. That a needy scoundrel should exercise his wits—his sole possession—in forgery would not excite much surprise, but men of substance are seldom disposed to stake their capital on the success of a felony. It is quite clear, however, that in this case those who devised and concocted the forgeries must have possessed, not only a thorough and minute acquaintance with mercantile ways and all the details of business, but also the command of a considerable amount of ready money. How many were involved in the crime has yet to be discovered, but it is suspected that there must have been a number of conspirators at work. It may prove, however, that Warren, who negotiated the bills, was the chief, if not the sole, agent in the affair, and that his clerk, who is now in custody, was only his tool. The perils of forgery are necessarily multiplied by the number of confederates, and the actual work to be done might easily be accomplished by one skilful and industrious expert. Warren, an American, who gave himself out as an agent for providing Pullman's sleeping-cars to run between Paris and Vienna while the Exhibition in the latter capital was open, contrived to get an introduction to the West End branch of the Bank of England in Burlington Gardens. He was introduced by an old customer of the Bank, deposited a satisfactory balance, and took care to renew it from time to time. Warren's dealings with the Bank began as far back as last May, and he took every opportunity of establishing himself in the confidence of the officials. He occasionally brought bills on Rothschild's and other houses which were undoubtedly genuine, and he was very punctual and regular in all his transactions. He showed that he had not only plenty of ready money, but intimate relations with good people in the City; and when the time came for the production of the forged bills, the manager of the Bank was probably prepared to accept them without the slightest hesitation. There was nothing in the appearance of the documents to create suspicion. They had been manufactured so skilfully as to defy the most jealous and suspicious scrutiny. It is well known that different firms use different forms of acceptance, partly written and partly printed on peculiar kinds of paper, with distinctive water-marks. Blank forms suitable for each case had therefore either to be stolen or imitated, and then they had to be filled up with a great variety of signatures. Bills drawn upon a dozen different houses in the City were counterfeited in this way so closely and cleverly that, even now that they are known to be forgeries, it is said to be difficult to believe it. The first of these false bills does not fall due till the 25th of this month, and Warren no doubt calculated upon turning the interval to profitable account in a similar way. It does not appear that he passed off any forgeries except at Burlington Gardens, but this was probably because he thought he had plenty of time before the inevitable exposure when the bills were presented for payment, and he did not want to press matters too much. His patience in waiting from May last before he began to cheat the Bank showed his preference for cautious and deliberate modes of action. A slight, but rather important, omission in two of his bills disclosed the plot. He forgot to date them; they had to be sent to the houses on which they were drawn in order to supply the omission, and they were of course at once repudiated.

It is quite possible that, as we have said, Warren may have been the sole agent in these daring and ingenious forgeries, but it can hardly be doubted that he had assistants, if not actual confederates, who were well acquainted with mercantile practices, and who provided him with specimens of the forms and signatures which it was necessary for his purpose to imitate. Forgeries are not so rare as is supposed, and of late years, with the spread of elementary education, they are said to have been rather increasing, but they are seldom attempted on a large scale or for great amounts. A clergyman at Middlesborough is just now awaiting his trial for forging joint-stock scrip to the amount of some 20,000*l.* or 30,000*l.*, but the common run of forgeries seldom go beyond petty sums. For a parallel to the case which has just excited so much alarm and uneasiness we must go back some thirty years and more. In 1841 the *Times* brought to light a bold project of forgery, and its prompt and energetic action in the matter is commemorated by a tablet in the Royal Exchange. Four or five different persons, some in Florence, others in London, were engaged in the conspiracy. On this occasion the forged papers were not bills, but letters of credit. The conspirators procured one of Messrs. Glyn's letters of credit, and produced an imitation of it so perfect that one of the partners of the house said that for a time he was unable to distinguish between the original and the copy. Two Scotchmen, father and son, resident in Florence, designed the facsimiles, and a couple of Frenchmen, one of them a marquis, took charge of the engraving of the plates in London. An English banker at Florence named Bogle superintended the distribution of the forgeries. They were presented for payment at Brussels, Ghent, Cologne, Turin, Bologna, and Florence in rapid succession, and in a few days 20,000*l.* had been obtained on them. Either seduced by their easy success, or afraid of prompt detection, and eager to make the most of their chances before an alarm was raised, the conspirators pressed the game too recklessly. Suspicion was aroused, and a communication was sent to Glyn's which led to a disclosure of the fraud. The *Times* was not afraid to publish an article showing up the swindle in all its ramifications, and Bogle, thinking he could brazen out the matter, took advantage of this to bring an action for libel. Owing to a technical rule of evidence which prevented the production of certain private letters, the jury were unable legally to identify the plaintiff with the conspiracy, but they gave him only a farthing damages. The *Times* refused to accept the subscription which was raised to defray its expenses at the trial, and the money was applied to the foundation of scholarships for the boys of Christ's Hospital and the City of London School, and to the erection of commemorative tablets.

If forgeries are not more common than they are, it is for other reasons than the difficulty of forging. The truth is, that forgery is a very simple art, and a natural aptitude for it may be quickly developed by a little practice. Almost any engraver's or lithographer's apprentice might readily become more or less expert in it; and, considering the vast amount of business which is daily transacted in London through the medium of hasty signatures, it is at first sight almost amazing that forgeries should not be more frequent. Perhaps the greatest check upon offences of this kind is that, although a man might thus win a considerable sum of money by a lucky *coup*, the art cannot be continuously exercised. The actual forgery may be easy enough, but the passing of the forgery is another matter. Except at the counter of a bank, where cheques are paid offhand, no business is transacted between absolute strangers, and even at the bank-counter the system of crossed cheques comes into play. Most men in the City either know, or know about, each other, and the great bulk of business is done through bankers, brokers, or other intermediaries, who may be taken as a sort of personal guarantee for the character of those for whom they act. In the present case Warren had to spend the best part of a year in building up a character which he must have been aware would be destroyed for ever as soon as his practices became known. The game may be played once, but only once; it requires both daring and adroitness; it is perilous; and, even if successful, it can scarcely be expected to yield anything but a small fraction of what might be earned by the continuous exercise of the same abilities in an honest way. It will be seen, therefore, that the chances of being imposed upon to a serious extent by forgeries are by no means so great as might be imagined. At the same time, it is a question whether so simple a precaution as communicating in the first instance with the persons whose names are attached to bills, when they exceed a certain amount, might not be adopted as a check upon fraud. With regard to bills of lading, the present system is almost a provocation to dishonesty, and

there could be no difficulty in providing that bills of lading, like bills of exchange, should be issued in sets of three only, and that they should be numbered, and also perhaps distinguished by the colour of the paper.

SOLDIERS AND THEIR POCKET-MONEY.

ALL classes of Her Majesty's respectable subjects are always doing their best to keep up appearances, and a very hard struggle many of us make of it. Thus a mansion in Belgrave Square ought to mean a corpulent hall-porter, a couple of gigantic footmen, a butler and an under-butler at the very least, if the owner professes to live up to his social dignities. If our house is in Baker or Wimpole Street, we must certainly have a man-servant in sombre raiment to open our door, with a hobbledehoy or a buttons to run his superior's messages. In the smart, although somewhat dismal, small squares in South Kensington and the Western suburbs, the parlourmaid must wear the freshest of ribbons and trimmest of bows, and be resplendent in starch and clean coloured muslins. So it goes on, as we run down the gamut of the social scale; our ostentatious expenditure must be in harmony throughout with the stuccoed façade behind which we live, or the staff of domestics we parade. We are aware, of course, as our incomes for the most part are limited, and as we are all of us upon our mettle in the battle of life, that we must pinch somewhere if appearances are to be kept up. We do what we can in secret towards balancing the budget. We retrench on our charities, save on our coals, screw on our cabs, drink the sourest of Bordeaux instead of more generous vintages, dispense with the cream that makes tea palatable, and systematically sacrifice substantial comforts that we may swagger successfully in the face of a critical and carping society. But, with the most of us, if our position is an anxious one, it is of our own making, and if we dared to be eccentrically rational, it might be very tolerable.

There is one class of Her Majesty's subjects, however, and perhaps the most showy of all, of whom this can hardly be said. It is victimized not only by circumstances and by the more amiable weaknesses of our nature, but by illusions which our Government does its best to encourage. All members of the military caste are at a great disadvantage as compared with the rest of us, and the non-commissioned officers and privates suffer even more than their superiors. An officer who lives on his pay, or on his pay and some small supplement to it, has a hard time of it no doubt. He must deny himself much that he would delight to indulge in, and must be sorely pushed if he is to dispose economically and unprofitably of all his superfluous time. But at least he has not to live up to the showy livery which the State compels him to assume when on duty. He need only appear in his resplendent war-paint where every one knows precisely all about him and his circumstances. When he mixes in the promiscuous civilian crowd, he disguises himself in unobtrusive mufti, and becomes a commonplace-looking personage like ourselves. With the sergeant, corporal, or private, it is altogether different. When he leaves his barrack-yard in the blaze of scarlet and yellow—or blue with gorgeously gaudy facings—in philibeg and chequered hose and nodding ostrich plumes; perchance in helmet and horse-hair, white buckskin tights, and spurred jackboots—he feels that he becomes forthwith the cynosure of surrounding eyes. The homage and admiration he receives is enough to turn a stronger head or disturb a better balanced mind. Conceive the respect with which he is regarded by the ragged roughs leaning up against the street corners and lounging round the public-house doors. They are slow to realize the fact that the splendour which impresses them is but the garb of servitude—a very honourable servitude it is true—that by accepting the shilling and passing the surgical examination they might transform themselves from the grub to that full-blown butterfly. As they follow the hero form with eyes of respectful admiration, they straighten their slouching backs, and they add a cubit or so to their stunted stature if they can attain to the honour of a flying acquaintance. If it be so with the men, still more is it the case with the damsels, of humble life. Venus has always had a tenderness for Mars, especially when Mars wears the laurelled helmet on his god-like brow and shakes his glittering spear. The ox-eyed maidens shoot their bewitching glances from behind a hundred area railings, and the young and sprightly warrior must be misanthropic or more than mortal if he does not assume in the circumstances the airs of a conquering hero. But it is all very well to button the tight-fitting tunic or shell jacket so as to set off the manly shape, to poise the cap jauntily on one side of the well greased locks, to burnish the war medal, and flourish the Lilliputian cane. Soldiers rising thirty have the tastes and passions of their age, and naturally feel that they are formed to shine in society and enjoy its pleasures. They feel a legitimate satisfaction in patronizing the *pékins* of their own sex, and would prefer to stand treat to them rather than to be treated; they would gladly be free-handed with those laughing ladies could they only afford it. Alas, with them more than with any one else, appearances are painfully deceptive. Those fine clothes of theirs might almost as well be made without pockets for anything in the way of money they have to carry on their persons. The old pecuniary chances of the soldier's calling are gone in these days of piping peace and rigid discipline. In the wars of the middle ages, and even in the campaigns of the last century, the profession had its money prizes and its times of enjoyment when it revelled in free quarters. You won a battle, and, if you could catch a prisoner in easy circumstances, you were allowed to put him to ransom. You sacked a town, and, if you were in any kind of luck, you filled your haversac with plate, or jewels, or valuable portable property of some kind. But nowadays there are no such chances. Soldiers can seldom make prisoners when the opposing columns rarely come within a mile or so of each other. If they do, they must hand them over to their superiors. It is a point of honour to offer scrupulous protection to private property from individual pillage. Generals in command may levy contributions at discretion, but if the private follows the example of his chiefs, he is apt to be very summarily dealt with. So it comes to this, that he has to subsist on a fixed income, with the remote prospect of a pension. But the fixed income is so minute as to approach the infinitesimal, and, what is worse, the world is given to understand that he is infinitely better off than he really is.

Fancy being condemned to lead not only an idle but a fashionable life on a penny a day. It is to be hoped that things can never again be so bad as that, now that Mr. Cardwell has reformed the regulation pay in the soldier's favour; indeed they can hardly have been so bad since General Peel took the initiative in a liberal direction by granting the soldier the additional twopence. But until a very few years ago the stately trooper in a crack cavalry corps might find himself for weeks or months together stinted to a penny a day for all pocket-money, and a letter that appeared in the *Times* a few days ago asserts the thing to be still possible. No doubt the original bargain by which he hired his services to the Queen was conducted with all technical legality. Had he taken the trouble to consult the terms of the bond before subscribing to it, he might have found out that the soldier's "shilling a day" was a mere popular hallucination, and that the standing deductions cut it down woefully. But men like him are indifferent arithmeticians at best, and not much given to forethought, and the scapegrace who was most likely to volunteer for the service was recklessly impetuous, if not actually in drink. We may think that an honourable Government, in engaging an ignorant man, should have taken particular care to make all parts of the bargain plain, and to preclude all possibility of misapprehension. But we suspect that the arrangements with regard to pay were only part of our system of "volunteering" as opposed to the Continental conscription by which men must be obtained somehow. The soldier came to the paymaster for his shilling, and opened his eyes to find that there was a stoppage for his daily rations of meat and bread. Imagine a master deducting so many pence a day for the dinner of the footman who lives under his roof. Then came further claims for messing and for clothes. The recruit was not told plainly that the terms of his wage were a shilling a day, one-and-fourpence a day, or whatever it might be, and feed and clothe himself. The Horse Guards apparently did their very best to make a muddle of the contract; and while the Queen provided the cavalry man with tunic, smalls, and boots, he had not only to buy the rest of his clothing, but actually his uniform jacket as well. So it is still, though his pay is a little better. Periodically he may be in tolerably easy circumstances for a time; he may have the magnificent sum of sevenpence at his absolute disposal. Rich to that extent, he acquires extravagant habits, gets into expensive company, and his mode of living does no great discredit to his brilliant cloth. On a sudden evil times come upon him. The underclothing that has done duty for so long begins to tumble to pieces. His jacket turns dingy and gets worn at the seams, he becomes a disgrace to his corps, and the order issued to replace it. Then the best part of his sixpence a day vanishes, and he is left with a miserable copper or two rattling in his empty pockets.

We suspect that what with one thing, what with another, most of those sprightly, good-humoured fellows whom we meet swaggering in uniform along the pavement are generally in this impecunious condition. We presume that it is a point of honour with them to carry their poverty off philosophically, as they would feel bound to grin over slight flesh wounds received on the day of battle. But a cheerful countenance must often cover an aching heart. Even out of the wretched sum that mocks their wishes there are certain necessaries which must be provided. The Crown expects you to be clean and smart, but we do not understand that it furnishes either soap or pipeclay. Tobacco is never so indispensable as when a man's spirits are low, and you must mortify the flesh at every turn and renounce the vanities of happier days. We should fancy there is nothing the soldier dislikes so much as a long promenade without the means of refreshing himself. It must brighten a long walk to feel, as you pass before each successive public-house, that you have only to will to refresh yourself with a half-pint, or "try our celebrated cream of the valley." It gives the walk a zest and an object to know that the half-pint or the half-quartern surely awaits you at the end, if you have not chosen to indulge yourself sooner. We can conceive few things more melancholy, on the other hand, than mooning along in sullen despondency, knowing that you must return dry-lipped as you came out unless some good Samaritan should compassionate your case and make you an object of charity. The soldier wandering past bar after bar, where vociferous groups are clinking glasses and clattering pewter, reminds one of the spirit of some sinful Norse hero condemned to keep moving round the table of Valhalla while his phantom companions in arms are draining the spectral beakers of ale. Seriously, we say that the life of the soldier must necessarily be one of great

temptation, and when he is culpable, or even criminal, he may plead the peculiarities of his lot by way of extenuating circumstances. His early training has seldom been such as to lead him to beguile his leisure by self-education and intellectual recreation. He has a great deal of time on his hands, and very little money wherewith to kill it. No doubt his straitened circumstances are in a certain sense a moral safeguard; but then there is another aspect to the question. The soldier has tastes which he cannot possibly gratify, and no constant occupation to turn his thoughts from his longings. We know what the old poet sings about Satan and idle hands, and a smart man who falls into bad company must be perilously open to unscrupulous suggestions as to how he may find money or money's worth. In any case it must, to say the least, be relaxing to the moral fibre to be tempted to toady a man for the sake of being treated, and to make love in order that your mistress may share her wages with you. It would be both impossible and undesirable materially to increase the soldier's pocket-money, but certainly the men should have a fair chance, and should receive all reasonable assistance towards preserving their self-respect and independence. Mr. Cardwell's recent proposals are a step in the right direction, and no one should grudge the slight addition to the Estimates which they will involve. We only hope that, in benefiting the soldiers as a body, he will take care that no single class of them has reasonable cause of discontent.

HEIRS AND MONEY-LENDERS.

MR. MITCHELL HENRY has again brought forward his Bill for the protection of "infants" against the frauds and exactions of money-lenders, but it may be doubted whether infants are not already sufficiently protected under the tender guardianship of the Court of Chancery. It is proposed by the Bill that any person who makes or procures any advance to an infant, or accepts any bond, bill, note, cheque, or other security for securing the repayment of a loan from an infant, without the consent in writing of the infant's father or guardian, shall be guilty of a misdemeanour, and shall be liable for each offence to a fine of not more than 20*l.*, or two months' imprisonment. It is to be a misdemeanour even to request or solicit an infant to borrow money, whether by verbal application, or by circular, card, or letter; and all contracts made or securities given in contravention of the Bill are to be void. An infant may make false statements about his age without fear of the consequences, for his representations on the subject are not to be admitted as evidence against him. An obvious objection to a measure of this kind is that it attempts too much. If it were to be made a criminal offence to lend money to an infant without the sanction of his father or guardian, and if the law were strictly enforced, it would simply have the effect of driving young men who wanted money for purposes which they were afraid or ashamed to disclose to their fathers or guardians into the hands of a lower and more reckless and unscrupulous class of money-lenders than those who now prey on them. The money-lender's risks would be greatly increased, and, as he is known not to be actuated by purely benevolent and philanthropic motives, it may be assumed that he would require to be paid for those additional risks, and would no doubt assess them at a somewhat higher figure. He would have to be paid for the risk of being deceived by the borrower pretending that he was of age when he was under age; for the risk of an infant turning against him; for the risk of being tried for a criminal offence and perhaps sent to prison. It shows a curious estimate of human nature to suppose that a fast infant would be able to procure the consent of his father or guardian to his borrowing money for the purposes of gambling and debauchery. On the other hand, it is idle to suppose that any amount of legislation will ever prevent profligate and extravagant young men from obtaining advances on the strength of their future prospects. The eagerness of young heirs to get money and the willingness of money-lenders to supply their necessities are tolerably certain in combination to strike out some means of evading the restraints of the law, and it may be taken for granted that whatever underhand and illegal arrangement is made is sure to be at the expense of the borrower. It must not be forgotten that there are money-lenders and money-lenders. Money-lending in the way we are now speaking of cannot of course under any circumstances be a nice business, and it is difficult to imagine a delicate or high-minded man engaging in it. Yet it can hardly be going too far to say that there are some money-lenders, even of the sort who minister to the wants of reckless youth, who are better than others. In every deep there is a lower depth, and on the whole, considering the hopelessness of keeping infants and money-lenders entirely apart, it may perhaps be the wisest policy not to hand over the business exclusively to the lowest kind of scoundrels. Draconic laws are apt to defeat this object, and Mr. Mitchell Henry's Bill would, we fear, in so far as it had any effect at all, be apt to do more mischief than good.

On the other hand, let us see what the Court of Chancery is already willing and able to do for young heirs who have been hard pressed by the usurers. The Lord Chancellor, in an elaborate judgment affirming the decision of Vice-Chancellor Wickens in the case of Lord Aylesford *v.* Morris, has just explained very fully the precepts of equity on this subject. Lord Aylesford, it will be remembered, borrowed nominally some 11,000*l.*, of which he received only 7,000*l.*, at sixty per cent. Lord Selborne did not waste any needless sympathy or sentiment on the young heir in this case. Lord Aylesford had, he said, no merits of his own. He came into court to be relieved from the consequences of a course of wilful and culpable folly and extravagance. Against Morris, the defendant, there was nothing to be alleged except that he was a money-lender and partial to sixty per cent. He was not accused of having done anything in the way of deceit or circumvention, and in fact his conduct seems to have been perfectly open and straightforward. "I take sixty per cent.," he said, "because I get the best price I can; we all do that." There are one or two subordinate characters who may as well be introduced to complete the *dramatis personæ*. There was a solicitor named Graham, who had in the first instance lent his lordship money, but who was anxious to get his money back, and therefore introduced him to Morris. It was arranged that Morris should accept Lord Aylesford's bills to the amount of 8,000*l.* at sixty per cent. Of this sum Morris retained 1,200*l.* as discount, and 3,000*l.* was paid to Graham on account of his outstanding claims. These bills, which were negotiated when Lord Aylesford was just six months over age, came due three months afterwards, on the 4th of October, 1870. The young nobleman's share of the money was, no doubt, pretty well exhausted by this time, and he found himself, as might have been expected, unable to meet the bills. He consulted Curtis, an hotelkeeper, and Curtis was kind enough to introduce him to a professional friend of young gentlemen in distress, one Addison. Addison represents a familiar type. He had been an officer in the army, and he now appears as earning a livelihood as agent for money-lenders. There was another case not long ago in which a major figured as a provider of a similar stamp—not a lion's provider, but the jackal of a money-lender's den. Addison is described by the Lord Chancellor as "a procurer of loans for spendthrifts from money-lenders." His own account of himself, however, is that he is a "monetary agent," or "the intermediate person bringing the capitalist and borrower together," which is no doubt a prettier way of putting it. For this service he is paid by a brokerage on the amount of the bills, and not of the money lent—so that, as Lord Selborne observed, he has a direct interest in swelling the amount of the bills as much as possible. Well, Lord Aylesford puts himself unreservedly in Addison's hands. Addison scours the town, as he says, trying to do what he can for his client. He goes to one money-lender after another, but they all shake their heads. Somehow they do not like the look of the thing. As a last resource, Addison tries Morris, who holds the bills. Morris is indeed the real friend in need. He agrees to renew the bills for 8,000*l.* by substituting another set for 11,000*l.* at three months at sixty per cent. as before. By this transaction Addison found himself 275*l.* the richer, while Lord Aylesford, so that he might not feel altogether neglected, received 207*l.* It was urged on Morris's behalf that he was entitled to a good price for his accommodation, because other money-lenders had refused to take up the bills, and the transaction must therefore be supposed to have been not a very promising one for the lender; but the Lord Chancellor suggested that perhaps the money-lenders who would have nothing to do with Lord Aylesford had some inkling of the functions of the Court of Chancery, and did not care to come into collision with it. Thus we find that a nobleman, just of age, and acting without the benefit of any competent and disinterested adviser, had, on receipt of 7007*l.*, put his name to bills for 11,000*l.* at sixty per cent. These bills fell due in three months, and they would then have had to be renewed on equally, or probably still more, onerous terms if Lord Aylesford's father had not died in the interval. Under these circumstances the Lord Chancellor, agreeing with Vice-Chancellor Wickens, held that there was an onus on the money-lenders to show that the terms which he exacted were fair and reasonable, and that, as he had failed to prove this, he must be content with five instead of sixty per cent. If Mr. Mitchell Henry's Bill had been law, it would have been of no service to the plaintiff in this case, as he was already of age: but the Court of Chancery would not allow a few months to make such a difference, and regarded him as still practically a minor and entitled to its protection.

It may perhaps be thought that Lord Selborne's judgment meets what may be considered the natural justice of the case. There is no need to waste any sympathy on the young man whose reckless folly and extravagance involved him in this scrape; and, on the other hand, it may be said that there is no reason to regret that money-lenders should be warned that it is better to be content with modest profits, and that sixty per cent., however tempting it may look, is apt to burn their fingers. It has not been laid down that sixty per cent. is unlawful usury; but only that a money-lender who makes an advance to a man who has only just reached his majority, and who is helpless, desperate, and without proper advice, must not be surprised if he is called upon to show that the terms he has exacted are, under the circumstances, fair and reasonable. The responsibility is thrown on the lender of proving, not only the existence of the contract, but its fairness. If the young heir comes to him with a letter of introduction from his father or the family solicitor, the money-lender may feel that he is on safe ground. In any case, if he is aiming at high interest, he had better, for his own security, take care that the borrower has the benefit of competent and independent advice. We have no desire to quarrel with the decision in this particular case; but at the same time we cannot help thinking that the principle which underlies it is a somewhat peculiar one. The theory that a young man arrives at years of discretion

and is capable of managing his own affairs when he reaches twenty-one rests of course on a purely arbitrary assumption. Some young fellows are perfectly able to take care of themselves at seventeen or eighteen, while others at thirty are about as imbecile as anybody has a right to be at twenty. Lord Selborne did not make it quite clear how far he regarded Lord Aylesford's age as a material circumstance in the case. Lord Selborne apparently adopts without reserve the principle affirmed by Lord Hardwicke, that in cases which, "from the circumstances or conditions of the parties contracting—weakness on one side, extortion and advantage taken of that weakness on the other," raise a presumption of fraud, the *onus probandi* lies upon the lender to show that he has not abused his power. It is obvious that a man who has no present means, and who is desperately in want of money, and who has in vain applied to different persons to help him, is at the mercy of the only person who is disposed to make an advance to him. There is no compulsion on the latter to lend the money, and it is not unnatural that he should exact his own terms, and say, "Take it or leave it." To an ordinary mind it is not quite easy to see the logic of allowing a tailor or jeweller to clear a profit of perhaps a hundred per cent., and cutting down a money-lender, who, after all, does at least give up to a certain point real substantial value in hard cash, to five per cent. It would also seem to be rather an abuse of language to talk of a young man in Lord Aylesford's position as being under a "necessity" of borrowing money. He contracted gambling debts (probably with sharpers); he borrowed money from Graham to pay these debts, and then he went to Morris to help him to pay Graham. He had, however, several courses open to him. He might have left the gambling debts unpaid; or he might have left Graham unpaid; or he might have made a clean breast of it to his father, and have taken the consequences. During the last few weeks coals have been a much greater "necessity" to people of all classes than ready money to a spendthrift. It is suspected that the coal-owners and coal-dealers took advantage of that necessity in order to raise their prices. This is a case where there is weakness on one side, extortion and advantage taken of that weakness on the other. It would be interesting to know whether the Court of Chancery would be kind enough to settle for poor householders who cannot do without coals what is a fair price to pay for them. Surely money is only a commodity like anything else. Why should one dealer be allowed to sell coals at any price he chooses, and to raise the price indefinitely in proportion to the weakness and necessity of the consumer, while another may not sell money to a necessitous person except at a price fixed by a Vice-Chancellor? When it comes to be a question of the competence of a man to make a bargain, it may be suggested that there are very few people really competent to buy a horse or an "old master" on their own judgment, and the Court of Chancery would certainly have plenty to do if it undertook to settle what was a fair price in every transaction where there was weakness on one side and a disposition to take advantage of that weakness on the other. The most effectual means of protecting young heirs is to get their fathers and guardians to do their duty by them properly, instead of trusting to the Court of Chancery. There must, for example, be a good many fathers and guardians connected with the Jockey Club, one of the objects of which, as Admiral Rous has lately explained, is to enable young men who can raise money on the strength of their expectations to ruin themselves under assumed names on the Turf without the knowledge of their relatives. If parents and guardians would use their influence to revise the rules of such an institution as this, and would set a better example to their young men, and take a little more trouble in looking after them, there would be less need of judicial interference. We are indebted to the Court of Chancery for some very sublime principles, but it is difficult to resist an impression that sometimes they are applied in rather a grandmotherly way.

RABBITS.

THE speech of the Earl of Malmesbury upon the Game-laws touches the lighter side of a grave and important subject. The figures which he produces, although necessarily questionable, do seem to indicate a great and growing demand for game on behalf of all classes of the population who are able to exercise choice in food. A favourite argument of the opponents of the Game-laws is that three hares consume as much as one sheep, and that one sheep contains more substantial food than three hares. But it is obvious that this argument, if admitted, could be carried much further than its authors would desire. It would, for example, be fatal to the existence of flower-gardens and shrubberies, which occupy land capable for the most part of producing grain or vegetables. It would also require the conversion into tillage of Epping Forest and other open spaces near large towns which lately, for excellent reasons, Parliament has declared its desire to preserve alike from the farmer and the builder. We do not of course assert that all these open spaces could be profitably cultivated, but some of them certainly might; and if they can they clearly ought to be, upon the principle which demands that a sheep should be fed in the place of three hares. The worst that can be said against the hare is that the flesh costs per pound more than mutton; but it might be remarked with equal truth and force that pine-apples cost more to rear than turnips. From the point of view of the enemies of game-preserving there can hardly be a more indefensible proceeding than the cultivation of hot-house pines. If pines are—which may be doubted—a necessary of life, they may be obtained plentifully and cheaply from the West Indies. But the epicure will object that these pines are inferior in flavour to the product of an English hot-house, just as the Belgian half-tame rabbit is probably inferior to the wild rabbit which infests the English farmer's crops. The epicure has hitherto been allowed to gratify his tastes according to his means, but perhaps the time is coming when he will be arbitrarily suppressed. It would appear, however, from the speech of the Earl of Malmesbury that all classes of Englishmen concur in desiring good eating, and that game is one of the delicacies most highly prized. The Earl, when not engaged in contemplating immortal truths, occupies himself in studying the habits of his humble neighbours. He states, and probably with truth, that with large numbers of the public either rabbits or hares are a favourite Sunday dinner. "Mr. Brooks, the great salesman in Leadenhall Market, receives 1,500 cases of rabbits, each case containing 100 rabbits, every week from Ostend." This figure is quoted by Professor Beesly in an article in the *Fortnightly Review*, as if it represented the total weekly importation from Ostend to London. Assuming this to be so, the fact possesses an importance which Professor Beesly must see, although he is unwilling to confess it. "The crave for rabbits," he says, "is the diseased crave of an urban population for a change of fare." Suppose it is, what then? This "diseased crave" is one of the most universal instincts of civilized mankind, and many writers of authority inform us that it is a wholesome instinct which we ought, as far as we reasonably can, to gratify. The Scotchman in the story says that when he was in England he had roast beef every day and nobody ever heard him complain. But perhaps if he had complained he would not have been unreasonable. However monstrous the idea may seem to Professor Beesly, we think it quite possible to grow tired even of roast mutton and to entertain a "diseased crave" for a boiled rabbit. We might even desire that our rabbit should be the produce, not of a breeding establishment in Belgium, but of an English warren. Professor Beesly objects to the rabbit that he is bony, which certainly is neither his fault nor ours. The *Fortnightly Review* is in the habit of discussing large questions, and therefore we propose to it as a subject for an article to inquire why Providence, if there be a Providence, has not made rabbits without bones. It might be remarked that even legs of mutton contain bones, and some of them are of a length that appears to answer no useful purpose but jumping over gates. To an inexperienced carver the occurrence of bones in joints of meat is as annoying and perplexing as the existence of rocks was to the girl whose lover had gone to sea:—

> How can they say that Nature
> Has nothing made in vain?
> Why then beneath the water
> Should hideous rocks remain?

The Londoner, according to Professor Beesly, chooses to pay 7½*d.* per pound for a bony rabbit, when he can get a shoulder or fore-leg of mutton for 9*d.* per pound, and the nation pays 15,000,000*l.* a year to gratify this "diseased crave." We will not follow the Professor through the calculations by which he supposes himself to have demonstrated that, by feeding rabbits on that which would feed sheep, the nation loses 15,000,000*l.* a year. Unless Parliament is prepared to say that sheep shall be substituted for rabbits and turnips for pine-apples, such calculations, even if well founded, are irrelevant. But it is really wonderful what can be done with figures if you try. "It has been calculated that if a rabbit costs 20*d.*, and one in twenty is killed in a year, any rabbit which costs more than one penny to rear is a dead loss to the community." Let us do Professor Beesly the justice to observe that this calculation is not his own, but still he quotes it with approval. We cannot understand either the calculation or the state of mind of the person who propounds it. When it is supposed that one rabbit in twenty is killed in a year, is it implied that the remaining nineteen rabbits go on living indefinitely? If this were true, those nineteen rabbits when they come to market would indeed deserve to be called bony. Does the author of the calculation seriously suppose that a rabbit warren is managed on the principle of killing only one in twenty of the annual produce? If he had not muddled his brain with figures, he might perhaps have perceived that what he wanted to say was this—that the reason why rabbits' flesh is cheaper than butcher's meat is that those who send them to market feed them at the expense of other people. To some extent this may be true; but it can hardly be denied that, if an estate were cleared of game and rabbits, the rent would be justifiably raised. The extreme economists would probably approve of this result: but we have all heard what happened when an enthusiastic disciple of Mr. Mill ventilated his doctrine in Devonshire. We are as a people averse to extreme economy, but if Professor Beesly or anybody else can induce us to modify any clearly wasteful practice, so much the better. The rabbit is in one respect more reasonable than his rival the sheep, for his flesh does not require to be roasted before a large fire; and indeed he never appears to greater advantage than in emerging from a pie, which may be cooked at a common oven without the necessity of any kitchen fire. When Lord Malmesbury discourses upon the fondness of urban populations for rabbits, he may almost be said to have added to his stock of immortal truths. "Sich a rabbit-pie, Bill," said Charley Bates to the burglar Sikes, at a time when burglary was a more flourishing profession than it is

now, and its members had no need to put up with bony rabbits. It should be remembered in justice to the rabbit that he is not a traveller like the hare, and there are some districts where he will flourish on land that is good for little else. Suppose that the owner of such land uses it for breeding rabbits, is he not entitled to protection? The law which protects him may be called a game-law, or a trespass-law, or by any other name, but a law there must be for this purpose in a country which pretends to civilization. If there were no such law, a party of two or three men might come with nets and ferrets and carry off a cartload of rabbits to a neighbouring town, where they would be certain to find a market for them. A range of sand-hills along the seashore makes an excellent rabbit warren, and it may be so situated that the rabbits have no access to any food except that which the warren itself supplies. But the more remote such a place is from cultivated land and houses, the more would it be liable to depredations; and if the law did not protect the owner, he would have to protect himself.

Considering that almost every Englishman loves sport, and that even those who do not care for it find game and rabbits acceptable on the dinner-table, we may conclude that either a game-law, or some equivalent for it, is likely to be maintained in England. The same conclusion may be derived from the futility of some of the complaints that are urged against the existing law. Professor Beesly has to deal with the suggestion that a tenant may obtain compensation from his landlord for damage done by game. We should have thought this suggestion reasonable, but the Professor produces a witness who informs us of the result of "such infatuation" in a tenant who sued his landlord. "He gained his claim, 197*l.*, and all he received was 40*l.* Extrajudicial expenses swallowed up the rest." If Professor Beesly were in a calculating mood, he might proceed, from this example of the rapacity of an attorney—a beast *feræ naturæ*, as all authorities agree—to estimate the cost of the entire genus of attorneys to the community. But if the tenant was weak enough to submit to such exaction, the sooner he gives up farming the better, as he must be very unlikely to succeed in that or any other kind of business. If the extrajudicial expenses of a lawsuit swallowed up more than three-fourths of the sum recovered, it is quite time that the Lord Chancellor, or some other law reformer, took the matter in hand. It is a pity that the discussion of a serious subject like the Game-laws should be confused by the introduction of imaginary or sentimental grievances. It may be quite true that many farmers personally dislike gamekeepers, but what of that? The truth is that Professor Beesly's essay is written on the principle that any stick is good enough to beat a dog with. He dislikes the class of game-preservers, and is willing to use every argument, good or bad, that he can find against them. If he intends to emit a general protest against luxurious expenditure, he would be entitled to some sympathy in undertaking a nearly hopeless task. He might denounce, let us say, the racehorse quite as reasonably as he does the rabbit. The racehorse consumes grass or corn upon which some animal more suitable for human food might be reared. By the arithmetical processes of Professor Beesly it might be shown that racehorses cost the country a very large sum yearly. It is alleged, with more or less truth, that racehorses are useful to maintain the quality of other classes of horses which minister more directly to human wants. Racehorses also afford an amusement which is still partially aristocratic, and therefore deserving of the scorn and vituperation of Professor Beesly. The case of the racehorse resembles that of the rabbit, except that the profit which the country gets out of him cannot be so exactly estimated. His flesh doubtless finds its way to market, but dealers in it are shy of quoting prices. The rabbit, on the other hand, is demanded as an article of food with continually increasing eagerness. Lord Malmesbury says that the owner of an estate in Somersetshire was requested to supply a dealer in Birmingham with 10,000 rabbits weekly. We are not informed whether the contract was undertaken; but, suppose it had been, and that rabbits were bred in performance of it, we should like to ask Professor Beesly whether such valuable property as this would not be entitled to the protection of the law. If he concedes this point, as we think he must, the question how protection can best be given would be greatly simplified.

COINS IN THE BRITISH MUSEUM.

A move has been made in the right direction; the public have now the opportunity of seeing under glass cases at least a part of the treasures long kept from general view in the Coin Room. Many people have felt that a spirit of exclusiveness has heretofore reigned within the Museum, that works the property of the nation have remained inaccessible to all but a privileged few. It is known that a considerable class exists who, though not deliberate students, and therefore scarcely entitled to ask for the special privilege of having cabinets unlocked for them and trays taken out by officials, have a general and laudable desire to make acquaintance with numismatic works which confessedly form an important, if not indeed an indispensable, link in the history of art. As contrasted with the system hitherto in force within our Museum, a liberal provision prevails in the interest of strangers and of well-conducted visitors in the Hermitage, St. Petersburg. The entire collection of coins, consisting of more than 200,000 specimens—that is, a number not much less than the collection in the British Museum—has been and is arranged in geographical divisions within glass cases. The visitor has but to knock at the door, and is at once admitted to a couple of spacious rooms in which he is allowed to walk freely. We need not dwell on the advantage of having a whole treasury of art and of history thus laid out before the eye. Visitors, especially if they are travellers in a foreign land, do not always know what to ask for. But here in the Hermitage, the coins and medals, by means of labels, are made to speak for themselves, and the stranger naturally turns to works of local, and therefore of national, interest, such as the series of 7,000 Russian coins dating from the tenth century, and the coins of countries such as Poland, once independent, but now subject to Russia. The want of space in the British Museum would of itself preclude so extended a scheme of exhibition from being carried out. In contrast to the liberal principle adopted in St. Petersburg is the shut-up and somewhat proprietary system still in force in parts of Germany. For example, in Saxe-Coburg a choice collection of coins is kept closed in cabinets which visitors can inspect, not of right, but only by privilege. The course now adopted in the British Museum is much to the credit of the authorities. Yet the task which has been undertaken in the best interests of art is by no means free from difficulty; it involves responsibility, with additional labour, mental as well as manual; and the step, once taken, can scarcely stop at its present tentative stage; the scheme doubtless will from time to time be pushed to further completeness.

The plan adopted in the British Museum admits of easy statement. A long case, ranged against the wall in the "Gold Ornament Room," is so constructed as to take thirty-two of the trays from the cabinets in the Coin Room. These trays, which contain a total of about twelve hundred coins, are changed once in every month or six weeks, and thus in course of some years the entire collection will pass under public view. The scheme, though praiseworthy, is obviously not without its disadvantages. For instance, the specimens at any one time exhibited are an isolated fragment rather than a representative series; thus the section we happened to meet with was limited to the Kingdom of Macedon, the time of Hadrian, and the reigns of Edward the Confessor and of Edward III. Hence a visitor must wait a month at least for the continuation of the subject, and, like the reader of a serial story, he may lose the clue to the narrative before the next publication comes round; or he may die before the work reaches its finis. Therefore the arrangement would seem more suited to the casual observer who is content with a partial peep than to the thorough student who naturally wants to master isolated details in relation to the collective whole. Again, in shut-up cases only one side of a coin can be shown; and the system of labels, which is almost essential to the teaching of the uninitiated, can scarcely be carried out in an exhibition which is changed every month. Yet, notwithstanding these defects, which are perhaps beyond remedy, we cannot but feel that a great boon has been granted. And in the future redistribution of the Museum consequent on the removal of the Natural History collections to Kensington, it may be anticipated that space will be found for the display of all medals proper and medallions. The public always feel more interest in originals than in copies, even though it be impossible for them to discriminate between an electro cast and the real coin. The magnificent series of plaster casts in the New Museum, Berlin, affects the imagination very differently from the original marbles in the Vatican or in the British Museum. In the same way it is much more satisfactory to examine the actual coins which bear on their faces a biga, a temple, or the head of an emperor or of a king, than to look at the most perfect of transcripts. A copy always seems to be one remove too far off from the author's thought and hand; the subtle niceties of execution may possibly be blurred by accident. And when it becomes a question of exciting or creating a general interest, there can be little doubt that the veritable historic works around which have gathered the associations of centuries are more potent educators of the people than any copies. Certainly we know of few spots in Europe where the mind is thrown more into an historic attitude, or is induced to take a tone more in keeping with antiquity, than the Gold Room of the Museum, where are ranged in the centre and around the walls antique gems, Etruscan gold work, and these twelve hundred original coins.

The varied contents of the Museum, comprising coins, gems, vases, bronzes, terra cottas, marbles, &c., enable the student to elucidate any one art by its sister arts. For example, we have found it instructive to turn from coins to the neighbouring gems in order to trace analogous compositions from precious metals to precious stones. In the same way we have felt it interesting to compare the head of the Emperor Hadrian in the flat on a gold coin with the head of the same Emperor in the round as seen in the noble bust in the gallery below. In like manner the Museum furnishes ample material by which even the tiro may become acquainted with the rise and development of historic styles, and with the essential principles which in all great schools have governed art treatments. Thus the principles of basso-relievo and of alto-relievo, on which excellence in the design of coins and medals greatly depends, will receive ample illustration in the matchless series of reliefs in marble from Athens, Halicarnassus, and Lycia. It may be instructive to try all works, whether on gems or in precious metals, by the standard reached in the Acropolis of Athens, the Procession on the frieze being the most perfect of known treatments in the flat, while the Metopes are good examples in higher relief. Difference of material and diversity

in scale no doubt impose variety in treatment, yet analogies, even in subject-matter, are patent, as when a chariot and horses are delineated as well on the Parthenon frieze as in miniature on a small Greek coin. One lesson which such comparisons seem to teach is the essential unity of all arts irrespectively of mere material. The material is but a medium through which the artist's thought obtains expression.

The value of coins as records of destroyed monuments has been contested. Addison, in his "Dialogues on Medals," says with some stretch of fancy that you may see on them "the plans of many of the most considerable buildings of old Rome," and that he knows "an ingenious gentleman of our nation, extremely well versed in this study, who has the design of publishing the whole history of architecture, with its several improvements and decays, as it is to be met with on ancient coins." On the other hand, it has been objected that on medals one temple is made to resemble other temples, that sometimes a part serves to represent the whole, and that often a conventional type is used by way of symbol for the reality. Such a liberty, for example, seems to have been taken with the Flavian Amphitheatre in a large bronze in the British Museum. Indeed, Professor Donaldson, in his *Architectura Numismatica*, frankly admits that in this representation "it will be perceived that the utmost license of conventional freedom has been exercised, in order to enable the artist effectively to give the most striking features of the monument, and yet convey a correct notion of the several parts." Nevertheless it cannot be doubted that this and other medals furnish data which enable archæologists in some important points to restore the ruin now known as the Colosseum. But of more immediate interest to us in England at this moment are the medals which illustrate the great Temple of Diana at Ephesus. Here the lower parts of the columns bear marks which have been taken as signs of sculpture, according to the words of Pliny that "thirty-six of the columns were carved, and one of them by Scopas." Professor Donaldson, writing more than ten years before the recent discoveries at Ephesus, says, "The evidence of the coin is irresistible, and, however qualified, must be admitted." The correctness of this interpretation is now placed beyond question by the presence in the Museum of a sculptured drum from one of the thirty-six columns bearing on its surface Mercury, with Victory, or Eros, and other figures not so easily named. It is seldom that corroborative evidence proves so conclusive; the text of Pliny, coins, and the marbles themselves are all agreed. It needs no doubt some experience to read correctly coins bearing structural designs; the scale on which the modeller or engraver had to work was so small that very much was of necessity left out. Thus architectural diagrams have to be read as shorthand; compared with photographs the transcripts may be said to be phonetic; in other words, the errors are more on the side of subtraction than of addition.

The exhibition, changed from month to month, of the collective riches of the Museum is supplemented by electrotypes from representative works. The idea when fully carried out is to present to the eye a synopsis of numismatic art, to display the geographic area and the chronologic development of the art of coining in all countries of the civilized world. Only since the discovery of the electrotype process has such a project been practicable. So perfect is this means of reproduction that even experts do not always find it easy to distinguish the copy from the original. And one advantage which this multiplication of replicas secures is the ready display of the two faces of a medal side by side. The present comparatively small exhibition, which we may hope is but the promise of better things to come, clearly shows the advantage of the method. Hitherto the space at command suffices for little more than electrotypes from Greek master-works and from gold coins of the Emperors of the West and of the East. But like casts are in course of preparation which will extend this representative series into English history. Only the most significant products of a nation or of a period appear in the selection, and thus a clear digest is obtained of a subject which otherwise might seem perplexed by intricate detail. For the sake also of simplicity, and in order, it may be, that art as distinguished from archæology shall be paramount, special prominence is given to the epochs when art was at its prime. For this end chronological development is made to give way to geographic divisions which display numismatic art at its highest point in the chief centres of the old world. Thus in this compendium are comprised Greece, Ionia, Sicily, Magna Græcia, Crete, Asia, Africa, Spain, Gaul, and Britain. In a lecture at the Royal Institution Mr. Stuart Poole attempted to show the characteristics of leading schools of Greek art as traced in the coins, in the following epigrammatic terms:—"The school of Greece is sculpture-like; the school of Ionia picture-like; the school of Sicily and Italy gem-like; the school of Crete realistic; and the school of Asia architectural." The chronological arrangement has been fitly adopted in the disposition of the electros from the gold coins of the Roman Emperors; thus the rise, the zenith, and the fall of Roman art are successively exemplified. The best period, as might be expected, is about the reign of Augustus. A marked contrast of course becomes apparent between the coins of the Western and of the Eastern Empire; the Western correspond in style with Roman statues, architecture, and ornament; while the Eastern or Byzantine coins accord in type of heads and decorative details with Byzantine mosaics. That some Emperors are not known even by name otherwise than by coins is a striking proof of the help which the numismatist may afford to the historian. We would further remark on the use of these coins at the critical turning point when Christian art was emerging out of Paganism. The heads of Christ on the gold coins we have examined correspond closely to the well-known Byzantine type, and thus furnish confirmatory evidence of the now accepted belief that the so-called portraits of Christ are nothing more than conventional and traditional types, handed down, it is true, from generation to generation, yet always moulded and modified according to the style of each place and period.

We are glad to know that the collection in the Museum is not at a standstill. Already it compares well with the richest collections on the Continent. In examples of the schools of Greece, and in specimens of Roman gold, it is not surpassed by the treasures at St. Petersburg, Paris, or Vienna. The yearly additions are necessarily dependent on the Treasury; last year the Government advanced 10,000*l.* Unfortunately the universal rise in prices has extended even to coins; hence any fixed annual grant becomes from year to year less adequate to meet the wants of the Museum. The French war for the moment paralysed the market; but now again the prices given in France are high. A coin needed by the Museum may sometimes be lost unless 100*l.* or 200*l.* can be afforded. But the collection under its present direction is not likely to remain without development. The public may be glad to learn that the project of preparing an Illustrated Catalogue of the 50,000 Greek Coins has made considerable advance. Every important specimen will be engraved. The first volume, which includes Etruria and Magna Græcia, will appear this spring, and the second, which treats of Sicily, will not be delayed beyond a year. This work, like the Catalogue of the Vases already published, is expressly for the use of students; it will be prized on the Continent as much as in England.

REVIEWS.

DÖLLINGER ON THE REUNION OF CHRISTENDOM.*

IF mankind were able to learn in anything like proportion to their experience, they would have learned by this time, what they certainly have not learned, that, though it is easy to break, it is very difficult to mend. If there is an organic law of the Christian society to be traced in the New Testament, it is the law of unity. On each several occasion which has in the course of centuries led to a breach of that unity, those who must be supposed to have felt themselves bound in conscience to accept division and separation in order to maintain truth and right probably thought that the necessity under which they seemed to act would be but temporary; that the corruptions or oppression against which they protested would in time disappear with their upholders, and that when the tyranny was overpast, and the error fully exposed, unity would return with returning reason and sober judgment. It is curious to speculate how many of these disruptions would have been risked if those responsible for them had been able to look forward, and to see that the tyranny might pass and the error be cleared up or surrendered, but that the rent would be incurable. It might have been thought beforehand so obvious and natural that, when the heat of a controversy or a quarrel had died away with the progress of time, the strong forces in Christianity tending to peace and union would resume their paramount influence; that broken ties would be knit together again; that good feeling and calm sense, to say nothing of Christian charity, would easily arrange differences; that sects and minorities would run their course, and then be reabsorbed in the large public body from which they split off. But we know that, though nations may make peace, Churches are irreconcilable. In the whole course of Church history it is hard to find a single clear instance of genuine voluntary reunion between separated bodies. Order and liberty, unity and truth, an honest conscience and peace, may be adjusted to one another, and may long coexist in a religious community; but once let the tension of their rival influences overcome its cohesion, once let the real or alleged claims of liberty, truth, and conscience require secession, and we may safely prophesy that, whatever becomes of the separated fractions, an amputated limb will grow again before their division is healed. One or both may perish, or may pass into something different; but it is most unlikely that they will ever, as bodies, come together once more.

And yet it is impossible to conceive anything more monstrous than this impossibility of reconciliation between Christian bodies which has hitherto been found to be almost the rule in Church history. All the noblest and best minds in all the divisions of Christendom rebel against it, and earnestly protest against erecting the formidable fact into a necessary condition of religious society. There can be no doubt that it is one of those cases where it is as right not to yield to the discouragement of countless failures as it is right for the martyr to maintain his convictions of the unseen truth, and the certainty of its triumph, with the world against him and death before him. When, then, a divine like Dr. Döllinger, seconded by a disciple who is so worthy to represent him as Mr. Oxenham, invites our thought to the prospects of the "Reunion of the Churches," we listen with the keenest interest and the deepest respect. If only because they are bolder and more hopeful than the mass of us, they command our attention.

* *Lectures on the Reunion of the Churches.* By J. J. von Döllinger, D.D. Translated, with Preface, by H. Nutcombe Oxenham, M.A. London: Rivingtons. 1872.

If attempts in the same direction have hitherto failed, adequate reasons can be assigned in each case for the failure; it does not follow that they must always fail. The time may not have been ripe for them; the idea, like many other ideas which have at last found their way into practical life, may need great changes in man's thought and knowledge and circumstances before it can be realized. At any rate it is one which, if it is to be realized, must be kept prominently before the minds of Christians; which, even if we are not to see it realized, we need to have kept before us as a measure of our shortcomings. Dr. Döllinger has claims on attention such as very few men possess. He has few equals in his knowledge of the causes which have led to the divisions of the Church, and which keep those divisions alive. Few Protestants have understood the case of Catholics and sympathized with them, as he, alone among Catholics of his eminence, has understood and sympathized with Protestants and Greeks. And, next, anxious as he is for reunion and sanguine of its possibility, he is so resolute and unflinching in his loyalty to truth that, when acquiescence in fraud and falsehood was the alternative, he deliberately chose to countenance by a fresh example the policy of separation. Truth is with him above the unity, the unity apparently unbroken and impregnable, of the most imposing portion of Christendom. The only reunion he will think of is one based on definite and positive avowals of truth; of that which ignores differences, and hides them under ambiguities and compromises, he will have none. It may seem idle to think of reunion on such terms; but at least they are the only fair and reasonable terms, the only terms on which a man of serious convictions could think of it; and on these terms, undaunted by the actual appearance of the world, Dr. Döllinger bids us not despair of reunion. The

"Nestor of Catholic theology," speaking [so Mr. Oxenham writes] from a profound acquaintance with the past history of the Church, and an intimate familiarity with the present condition of both Catholic and Protestant society, he declares that union to be at once the supreme necessity of the Christian commonwealth and a perfectly practicable achievement. It is not the voice of a youthful zealot, or a dreamy mystic, or a fiery reformer, which addresses us, but a venerable friend full of years and of honours, cautious by temperament, and of a nation pre-eminent for its critical acumen, conservative and Catholic to the backbone in his instincts and habits, who sums up in these weighty words the concentrated convictions of a lifetime.

What is there, then, in the circumstances of the time to induce a man like Dr. Döllinger to think that this union of Christendom, hitherto attempted in vain, is now "a perfectly practicable achievement"? We ask the question with the most sincere wish to agree with him, and with the fullest recognition of the calmness and candour with which he surveys the scene. The favouring circumstances which present themselves to his mind seem to be mainly these. In the first place, the events of the last few years have paved the way for a reconciliation between the two greatest bodies of Christendom—the Latin Church of the West, and the chief representative of Oriental Christianity, the Russian Church. It is clear that he thinks that the proverb must come true of the Papal system, that when things are at the worst, they must soon mend. The Vatican decree is the climax of that intolerable tyranny long exercised by the Jesuit party in the name of the Pope; and the result of it must be a general reaction and revolt in the Latin Church against this tyranny, which shall place the Papacy in its true constitutional position, a position in accordance with the genuine tradition of the ancient Church. With a Latin Church which has got rid of the irresponsible despotism established in the Roman Curia, supported by the inflexible policy of the Jesuits, and consecrated by the Vatican decree, the greatest and most serious hindrance to union with the Eastern Church will have been removed; the two great bodies are at bottom agreed in doctrine, and the real bar to reconciliation is the usurped power of the Popes. Another sign is the increased spirit of sympathy in the English Church towards the great traditional Churches both of West and East from which she has so long kept aloof—a sympathy developed directly from the doctrinal and historical position of the English Church, which, in spite of the strong Protestant temper dominant in England, has never let go her hold on Christian antiquity, and whose most learned divines and most consistent schools have always laid the greatest stress on this unbroken connexion. Lastly, in the new circumstances of Germany Dr Döllinger sees a great source of encouragement. Everything has told of late to disengage Catholic Germany from Rome; and what tends to disengage German Catholics from Rome turns their thoughts towards reconciliation with their Protestant countrymen, who were driven reluctantly into separation by precisely the same policy of insolent fraud and imposture which has just now so profoundly shocked the conscience and intellect of devout and learned Catholics. And since Dr. Döllinger's Lectures were published the attitude and claims of the Roman Court have turned a religious quarrel into a political one, and have brought the Pope face to face with the new German Empire, as the secret enemy of German unity and the intriguer against its peace. We know what such a feeling has brought about in former times; our own times are hardly likely to be more patient. And whatever weakens the attraction of Germany to Rome is an opening and advantage towards a unity which shall be independent of it—a unity which, however much men desire it, they will not accept coupled with the condition of submission to Rome.

Dr. Döllinger looks to Germany as the most hopeful source and guide of this movement:—

At the beginning of any eirenic movement, its opponents will outnumber its friends and helpers. But we may count on the sympathy, if not the active help, of those who have at heart the greatness and unity of Germany, and who believe that the political union is but half the work and requires an ecclesiastical union of all its tribes as the completion, fulfilment, and crowning of the edifice. In Germany the two religions are constantly becoming more and more intermingled, and the artificial devices for keeping them apart are more and more felt to be disturbing and hindering influences, superseded by the movement and needs of the present, and are being gradually put aside. . . . . I have found it the almost universal conviction in foreign countries that it is the special mission of Germany to take the lead in this world-wide question, and to give to the movement its form, measure, and direction. We are the heart of Europe, richer in theologians than all other lands, and the linguistic knowledge indispensable for this task exists with us in a higher degree than anywhere else. What can, what ought to be done? A negotiation between Churches through plenipotentiaries accredited on either side promises no result; the mere proposal or attempt would now, after July 18, 1870, be folly. The right instrument would be found in men, both of the clergy and laity, who would unite for common action, first in Germany, untrammelled by instructions, and simply following their own mind and judgment. They would soon draw others to them in rapidly increasing numbers, by the magnetic power of work so pure and well pleasing to God, and would thus be brought into communication with like-minded men in other countries. *The basis of their consultations would be Holy Scripture with the three Œcumenical Creeds, interpreted by the still undivided Church of the early centuries.* Then would an international society be formed of the noblest and most beneficial kind, and which, begun as a snowball, might well become an irresistible avalanche.

If Germany were the world, or if the world were like Germany, these expectations might appear better grounded. But large elements have been left out of the calculation. If the Eastern Church were attracted, what about the Latin populations? What about Italy, Spain, and Ultramontane France? What about the strong anti-Catholic element in the English Church? What about the 126 sects of English Nonconformists, fiercely insular, fiercely suspicious of Popery, or of anything which their ignorance or their instinct confounds with Popery? What about the land of triumphant sectarianism, the United States? Do they give much promise of coming into a scheme of reunion like this? The writer and the translator of these interesting lectures will seem to most persons to be too sanguine in speaking of the union which they long for and urge on Christians as a "perfectly practicable achievement." "Why," asks Mr. Oxenham, "is reunion considered an 'idle dream'?" "*Simply because we choose to make it so.*" But who are the "we" with whom it rests? Not himself and those who sympathize with him, but all the Churches, and sects, and parties, and single minds and souls, with all their separate convictions, and traditions, and prejudices, and interests, all over the Christian world. And who is to make all these infinitely differing views and habits and inherited opinions converge to the point where variations may be adjusted and agreement may become possible? who is to attract to any common ground, even for discussion and deliberation, bodies and individuals so remote in distance, and still more remote in ideas and sympathies?

And yet it is no useless task to which Dr. Döllinger has devoted himself. He seems to us more of a mere pioneer than he conceives himself to be; but it is enough even for a writer of his position and ability to be but a pioneer in the cause which so interests him. Before any such result as he contemplates can be even approximately reached, there must be a long, a very long and doubtful, work of breaking up the ground. Evidently the public mind is still absolutely unprepared even to take in the conception of such a reconciliation as he has in view. The disintegration of what still holds together, the destruction of what is established—this it can understand; but the fusing into a stable cohesion elements which have long been kept apart, the reconstruction of Christendom on larger and nobler principles than have yet ruled in it—this we are yet a long way from regarding as a thing of practical interest. All that can be said is, that there is more chance of gaining a hearing for words of truth and soberness about such questions than there was when Calixtus and Santa Clara, and Leibnitz and Molanus, and Wake and Dupin ventured to feel their way towards counsels of peace. If many differences have since their days become consolidated and hardened by time, if extreme opinions have become more extreme, yet there is a wider and better-informed public opinion than they had, and one less embarrassed by political considerations, to listen to and judge of reasonable and serious arguments. For the sake of generations to come it is well to familiarize our own generation with the two great points of truth on which Dr. Döllinger in his lectures and Mr. Oxenham in his eloquent preface insist. One is the monstrous anomaly of the existing state of division of the Christian Church; an anomaly which, familiar as it has become to us as an existing fact, no prescription can ever legitimate, no excuse can ever palliate as a fatal violation of the very idea of Christianity, and which is obviously and confessedly the poisonous influence for which there is no antidote, sapping its strength and arresting its advance. The other point is the extravagant and absurd insignificance of the greater part of the causes of separation and disunion. To each particular separated body the points of doctrine which keep it separate seem, of course, to be of paramount and supreme importance; but they are likely to appear so to none but its own partisans. There are two subjects on which to differ is necessarily to find it impossible to unite with any truth and reality in religious association. To differ about the object of worship, and to differ about the source and guarantee of religious truth, must be and ought to be, as long as they last, fatal bars to union. It never can be taken as a matter of indifference whether we refuse worship and all that goes with worship to one who is entitled to it, or whether we give worship to one who is but a

creature. And, again, it cannot be a matter of indifference, for it must be either the first of human blessings or the worst of human impostures, whether or not we believe that there is in the world, in the flesh like ourselves and speaking human words, a living oracle of divine truth, who may be consulted on all the difficulties and dangers of thought and life, and whose voice is certainly and without fail equivalent to the answer of God himself. Between divergent convictions on these two fundamental conditions of religious belief there can be no compromise; and no religious community could, without losing that which made it religious, embrace them together. But, besides these two points, it is difficult to name a third, absolutely and *in limine* fatal to an honest attempt to reunite a shattered Christendom. Certain it is that many grave points of difference which in former times have been thought insuperable obstacles to union have sunk more and more into differences of aspect or point of view, perfectly compatible with sincere co-operation and a large measure of sympathy. Dr. Döllinger enumerates a number of questions on which great changes have come either on the Catholic or the Protestant mind, where these questions have been reviewed and examined with competent knowledge, and on a higher level than that of urgent and keen controversy. The Lutheran article of justification is still of interest to numbers, and will still be of interest as long as St. Augustine is studied and human experience remains the same; but it has not the factitious supremacy which it once had, as the article of a standing or falling Church. Questions about the efficacy and administration of the sacraments, about church discipline, such as celibacy and the self-devoted life, about our relations to the other world, such as the intermediate state, the invocation of Saints and prayers for the departed, are all questions on which the deepest and most legitimate interest is felt, and on which the right or the wrong is of the greatest consequence; but they are questions which are more and more recognized as having two sides, and admitting of being looked at from varied points of view. There is a wide margin relating to them within which members of the same Church might fairly differ. How the lines are to be traced which shall comprehend these differences, Dr. Döllinger does not adequately show us. But it is no small service that he renders to Christendom when he reminds us, not only as a learned man, but as a sincere Catholic, how much wider these lines of comprehension ought to be than any of those with which use and custom have made us familiar.

DASENT'S JEST AND EARNEST.*

THE students of the great series of Chronicles and Memorials—which, it is to be hoped, will suffer nothing though Lord Romilly should cease to be Master of the Rolls, or though there should cease to be any Master of the Rolls at all—have been for years waiting for an edition of those Scandinavian Sagas which bear upon the history of Britain from the hand of Mr. Dasent. Mr. Dasent more than obeys the precept of Horace about the ninth year. His Collection of Sagas was advertised as "in the press" in 1860, and it was still advertised as "in the press" in 1872. Meanwhile, scholars have been feeling the lack. There is really no trustworthy and accessible edition of those Scandinavian tales, whether we choose to call them legend or history, which, great as is the caution with which they must be used, are still one of the materials for English history during several centuries. Any accessible edition of them would be a gain; a really critical edition would be an unspeakable gain. During all these years Mr. Dasent has mocked us by the promise of an edition which we fondly hoped might turn out to be something like what we want. For all these years we have been waiting in vain:—

> μίλλων γὰρ ἀεὶ δρᾶν τε τὰς σπουδὰς τε μου·
> καὶ τὰς ἀπούσας ἐλπίδας διέφθορεν.

Many has been the time that we should have been rejoiced to be able to turn to such an edition of the Sagas as we hoped that Mr. Dasent's, when it came, would turn out to be. We have waited more patiently, but not less unsuccessfully, than the ancient worshippers of Baal. Whether Mr. Dasent has been sleeping it is not for us to guess; that he has been several times on a journey we gather from the two volumes before us. From these volumes also we learn that he has been writing divers squibs and articles, while from other sources we know that he has been writing a novel. But what comfort is all this to us, who have been all this time wanting our Sagas in a shape in which we could make use of them? And now we have something which, for anything we know, Mr. Dasent may be giving us instead of the boon for which we have so long been looking. If so, we can only say that it is not a little cruel to give us so hard a stone instead of the long promised bread. It is cruel when Mr. Dasent, instead of a critical edition of Sagas, gives us a sort of summary of Sagas without any criticism. It is more cruel still when, instead of Sagas or anything else about the Faroe Islands, he gives us, under the title of "A Fortnight in Faroe," page after page of the poorest and dullest cockney joking. We know not for what kind of public Mr. Dasent may have put forth his two volumes of *Jest and Earnest*. It certainly cannot be for the scholars whom he has so long mocked with the vain hope of getting something from him which might really help them in their studies.

We are in fact quite at a loss to guess with what motive Mr. Dasent can have put forth what he is pleased to call his Essays and Reviews. We should really have thought that a man who has somehow got a reputation for knowledge of Scandinavian matters, and who has had the honour of being chosen as a fellow-worker with such scholars as those who have edited the later volumes of the Chronicles and Memorials, should have had more respect for himself and his subject than to treat a matter of such interest as a voyage to Faroe in a style which brings him down to the level of Mr. Jeaffreson or Mr. Hepworth Dixon. Why cannot he tell us where he went and what he saw in that curious island scrap of Scandinavia, without bringing it in with a hideous mass of rubbish about "Smith," and "Paterfamilias," and the London season, and bathing at Dieppe, and all the lowest jargon of the cockney penny-a-liner, who fancies that all the world lives in London? A sensible traveller, knowing the language and history of the country, as we are bound to assume that Mr. Dasent does, could have told us a good deal about so very curious and out-of-the-way a part of the world. And a long-suffering reader may by a series of efforts dig up several pieces of information out of the dreary waste of Mr. Dasent's liveliness. But the effort is a painful one, and puts him who makes it pretty much on a level with the unlucky whales whose merciless butchery Mr. Dasent tells us about. When Mr. Dasent lights upon a good thing, he does not seem to know what to do with it. He hears a story about seals turning into women, and it does not strike him that he has lighted on a rich vein of comparative mythology. The utmost that he does, which is doubtless some self-sacrifice for Mr. Dasent, is to keep himself from making any cockney joke while telling the story. In the next paper he goes to Wildbad, but he cannot get there without an overpowering flood of cockneyism, which, when he gets to his bath, changes into such elegant wit as calling one of his fellow-visitors "Prince Ringwormowski." How all this stuff ever found its way into a periodical like the *North British Review*, which certainly contained some articles of a very different stamp, is even harder to understand than how Mr. Dasent himself could first write and then after eight years reprint them.

It is hardly needful to dwell on two political squibs twenty years old which Mr. Dasent has actually thought it worth while solemnly to reprint, or on some more cockney nonsense called "How we were all Vaccinated," stuff about "Mrs. Jellybag," "Mr. Squills," "Struggles," and "The housekeeper's room," the sort of thing which might, by an effort, be endured in a comic newspaper, but which we should have thought that no human creature would have dreamed of printing in a book. But here it all is, and we suppose it makes up Mr. Dasent's division of Jest alongside of what we suppose is meant for Earnest, namely, the papers on the English Language and on Norwegian History. Mr. Dasent calmly tells us in his preface, "They now reappear just as they were originally written, though the writer well knows that the world has not stood still either in politics or literature during the last twenty years." The years 1863 and 1864, in which Mr. Dasent wrote most of the articles, are as yet hardly twenty years ago, though the paper on the Origin of the English Language, written in 1856, comes nearer to that, we might almost say, distant time. Mr. Dasent's apology shows that he knows that these papers are behind the present state of knowledge; it is no shame to him that they are so; it is not given to every man to lead the way; but every man may follow the path when it is once pointed out. We neither wonder at Mr. Dasent nor blame him because, writing about the Origin of the English Language in 1856, he wrote in an unscientific and blundering way about Britons, Semi-Saxons, and what not. What we do wonder at, what we do blame him for, is his reprinting this kind of thing unaltered in 1873. If Mr. Dasent had only marked the things about which he knows better in 1873 than he did in 1856, we should at least have a picture of the progress of his mind, whatever that might be worth. But, as it is, he does not even give us this. All that we can see is, that Mr. Dasent knows that the world has not stood still in all these years, but that he will not take the trouble to make any use of its advance.

The third paper in the first volume is headed "England and Norway in the Eleventh Century," and is also reprinted from the *North British Review*. This, we presume, is one of the essays which come under the head of "Earnest." We are bound to say that there is nothing in it about "Smith," or "Struggles," or "Paterfamilias." There is nothing about Mr. Dasent bathing at Dieppe, or his being jaded with the London season. But it is no a paper which promises very much for the critical character of Mr. Dasent's edition of the Sagas, whenever we get it. His paper is dated in 1865; but, as he chooses to reprint it in 1873, we must judge it by the light of 1873, and not by that of 1865. But, even by the standard of 1865, it is sadly uncritical. First of all, the title is misleading. Who would have thought that "England and Norway in the Eleventh Century" meant nothing more than the story of the reigns of Edward the Confessor and Harold, told according to Mr. Dasent's notion of them? And really no man in 1865 should have written such a sentence as this:—

> Ingulph, the secretary of William, indeed denies that at that visit his master exerted any undue influence on Edward to extort a promise from him; but who can tell—no, not even in aftertimes the hired scribe of William—what passed between the cousins?

It is certainly a strange state of things when a man who is thought capable of work on the Chronicles and Memorials could, in 1865, think the stories of the false Ingulf worthy of

---

* *Jest and Earnest. A Collection of Essays and Reviews.* By George Webbe Dasent, D.C.L. 2 vols. London: Chapman & Hall. 1873.

serious discussion, and could calmly reprint in 1873 this witness that he was a good deal behind his age eight years before. After this specimen, it is perhaps hardly worth while to go into any very minute examination of Mr. Dasent's notions about eleventh century history. He has made use of the Life of Edward published by Mr. Luard, and that is all that we can say for him. To all that has been done for this period of history since 1865 Mr. Dasent resolutely shuts his eyes. We have all the different versions of Harold's visit to Normandy, run over in a light and flippant way, as if the evidence on which they severally rest had never been critically tested. Mr. Dasent tells us that the visit happened in 1064, a date certainly less improbable than most others, but which is hardly to be taken for granted. Then he tells us:—

> Certain it is that soon after that visit Edward sent Harold's brother Wulfnoth, and his nephew Sweyn's son Hacon, who had been given by Godwin as hostages over to William for safe-keeping.

Any one who has really worked at the different statements, and not tripped jauntily over them, will perhaps think that this story, like all the other stories, is anything but certain. We need hardly say that the Norwegian legend of Stamfordbridge, the English cavalry, the English archers, and so forth, is told over again as if it were so much true history; only Mr. Dasent does stop to point out the mistake of the myth-maker—one simply of a piece with the rest of the story—which kills Morkere at Fulford. At the authentic account in Henry of Huntingdon he seems never to have looked, but he gets into a critical fit over Waitz's edition of Marianus Scotus. But of the real meaning of Marianus's account, and of its utter inconsistency with the Norwegian fable, Mr. Dasent seems to have no notion whatever.

In the second volume we get a review of the early parts of Latham's Johnson's Dictionary. This dates in 1864. Mr. Dasent gives us over again a good deal of the same kind of thing which is to be found in the earlier essay on the Origin of the English Language; but he does seem to have advanced in one point between 1856 and 1864. As early as 1848 Dr. Guest had explained the real meaning of the "Saxon shore;" but in 1856 Mr. Dasent had not reached the point which Dr. Guest had reached at least eight years earlier, and, in the essay on the Origin of the English Language, he talked all the old talk about its being called from a German settlement to which since Dr. Guest no scholar has listened. In the paper written in 1864 this does not appear again, so it is just possible that Mr. Dasent may have spent his second term of eight years—the great cyclic period, according to Lappenberg—in learning a little about early English history at the hands of its great master. In the essay itself Mr. Dasent undertakes the easy task of convicting Dr. Latham of a good many mistakes. But Mr. Dasent is himself really a good deal more uncritical than Dr. Latham. He seems to have no idea whatever of the nature of the English language, or of any language. He goes on talking, in the old blundering way, about modern English words being "derived from the Anglo-Saxon"; only he objects to "deriving" them from the Anglo-Saxon, because he wants to "derive" them from the Scandinavian. In short, like most people who touch Scandinavian matters, Mr. Dasent has got bitten with the Berserker madness. The fault of most Scandinavian writers on English matters is that, whenever they see anything in England which is the least like anything in Denmark or Norway, whether it be in language or in anything else, they at once rush at it as something of direct Scandinavian origin—something brought into England by Hubba or Cnut—whereas, ninety-nine times out of a hundred, the likeness is simply owing to the original kindred of the English and Scandinavian nations. And English writers who take up a strong Scandinavian line are apt to fall into just the same error as the native Danes and Northmen. Mr. Dasent, for instance, sees Scandinavians wherever he has the ghost of a chance. He will make everything Scandinavian which could possibly be Scandinavian. Now no one doubts that the Danish invasions, like the other events of our history, had some effect on our language. No one doubts that there is a Scandinavian element in the existing English speech; but how great that element is we shall never find out unless we set about it in a more critical and a less impetuous way than Mr. Dasent. Anything in modern English which cannot be traced up to the existing remains of the oldest English, which has nothing like it in any of the continental forms of the Low-Dutch, but which has something like it in Scandinavian, may be safely set down as a real Scandinavian infusion into English; but further than this it is not safe to go. Mr. Dasent's notions of the history of language during the eleventh and twelfth centuries are truly remarkable when we think that they are deliberately given to the world in 1873:—

> The King and his barons spoke Norman French, their subjects and serfs, whether Scandinavians or Saxons, might speak whatever jargon they chose. It never occurred to the Conqueror or his sons, or to his grandchildren and great-grandchildren, that a Norman could be anything else than a Norman, or his speech anything else than Norman.

Normans and Angevins are most likely all the same to Mr. Dasent, but what does he make of William's attempt to learn English? of the English education of Henry the First? of the fact that Henry the Second, whether he could speak English or not, most certainly understood it when spoken? These things were perhaps not so clear in 1864 as they are in 1873; but there are some people who keep their eyes open to the last lights as they come, Mr. Dasent chooses rather to stay where the last revolution of the octennial cycle left him.

One page of Mr. Dasent's book—namely, page 337 of the first volume—emphatically reminds us that, in his own phrase, the world has not stood still during the last twenty years. Mr. Dasent's essay, written in 1856, brings strongly home to us the fact that the Semi-Saxon was then in the land. He has indeed something like a page to himself—at least his name stands in all the glory of a heading. In the text Mr. Dasent says, "We have called the speech of England in the time of John Semi-Saxon. Why not," he goes on, "call it Anglo-Saxon?" The answer, we confess, is beyond us; but that is not wonderful, as the whole nature of the Semi-Saxon is beyond us. However, here it is:—

> Because during that century and a half the internal law of simplification and progression had continued to exert its influence on the language in an increased ratio of speed.

A few pages on we read:—

> The dialects cease to be called Anglo-Norman on one side or Semi-Saxon on the other. The common term Early English includes them both.

The time when this happened seems to have been in the thirteenth century, and it also seems as if Mr. Dasent thought that people at the time talked about Anglo-Norman and Semi-Saxon. Perhaps a man of mixed blood might say, "My father talked Anglo-Norman and my mother talked Semi-Saxon; as for me, I talk Early English." After all this we are not surprised to find a few pages before this Mr. Dasent talking of "the sack and burning of Anderida by the *sons of Cerdic*," and adding, "but for a long time such a capture was an exception."

A great part of the second volume is taken up, not by a critical examination of the Sagas, but with an account of the reigns of Magnus the Good and Harold Hardrada according to the Sagas. This makes us tremble a little for the coming edition.

Of course there are, scattered up and down Mr. Dasent's essays, things of a different character from those which we have quoted. He makes, for instance, some good protests against some of the modern corruptions of English, and against filling dictionaries with words which are not words but merely technical terms. There is a good deal in Mr. Dasent's two volumes which is quite to the purpose, but then it is for the most part quite commonplace. It is the old story that what is true is not new, and what is new is not true. But, when a man thinks good to reprint his fugitive pieces, and that, according to his own confession, without any kind of correction or improvement, we may fairly ask that they should rise to a higher level than this.

SAGAS FROM THE FAR EAST.*

At the end of his preface the author of this volume apologizes for "any inaccuracies which may have crept into" his "pages owing to being abroad while preparing them for the press." The plea is elastic; but if it be suffered to cover not a few sins in the way of mistranslation, or of wrong transcription of names from German into English, it can scarcely be taken as an excuse for making Mongolians talk Sanskrit, and still less for the form which he has chosen to give to his book. He has written it, he tells us, especially for the young; that is, for those whom it is specially necessary to place in the right track at a time when misdirection may send them permanently and fatally astray. When, then, boys and girls, in reading what is put before them as a Calmuck or Mongolian tale, find the narrator saying that "a voice came out of *Saurya*," and are referred to a note which consists simply of a quotation on the origin of the word from Lassen's work on the Mahâ Bhârata, what can they suppose but that Hindus and Mongols talk much the same language, or have at least the same names for their objects of worship? But if even this be condoned, indulgence cannot fairly be carried further.

Popular tales, from whatever quarter they may come, have attractions for two sets of readers, and have therefore a twofold value. It is a distinct gain when any addition is made to the stock of stories in which children may take pleasure simply as stories; and it is next to certain that these stories will have a further scientific value for the comparative mythologist and the historical student. But, whether for those who read for amusement only, or for those who take them up as serious work, there are only three ways in which such stories should be put forth. To the publication of the mere text, provided it be accurate, without note or comment, there can be no objection; but if either notes or comments are to be made, they should be confined to matters really needed to explain the text; or, secondly, to the history of these traditions and to their connexion, if any such should exist, with the traditions or stories of other tribes and nations. Unfortunately the translator of these tales has not followed either of these courses. Not less than eighty closely printed pages of notes are appended to about three hundred pages of text, which an exact translation would have reduced to a much smaller number, and of these eighty pages not much more perhaps than a tenth is really needed to make the text intelligible to children. The collection of tales known as the Siddhi-Kür is preceded by a dedication to the teacher Nagarguna, who is said to be second only to Sakyamouni. This gives occasion to one note of sixteen pages on the history of Gautama Buddha and his doctrines, and to another note of about half that length on the forms which Buddhism has taken in Tibet. On this subject a few lines or a

---

* *Sagas from the Far East; or, Kalmuk and Mongolian Traditionary Tales.* With Historical Preface and Explanatory Notes. By the Author of "Patrañas," &c. London: Griffith & Farran. 1873.

few paragraphs would amply suffice. If anything is to be said about these stories at all, what we need to be told is, how far they are Calmuck or Mongolian; and, if they did not originate with these tribes, how far they have been modified in their new home. This is a task to be done systematically; in the present work, for all practical purposes, it has not been attempted at all. Here and there the reader will find scattered through the notes a few remarks on Mongolian or Calmuck changes in Hindu stories, although in the preface he is told that they are all traceable to Indian sources, and that they have "received an entire transformation in the course of their adoption by their new country." That this last assertion is far too sweeping, boys and girls who know the stories gathered by Grimm, Asbjornsen, Campbell, and many others will soon see when they find some of their favourites not much the worse for putting on a Mongolian dress. Beyond the mere fact of this borrowing or importation, the translator, it seems, has little to tell them; and what he does say is likely to mislead. In truth, they can scarcely fail to be misled when they are told that we can "trace the age of a building by its alterations and repairs, and that equally well whether these be made in a style later prevailing, utterly different from that of the original design, or in the most careful imitation of the same, for the age of the workman's hand cannot choose but write itself on whatever he chisels." The notion that we can always, or even generally, do this without documentary evidence is a mischievous delusion.

The statement that these stories may be traced to a Hindu source is followed, not by an attempt to show how Mongolians received them, but by a discussion on the meaning of the word "Indian," and on the way by which the Aryan tribes entered Hindostan. This is not wanted to enable children to understand these stories, while for students it is wholly uncalled for; but even more unfortunate is the eagerness of the translator in hunting out moral lessons for the edification of his readers. It might have been thought that at this time of day the stories should be allowed to speak for themselves. If a popular tale is too coarse, or in any way unfit to be put before the young, let it be kept from their sight; but it is purely mischievous to speak of these myths or traditions as being either composed with a purpose, or as even having a didactic element, unless we have clear evidence that this is the case. The author has already published collections of Spanish and other stories, of which he says that in telling them there was no need "to point to a moral, for the moral—*i.e.* some more or less remote application of the sacred and civilizing teaching of the Gospel—was of the very essence of each" (xv.) Here again we have an assertion which, as being altogether too sweeping, becomes untrue. Probably on no popular traditions has the Christian sentiment of the middle ages more clearly set its mark than on the magnificent group of legends which have gathered round the name of Arthur. Yet the very myth in which this sentiment becomes most conspicuous is in all its essential features found in a hundred or a thousand purely heathen stories. It is, of course, useless to seek for Christian teaching in these Mongolian tales; but the translator is nevertheless not to be baulked in his efforts to turn them to moral uses. They are, he says, "not ideal embodiments of the perfect motives by which people ought to be actuated, but *genre* pictures of the modes in which they commonly do act. As such, they cannot fail to contain the means of edification, though we are left to look for and discover and apply it for ourselves" (xvii.) The youngest of his readers will soon see that, for the most part, the motives which prompt the actors in these tales do not belong to common life at all, while those who are somewhat older will perhaps begin to feel that the edification extracted from them is obtained at the cost of spoiling them as stories, or of bringing the matter to a wrong issue. The thirteenth tale of the Siddhi-Kür relates the fortunes of the man who has set free from their tormentors three beasts which come to help him when he is shut up in the iron box for stealing silkstuff from the King's treasury. In this prison he is nearly choked for want of air, when suddenly a little chink appears in one corner. This was the work of the mouse whose life he had saved; and to the sentence in which this is stated the translator has appended the following portentous note:—

> The Indian world of story abounds in tales in which the low notion of expecting some advantage to accrue in this life is proposed as the object and reward of good actions. Instances will doubtless occur to the reader. The Pantcha-Tantra collection contains one in which an elephant is caught by a Khan out hunting by being driven into a deep dyke. He asks advice of a Brahman who passes that way as to how he is to extricate himself. "Now is the time," answers the Brahman, "to recall if you have ever done good to any one, and, if so, to call him to your aid." The elephant thereupon recalls that he once delivered a number of rats whom a Khan had hunted and caught and shut up in earthen jars by lifting the earthen jars with his trunk and gently breaking them. He accordingly invokes the aid of these rats, who come and gnaw away at the earth surrounding the dyke, till they have made so easy a slope of it that the elephant can walk out. Christianity fortunately proposes a higher motive for our good actions; and the experience of life would make that derived from results to be expected from gratitude a very poor one.

The experience of life scarcely shows that the good turns which a man may receive from others come for the most part from those whom he has injured, nor are we aware that Christianity forbids us to look for aid to those whom we may ourselves have been able to help. In short, this talk is twaddle, or something worse. It cannot edify, and it may lead to a false classification of popular stories. The very gist of both these tales is that the good deeds are done without any hope whatever of future recompense. To show how little Shrikantha, who has rescued the mouse, the monkey, and the bear, expects any good to himself from his acts of mercy, he is represented as brought into trouble for stealing when, if it had been a mere matter of tit for tat, he might have invoked their aid to save him from hunger without adding to it the task of delivering him from the consequences of his theft. The translator's business, therefore, was to see, if he felt himself called upon to meddle with these matters at all, whether his elephant story was or was not only the story of Shrikantha in another form; whether the same story can or cannot be found among the popular traditions of other tribes; and, if so, which may be the oldest form, and whether they may or may not have one common source. The merest child who has read the tales will see that, whatever may be said of the elephant and the rats, the legend of Shrikantha is in this feature in precise agreement with that of Psyche aided by brute animals to perform the tasks put upon her by Aphrodité, and with that large family of Teutonic, Norse, and other stories in which the wanderer or pilgrim has certain seemingly impossible things to do—mountains of ice to scale, huge castles to throw down, or myriads of boulders to remove—in which, when their own powers are found to be useless, they are helped by bears, wolves, or foxes, by ducks, swans, eagles, ants, fishes, or ravens. If, then, this matter is to be taken in hand at all, these stories must be classified both according to the tasks to be done and the beasts which accomplish them. Why these beasts should be introduced is a question belonging to the *Zoological Mythology* of Professor Gubernatis; nor is it necessary for us to say whether Mr. Cox be or be not right when he states that under the names of these animals the old mythical language spoke of the clouds, the winds, and the light which conquers the darkness, and that the chief work enjoined in these tales—the recovery, namely, of an apple, a golden or a silver ball, or egg-shaped talisman—is the bringing back of the sun's orb. But it is obvious that in the one case we have a scientific process and a conclusion which may be accepted or rejected according to the evidence; in the other we have a mere random beating of the air. We rise, in fact, from the reading of these *Sagas from the Far East* knowing less about the share which Mongols or Calmucks had in shaping them than we learn from the single sentence in which Professor Gubernatis tells us that

> the popular tales of the Tatars do not differ enough from those of the Aryans to infuse into them anything like new blood or affect in any degree their radical nature; on the contrary, the Tatar stories are the Aryan tales themselves, or at most the Hindoo ones, a little modified by a few peculiarities which are specifically of a Tatar character.

If the reader of these Eastern Sagas should desire to have an excellent analysis of most of these Siddhi-Kur and Ardschi-Bordschi tales, he will find it in the work of Professor Gubernatis. He will there also find evidence of some unfortunate slips made by the translator of these Eastern Sagas. In one of the tales Professor Gubernatis rightly says that "a man uses the horns of his dead buffalo to grub up the roots upon which he lives in exile." In the translation the buffalo is turned into a goat, and is brought back alive by the man to his own country, and there made to dig roots out of the earth for him to eat.

To speak plainly, the translator has not withstood, as he ought to have withstood, the temptation to compile a book which should give him a character for much learning. Nor is he the only offender among recent writers on mythological subjects. It is an easy matter for compilers to lay claims to superior wisdom by taking exception to the theories or conclusions of other writers as being carried too far, and then putting forth substantially the same conclusions as their own. This method is adopted in one or two passages by the translator of these Eastern Sagas, without, however, naming those who are thus censured. It is employed more ostentatiously by Mr. Fiske, who in his volume on Myths and Mythmakers takes special credit to himself for avoiding what he calls the extreme views of Mr. Cox. Yet Mr. Fisko speaks with undoubting assurance of "Odysseus warring with the impious night heroes who have endeavoured throughout ten long years or hours of darkness to seduce from her allegiance his twilight bride, the weaver of the never-finished web of violet clouds"; and he has no hesitation in saying that "in Achilleus and Meleagros we see the unhappy solar hero doomed to toil for the profit of others, and to be cut off by an untimely death." We need say no more than that these views of Odysseus, Meleagros, and Achilleus were first put forth by Mr. Cox, and are generally set down as among the extremest which he has put forth. It is time that writers on mythological matters, whose number seems to be rapidly growing, should learn the duty, more strictly obeyed by historians, of assigning to their proper sources all results not obtained strictly by their own researches. Their reputation for learning will not be lessened by more scrupulous care, even though it may cost them a little more time and trouble.

MACLEOD'S ECONOMICAL PHILOSOPHY.*

MR. SARGANT, in an essay which we reviewed some time ago, remarked upon the unfairness of ignoring certain writers without close examination of their merits. He mentioned Mr. Macleod as a case in point. Mr. Macleod, as he remarked, had

* *Economical Philosophy.* By Henry Dunning Macleod. London: Longmans & Co. 1872.

received very high commendation from some foreign authorities, and especially from M. Chevalier. English economists, on the other hand, seem to be in a tacit conspiracy to put him down, not by argument, but by silence. With Mr. Sargant's general principle we fully agree. Undoubtedly a gentleman who comes to us with such testimonials deserves a serious examination, though it is possible that the results of the examination may not be specially gratifying to him. Bearing this admonition in mind, we thought it our duty to read through a thick volume in which Mr. Macleod has expounded his principles, or rather has expounded some of them; for beyond the 676 pages of the present work we can see looming in the distance an indefinite vista of economical disquisition. We will not say that our attention has never flagged in the process; for, to confess the truth, it is difficult to conceive reading of a more hopelessly dreary kind. If we wished, for example, to express our conception of the deepest misery to which a human being could be exposed, we should endeavour to picture Mr. Carlyle condemned to plod through this contribution to the "dismal science." However, we have performed our task, and it has left upon our minds an impression equally compounded of weariness and a sense of the pathetic. Here is a gentleman of great reading, of much experience in business, and of some ability, who has obviously devoted years of labour to preaching a new economical gospel to mankind. He is fully persuaded that his speculations are fraught with results of unspeakable importance to human happiness. Newton did not work harder at his mathematical inquiries, nor did Descartes show more devotion to metaphysics, than Mr. Macleod to what he calls "Economical Philosophy." Is it not rather cruel to say to such a man, Your pains have been thrown away; you have found nothing but a mare's nest, and your philosophy is chiefly composed of rubbish? And yet what is a critic to do if such should be his candid opinion? He must, we presume, speak the truth, and, whilst praising Mr. Macleod's heroic devotion to his task, admit with sadness that his book is one more lamentable waste of human energy. Well, waste is the law of nature, and we cannot be much surprised. Mr. Macleod has done his best; he has accumulated a considerable amount of information which may be useful in other hands; he has done some positive service to literary history in calling attention to the labours of the French and Italian economists who anticipated Adam Smith in many of the doctrines which are supposed to have started full-blown from the Scotchman's brains; and he has published a very big book. More we can hardly say for him; the remarks which we are about to make will be to Mr. Macleod one more instance of the perverse stupidity which fails to recognize his merits; whilst to Mr. Sargant they may possibly serve in some degree to justify the apparent negligence of English economists in ignoring the claims of this would-be reformer of the science. In fact, we began to read Mr. Macleod with as much impartiality as was possible; but we soon came upon a specimen or two of his methods of reasoning which would probably deter any one but a critic from going much further.

Mr. Macleod, for example, argues at starting that the same methods are applicable to the moral and to the natural sciences. Amongst other authorities rather more to the point, he quotes Bishop Butler as holding this theory; and alleges in proof Butler's well-known sentence, "There is much more exact correspondence between the natural and the moral world than we are apt to take notice of." We will not say that the remark is utterly irrelevant; but when we see Butler classed with Bacon, Locke, Say, Comte, and Mill, as maintaining that "economic science as one of the moral sciences is an inductive science," and so classed on the strength of this single saying, we are struck with amazement. We have no doubt that Butler would have been equally amazed at being dragged into a controversy so utterly foreign to his modes of thought. Going a little further, we are still more perplexed by Mr. Macleod's notion of what is meant by inductive science. Mr. Mill alleges as a reason for teaching political economy by deductive rather than by inductive methods that we cannot try experiments in it. We cannot, as he puts it, "try forms of government and systems of national policy on a small scale in our laboratories." Now Mr. Macleod admits the truth of the statement, as he could not very well deny it; but he denies that it renders inductive methods inapplicable. His reason is singular. "In political economy," he says, "and the moral sciences generally, we can have what are in all respects equivalent to experiments—namely, FEIGNED CASES. . . . We can argue from feigned cases, and educe principles from them with exactly the same degree of certainty as if they were real cases; and also with the same degree of certainty as principles are tested by real experiments in experimental science." He proceeds to invent the name of "experiential philosophy" for "that branch of inductive science whose axioms are tested by observation and *feigned cases* or human *experience*." The *naïveté* of this argument is admirable. A "feigned case" means that you find out what would be the result of certain combinations by reasoning instead of by appealing to experience. Inductive reasoning rests upon inquiry into cases which have been observed. Deductive reasoning means inquiring into cases which have not happened, or, as Mr. Macleod calls them, feigned cases. And thus he argues that the moral sciences are inductive because they use deductive methods. He regards this as a great discovery.

When we meet with such an argument we have a pretty shrewd guess as to the logical capacity of the author. Mr. Macleod, however, presents us with other samples of argument almost equally strange. He has, as may easily be imagined, a great objection to Mr. Mill's methods of reasoning. Mr. Mill tells us in a well-known passage that it is improper to speak of the price of any commodity being fixed by the ratio between the demand and the supply. "The idea of a ratio," he says, "as between demand and supply is out of place, and has no concern in the matter; the proper mathematical analogy is that of an equation." Hereupon Mr. Macleod triumphs greatly. "It is very surprising," he says, "that so acute a thinker should not have perceived what any intelligent schoolboy could have told him, that an equation is a ratio!" We have every reason to believe that Mr. Mill is a gentleman of singularly humane temper, and entirely averse to the needless infliction of corporal punishment. We therefore imagine that if a schoolboy had made such a statement to him, he would have calmly explained the error involved. A ratio, we need hardly say, is no more an equation than a triangle is a geometrical axiom. The relation of two to three is a ratio; the statement $2x=3y$ is an equation; and there is therefore a most important difference between saying that price depends upon the ratio between demand and supply, and saying that it is determined by an equation between demand and supply. The point is not of much importance, except as illustrating Mr. Macleod's lax use of language, especially as he condescends to acknowledge that Mr. Mill "gives fairly enough an account how demand and supply are adjusted." Similar confusions appear at every page. Here is another problem for the "intelligent schoolboy." Mr. Macleod tells us that every book on algebra says, as an illustration of the meaning of positive and negative signs, that "money is a positive quantity, and that a debt is a negative quantity." To talk about money being positive is just as meaningless as to talk about horses or oxen being positive. If you are calculating the amount of a man's property, you may, if you please, call the number of coins owing to him positive, and you must then call the number which he owes negative. And therefore one may say roughly that credit may be called positive and debt negative. Mr. Macleod, however, makes a great point of what he calls negative economic quantities, which he appears to regard as mysterious entities endowed with some strange intrinsic quality. He gets into terrible troubles with his negative sign, and still more with the imaginary symbol $\sqrt{-1}$, and reminds us at times of an unfortunate wrangler who dreamt that he had got under a square root with a negative sign prefixed to him, and that all the best mathematicians in Europe were in vain endeavouring to extract him. Over 5,000,000,000*l.* of debts or credits, he says, pass through the London Clearing House in a year. "Now in those great accounts," he asks pathetically, "consisting chiefly of negative quantities, what are they to be subtracted from?" We will say, to relieve his mind, that he need not call them negative unless he chooses, and, further, that there is no law, human or divine, which bids him to subtract them *from* anything. If, indeed, he wishes to determine the total amount of credit or indebtedness of any class, he had better subtract the debts from the credits, and as all these distressing negative quantities represent debts due from somebody to somebody else, he will find that, if he includes all classes, the result is precisely nothing.

Here, however, we come across Mr. Macleod's favourite doctrine, upon which he has expended an infinite amount of labour, and which is to revolutionize the science. The confusions into which he falls are curious as illustrating a particular weakness of the human mind, but are otherwise scarcely worth prolonged study. His main argument, as we take it, is as follows:—He defines wealth to be anything exchangeable. Hence it follows that a good many things are wealth which are not generally known under that name. This will appear from his classification of wealth into "corporeal property," "unmaterial property," and "incorporeal property." Typical examples of the three classes are land, money, or minerals in the first, labour of all kinds in the second, and credit or copyrights in the third class. Mr. Macleod has of course a right to define his terms as he pleases, and we cannot complain so long as he is consistent, though we may doubt whether his definition is the most convenient. There has been much dispute as to whether personal accomplishments, for example, should be called wealth; and though we should agree with Mr. Mill in excluding them, there is no necessary absurdity in giving them that name. We must remark, however, that Mr. Macleod's definition involves an obvious inconsistency. To call an ox wealth, and to call credit wealth, is to compare things essentially disparate. At times, too, Mr. Macleod himself uses words differently. Wealth sometimes means with him, not the ox, but the right to the ox; and these are very different things, though Mr. Macleod apparently confounds them. The right to an ox may, in fact, be compared with the right to a sum of money, which can hardly be said for the ox itself. If then by wealth be meant merely rights, it is obvious enough that they may be multiplied at will to any assignable extent. The consequence, however, is a divergence from ordinary speech which is, to say the least, perplexing. If A. promises to pay B. 1,000*l.*, and promises to pay the same sum to A., Mr. Macleod considers the wealth of the country is increased by 2,000*l.* And without a single addition to the material wealth of a country wealth, as Mr. Macleod uses the word, may vary indefinitely. Macleod, again, declares that "credit is capital," and

is a general right"—expressions which, according to the ordinary use of words, involve a palpable confusion of ideas. To call a sovereign a right is to bring all language into incalculable entanglement. Without, however, tracing Mr. Macleod's argument in detail, we will simply suggest to him that, if his nomenclature is accepted, he must invent some new word to signify what is now generally meant by wealth. If he does not admit of such a new word he will fall into the strangest perplexities. When a house is called wealth, and the right to the lease is also wealth, we are left without the power of distinguishing between a concrete reality and a metaphysical abstraction. If, on the other hand, Mr. Macleod admits such a term, all the previous doctrines of the ordinary school will remain unchanged, except verbally. The difference remains in spite of all Mr. Macleod's fine language about the "continuity of science" and the necessity of finding a "general form or cause of value," and studiously ignoring the difficulty is only to plunge into constant confusion.

It is needless, even if we had the space, to consider Mr. Macleod's assault upon Ricardo's doctrines of the conformity of price to the cost of production, and the law of rent. Probably they will not disturb the faith of any orthodox political economist. One remark we may venture to make. Mr. Macleod tells us that it is highly unphilosophical to break up phenomena into classes, and to say that value is determined in one case by supply and demand, and in another by the cost of production. It is like explaining some planetary motions by the Ptolemaic and another by the Copernican hypothesis. But if facts persist upon being affected by different laws, as all concrete facts do, what is the use of an *à priori* objection, especially in the mouth of an inductive philosopher? Would Mr. Macleod say that it was unphilosophical to bring different laws to account for the motion of a body in *vacuo* and in a resisting medium? That Ricardo used some inconsistent language in speaking of labour as the cause of value we freely grant; and we agree further with the grand philosophical doctrine that demand is in all cases the cause of value, which means simply that people always buy a thing because, for some reason or other, they want it. But it remains true that the value of commodities will follow different laws of variation according as they are or are not the subject of a monopoly. Labour, as Mr. Macleod seems half to admit, may regulate value in some cases, though we may not call it, in some senses, the cause of value. A fair analogy would seem to be this:—If we wished to know the precise pressure in the boiler of a steam-engine, we might say that it was determined by the weight on the safety-valve. No, says Mr. Macleod, that is utterly unphilosophical. It is determined by the temperature and density of the vapour. That is also quite true; but then the condition of the vapour is determined by the safety-valve. And, in like manner, Ricardo's theory that value depends on the cost of production is perfectly accurate as determining what will be the price of commodities, although acute philosophers may declare that he is describing, not the cause, but an essential condition. In short, we fear that, though Mr. Macleod energetically denies it, he is in fact indulging in a mere logomachy when he is not positively erroneous.

JOHANNES OLAF.*

JOHANNES OLAF, so far as we know, is the first novel by this authoress which has yet appeared in England. She may or she may not have published other books in Germany. If she has, the various catalogues that we have been able to consult have omitted to mention them. Her English publishers, however, have thought fit to advertise *Johannes Olaf* as by "the George Eliot of Germany," and by so doing they have probably attracted some readers to a book which otherwise might have remained unread. But such an announcement, while it arouses curiosity, suggests comparison; and when a comparison is instituted between Madame de Wille and George Eliot, it may be doubtful if the former comes well out of it. It would have been a pleasing mission to direct attention to a new author whose novels would rank with *Romola* or *Silas Marner*. *Middlemarch* had come to an end just as *Johannes Olaf* was announced, and there was no prospect that the English George Eliot would write again for months. But here was the German George Eliot ready to fill up the gap until the native product could again be produced in those much looked-for monthly or quarterly supplies. Interest might be excited by the reproduction of German middle-class life as much as it had been by those familiar pictures of English middle-class life. A German or Icelandic Dorothea might arouse speculation as to minute points of individual character as readily as an English Dorothea. Conversation in everyday society might ring the changes on the plot and texture of Madame de Wille's German novel with the same animation and enthusiasm that it exhibited during eighteen months on the plot and texture of George Eliot's great English novel. How much better it would be to have two George Eliots than one! The fountain of her genius would thus be perennial, and English and German novel readers might drink thereof perpetually.

The first half-dozen pages of *Johannes Olaf* encouraged rather than [illegible] these sanguine anticipations. They promised to be the prelude of a grand, wild Northern romance; and wild and Northern the romance truly proved to be. But before half of the first volume was concluded all feeling of grandeur died away, and the vision of a new George Eliot having arisen amongst us disappeared. The book is wild, as we have said, and continues getting wilder and wilder as it unfolds, until it culminates in incoherence. It begins with a few pithy and striking sentences that awaken a transient interest. But these soon give way to what the book really is—a prolix and unconnected record of the ungoverned impulses of a Scandinavian savage, portrayed by Madame de Wille with a sort of discordant force which has much the same resemblance to the intellectual elements which constitute the genius of George Eliot as the jingling rattle of tin plates behind the scenes in a provincial theatre has to the sound of thunder.

The novel, if it can be called a novel, is badly written and indifferently translated. The writing has all the usual peculiarities of bad German composition—lengthy unmeaning sentences crowded with epithets in the superlative degree strung together without precision or directness, and weary monologues instead of conversations without a broken paragraph for pages. The translation bears the name of F. E. Bunnett. If this be the translator of Gervinus's *Shakspeare*, his familiarity with the English idiom has not increased in the last ten years. It is difficult to understand how a writer who has such command of English as that translator certainly has could have habitually misused the word "than" when he intended to say "except," as in the sentence "He saw nothing in the world *then* what invited raillery and satire," or could have suffered the following to pass into the hands of people who think they are going to read the English language:—"It is repugnant to me that one man should dare to mark out the path of another; the watchmaker, who with the key of his understanding, presumes to set going and to regulate the mechanism of the nature within—no weary satiated heart shall interpret the dreams of my youth." It is true that the author says in one place, "Poetry is the language of some of us"; and this that we have quoted may be poetry. It certainly is not prose, or at least English prose, in the ordinary acceptation of the term.

The story is divided, after the German fashion, into a series of books, nine of them altogether, each divided into a series of chapters. In every book of the series Johannes appears in a different character—as a badly nurtured boy, a gloomy student, a social sinner, and a gay Lothario, a murderer, a convict, a pirate, an explorer, a naturalist, a man about town, a good physician, and a constructive, if not an actual, infringer of the Seventh Commandment. In each character his native ferocity is unduly prominent, and, fearing neither God nor man, he runs through the whole gamut of his performances in defiance of all law, all religion, all reasonable conduct, but with an indeterminate straining after something which he considers the higher law, but which, fortunately for weak humanity, is not yet recognized anywhere except in the ill-defined imaginings of brooding novelists, mostly of the softer sex. Johannes Olaf is the son of a schoolmaster in the island of Föhr (which, for the benefit of the inexperienced, we may explain is in the North Sea, on the western coast of Schleswig), by his wife Goneril. "Goneril's," we are told, "was a passionate nature, which consumed itself inwardly. . . . . People said that she loved nothing rightly, not even her own son." The explanation of this idiosyncracy in Goneril's character is found in her genealogy, which, as being peculiar, we prefer to give in the "German George Eliot's" own words:—

> Goneril was a child of love. Her mother, the wife of the brave Jan Ketel, had forgotten her conjugal fidelity for the sake of a stranger who had been shipwrecked on the island, and who, after a short sojourn there, had departed, never more to return. The name of the stranger was Adam Thorson: his home was Iceland. No one knew more of him than this, not even the woman who for his sake had imperilled both soul and body. But his unusual appearance had remained like a legend on the lips of the people; and as Goneril grew up and became more beautiful than her brothers and sisters, and utterly diverse from them, her mother, whose heavy sin had been forgiven by her husband, told her, with secret tears, of Adam Thorson, and Goneril felt herself among her brothers and sisters like the royal child in the fairy tale, who, conscious of her noble descent, assumes the bearing of a lofty spirit as a jewel from the ancestral crown. Endowed by nature with a kind of wild poetic feeling, she loved the sea as though it were her father's kingdom and her own natural home.

After the death of Goneril and her schoolmaster—the latter having expired under the effort of painting a picture of Eve which so shocked the royal Goneril that she sewed it up in a modest covering—Johannes is taken up by Thorson, his maternal grandfather, and after spending some time in Iceland, is sent to sea while Thorson retires to "the monastery on the island of Iona"; the author, in defiance of all historical or antiquarian lore, proudly ignoring the fact that there has been no monastery on Iona—unless a piece of whitewashed Presbyterian Church architecture, recently erected, can be dignified by the name of a monastery—since the end of the fifteenth century. Johannes next appears diving at Hamburg as a student in the same house with Franziska Warning and her mother. Franziska falls in love with Johannes, or, as the author puts it, "her fresh vigorous nature was gone, and in his presence she had become fettered in soul and body and trembling like a string too tightly drawn." For a time Johannes reciprocated this feeling; "there was something in her that calmed him and made him happy"; but he falls into evil ways. He meets a beautiful waif and transfers his grand emotions to her. They set up house together, and "days, weeks,

---

* *[illegible]nes Olaf.* By Elizabeth de Wille. Translated from the German [illegible]nnett. 3 vols. London: Henry S. King & Co. 1873.

and months passed away as in an intoxicating ecstacy of happiness." There were difficulties in the way of marriage; papers and certificates had to be procured; great expense was connected with the settlements. "He himself," it appears, "regarded the nuptial ceremony with indifference; what else than indifferent was it in the earnestness of his love? Maria (*i.e.* the waif) also would hear no more of it. 'No, no: it cost money,' and must they not save, and spare? She agreed with him as he did with her, and she called herself by his name." This ideal existence ended in the usual way. Johannes had to leave his Maria for a fortnight, and on his return she had disappeared. After days and nights spent in fruitless searching after her she is traced to the suburban villa of a youthful noble. Johannes in despair, but resolute, borrows a pistol from a college friend and shoots the youthful noble through the head in his own villa and almost in Maria's arms. He is imprisoned, and Frauziska reappears upon the scene. She, *more Germanico*, discusses the ethics of love and murder with her music-master, defends Johannes' act as that of a noble-hearted man whose "blood is hot," and, heedless of her music-master's warnings, squanders her fortune and ruins herself and her widowed mother in bribing a treacherous gaoler to let Johannes make his escape. By good or bad luck she at length succeeds. A great fire broke out in the prison; the gaoler leaves the door of Johannes' cell open; he seizes the opportunity, escapes into the main sewer of Hamburg, and finally gets on board a sailing vessel, which combines the characters of a smuggler, a wrecker, and a pirate. There, after moralizing on his past life in the following strain, he is thrown overboard and picked up by an English yacht:—

His heart rebelled, his blood surged within him with the old defiant feeling, when he had to join in the penitential psalms and litanies which were placed before him. "I have not yet been brought down so low in soul and body," he would say, "that I should have defiled my innermost shrine; rolling the eyes, lamentations, and genuflexions are not in my way, least of all when they are the result of habit or intended not to give offence. What are the concerns of one soul to another? Each has his feelings—the god or the devil he obeys. None has the rule here, and has a right to enter by force." The clergyman had turned aside, because Johannes looked upon his wild act as the soldier does upon the foe whom he has slain! *One* feeling, however, was within him, and that lay deep as life. Maria was lost, so young, so beautiful; *who* now trampled upon her fate? Who was destroying her soul? How often did he fearfully and shudderingly look at one of the female prisoners immured there, he knew not why. She had been beautiful, like Maria; now she was depraved, immodest, ruined! And was he to have pity and to feel repentance because he had killed one who had broken into the sanctuary of his happiness, to make his consecrated image a disgrace and a dishonour? What to him was the law of a world which tolerates every domestic outrage, which declares to him, with a thousand miserable examples, that that woman was not worth the powder he expended in her behalf! Blood for blood! Had he not also perished? His youth, his mind, his honour, freedom, happiness! And was he to atone for his deed, and to wash his blood-red heart white with tears of repentance? The milk of human mercy was not for him. *Who* had spared *him*? Who had regarded *him*? "Farewell, happiness! Thou and I are to know each other no more. That is atonement and expiation enough!"

Johannes was raised to excitement by the feelings which stirred within him! He seized the oar hastily, and plunged it in the water.

* * * * * *

Both took the oars; not a breath moved; the morning was cold; the keen air did Johannes good. He drank nearly a bottle of rum. He was glad they were obliged to row so hard, in order to reach home, that their joints cracked and the perspiration ran down their bodies.

After this exciting episode, which brings us down only to the beginning of Book V. of this eventful life—and there are four more to come—it may be unnecessary to proceed further with the tedious and disagreeable narrative. If any of our readers feel stimulated to pursue the wanderings of Johannes, we must refer them to the work itself. There are still nearly two volumes left, and the hero has to appear in some fifteen different characters before you come to the end of him. It is only fair to the authoress to leave part of her tale untold. But before parting with her we would, with all courtesy, suggest one remark for her consideration. If she wishes to become popular in England, she must adapt herself to English taste; and English taste is not fastidious, nor is it unreasonably prudish. But it is easily bored, and it can be shocked. It wants in a novel something light and delicate, if it cannot get something of genuine force and power. It wants something natural, pleasant, and readable, and it has a prejudice—it may be an insular prejudice—in favour of works of fiction which may be discussed in general society by people of both sexes who do not "regard the nuptial ceremony with indifference" and are still in ignorance of "the higher law."

THE FRENCH INDO-CHINESE EXPEDITION.*

THE official report of the expedition up the Cambodia river, of which we spoke in our recent notice of M. de Carné's work, has lately issued from the press of Messrs. Hachette. Nothing in the way of literary taste or finish could excel the getting up of these two large and handsome volumes. Paper and type of superlative quality; woodcuts, combining boldness and breadth with delicacy and clearness of detail, not less than two hundred and fifty in number; architectural plans, and facsimiles of native inscriptions or manuscripts, bespeak at once the liberality of the Government under whose auspices the work has been prepared, and the taste and skill which have been brought to the execution of the task. The literary care of the report has devolved since the death of the lamented chief of the expedition, M. Lagrée, upon M. Francis Garnier, the able hydrographer to the mission, aided by Lieutenant Delaporte and Drs. Joubert and Thorel, who were attached to it partly in a medical capacity, partly for the purposes of scientific exploration and research. It is to the pencil of M. Delaporte that we owe the sketches from which have been prepared the woodcuts that so graphically illustrate the text, as well as the drawings and plans on a larger scale, chiefly lithographs and in colours, which make up the *Album pittoresque*, in folio, corresponding in size with Lieutenant Garnier's atlas of charts and geographic details. The first volume of the work is occupied with the history of the mission, preceded by a sketch of its objects and equipments; the formal instructions given to M. Lagrée by the French Governor at Saigon, Admiral de la Grandière; the *personnel* of the commission; the credentials supplied by the Siamese Minister at Bangkok for the Northern provinces and the Mekong, Chao Phya Bhudhara Bhay, by whom letters commendatory were also given for the purpose of securing similar passports from the Courts of Hué, Pekin, and Ava.

On the 5th of June, 1866, the party started from Saigon. So little being popularly known of the previous explorations of this region, M. Garnier has thought it well to introduce his narrative with an historical summary of geographical discoveries in the Indo-Chinese peninsula. The meeting-point and battle-ground of the two oldest races or civilizations in the world, there is hardly any district of which the earliest records are buried in deeper obscurity. Indo-China was the latest among Oriental lands to become known to Europeans. The impulse given to Western enterprise by the conquests of Alexander, after having driven back the limits of the unknown world from the Indus to the Ganges, seems to have had no power to urge Europeans across the latter river. On the other hand, the extension and consolidation of Chinese power as far westwards as the Oxus and the Jaxartes, in the second century before our era, had created to the north of the Himalayan chain an important commercial current, which opened to India and China a direct line of communication, too far to the north for the existence of Indo-China even to be suspected. Owing to the constant strife between the two races, after the mission of General Tchang-Kiang to the trans-Oxan provinces, an expedition was at length despatched in the year 122 B.C. by the Emperor Hiao-wou-ti to seek by a southerly route to reach the land of Chin-thou (the region of the Indus). Having reached the Tien country, the present province of Yunnan, and having been detained for four years by the artifices of the King, the mission returned home without result. It was not till two centuries later that the communications by the upper regions of Indo-China became more frequent, according to the authorities consulted by M. Garnier. This was due in the main to the spread of Buddhism, which reached as far as China about the year 61 A.D., and rapidly gained ground for itself in Indo-China. It is not long after this that the Chinese annals speak of the people of Ta-thsin, the Roman Empire, coming for purposes of trade to the kingdoms of Fou-nan, Ji-nan, Kiao, Tchi—that is, to the upper provinces of Indo-China—and the kings of India sending tribute and ambassadors "outside the frontiers of Ji-nan." This route, our author, resting on the words thus quoted, believes to have been that followed by the envoys of M. Aurelius in the year 166, in preference to the view of many Orientalists that the Roman mission landed at Canton, which they identify with the Cattigara of Ptolemy. Gosselin, he adds, places Cattigara on the west coast of the peninsula of Malacca, at the mouth of the Jennasserim river. In 227 the native historians speak of the arrival of a Roman, whom they name Lun, at Kiao-tchi (Tong-kin), whence he proceeded to the Court of the King of Ou (Southern China). About the same date mention is first made of the maritime relations of the powerful Empire of Fou-nan with India. How soon the use of the compass and the knowledge of the monsoons may have led to a regular traffic on the part of the Chinese mariners with the ports of Hindostan it may be impossible to discover; but early in the fifth century, according to Massoudi, quoted by our author, their junks appeared in numbers in the Persian Gulf; and although the Buddhist pilgrims, as a rule, kept to the northern or overland route, one of their number, the celebrated Fa-hien, after making his journey westward by that route to Hindostan, embarked at the mouth of the Ganges, and made his way home by coasting round the Indo-Chinese peninsula. M. Garnier is chary of naming his authorities, especially the source from which he has drawn his stores of early Oriental lore. Had he let us more intimately into his confidence, we can imagine him owning to many an obligation, not only to Pauthier, Klaproth, and De Rémusat, with other collectors and interpreters of the Chinese annalists and Arabic historians, but, among writers of our own country, to Colonel Yule, who has brought together such a mass of reading of this class in *Cathay, and the Way thither*. At the same time he may claim to have in no slight measure repaid such obligation by the valuable notes for which Colonel Yule acknowledges himself indebted to the courteous and liberal communications of the French officer, imparting, as they have done, not a little of its exactitude and finish to this part of his admirable edition of *Polo*. From whatever source derived, M. Garnier's historical summary presents in

* *Voyage d'Exploration en Indo-Chine*, effectué pendant les années 1866, 1867, et 1868, par une commission française, présidée par M. le capitaine de frégate Doudart de Lagrée, et publié par les ordres du ministre de la Marine, sous la direction de M. le lieutenant de vaisseau Francis Garnier. 2 vols. folio. Paris: Hachette & Co. 1872.

a clear and masterly manner the utmost that can be done, out of existing materials, to set forth in a connected form the course of discovery in this direction.

By the eighth century it seems clear that all the coasts of the peninsula were freely frequented by Western navigators. In 758 so numerous were the Arabs and Persians at Khan-fou, which our author would identify with the Gan-pou of Marco Polo, as to break out into a revolt. The effect of the troubles which led to the downfall of the Thang dynasty, towards the end of the ninth century, was to draw away the commerce of China towards the isles of Sonda and the great rivers of Indo-China. In the course of the closer relations between China and Hindostan which grew out of the conquests of Mohammed of Ghuznee, took place the voyages of Ibn Batoutah, between 1342 and 1349, which furnish many particulars concerning the peninsula. More than half a century before this Polo had penetrated the northern part of this region, traversing a portion of Yunnan, Burmah, and the intermediate provinces. To what extent he penetrated into the heart of the peninsula depends upon two points—how far we are to take his descriptions to imply his visitation of each spot in person, and how far we are at liberty to identify such places as he mentions with Indo-Chinese names. We may probably take it, with Colonel Yule, to be quite made out that Polo's Carajan is the city of Tali-fu visited by the French expedition—whether or not, with Pauthier, we conceive the Caugigu of the Venetian traveller to be one of the Laotian States, that of Papesifu, as Colonel Yule thinks, to the north-east of which lay Cuiju, now Kwei-chau, or Kiang-Hung. Derived as they doubtless were in the main from native rumour, there is not much light that Polo's itineraries can be made to throw upon the topography or the political condition of Laos in the middle period of its history, before we come to the better authenticated records of exploration and travel which followed the discovery of the Cape route to the East. The voyages of the Genoese and Venetians, followed by the Portuguese, bring the country into fixed and well-ascertained relations with the general course of history. The French brothers Parmentier, who made two voyages to India and China about 1525 and 1529, do not appear to have landed on any point of the region of Asia that concerns us. But in 1565 the Spaniards, having taken possession of the Philippines, spread into Indo-China. The first Europeans to penetrate and to make known the kingdom of Laos were the Spanish adventurers Blas Ruiz and Diego Belloso in 1596, though thirty years before this the Dominican Alonzo Ximenes had played a conspicuous part at the Court of Aprumlangara, King of Cambodia, who had solicited the aid of Spaniards against a revolting nephew. In the account of this war by Ribadeneyra and Cristoval de Jaque we have the earliest mention of the wondrous ruins of Angcor, discovered in 1570. So confused was still the geography of that region, that Jaque could speak of the kingdoms of Cambodia, Pegu, and Rachon (Arracan) being watered by a branch of the Ganges. In 1596 the Dutch made their appearance on the Indo-Chinese seaboard, followed by the English, the first English factory being founded by Henry Middleton, in 1610, at Ajuthia. In the course of trade disputes which ensued a massacre of Dutch and English took place in Cochin-China in 1619. Gerard van Wusthof, despatched by the Dutch Company in 1641, who ascended the Mekong as far as Vian-Chang, the Laotian capital, left few geographical notes. It was the Jesuit Jean-Marie Leria, who resided there several years, to whom we owe fuller notices of that country, reduced to order and published by Martini, incorrect as they are in many points of geography. The intermediate growth of knowledge down to our own time is to be traced in such compilations as those of Pauthier, De Rémusat, and Stanislas Julien, with the journals and notices of McLeod, Yule, and other officers or travellers of our own, the notes of the lamented Henri Mouhot, and the elaborate work of Dr. Bastian, opening up within the last twelve years newer and more intimate views of Laos and its people, and the remains of its ancient grandeur. The volumes now before us present in a collective and authentic form the sum of all that has come down from the past, or that is to be gathered on the spot, concerning this deeply interesting region of the Asiatic continent.

The personal narrative of the expedition, which takes up the remainder of the first volume, has already been in a measure brought before us in M. de Carné's lively sketches. Told here in fuller detail, and made vivid by the illustrations profusely interspersed among its pages, it forms a record of travel to which we should find it very difficult to do full justice. To a taste for the picturesque in nature, and a feeling both warm and appreciative for all that belongs to human life and manners, M. Garnier adds the culture of a well-read student of history, and the critical eye of a skilled archæologist. The volume closes with an ably written *précis* or history of the recent progress of French diplomacy in Cochin-China, with a justification of the political and commercial designs out of which the late expedition grew. Other causes than the death of its official leader have to be taken into account in explaining the slightness of the political results which it is calculated to bring directly to the influence of France in the heart of the peninsula, or to the development of commerce or of European civilization on the overland route towards China. In the interests of science much has been done towards accurately laying down the geographical and geological features of the Mekong valley and the neighbouring districts, mapping the course of the stream and its tributaries, with the aid of numerous stations astronomically determined, and collecting data for estimating the mineral and agricultural resources of the country. A series of carefully written reports under these respective heads makes up the bulk of the second volume, chiefly from the pens of Drs. Joubert and Thorel. Philologists will be pleased with a list of Laotian, Siamese, Cambodian, and other words, prepared in part by the late M. Lagrée, together with much critical discussion of the comparative structure and affinities of the native tongues. The ethnology of the peninsula is elucidated by means of a series of native heads in chromo-lithography, based, we presume, upon photographs, full of individuality as well as of the typical characteristics of Eastern races. The part which M. Garnier has had specially for his own—namely, the chartography of the line of route—is executed with all the clearness, precision, and delicacy which we naturally look for from the hydrographic department of our neighbours. The sectional surveys of the Mekong, with the bearings and cross-sections which determine the set and the altitude of the land on either side, leave nothing for future map-makers but to copy and incorporate. Where the work falls short of what many had been encouraged to expect is in a matter which in no way detracts from the proper credit of the surveyor. Beyond the point whence the expedition had to turn back, all had necessarily to be left in the same state of conjecture as before. Downwards indeed to the sea, from the point where M. Garnier and his party quitted the Mekong (lat. 22° N.), just above Kiang-Hong, the course of the river has been laid down with true geographical precision. But our author's maps add nothing to what little was previously known of the upper waters of this great river. He can but lay down the same traditional or conjectural landmarks. He has, indeed, fixed for us the true position of Lake Tali, its elevation (2,120 metres) above the sea, and its effluent, the Yang-pi-Kiang, whereby its waters mingle with those of the Mekong, there and for a great portion of its upper course known as the Lan-tsang. But it is reserved for future explorers to penetrate and solve the mystery which has been kept from the dawn of geological time by the vast and lofty range of the Thibetan Alps, from whose mighty glaciers issue by unknown gorges the five great rivers of Eastern Asia—the Brahmapootra to the west and south-west, the Yang-tse to the east and south-east, the Irrawaddy, Salween, and Mekong to the south. M. Garnier's two comparative charts, the one representing the state of Indo-Chinese geography before, the other since, the French expedition, show how much has been done to fill up the gaps in the river's course, notably the long bend between Luang-Prabang and Kiang-Hong, as well as the vast blank formerly existing between the latter point and Yunnan. Greatly enhanced accuracy and definition have also been given to the rivers and mountain chains which were crossed or sighted on the journey over the Chinese upland from Yunnan to where the Yang-tse was struck at Sou-Tchou-fu.

But that which, beyond all contributions to geographical or other science, will be held to form the glory or charm of the work is the artistic presentment, on a scale and with a degree of pictorial truth never seen before, of the architectural monuments of Indo-China. Those true wonders of the world, the ruined memorials of the noble Kmer builders of old, attest a degree of civilization, a culture of art, an accumulation of wealth, and an organized command of labour, on which we gaze with a wonder not inferior to that inspired by the disinterred palaces and temples of Assyria. The most important of these structures, already made known to us by Mouhot and Bastian, have been once more accurately drawn, to the scale of 1 to 1,000, by M. Delaporte, whose larger drawings, engraved with the utmost boldness and depth possible in wood, give admirable perspective views of these elaborate and stately piles. Conspicuous above all are the ruins of the great Buddhist pagoda palace of Angcor. Not much under an English mile in its longest dimensions, this mighty parallelogram, nearly square, exhibits a series of terraces of the same form, above which rises in the centre the great "Angcor wat" (pagoda), with its five towers, the central one some hundred and eighty feet in height. Amazing richness of detail characterizes the carving of the galleries or cloisters which surround the building, the passages or corridors from stage to stage, the doorways, cornices, and, in fact, every portion over which the workman's hand has passed. Over the façade of the Baion, or monument with forty-two towers, part of the "Angcor Thom" (great palace), gigantic Bouddhas sit in array amid groups of elephants, serpents, and various animals of stone. Unique probably among architectural devices of its class is the giant's causeway at the south entrance, of which a restoration has been attempted from the fragments which remain *in situ*. A long row of fifty-six gigantic kneeling figures on either side of the approach, wearing the royal cap of Burmese type, sustain under their arms a beam of stone extending the entire length of the array, ending with the nine-headed serpent, the heads disposed in fan-shape. At the east gate a grotesque human figure with nine heads sits on watch. On the east the cornice is upheld by a curious row of caryatides—human trunks with outspread and uplifted arms, ending in bodies of yaks below. In the interior, bas-reliefs of striking power and beauty abound—here a file of dancing women, marvellous for vivacity and grace; there an array of kings in their chariots, with sword and shield, cleaving their way through throngs of followers of lesser stature, recalling to mind the mural tablets of Nineveh or Egypt. The pillars and cornices are marked throughout by a distinctively Doric style of ornamentation, showing that Western influences mingled with the native arts which accompanied the Bouddhist migration from India to the peninsula. How long these

monuments of a now decayed civilization had been reared prior to their devastation by the Siamese invaders about the sixteenth century appears to remain uncertain. Signs are to be seen that ruin had set in in parts even whilst other parts were under the eye and hand of the architect. Whatever their date and history, they have beyond denial opened up a long unturned page in the development of art and of human progress in general, and the style in which they are set forth in M. Garnier's pages gives its crowning finish to a work which forms in most respects one of the literary triumphs of the day.

THE FOOL OF QUALITY.*

IT will be an achievement of which even Mr. Kingsley may be proud if he succeeds at last in bringing the *Fool of Quality* into fashion. His preface to the present edition was written many years ago, a fact only noteworthy as proving that his opinion of the work is the deliberate opinion of a life, and that his contempt for a reading public which neglects so remarkable a genius is not mitigated by time. We respect a courage which can set its own judgment against fearful odds, but at the same time we are driven to search for some reason for Mr. Kingsley's preference outside the merits of the book, and we imagine that we find it in gratitude. It must have been the first book Mr. Kingsley ever read. The first book which makes us think, or opens a new world to our fancy, entails an everlasting sense of obligation. It is often chance rather than merit that effects this awakening. The keener the intelligence the lighter the touch needed; but there might be a peculiar fitness in the *Fool of Quality* to give the first impulse to Mr. Kingsley's dawning faculty of invention, for its hero foreshadows the Muscular Christianity with which he has made the world familiar. When we say that to the ordinary reader the *Fool of Quality* as a whole is an absolutely unreadable book, or so far unreadable that only a reviewer's sense of duty can force him through the task, we are very far from saying that it wants merit. There is truth and independent thought in the dissertations, and there is a great deal of the author's self in it. We admit that it may have told in its day, coming out a volume at a time; the idea of *Sandford and Merton* was probably taken from it. But there is a gigantic childishness running through it and gaining head over everything else as the story advances, which not only wearies the reader, but makes him ashamed. The story swamps the theories and reflections on which Mr. Kingsley lays such great stress; the illustration goes far to render the principles of action ridiculous. It is impossible that the mind which expatiated in such absurdities could ever have arrived at maturity.

Not a great deal is known of the author, Henry Brooke, but what is told us bears out this view. He was a precocious child; he was something of a genius, but he was never in the full strong sense of the word a man; he was, however, a personage in his day. He was born in 1708; his father was a wealthy, worthy parson in County Cavan; his mother was known, and even held in some awe, by Swift. At sixteen he went to London to study law, where he made his way among the greatest wits:—

> The pupil of Swift and Pope, the friend of Lyttelton and Chatham, the darling of the Prince of Wales; beau, swordsman, wit, poet, courtier; the minion once of fortune, yet unspoilt by her caresses, had long been known to Irishmen only as the saintly recluse of Longfield; and latterly an impoverished old man, fading away by the quiet euthanasia of a second childhood, with one sweet daughter—the only surviving child of twenty-two—clinging to him, and yet supporting him as ivy the mouldering wall.

From these social successes he was recalled to Ireland by what is termed a quaint interruption. A dying aunt made him guardian of her child of twelve years of age, whom he secretly married within two years. This gives Mr. Kingsley an opportunity of defending early marriages, and ourselves of noting that, as far as his history tells us, Brooke never through life denied himself in what he believed to be in the abstract virtuous inclinations. He spent his money with as little regard for the future as he married his wife. In Henry Brooke's case, says his panegyrist, it conduced to the growth of his noblest qualities; "growth in his lofty moral standard altogether heroical and godlike, in his delicate sensibility, in his chivalrous respect for woman, in his strong trust in mankind; in his pitiful yearning, as of a saving angel, over sin and sorrow; in his fresh and full manhood, most genial and yet most pure." But it seems to us that in all this Mr. Kingsley evades the question. Henry Brooke was at least of age. It is "the beautiful child wife," the mother of three children before she was eighteen, on whose case the argument turns. The marriage was a happy one, we are told, but we read of a failing life of langour and anxiety for her, and of a score of children dying before her own premature death. After eight years spent at the Irish Bar, Henry Brooke, then twenty-nine, came again to London, where he wrote a poem and a tragedy which made a sensation. His zeal for his patron the Prince of Wales, who caressed him with great familiarity, and presented him with many elegant and valuable tokens of friendship, led him into a strain of political declamation on patriotism, heroism, and death to tyrants, which awoke the jealousy of the Court. The performance of the play was prohibited, upon which he printed it, Dr. Johnson writing the preface; and the sale with other matters brought him a thousand pounds. But while his prospects were fairest a bad illness sent him to his native air for recovery; and his wife, afraid lest his zeal for the Prince should get him into trouble, and possibly, we imagine, little liking the company he would meet in his circle, persuaded him to stay in Ireland, and give up London altogether.

Here Lord Chesterfield gave him a place of 400*l.* a-year, but his reforming spirit on the one hand, and an inability to keep money in his pocket on the other, were too much for the kindness of his friends. He was one of those men who must die poor. If he had prospered, Mr. Kingsley supposes he would have been a great literary personage, perhaps a great orator; "but in that case we should not have had the *Fool of Quality*." In his retirement from the world he was led to speculate on problems of political economy and the mistakes and abuses of social life, associating with them his own career and early successes. The plan of the story gives the impression of a mind immersed from childhood in ambitious day-dreams, and expatiating in imaginary successes and visions of gilt gingerbread splendour; his hero personating this inner self. Only such a habit of mind long indulged could have betrayed a writer even in old age into the delirium of extravagance in which the tale closes. When Mr. Kingsley calls the hero godlike, he really means this windy inflation in the author's mind. Wherever he reveals himself Harry shines out as a demi-god, and produces the effect of one on all beholders. We do not learn how far the *Fool of Quality* was ever popular. Mr. Kingsley is charmed with it perhaps because it bears out his own views of life and heroism. Wesley, who, after purging it of such passages as were not to his mind, published it for the use of the Methodists, pronounced it one of the most beautiful pictures that ever were drawn in the world; "the strokes are so delicately fine, the touches so easy, natural, and affecting, that I know not who can survey it with a tearless eye unless he has a heart of stone." But Wesley was a religious reformer, and reformers view all things in relation to their one absorbing object. We ask for readers who judge by the ordinary literary and critical standard. Tastes, we know, change in the course of a century; but would the pathos which John Wesley called irresistible, and which Mr. Kingsley considers too healthy and simple for tastes palled by French novels, ever have drawn tears unprompted? We are still able to relish the opening of the story. While the author treats of children, he writes like a man. There is a charming little fable, the "Three Silver Trout," quite a model of style. But when he comes to portray men and women, he writes like a child, and with as little power as a child over modern emotions. For ourselves, we are reminded of the old lady and the sea captain:—"Oh, captain, is there any fear?" "Plenty of fear, marm, but no danger." Plenty of tears, we say; torrents of tears, flowing on all occasions; "tears watering the ground"; but no pathos. Persons with the morbid sensibility attributed to Henry Brooke are not the people to touch the tender chord of stronger nerves. They simply embarrass us and shut up our sympathy. The stomach of our sense turns against those eager embracements, those mawkish creatures clasping each other to their hearts, catching eagerly round the neck, smothering with caresses, relating their gushes of tears and suffocating sobs, their unspeakable transports and unsupportable anguish. And if the men cry, the women must necessarily assert their keener sensibility by stronger measures; they faint, they scream, they swoon, they fall senseless with a loud shriek; and also—which is, we hold, a confirmation of our view—they fall in love with an aptitude and precocity which throws all the generosity and acceptance on the men's side. So wary is Harry's conscience on this head, that, on his first introduction at Court, where all eyes, including those of King William and Queen Mary, are upon him lost in absorbing wonder at his wit and grace, and where he dances with one of the maids of honour, he reproaches himself for paying her a compliment, as endangering the affections of an innocent girl; and this at so tender an age that the day after this scruple he is taken by his Mentor to see the lions in the Tower.

Another reason why we feel easy under the extreme miseries to which the author reduces his various heroes or heroines—for the book is made up of episodes—is that he himself so easily rallies from his own emotions. At their very worst extremities his people are never beyond being set on their legs again by a cup of tea or a bottle. When "the Man of Letters'" dismal narration of calamities reaches its climax in his wife's act of justifiable homicide—a lady, in every sense a heroine, who, upon her husband presenting her on a previous occasion with a pint of sack and a Naples biscuit, suspecting they were not honestly come by, exclaims, "First perish your Arabella, perish also her infant, rather than on our account or on any account the least of the virtues of my Hammy should be lost"—having stuck the conventional seducer with her scissors, she snatches up her child and the money she had got together to liberate her husband from gaol, and hastens to inform him that she has left Lord Stivers weltering in his gore. A critical situation certainly, but not at all beyond the aid of the familiar consolations. The good man takes a coach, calls at a tavern on the way for a pint of Spanish wine to settle their spirits, and drives to lodgings in Cheapside, where he at once sends out the maid for the proper ingredients, and, by the time the kettle is on the fire and the tea and sugar are brought, he has got his wife into a frame of mind in which she can relate to him all that has passed during their separation. At the trial of Arabella for murder, which is one of the scenes of the book, a volunteer witness entertains judge and jury with a narrative of his own extraction, and relates what he had seen and heard through the keyhole, ejaculating, "Blessed heaven! to what surpassing sentiments was I then an amazed witness." Upon this valuable testimony Arabella is acquitted, gracefully curtseying herself out of court amid a storm of applause.

---

* *The Fool of Quality.* By Henry Brooke, Esq. With a Biographical Sketch by the Rev. Charles Kingsley. New Edition. Macmillan & Co.

And, just as misery and disaster huddled in quick succession leave no trace, so it is with bloodshed. Blood flows from one end of the book to the other; and scarcely anybody is the worse. The sponge and hot water have to be called for as a matter of course before a recognition; and the whole *dramatis personæ* are losing and finding one another without intermission. People look at one another attentively, and out comes an old friend, an old lover, a father or a brother, who throw themselves into each other's arms, bathe each other in tears, and relate their history.

It is important, as showing the propensities of the author, to note that the title is a misnomer. He started with a design which something in him prevented his being able to carry out. The design was to draw a character so much nobler and purer than the world around, actuated by aims so far removed from selfishness, that he should pass among people incapable of understanding high principles of action for a fool. And Harry's mother, when his foster nurse introduces him first to her notice, takes him for a fool, and calls him one. After seeing the child of five put aside as of no use the glittering toys she has given him,

> My lady piqued thereat told the Earl that she resolved once more to prove the wits of the youngster; and whispering to Dickey, he immediately went out and took with him his companions. Soon after Dick returns without his shoes and with a pitiful face cries, "Brother Harry, I want a pair of shoes sadly; will you give me yours?" "Yes, I will," said Harry, "and instantly strips and presents them to him. Then entered another boy and demanded his stockings in the like petitioning manner; another begged his hat, another his coat, another his waistcoat—all of which he bestowed without hesitation; but when the last boy came in and petitioned for his shirt, "No, I won't," said Harry, a little moody. "I want a shirt myself." My lady then exclaimed, "Upon my honour, there is but the thickness of a bit of linen between this child and a downright fool." But my lord rose up, took Harry in his arms, and having tenderly embraced him—"God bless thee, my boy, and make thee an honour to old England."

This, we would observe, is about the only instance of self-denial attributed, or rather permitted, to our hero. Mr. Brooke's secret for setting the world to rights is a simple one—scattering money broadcast. During the rest of the story Harry goes about like a beneficent Providence, emptying a pocket which is filled again faster than he can empty it, and regarded by adoring crowds, not as a "fool," but an "angel" of quality. His Mentor, who kidnaps him that he may pursue his education free from parental interference, first whisks him away in a coach and six, with attendant servants, to give him a lesson in humility, then stuffs his pockets with crowns to give away to any and everybody, at the same time furnishing a closet with countless suits of apparel of all sizes, which he may distribute at his pleasure to the ragged objects he meets on the road; and next sends him with a tutor and 1,500*l.* to liberate debtors in the London gaols; assuring him that the more he spends the better he will be pleased, and that there is plenty more where that came from. And he is so far as good as his word that by the time he is seventeen Harry boasts to have spent 50,000*l.* of his Mentor's money. All this is a delightful exercise of imagination to one who has found the process of spending ill rewarded in real life; but we do not see the moral, nor how the hero by these means is raised into an ideal of what man might be. Mr. Kingsley expects "the average reader" to object to the morality as Quixotic. This objection is not ours, for the chivalrous knight suffers for his cause; whereas Harry always comes out gainer and victor. If an atheist throws a bottle at his head in return for the indignant lie he gives him, it "happily misses" him, and hurts the fleshy part of somebody's else's shoulder, leaving Harry at liberty to fell the blasphemer with one blow of his fist, and, as he lies insensible, to send off a drawer for a surgeon, saying, "I should be sorry that the wretch should die in his present state of reprobation." Don Quixote defending religion or virtue would be laid up in bed for a week. However, Mr. Kingsley is satisfied that such pictures fulfil the Gospel ideal, and prove Mr. Brooke a Realist, and as such a natural enemy of the Nominalists, among whom is classed Dr. Johnson, "his inferior in intellect," who, though he vindicated his tragedy, indulged in a private laugh at the author's expense.

A passion for display is fatal to this higher morality. Harry must do everything better than anybody else, get praised for it, and attract the eye of crowds high and low. Whether he relieves a beggar, rides a horse, dances at Court, or boxes with a rustic, there is always the same docile, admiring circle of spectators. As a lad he dines with the Premier. "We are quite alone," says the Earl to him on this occasion; "only two viscounts, a baronet, and four or five gentlemen," and he not only routs the whole party in argument, but they confess themselves routed. "I protest," says his lordship, "I never beheld this matter in the same light before." This passion arrives at last at a height of frenzy for which even Mr. Kingsley apologizes as a sign of failing powers. But old age does not alter the character; it only betrays what has always been there. We have already said that, while there are good and pious reflections interspersed all through, the first part contains the best writing. A dialogue between author and reader on the subject of ghosts, in which the former observes that an exceeding clear or an exceeding callous conscience alike preserves from the natural fear of spirits, gives occasion for a touch of humour. Two travellers, we are told, the one pious, the other a profligate, met at an inn Hallowtide Eve. The conversation in the kitchen naturally fell upon spectres, and particularly on the man in gibbets who hung by the road, and was reported to descend between twelve and one at night and take a turn about the old barn. "Do you believe any of this droll stuff?" said the profligate. "I know not what to think," said his pious companion:—

> "As for my share," says the profligate, "I think I should not fear the great devil himself; and indeed I should be glad to have a little chat with the old gentleman." "Stout as you are," rejoined the other, "I will lay you a bet of five crowns that you dare not warm a poringer of broth and go and offer it without there to the man on the gibbet. I will depend on your honour for the performance of the articles." "'Tis done," cried the other. The bets were produced and respectively deposited in the hands of the landlady.
>
> Our pious traveller, who had begun to be alarmed for his wager, stole slily out, while his companion was busied in heating the broth. He made up to the place where the deceased malefactor was taking the fresh air. The gallows was low, and by the advantage of a bank behind and his own agility, he leaped up and fastened his arms about the shoulders of the corpse, so that they both appeared but as one body. He had just fixed himself to his mind, when up comes his companion with the poringer and a stool. He directly mounted the stool, and reaching up a spoonful of broth to the mouth of the dead, with a firm and bold voice he cried, "Sup, man! why don't you sup?"
>
> Scarce had these words been uttered when, fearful to hear, with a tone deep as hell and dismal as the grave, the man in gibbets replied, "It is too hot." "And, confound you, why don't you blow it then?" rejoined the other.

After reading this specimen our readers may be disposed to look into the *Fool of Quality* if it comes in their way; whether they will get through it is the question at issue between us and Henry Brooke's thoroughgoing eulogist.

SIR GEORGE POLLOCK.*

THE character of Sir George Pollock as a brave and skilful officer had been established in India by his services in the Mahratta and Burmese wars. His reputation became greater after he had relieved Jellalabad, and occupied Cabul. At this time he had reached the mature age of fifty-six years. This was his first great service and his last. During the first Sikh war he was made a member of Council in Calcutta, and, but for the "rules of the service," his great experience and tried firmness might have been made available in the field, where we may venture to say that one more first-rate soldier would not have been superfluous. But as Lord Hardinge, the Governor-General, himself proceeded to the seat of war, it was perhaps necessary or desirable that Sir George Pollock should remain at Calcutta. He left India in 1846, having served upwards of forty years.

George Pollock was educated at the Military Academy at Woolwich, and, having obtained a commission in the Artillery on the Bengal establishment, he sailed for India in the latter end of 1803. He was actively employed next year in the war with Holkar. In the battle of Deig, which Lord Lake called "a very near business," the guns to which he was attached did good service against the superior artillery of the enemy. He was present at the taking of Deig, and at the bloody and fruitless assaults on Bhurtpore. His next active service was in the Nepaulese war of 1814–6, and in 1824 he found in the Burmese war a suitable opportunity for displaying his ability. He was in ill-health, and could not afford to go, as he had been medically advised, to Europe, and the happy thought struck him of applying to be sent to our army, which was already at Rangoon, and suffering much from sickness. Amid the absorbing duties of an artillery officer Pollock either got well, or had not time to be ill. The difficulties of the army in these campaigns lay not so much in fighting as in marching. From Rangoon almost to Ava Pollock carried his guns and himself in an efficient state.

The Burmese war gained high reputation for Pollock as an energetic and at the same time patient officer; but it affected his health so seriously that he was obliged to go on leave to Europe. His voyage home occupied nine months. He returned to India in 1830, and for the next eleven years his career was entirely uneventful. On New Year's day, 1842, while holding command of the Agra district, he received an order to proceed to Peshawur and take command of the troops preparing to relieve Jellalabad. The deplorable history of British disaster at Cabul has lately acquired fresh interest, not only as having given to Pollock the opportunity of glory, but also in reference to the question of frontier between Russian Asia and British India. The army which perished miserably at and near Cabul in the winter of 1841 was as unfortunate in its leaders as the army which marched triumphantly to Cabul the next year was fortunate. General Elphinstone who commanded at Cabul was enfeebled by disease, while Brigadier Shelton, who was next in rank, had the courage which inspires courage in others, but happened to disapprove of everything which his superior proposed. Shelton had lost an arm at the siege of St. Sebastian, where he served in the 9th Regiment, and this corps formed part of the army with which Pollock forced his way to Cabul and delivered the captives of the previous winter, among whom was Shelton. In spite of the disasters which he shared, and perhaps partly caused, he was an officer of whom his old regiment might well be proud. But let us return to Pollock, who found awaiting him at Peshawur a task which needed all his skill, patience, and resolution. Sale at Jellalabad was urgent for relief, but the troops at Pollock's disposal were unequal in numbers, and still more in health and spirits, for such

* *The Life and Correspondence of Field Marshal Sir George Pollock, Bart., G.C.B., G.C.S.I. (Constable of the Tower).* By Charles Rathbone Low. London: Allen & Co. 1873.

an enterprise as the forcing of the Khyber Pass. Brigadier Wild had been beaten back from the mouth of this Pass, and the four native regiments of his command had now more than one thousand sick of an epidemic which, as Pollock guessed, was chiefly moral. He reported that the feeling among these regiments was "most [illegible]"; it was encouraged by our so-called allies the S[illegible] and it rendered an advance hopeless until a stronger force of European troops could be collected to give confidence to the Sepoys.

With quiet firmness Pollock awaited the time proper in his own judgment for advancing, and, with that attention to details which he always showed, he made his arrangements so completely as to prevent the possibility of failure. The Commander-in-Chief, Sir Jasper Nicholls, in a report to the Horse Guards written some months afterwards, accurately described the difficulties of the position in which Pollock found himself. The Sepoys were declaring that they would not again advance through the Khyber Pass. The Sikhs were spreading alarm and encouraging and screening the desertion of the Sepoys, which was considerable:—

It was well that a cautious, cool officer of the Company's army should have to deal with them in such a temper, 363 miles from the frontier. General Pollock managed them exceedingly well, but he did not venture to enter the Pass till April, when reinforced by the 3rd Dragoons, a regiment of cavalry, a troop of horse-artillery, and other details. Lord Hill will at once perceive that the *morale* must have been low when horse-artillery and cavalry were required to induce the General to advance with confidence through this formidable Pass. Any precipitancy on the part of a general officer panting for fame might have had the worst effect.

Mr. Thomas Campbell Robertson, late member of the Supreme Council of India, writing in 1858 on the causes of the Indian Mutiny, says that a spirit of insubordination showed itself formidably before General Pollock's movement from Peshawur:—

Few know how much his country is indebted to that distinguished officer for the patience and skill with which he allayed the discontents and raised the *morale* of the native portion of his army before he advanced into the Khyber Pass.

There is of course no novelty in the plan on which General Pollock operated in forcing the Khyber Pass. All such defiles consist of two heights and a gorge, and it was long since perceived that the best method of attack is to crown the heights on either flank, and to have another column to attack below when the operations of the flanking parties appear to be developed. By this method Napoleon in 1799 carried the defile of Newmarckt: by it Soult forced the pass of Roncesvalles; and by it Pollock succeeded in penetrating the Khyber. A military writer who brings together these instances remarks that Pollock's arrangements were perfect in conception and complete in detail. The centre column was not meant to do any fighting, but was to remain halted in front of the Pass till the flanking columns had won their way to the rear of the barricades which the enemy had thrown up in the mouth of the defile, and it was then to advance through obstacles which the Sappers would have destroyed. A bugler was told off to each commanding officer of detachment, to sound whenever anything occurred to stay the advance of his particular party; and this call was taken up by every other bugler, and the whole of both flanking columns was to halt till the obstruction had been cleared, when the same bugler as before was to sound the advance. Thus the columns advanced simultaneously, and the advance of each being carefully regulated, there was no fear of their being overwhelmed in detail. The clearest orders were laid down as to the position of the baggage of each regiment, and an English officer was told off from each corps to see that the places assigned were kept. Such arrangements as these, says this writer, deserved the success they attained. It may be thought by some that the minute detail of the place of every camp-follower by the general was unnecessary. "Not so; there is no operation in war in which confusion is more likely to take place, none in which confusion is more fatal, than in the forcing of a narrow mountain pass." This writer remarks that the same precautions are necessary in retreating as in advancing through a pass; and it is a curious proof of this that General Pollock, who led the way in the return from Cabul, and invariably adhered to his formed plan, was never once attacked, while Generals Nott and McCaskill, who brought up the rear and neglected these precautions, were frequently harassed by the matchlock fire of the enemy. The march forward began on the 5th April, and Jellalabad was relieved on the 16th. About this time Lord Ellenborough succeeded Lord Auckland as Governor-General of India, and his correspondence with General Pollock has excited controversy and undergone adverse comment. He seems to have fluctuated between caution and boldness. He sent despatches which authorised Pollock to retire, but Pollock preferred to wait until he received not only authorisation but positive command. In the meanwhile Lord Ellenborough became aware that the public and the Home Government desired something to be done to re-establish our military character, and ultimately he contrived the ingenious plan of giving to General Nott the option of retiring from Candahar by way of Ghuznee and Cabul, while Pollock was to "endeavour to combine his movements" with those of General Nott in case he should decide on adopting the line of retirement by Ghuznee and Cabul. Thus Lord Ellenborough managed to give a discretion to the two generals to undertake what would be commonly described as an advance, while preserving a literal harmony with his previous despatches in which he had urged retreat. The honour of England thus became dependent on two generals, each of whom, happily, could trust the other and himself. It was not until the 20th August that Pollock marched from Jellalabad towards Gundamuck. On the 13th September he forced the pass of Tezeen, after a hard day's fighting against Akbar Khan, who became convinced by the result of it that further opposition was useless. A remarkable feature in all these operations is the great bodily activity of the European soldiers who took part in them. Wherever an Afghan could climb an Englishman followed him, and the bayonet was frequently used with good effect. The contrast is striking between the conduct of the three European regiments which advanced with Pollock and that of the regiment which retreated in the previous winter with Elphinstone. This difference was caused by circumstances and generalship. The action at Tezeen opened the road to Cabul, which was reached on the 15th September. Meanwhile Nott had taken Ghuznee, and was approaching Cabul from the other side. The excellent result of giving these generals their heads was promulgated to the Indian world by Lord Ellenborough in a triumphant proclamation. No two colleagues could have suited one another better than Pollock and Nott so long as they had to co-operate at a distance, but Nott's temper showed itself as soon as they came into close contact. However, Pollock was happily as calm as his brother general was irritable. Pollock's first care was the delivery of the prisoners who had remained in the hands of the Afghans since the disasters of the winter. In after years, when Pollock felt, as he sometimes did, disappointment at the limited opportunities and rewards of his military career, he was able to console himself with the recollection that he had saved his countrymen and countrywomen from the choice between a miserable death and a lifelong slavery among barbarians. The biographer dwells upon the fact that Pollock was only created a G.C.B., and not a peer, for his signal service. If Lord Auckland deserved to be made an earl for getting us into this Afghan scrape, certainly Pollock deserved to be made a baron for getting us out of it. But the reader will be rather struck with the caprice of fortune which ordained that Pollock's opportunity of distinction in command should be restricted to one year of an unusually long and vigorous life. In the Burmese war he was not even chief officer of artillery, but it is manifest that his superiors owed much to his vigour and ability. He gradually acquired a character which, when placed in a responsible position, he maintained. As an officer of the Company's army he was at a disadvantage compared with officers of the Queen's army, whose ability and resolution were not greater, while their knowledge of native troops was far less. Pollock would have been well employed in encouraging the Sepoys to make head against the Sikhs, but Gough and Hardinge undertook to withstand the Sikhs, and with great difficulty maintained our superiority in the field, while Pollock was quietly employed in an office at Calcutta. Thus, however, was this able soldier's life ordained. May British India find in the hour of need such men ready for arduous work as the Company's army produced in Nott and Pollock! The return march from Cabul was begun on October 12, and Peshawur was reached early in November. It is possible that Pollock's success would have been more highly appreciated if he had lost more men. The very completeness of his arrangements rendered them less impressive to the minds of ordinary readers of newspapers, who like to have what Wellington called a heavy butcher's bill. In forcing the Khyber Pass the casualties were only 135, and in the battle of Tezeen they were 162. These successes were gained on ground where artillery and cavalry could scarcely be employed at all. The infantry had to assail heights where every crag, precipice, and bypath was known to the defenders, who were armed with jezails, carrying death at distances at which Brown Bess was useless. This campaign, by its success and brilliancy disarms criticism, and military writers concur in speaking of it with warm commendation. Pollock lived long enough to enable his country to appreciate his services and to pay him late and by no means excessive honours. If ever Russian aggression should threaten India from Cabul, it is devoutly to be hoped that there may be a Pollock in command of our army at Peshawur.

NOTICE.

We beg leave to state that we decline to return rejected communications: and to this rule we can make no exception.

The SATURDAY REVIEW *is duly registered for transmission abroad.*

The publication of the SATURDAY REVIEW *takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.*

Nearly all the back Numbers of the SATURDAY REVIEW *may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.*

Now ready, VOLUME XXXIV., bound in cloth, price 10s. Cloth Cases for Binding all the Volumes, price 2s. each. Also, Reading Cases, price 2s. 6d. each. May be had at the Office, or through any Bookseller.

Copies of the SATURDAY REVIEW *Bill of Contents will be forwarded every Friday Evening by post, prepaid, to any Newsagent in Town or Country on application to the Publisher.*

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 906, MARCH 8, 1873:

The Position of the Government.
President Grant's Message. The Irish University Debate.
Progress of Disorder in Spain. M. Thiers and the Republic. Railway Property.
Difficulties of European Government. Mr. Plimsoll's Motion.
The Three Right Honourables.

Culpable Luxury. Silchester.
Deputations to the Archbishop of Canterbury.
The Forged Bills. Soldiers and their Pocket-Money. Heirs and Money-Lenders.
Rabbits. Coins in the British Museum.

Döllinger on the Reunion of Christendom.
Dasent's Jest and Earnest.
Sagas from the Far East. Macleod's Economical Philosophy. Johannes Olaf.
The French Indo-Chinese Expedition. The Fool of Quality.
Sir George Pollock.

CONTENTS OF No. 905, MARCH 1, 1873:

Spain—The Irish University Bill—The Army Estimates—The Right Centre and the Left—The Chancellor's Bill—Coal and the Colliers—November Sessions—Prevention of Crime—Mr. Plimsoll and the Shipowners.

Mr. Matthew Arnold on Dogma—Madame de Sévigné—Muir's Original Sanskrit Texts—Colymbus—Ravensdale—The Sieges of Strasburg and Metz—An Architect's Note-Book in Spain—Madeline Heathcote—French Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS.
THIS DAY and NEXT WEEK.
Saturday (March 8).—Nineteenth Saturday Concert, at 3.
Monday to Friday.—Exposition of Spiritualist Manifestations and other Illusions, by Messrs. Maskelyne and Cook, at 2:30. Orchestral Band, at 4:30.
Monday and Wednesday.—Great Organ, at 1.
Tuesday.—Orchestral Band, at 12:30.
Friday.—Great Organ, at 1:30.
Saturday.—Twentieth Saturday Concert, at 3.
The Fine Arts Courts and Collections, including the Picture Gallery (the Work., the Technological and Natural History Collections), all the various illustrations of Art, Science, and Nature, and the Gardens and Park always open.
Admission, Monday to Friday, 1s.; Saturdays, 2s. 6d.; Guinea Season Ticket, Free.

WEDNESDAY NEXT.—LONDON BALLAD CONCERTS,
St. James's Hall.—The LAST EVENING CONCERT on Wednesday next, at Eight o'clock. Artists: Miss Edith Wynne, Miss Jenny Pratt, and Madame Patey; Mr. Edward Lloyd, Mr. Henry Guy, and Mr. Santley. The London Orpheus Quartett. Pianoforte, Mr. Sydney Smith. Conductors, Mr. J. L. Hatton and Mr. Lutz. Stalls, 6s.; Family tickets (for four), 21s.; Balcony, 3s.; Area, 2s.; Gallery and Orchestra, 1s.—Tickets of Austin, St. James's Hall; Chappell & Co., New Bond Street; Keith & Prowse, 48 Cheapside; Hays', Royal Exchange; and Rooney & Co., Holles Street.

MADAME SCHUMANN'S SECOND PIANOFORTE RECITAL takes place in St. James's Hall, on Wednesday After noon next, March 12, to commence at Three o'clock; Pianoforte, Madame Schumann; Vocalist, Madame Lavrowska; Conductor, Sir Julius Benedict. Sofa Stalls, 5s.; Balcony, 3s.; Admission, 1s.—Programmes and Tickets at Chappell & Co.'s, 50 New Bond Street.

MADAME LAVROWSKA begs to announce that she will give a CONCERT in St. James's Hall, on Friday Evening, March 14, on which occasion she will make her LAST APPEARANCE in London. Sofa Stalls, 10s. 6d.; Reserved Seats, 5s.; Admission, 1s.—Tickets at Chappell & Co.'s, 50 New Bond Street.

MADAME LAVROWSKA will SING the following SONGS on the occasion of her CONCERT and LAST APPEARANCE in London, on Friday Evening, March 14, in St. James's Hall, viz.:—"Che faro senza," Eurydice (Gluck), "Dove sei amato bene" (Handel), "Ich grolle nicht" (Schumann), "Il Segreto" (Lucrezia Borgia), and Chansons Russes. Sofa Stalls, 10s. 6d.; Reserved Seats, 5s.; Balcony, 3s.; Admission, 1s.—Tickets at Chappell & Co.'s, 50 New Bond Street.

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRAETORIUM," with "Triumph of Christianity," "Christian Martyrs," "Francesca da Rimini," "Neophyte," "Titania," &c., at the DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS.
Two, £50; Six, £40; Four, £30. Election, Second week in May.—Apply to the SECRETARY, The College, Cheltenham.

RADLEY.—ST. PETER'S COLLEGE, near Abingdon.—There will be an Election to TWO ENTRANCE SCHOLARSHIPS of £50 a year each, on Wednesday, May 7.—Apply to the WARDEN.

BRIGHTON COLLEGE.
President—The Earl of CHICHESTER.
Principal—The Rev. C. RIGG, M.A., late Senior Student and Tutor of Ch. Ch. Oxford.
There are special Modern Forms affording every necessary preparation for the Civil Service, Line, and Woolwich Examinations. The School is well endowed with Scholarships and Exhibitions tenable both in the College and at the Universities. Brighton College is perhaps the healthiest Public School in the kingdom.
The whole necessary charges for Boarders are from 80 to 90 Guineas, according to age.
For information apply to the SECRETARY.

TRINITY COLLEGE, Glenalmond, Perth, N.B.
Warden—Rev. R. THORNTON, D.D. Oxon.
A School on the model of the greater Public Schools of England. Terms (including every necessary expense), 80 and 90 Guineas, according to age. There is also a Theological Department, for Candidates for Holy Orders. Particulars may be obtained from THE WARDEN.

THE LADIES' COLLEGE, Grosvenor Square, SOUTHAMPTON. Founded by the Hampshire Association for Promoting Female Education. *Patron*—The Bishop of WINCHESTER; Viscount EVERSLEY; Lord NORTHBROOK. *President*—The Right Hon. W. COWPER-TEMPLE, M.P. The SPRING TERM commences May 1. Applications for the Prospectus and for Entries may be addressed to the HONORARY SECRETARY, or to the Lady Principal, Miss DANIELS.

THE Right Rev. Bishop STALEY (formerly Wrangler and Fellow of his College) wishes to receive TWO STUDIOUS BOYS, as Companion Pupils with his Son, aged Fifteen Years. No Village. Fishing, Boating, Good Stabling, &c., if Horses kept. Terms, 150 Guineas.—Address, Crovall Vicarage, near Tunworth.

A GRADUATE of CAMBRIDGE can receive One or more PUPILS to prepare for the Public Schools.—Address, J. S., Barrister-at-Law, Astley, Shrewsbury.

UNIVERSITY of LONDON.—NOTICE is Hereby Given, that on Wednesday, 30th of April next, the Senate will proceed to Elect EXAMINERS in the following Departments:

Examinerships.	*Salaries.* (Each.)	*Present Examiners.*
ARTS AND SCIENCE.		
Two in *Classics*	£200	Rev. Dr. Holden, M.A. R. C. Jebb, Esq., M.A.
Two in *The English Language, Literature, and History*	£100	J. G. Fitch, Esq., M.A. Prof. Henry Morley.
Two in *The French Language*	£100	Prof. Cassal, LL.D. Gustave Masson, Esq., B.A.
Two in *The German Language*	£50	R. Rost, Esq., Ph.D. Rev. C. Schoell, Ph.D.
Two in *The Hebrew Text of the Old Testament, the Greek Text of the New Testament, the Evidences of the Christian Religion, and Scripture History*	£50	W. Aldis Wright, Esq., M.A. Vacant.
Two in *Logic and Moral Philosophy*	£80	Rev. John Venn, M.A. Vacant.
Two in *Political Economy*	£30	Prof. T. E. Cliffe Leslie, LL.B. Vacant.
Two in *Mathematics and Natural Philosophy*	£100	Prof. H. J. S. Smith, LL.D., F.R.S. Prof. Sylvester, LL.D., F.R.S.
Two in *Experimental Philosophy*	£100	Prof. W. G. Adams, M.A., F.R.S. Vacant.
Two in *Chemistry*	£175	H. Debus, Esq., Ph.D., F.R.S. Prof. Odling, M.B., F.R.S.
Two in *Botany and Vegetable Physiology*	£75	Vacant. Thomas Thomson, Esq., M.D., F.R.S.
Two in *Geology and Palæontology*	£75	Prof. Duncan, M.B., F.R.S. Prof. Morris, F.G.S.
LAWS.		
Two in *Jurisprudence, Roman Law, Principles of Legislation, and International Law*	£100	Prof. Bryce, D.C.L. T. Erskine Holland, Esq., B.C.L., M.A.
Two in *Equity and Real Property Law*	£50	Herbert H. Cozens-Hardy, Esq., LL.B. Vacant.
Two in *Common Law and Law and Principles of Evidence*	£50	Farrer Herschell, Esq., B.A., Q.C. Henry Matthews, Esq., LL.B., Q.C., M.P.
Two in *Constitutional History of England*	£25	Prof. Sheldon Amos, M.A. Prof. Courtney, M.A.
MEDICINE.		
Two in *Medicine*	£150	J. Syer Bristowe, Esq., M.D. Vacant.
Two in *Surgery*	£150	John Birkett, Esq., F.R.C.S. Prof. John Marshall, F.R.S.
Two in *Anatomy*	£100	Prof. G. Viner Ellis, F.R.C.S. Vacant.
Two in *Physiology, Comparative Anatomy, and Zoology*	£150	Prof. Michael Foster, M.D., F.R.S. Vacant.
Two in *Obstetric Medicine*	£75	Robert Barnes, Esq., M.D. Prof. Grailly Hewitt, M.D.
Two in *Materia Medica and Pharmaceutical Chemistry*	£75	T. R. Fraser, Esq., M.D. Vacant.
Two in *Forensic Medicine*	£50	Arthur Gamgee, Esq., M.D., F.R.S. Prof. Henry Maudsley, M.D.

The Examiners above named are re-eligible, and intend to offer themselves for re-election.
Candidates must send in their Names to the Registrar, with any attestation of their Qualifications they may think desirable, on or before Tuesday, March 25. It is particularly desired by the Senate that no personal application of any kind be made to its Individual Members.
Burlington Gardens, March 1, 1873. By Order of the Senate, WILLIAM B. CARPENTER, M.D., *Registrar*.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon (formerly Principal of the Elphinstone High School, Bombay), will continue, with the Assistance of a Cambridge Honours-Man, to prepare PUPILS for the Universities, Indian Civil Service, Woolwich, and all Competitive Examinations.—Terms and References on application.

WOOLWICH, COOPER'S HILL, The LINE, CIVIL SERVICE.—Rev. Dr. HUGHES (Wrang. Joh. Col. Cant.), who has passed over 300 for the above, receives TWELVE YOUNG MEN directly for these Examinations, and in an entirely separate wing of his House TEN BOYS, who have the advantage of the same Tutors and Training.—Paling, W.

PREPARATORY SCHOOL for the SONS of GENTLEMEN,
1 Geraldine Villas, East Sheen, S.W.—Mr. S. LUCKMAN, of Queen's College, Cambridge, and for seven years Assistant-Master at Temple Grove, East Sheen, prepares the SONS of GENTLEMEN for the larger PREPARATORY SCHOOLS. Terms on application.

A GENTLEMAN (formerly in the Army), Married, living on his own Estate, in one of the best parts of Hants, assisted by a Militia Officer of great Experience in Tuition, wishes to receive SIX PUPILS to prepare them for the University, Civil Service, and Competitive Examinations. Both Gentlemen well versed in Modern Languages acquired abroad. Church of England. The Advertiser, from his position, can offer exceptional Advantages. Highest references given and required.—Address, C. C. King's Library, Alton, Hants.

LAW EXAMINATIONS.—A BARRISTER-AT-LAW, of the Chancery Bar (an Honours-Man, Oxford, and an Exhibitioner, London—both in Law) prepares PUPILS, at his Chambers in Lincoln's Inn, for all the LAW EXAMINATIONS. Terms: 7 Guineas per Month one hour daily, or 5 Guineas per Month one hour every alternate day.—Address, A. B., care of Messrs. Stevens & Haynes, Law Publishers, 11 Bell Yard, Temple Bar, London, W.C.

ORPHAN WORKING SCHOOL, Maitland Park, Haverstock Hill, N.W.
373 Orphan Children are now under care.
400 can be accommodated.
2,786 have been admitted.
The Charity is greatly in WANT of FUNDS, depending upon Voluntary Contributions for three-fourths of its annual income. At the present time, consequent upon high prices, there are outstanding accounts due exceeding £1,000. Donations and Subscriptions are earnestly solicited, and will be thankfully received.
JOHN KEMP WELCH, *Treasurer*.
74 Cheapside, E.C. JOSEPH SOUL, *Secretary*.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill.
Physician—Dr. EDWARD LANE, M.A., M.D. Edin. Turkish Baths. Consultations daily (Saturday excepted) at 7 Princes Street, Hanover Square, from Ten till Twelve.

OVERLAND ROUTE.—The PENINSULAR and ORIENTAL STEAM NAVIGATION COMPANY BOOK PASSENGERS and receive Cargo and Parcels by their Steamers for

	From SOUTHAMPTON.	From VENICE (calling at Ancona).	From BRINDISI.
GIBRALTAR MALTA	Every Thursday, at 2 p.m.	—	—
ALEXANDRIA ADEN BOMBAY	Every Thursday, at 2 p.m.	Every Friday Morning.	Every Monday, at 5 a.m.
GALLE MADRAS CALCUTTA PENANG SINGAPORE CHINA JAPAN	Thursday, Mar. 13 and 27, at 2 p.m.	Friday Morning, March 21 and April 4.	Monday, March 24 and April 7, at 5 a.m.
AUSTRALIA NEW ZEALAND (Cargo only)	Thursday, Mar. 13, at 2 p.m.	Friday Morning, March 21.	Monday, March 24, at 5 a.m.

Attachments are made in favour of Passengers returning by the Company's Steamers within Six or Twelve Months of their arrival.
Passengers are now booked through, via Bombay to the principal Railway Stations in India, and through Tickets to Venice and Brindisi are issued at the Company's Office. Tickets to Brindisi only can also be obtained from Messrs. LEBRAD & Co., 6 Billiter Street (South Italian Railway Office).
For Rates of Passage Money and Freight, and all other information, apply at the Company's Offices, 122 Leadenhall Street, London, or Oriental Place, Southampton.

INDIAN PARCEL POST.
Under Authority from the POSTMASTER-GENERAL of INDIA.
Parcels not exceeding fifty pounds in weight and 2 ft. × 1 ft. × 1 ft. in size, and £50 in value, are conveyed by the PENINSULAR AND ORIENTAL COMPANY from London to any Post Town in India at a uniform charge of 1s. 3d. per lb. Full Particulars on application at
122 LEADENHALL STREET, E.C.

BRIGHTON.—BEDFORD HOTEL.—Every endeavour is made to render this Hotel equal to its long-existing repute. Spacious Coffee Room for Ladies and Gentlemen. Sea-Water Service in the Hotel.—Communications to The MANAGER, Bedford Hotel Company, Limited.

THE GRANVILLE HOTEL, St. Lawrence-on-Sea.—Ramsgate the nearest Station on both Lines. A Reduction of 20 per cent. off Apartments taken by the Week until end of March. Hydropathic, Turkish, Ozone, Plunge, and other Baths in the Hotel.

THE

SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

No. 907, Vol. 35. March 15, 1873. [Registered for Transmission abroad.] Price 6d.

THE RESIGNATION OF THE MINISTRY.

THE tone of Mr. GLADSTONE's speech on Tuesday night foreshadowed the result of the division. He spoke with unusual force, and never better maintained the dignity of his position, but he spoke like a man who knows that the battle he is fighting is lost, and that he has only to fold his robe round him and die honourably. Mr. DISRAELI had done his utmost to make the division a strictly party one, and to win a victory, and, according to the rules of political warfare, he was not to be blamed for doing so. The Irish Catholic vote was irretrievably lost to the Ministry after Mr. CARDWELL's speech, if not before, and the Government had made every possible concession in order to remove the objections of those who thought that the Bill was too favourable to the priests. If the Bill had been introduced in the shape into which it was virtually moulded by the Government before the division took place, the ground taken both by the Conservatives and by nine-tenths of the English Liberals who voted against the Government would have been cut away from them. The real question, therefore, was whether the concessions of the Government would disarm the Opposition; and Mr. DISRAELI was forced to stake the issue upon a purely party question. He bade his supporters not to accept the concessions of the Government, because they could not trust the Government. The Government pretended to concede now in order to withdraw their concessions afterwards. A Liberal Ministry was not to be trusted by Conservatives. With regard to Ireland, as the Bill had no longer any life in it, both leaders naturally had something to say which might guide the future action and perhaps determine the future destinies of their party. Both agreed that the disestablishment of the Irish Church was the real bar to any plan of concurrent endowment. Mr. DISRAELI said that the Liberals, by adopting a totally wrong principle, and taking away from the Protestants that which they had, interposed a fatal obstacle in the way of the statesmanlike policy of giving the Catholics that which they asked for. The Romish hierarchy have really, in Mr. DISRAELI's opinion, defeated themselves by sacrificing the Irish Church. Mr. GLADSTONE, on the other hand, said that the Liberals, by adopting the right principle that money over which Parliament has control in Ireland shall not be at the disposal of one sect more than of another, had of course determined beforehand a case so manifestly coming within this principle as the proposal to endow a Catholic College or University. Perhaps he thought it necessary to remind amiable people like Mr. CHICHESTER FORTESCUE, who show that they would like to give the Catholics a little money if they make so much fuss about it, that to do this would be to violate the principles on which their favourite Bill for Disestablishing the Irish Church was founded. It is absurd to talk of any coalition or understanding between the Ultramontanes and the Conservatives; but while Mr. GLADSTONE says that to give what the Ultramontanes declare is the only thing they will take would be to violate his principles and those of his party, Mr. DISRAELI says that to give this would be to violate the principles which not the Conservatives, but the Ultramontanes themselves, and Mr. DISRAELI's adversaries, in dealing with the Irish Church, have successfully established.

The consequence of the adverse vote of the House of Commons has been, in accordance with general expectation, the resignation of the Ministry. The conduct of the Ministry at the several steps which have led up to this result has been severely criticized, but principally perhaps from a failure to look at the matter from the point of view natural to a Ministry. In the first place, it is said that Mr. GLADSTONE ought never to have made the success of this Bill a vital question for the Ministry. He ought to have suggested a Bill and have seen whether Parliament was inclined to pass it. No weight ought to be attached to this argument. The real fault of the Government was in keeping their scheme so dark that they lost all the benefit of criticism on it beforehand; but when they had determined on its main outlines, they would have been doing justice neither to themselves nor to their Bill unless they had declared that they would use the whole force of the Government to carry it. They were doing, as they considered, a work of justice, and they know that to do it successfully was difficult. Unless they had shown themselves thoroughly in earnest, the Bill could have had no chance whatever. Their next duty was to decide whether, after the strong disapproval which the Bill excited from so many various quarters, they should withdraw it; and here there was much to be said on both sides, for there was something absurd in persevering with a measure intended to conciliate Irish members after every Irish party had pronounced against it. But then it is only fair to recollect that a Ministry, when it has once coupled its fate with the fate of a particular measure, has great difficulty in severing the tie and deciding to live on while the Bill dies. It thenceforth loses the power of persuading men that it is in earnest, and inspires a fatal doubt whether it is not clinging to place without power. Having decided to abide by the vote of the House, the Ministry had to determine whether it would resign or dissolve, and on this point the decision of the Ministry was incontestably right. A Prime Minister has no business to dissolve on a question which he has made a vital one unless he honestly thinks that the constituencies will reverse the decision of the House. Now no one could pretend to believe that a new House of Commons would be elected more likely to pass an Irish University Bill acceptable to Mr. GLADSTONE than the present House, and Mr. GLADSTONE had also to think of the interests of the large body of his faithful supporters. He could not have done them a greater injury than to have sent them to their constituencies on such an occasion, when they must have either associated themselves with the mistakes and ill-fortune of their leaders, or have most seriously weakened the party organization by separating themselves from their leaders, and appealing to the general pity and gratitude of Liberal electors, and asking them to overlook a single error which the candidate deplored as much as any one else.

The Ministry having resigned, the question of the moment is whether Mr. DISRAELI will consent to take office. The Conservatives have a perfectly clear field before them. There is no analogy whatever between the position which they would occupy now and that which they occupied in 1867 and 1868. They were then a minority engaged in carrying through a great measure in the face of their opponents, and they had to suffer the innumerable humiliations which must attend such an attempt. Now they would be in office merely engaged in carrying through the necessary formal business prior to a dissolution. If Mr. HARDY or any one else gave Mr. BENTINCK the assurance which determined his wavering vote, that the Conservatives would not take office during the continuance of the present Parliament, there would be no violation of such a pledge in taking office merely to wind up the affairs of the present Parliament and to call a new one. The objection of independent Conservatives — and it is an objection fully shared by the Conservative leaders in the Lords — is to any attempt to govern with a minority, and to sit with the lash of triumphant opponents always hanging over them. This objection does not at all apply under the present circumstances. If the Session must still last some time longer, it will last, not for the convenience of the Conservatives, but for that of the nation. The sooner an election can take place the better for everybody; but it is a

satire on Parliamentary institutions to argue that Mr. DISRAELI cannot properly come in because the division giving him the option of accepting office was taken a week too late in March. Possibly a new Parliament could not be got together before late in May, and possibly, if this is the case, it would be better to finish off the whole Parliamentary work of the year, and postpone the election till July. But this is a consideration which ought to have nothing to do with the course taken by the Conservatives. Their position would be simply that of men holding office with the intention of dissolving at the earliest moment convenient to the country, and any reflections on them as on men holding office under the humiliating condition of being in a minority in the House of Commons would be entirely unjust. The one point they have to consider is whether, when they do dissolve, they can hope to get a majority in the House of Commons, or, at any rate, not to have a majority against them. What are the prospects of the next election? is what they have to ask. Probably their own agents could not tell them very exactly, and we know how entirely the Conservative agents miscalculated at the time of the last election, when they inspired Mr. DISRAELI with a belief that he would have a large majority after the dissolution. But the general opinion of competent judges of all parties is not likely to be very far wrong, and this opinion concurs in anticipating that the Conservatives would lose few seats and gain many. Even now, if the Irish Catholic Liberals are deducted, the present Government has only a very slight majority, and it is a tolerably safe guess to say that at any rate this slight majority will at the next election be transferred to their opponents. If the Irish Catholic Liberals, many of whom, if they reappear at Westminster, will probably return not only as the nominees of the priests, but as the advocates of Home Rule, are put down as supporters of Mr. GLADSTONE, then perhaps the Conservatives would be in a minority in the next Parliament. But Mr. GLADSTONE would be very reluctant to come into office with a minority apart from the Irish vote, and, if so, the Conservatives might hold office in reliance, not on the forbearance, but on the fears of their opponents. They would not have a very pleasant time of it with an even balance of parties; but then no party could, under the circumstances, have a very pleasant time of it; and with prudence and care there is no apparent reason why they might not hold office for a respectable length of time, without any loss of credit and self-respect. There would, however, be much inevitable anxiety and uncertainty involved in the acceptance of office under present circumstances, and it would not be a matter of surprise if Mr. DISRAELI and his friends should shrink from the risk, although even then it is by no means certain that the Ministerial crisis would be at an end, and that it would be so easy to get Mr. GLADSTONE to resume office as some of those who dread a dissolution expect.

THE CHANCELLOR'S DEFENCE OF HIS BILL.

THE tone of the debate in the House of Lords on the second reading of the Judicature Bill will afford genuine gratification to sincere law reformers, in spite of the forebodings with which its conclusion must fill them. The satisfaction so warmly expressed at the reappearance in public of the late LORD CHANCELLOR will command universal sympathy. Not law reformers only, but all who reverence high-minded intelligence, must rejoice once more to recognize in Lord HATHERLEY'S speech the pure and clear ring of a noble mind, as free from jealousy as it is replete with power. There was much too that was reassuring in the whole debate, and especially in the reply of the LORD CHANCELLOR. With that generous consideration towards fair opposition which has been not an ornament only but a tower of strength to him throughout his brilliant career, Lord SELBORNE frankly and candidly discussed the objections which we had raised to the frame of his Bill; and though he has not succeeded in dissipating our alarm at his measure, he has restored the confidence which we, in common with the whole world alike of lawyers and laymen, reposed in his conception of the great subject which he has taken in hand. His ideal of the reform needed, so far as we can see, differs in no essential respect from ours, and the same may be said of the views of every peer who took part in the discussion. Every principle for which we contended was admitted as fully as we could desire; and the only answers suggested to our remonstrance were that a complete reform would be impossible, that the Bill (at any rate after modification in Committee) would be found to be as large a stride as it was practicable to take, and that its defects were merely transitional, and would lead to no permanent evils. We cannot persuade ourselves that any modifications short of an entire recasting of the Bill can really eradicate its faults. As it stands, its defects seem to us essentially of a permanent and not of a transitional character, and in our judgment the evil to be apprehended—the deterioration of Equity jurisprudence—far more than outweighs the mere gain in convenience and symmetry of procedure which it is the object of the Bill to secure.

Before considering in detail the LORD CHANCELLOR'S explanations, we owe it to ourselves to notice one point on which our objections seem to have been misapprehended. We said that the general scheme of preserving under new names the existing divisions of the Courts would keep things in their old grooves, and make the reform more nominal than real. We further said that the one exception grafted on this rule, by which the jurisdiction of the Court of Chancery was to be narrowed and its supremacy abolished, aggravated the mischief by destroying the machinery which has hitherto preserved the purity of Equity jurisprudence, without substituting the better machinery which a complete system of Courts all *doctæ utriusque juris* would supply. The LORD CHANCELLOR treated these as antagonistic objections, as if we had insisted, first, that all special grooves should be obliterated; and, secondly, that the groove in which the Court of Chancery is worked should nevertheless be permanently maintained. We desire nothing of the kind. We are anxious above all things that all such sectional divisions should be abolished and each Court made perfect in itself; but until this work of construction is completed—and the Bill does not even lay its foundation—we do desire that Equity should be preserved, even though it be by the clumsy contrivance of the old Writ of Injunction wielded by the old Court of Chancery. Once construct Courts to which the doctrines of Equity may be safely entrusted, and you may destroy the Court of Chancery without a word of remonstrance from us. But our complaint of this Bill is that it destroys and does not construct; that it abolishes the old safeguards—rude no doubt, but still efficient—without substituting any other safeguards to protect the highest portion of our law from gradual but certain deterioration. Granting, as we do grant, that our existing jurisprudence ought henceforth to rest on newer and more symmetrical foundations, would it not be folly to knock out the keystone of the old arch before you have built the new one? Would it not be madness to pull down the scaffolding before the permanent wall is raised? The Court of Chancery is the scaffolding on which Equity jurisprudence has rested until now—the Writ of Injunction is the keystone of the arch. Let these go by all means when you have founded a new structure, but in the meantime preserve them, lest your so-called fusion and reconstruction prove nothing but confusion and demolition.

But to return to Lord SELBORNE'S reply to our warnings. What we understand him to say is in substance this:—"I "do not question the soundness of your theories as theories; "my Bill is not so antagonistic to them as it seems; I am "even willing, as far as practicable, to mould its provisions "more into harmony with the principles on which you insist; "but I have found it impossible to do all that I could wish, "and I think it dangerous to push on too rapidly to the goal "without passing through the intermediate stage of transition "enforced by the necessities and circumstances of the case." No one who is not a mad enthusiast will deny the cogency of this kind of reasoning in any case to which it is fairly applicable. In politics we must often content ourselves with a short step in the right direction, however clearly we may see that a great stride would be incomparably better. But when such a plea is urged, it is of vital importance to be sure that the proposed step is unmistakably in the right direction, that the admitted defects are really transitional and not permanent, and that the impossibility of a more vigorous effort is clearly proved. On all these points Lord SELBORNE'S speech, though full of masterly ingenuity, failed altogether to justify his Bill.

In the first place, let us ask what are the "necessities and "circumstances" which call for the mutilation of any ideal scheme of reform? They all resolve themselves, directly or indirectly, into the single fact that the Common Law Bench enjoys an enormous numerical preponderance over the Equity Bench, with perhaps a corresponding preponderance of social and political influence. There is no other difficulty in the case. Strangely enough, this disparity does not exist because business of greater extent and importance finds its way to the older tribunals, but because—thanks to ancient habits and modern parsimony—suitors in Chancery are allowed but one judge to do the work which in the Common Law Courts is allotted to three or four. Much evil has resulted from this deficiency

of judicial strength. It has rendered the free resort to *viva voce* evidence impossible, it has sapped the system of judicial administration in Chambers, and it has multiplied appeals by depriving the decisions of Courts of first instance of the weight that would attach to the judgments of full-manned tribunals. And now that reconstruction is the aim of every Chancellor, this same numerical weakness of the Equity Bench is the one serious obstacle to any real fusion, which can only be effected by bringing together Equity Judges and Common Law Judges on equal terms in every division of the contemplated Court. No one can say that a difficulty such as this is one that it surpasses the power of a Government to deal with. But, instead of grappling with it, Lord SELBORNE's Bill proposes to establish the predominance of Equity principles by perpetuating and aggravating the predominance of the Common Law Bench. Lord HATHERLEY indeed suggested that the difficulty might be gradually mitigated by appointing Equity Judges to seats in the Common Law division, and Common Law Judges to seats in the Equity division, and congratulated himself that he had so far acted on this principle as to select a distinguished Common lawyer for the Appellate Bench of the Court of Chancery. There are two objections to this proposal—one, that Equity traditions would have perished long before the process was complete; the other that no Government would have the courage to carry it into effect. Lord HATHERLEY himself, though he wisely (even at the cost of aggravating the existing disproportion of judges) selected Lord Justice MELLISH as the colleague of Lord Justice JAMES, never once during his tenure of office ventured to place an Equity lawyer on the Common Law Bench. Such an anomaly has not been heard of since Mr. ROLFE became a Baron of the Exchequer, when most of us were unborn; and Lord SELBORNE, we observe, has been too prudent to give either by word or deed the slightest encouragement to this chimerical idea. The same "necessities and circumstances" which have forbidden the introduction of a perfect Bill would equally forbid the process by which Lord HATHERLEY hopes that its shortcomings may hereafter be made good.

The arrangement proposed by the Bill, that the High Court shall be composed of seventeen Common Law and four Equity Judges, must therefore be regarded as permanent at least for one or two generations. Surely we are right in saying that this is not a defect for which Lord SELBORNE's plea of transitional difficulties can possibly be accepted. Under such conditions it is as idle to hope to infuse Equity principles into all our tribunals as it would be to entrust Liberal measures to a Coalition Cabinet in which Tories should preponderate in the proportion of four to one. While the materials to work with are so adjusted, no manipulation, however ingenious, can possibly supply the requisite power of the requisite kind for the determination of all the cases that will come before the Courts. Putting aside writs issued merely as means of compelling payment by debtors in arrear, the number of actions in which any questions of Law are involved will, we believe, be found to be less than the number of suits and matters in Equity; but, whether this be so or not, the aggregate amount of property dealt with, and the magnitude and intricacy of the rights involved, in the Equity suits of any given period, must largely surpass what would be met with during the like period in all our Courts of Common Law. If the High Court were constituted as proposed, more than half of its genuine judicial business must be expected to turn upon equitable doctrines. If this is even a remote approximation to the truth, how is the work to be done under the CHANCELLOR's Bill, except by the means which we have—not untruly, we think—described as a transfer of the administration of Equity from those who have studied it to those who have not? This is the fatal blot on the measure which no amendments in Committee can obliterate. It is in vain to argue, as Lord SELBORNE did, that his Bill authorises the occasional removal of judges and the transfer of causes from one division to another. For years, powers have existed under which Common Law Judges may be lent by one Court to another, and even supplied as assessors to the Court of Chancery; but the instances in which these powers have been exercised may be counted on the fingers of the hand. And this for a very good reason, which will not lose its force under the new *régime*. Judges and Vice-Chancellors are hard-worked men, and their ordinary duties are too exacting to allow of the disturbance which frequent migrations for special service would necessarily occasion. And another reason still more cogent would be added by the Bill. Every time that a Vice-Chancellor was sent to a Common Law division, his judicial power would be reduced in the ratio of three or four to one, as he would then become a fraction only of a Court, instead of a complete tribunal. Moreover Equity Judges would be called for almost daily, while their scanty numbers would barely suffice for their own department. Nor would the difficulty be much mitigated by any frequent transfer of causes, for the Bill provides no workable machinery for the purpose; and, if it did, the result would be almost the same as that which is now effected by injunctions in Equity. In nine cases out of ten where actions are restrained the order is made before anything has been done beyond serving a writ, and occasionally filing a declaration. In all these instances the process is substantially one of transfer only, and the sole change which the Bill would introduce, if a really effective system of transfer formed part of its provisions, would be to leave the propriety of the transfer to be determined, not by the Court to which the cause is supposed to be appropriate, but by that which is asked to part with it on the ground of its own unfitness. Surely this would not be an improvement. There would be the old bandying, as it is called, from one tribunal to another, and a less mature discretion applied to the process.

We have considered the arguments of Lord SELBORNE with the strongest desire to be convinced; but we can see nothing in them which even palliates the vice of the Bill, nothing which promises to save Equity jurisprudence from destruction, nothing to encourage the hope that the mischief once established will be mitigated as time goes on, nor even anything to justify the exaggerated timidity which has induced our ablest law reformer to sacrifice his own ideal to imaginary necessities, and to circumstances which he had ample strength to control.

THE IRISH UNIVERSITY BILL AND THE IRISH VOTE.

THE noble indignation of the Catholic people of Ireland, taking effect through the votes of their representatives, has extinguished the Irish University Bill. This is the version of the division of Wednesday morning which for some time to come will be current on the other side of St. George's Channel. It may be doubted, however, whether this noble indignation will bear the ordeal of close inspection. As the Bill was first presented to Parliament it was an honest attempt to remove the disabilities of the Irish Roman Catholic laity in the matter of University Education. Their case at present is this:—If they wish their sons to enjoy the advantages of University training, they must send them to Trinity College, the traditions and successes of which are entirely Protestant. If they wish their sons to obtain a University degree, they must send them either to Trinity College or to the Queen's Colleges, of which last the traditions and successes, so far as there are any, are entirely secular. Had the Bill passed, even with all the modifications to which the Government had consented under the pressure of their English supporters, this grievance would have been entirely got rid of. Irish Roman Catholics might have obtained University training for their sons by sending them to a College in which the instruction and discipline would have been under the exclusive control of teachers of their own faith. They might have obtained a University degree for them on even easier terms, for the unattached student was placed under no restrictions as to his place of residence. By either of these channels Irish Catholic youths might have gained their full share of the honours and endowments of the University. In neither of them would their religious belief have been exposed to any danger, unless the mere neighbourhood of Protestant students in an examination, or the obligation to answer questions set perhaps by a Protestant examiner, can be considered to involve theological contamination. The grievance and the remedy were coextensive. The Roman Catholics complain that the Protestants of Ireland enjoy a monopoly of University education, and refuse to admit them to a share of it except upon terms which their consciences will not allow them to accept. The Bill took the matter out of the hands of the Protestants, and gave the Catholics access to degrees, honours, and emoluments, on the sole condition of passing the prescribed examinations. By so doing it did in effect give them access to College life. Students living and working together have many advantages over students living apart, and this fact would have been enough to fill the Catholic College in Dublin.

This, we repeat, is the grievance which Irish Roman Catholics have constantly complained of, and it is this grievance that the Bill proposed to redress. The Government were in no way obliged to bring the subject forward. They

might have secured the support of a majority of their own adherents, and the neutrality at all events of the Conservatives, if they had accepted Mr. Fawcett's Bill. It was not a matter that pressed for settlement in the sense in which the Church Establishment and the relations of landlord and tenant in Ireland pressed for settlement. It was not a matter even upon which the Cabinet as a whole had any strong convictions. The origin of the Irish University Bill must be traced to Mr. Gladstone's own recognition that the Irish Catholics were not fairly treated as regards University education, and to his determination not to let the subject rest. Considering that all this was perfectly well known to every one, that the introduction of an Irish University Bill conceived in this spirit had all along been regarded by the extreme section of English Liberals as the point at which they might be forced to withdraw their confidence from the Government, and that the Bill when introduced had proved exceedingly distasteful to them, it might naturally have been expected that the Irish Catholic members and the Irish Catholic laity would give it a hearty support. Perhaps if it had been brought forward in the first Session of a Parliament instead of in the last, this expectation might have had some chance of being fulfilled. An Irish member's deference to his leaders is usually greatest when the prospect of having to meet his constituents is most remote. During the interval which separates him from the next election, it is always possible that something may happen to make him indifferent to dissolution. Unlike the steward in the parable, he is less and less careful about making friends with the mammon of unrighteousness in proportion as the time for giving an account of his stewardship draws nearer. Still the Irish Catholic members would not have voted against the Government if to do so had not been agreeable to their constituents. A better proof of the need of education in Ireland could not be desired than the action of the Irish Catholic laity upon this question. They had the game in their own hands. The Bill gave them all that they have for years complained of being denied—a Catholic College, and a University to the endowments of which Catholics would have full access, and in the government of which they would have their full share. The Bishops would never have moved against such a Bill as this if the laity had had sufficient independence and common sense to declare themselves satisfied with it. The Bishops have no reason to care for the diffusion of University education. They already possess the maximum of influence over their flocks, and any increase of learning in Ireland can at most only leave that influence what it is. But Irish Catholic parents have a solid interest in University education being placed within the reach of their sons upon conditions which shall not be hostile to their faith. They have let this interest go for nothing because the Bishops thought the occasion a good one for reviving a demand which they, as well as the rest of the world, knew could never be granted. If the Bishops had had anything to lose by this manœuvre, they would probably have thought twice before resorting to it; but as it was only their flocks who could lose by it, they were able to go into battle with a light-hearted indifference to consequences. When their flocks find out that the passing of Mr. Fawcett's Bill is the sole result of a ten years' agitation, they will be in a position to appreciate the self-sacrificing devotion of their spiritual guides.

If the Irish members cared to defend a vote which they doubtless regard as the most natural thing in the world, they might say that, even if they had voted straight, the Bill would probably have been shipwrecked in Committee. Certainly no concessions which the Government could have made with honour would have altogether removed the objections of English Radicals. Mr. Vernon Harcourt was thought to have spoken parables when he described it as a Bill to affirm, consolidate, and extend the system of mixed and united education in Ireland. In the proper sense of the words this description is perfectly true. It was a Bill to make it possible for Catholics to avail themselves of the system of mixed and united education in Ireland, and, considering that Roman Catholics form three-fourths of the population, a Bill which did this would have been pre-eminently a Bill to consolidate and extend that system. But to the mind of an English Radical mixed education ordinarily stands for something of which Catholics are certain not to avail themselves. His idea of a mixed University is not a University in which various religions maintain separate Colleges for their own students, but a University in which all the Colleges are open to students of all religions. In a country where religious belief is strong and definite this latter form of University must always fail to answer to its purpose. The only form which will meet the case is the form that would have been created by the defeated Bill. Supposing that the Radicals had consented to the affiliation of the Catholic College, and that the Irish members had consented to the omission of the "gagging" clauses, there would still have remained the difficulty about the Council. In theory this need have been no difficulty at all. An academical Council ought to be elected by an academical constituency, and when once the new University had got into working order, either the Senate, or such members of it as were engaged in actual University work, would have been a very proper body for the purpose. But in this case there was no academical constituency ready to hand. Graduates of Trinity College and of the Queen's Colleges would have been forthcoming in sufficient abundance; but where would have been the graduates of the Catholic College? It would have been altogether impossible to commit the control of the new institution during the first and most critical years of its existence to a body in which the persons whose introduction into the University was the main object of the Bill had no representatives. If all parties had been sincerely anxious to settle the question on fair terms, this obstacle might have been got over. The Government might then have said, We wish to do as far as possible what would have been done by mere lapse of time if a Catholic College had been affiliated to the University of Dublin thirty years ago; in that case there would now have been a body of Catholic graduates equal in all respects to the existing body of Protestant graduates; our object will be to place upon the Council the sort of members whom these Catholic graduates, in combination with the Protestant graduates, would have been likely to place on it of their own free choice. This would have been the only course the Government could have taken consistently with fairness to the Catholic element in the University. But it is far from certain that the existing House of Commons would have assented to their taking it. In a critical division in Committee the Conservatives would have voted against them, and the adhesion of the Irish Catholics might have been more than balanced by a secession of English Radicals. If political consistency is only admirable when it is certain to win immediate reward, the vote of the Irish members is excusable. Should they be disposed to quarrel with this estimate of their conduct, they will do well to remember that where excuses are concerned beggars cannot be choosers.

SPAIN.

THE suspended diplomatic action of the European Governments during the crisis of the Spanish Revolution is fully justified. If a Republic is hereafter definitively organized, with a reasonable prospect of continuance, it will probably be recognized by all the Powers, and certainly by England. It is reported indeed that some of the Continental Governments profess a disinclination to permit the establishment of a Federal Republic, probably because it would be associated with reminiscences of the Paris Commune; but the policy of England is settled and clear. Every nation has the exclusive right to determine its own form of government, and to deal through its chosen agents with foreign States. It is nothing to the English Government or people whether Spain may prefer a Monarchy, a despotism, a theocracy, or a centralized or Federal Republic. The only reason for delaying recognition is that nothing has hitherto been fixed, and that a communication addressed to a supposed Government might possibly be received by a hostile successor. The condition of the country is lamentable, almost hopeless, and strictly conformable with the anticipations which were formed by all sound politicians when the Republic was proclaimed. An accidental inversion of the order in which the telegraphic reports ought to have been received produced some confusion in the narrative of recent events; but it was not impossible to disentangle the accounts of what has occurred, and the gaps which divide different portions of the story have been since filled up in accordance with previous conjectures. A week ago the majority of the Assembly which is nominally recognized by the Executive Government as sovereign determined to assert its right to share in the determination of the national policy. The Progressists unanimously resolved to reject the Bill for the dissolution of the present Legislature, and for the convocation of a Constituent Cortes. Nothing in the way of argument or of novel occurrence has interfered with their persistence in their resolution; yet Señor Castelar is enabled to communicate to the Spanish Ministers in foreign countries, with his usual ornaments of rhetoric, that the Cortes have, after a patriotic speech by Señor Rivero, passed the Bill

for the dissolution, and for the consequent election. The numbers of the division prove that the majority of the Assembly, instead of concurring with the proposal of the Government, abstained from voting; nor is their reason for withdrawing in any degree doubtful. As on the day when the Progressist members of the Cabinet were forced to resign, a mob of the patriots whom the Executive Government has supplied with arms surrounded the palace of the Cortes; and a truculent demagogue of the extreme Republican faction warned the majority, after the fashion of the Jacobin members of the French Convention, that, if they opposed the will of the people, the consequences would be terrible.

Another discussion which arose during the same sitting furnished a highly characteristic illustration of the spirit of the dominant party. Since the establishment of Señor CASTELAR'S peaceable and orderly Republic, the shop-keepers and the other respectable inhabitants of Madrid have organized themselves in armed bodies for the defence of their lives and property against the bloodthirsty rabble. It must be admitted that the spontaneous formation of armed bodies is inconsistent with regular government; but the condition of Spain and Madrid is exceptional and revolutionary, and there is no doubt that the measures adopted by the tradesmen are exclusively defensive. The agitators in the Cortes fiercely denounced the efforts of the lamb to obtain protection against the wolf; and the Ministers scarcely ventured to affirm that associations for the safety of person and property were consistent with law. The Republicans taunted their opponents with derisive invitations to descend into the streets, where they might have probably become the victims of a massacre. It may be worth the while of extreme Liberals in countries not yet so far advanced as Spain to observe that the helpless victims of menace and of possible violence are even now called Radicals. Two or three years ago the Progressists or Radicals were busily engaged in demolishing all the safeguards which experience and foresight had provided against the unqualified domination of liberty, equality, and fraternity. The Constitution of which the unhappy Radicals were authors was at the time held up to the admiration of the professors of their faith in England. On the high authority of the ringleader of the Hyde Park riot, the enthusiasts who thought that the Rights of Man included the right of any man to his life and property are now rudely deceived by their more thorough-going rivals. The process by which Girondists invariably succumb to Jacobins will be repeated as often as ambitious charlatans attempt to govern, after destroying all the means of government. Perhaps the ignominious charge of Girondism may be found still more applicable to the promoters of the last revolution, who already find themselves compelled, against their will, to obey the mob of Madrid and the mutinous provincial deputations. There is no reason to suspect FIGUERAS or CASTELAR of willing complicity with the crimes which they find themselves perhaps unable to prevent.

It is stated that twenty-two provinces announced their intention of withdrawing their obedience from the Central Government if the Cortes had refused to vote for the convocation of a Constituent Assembly. Nearly all the rebellious provinces must have returned, by popular suffrage, members to the Cortes which they now set at defiance. It would be absurd to suspect that a Cortes which may be called constituent will be better able to command the allegiance of political malcontents. Since 1789 the Continental theory of revolutionary freedom has always implied unbounded license of disavowing the authority of any Government or Assembly which may interfere with the schemes of a faction. The future Cortes will be summoned, not to express the deliberate will of the community, but to furnish the Republicans with a kind of legal sanction. It is well known that in Spain as in France the actual Government can always control the elections; and FIGUERAS will have a Republican majority as SAGASTA and ZORRILLA have in turns within a single year respectively assembled a Conservative and a Radical Parliament. The present Ministers have provided themselves with a further security against any possible reaction. Though they profess to hold power under the Constitution of 1869, they have at their own discretion, and without the consent of the Cortes, summarily abrogated the constitutional limitation of the age of electors. According to the law, a voter must have attained twenty-five years; but the Ministers have coolly extended the franchise to every Spaniard over twenty. It is possible that there may be a difference of opinion as to the proper date of political majority; but, if there were such an offence as treason in revolutionary times, the Spanish Ministers would incur some danger of impeachment. Arbitrary postponement of constitutional law to the convenience of a democratic faction will be universally approved by the Republicans, and perhaps but faintly censured by their opponents. After all, it matters little how a Cortes may be chosen which will be absolutely powerless when it has assembled. It is doubtful whether some of the most important Spanish provinces will allow members to be elected to a central Assembly. The provincial Deputation of Barcelona has assumed to itself supreme civil and military power; and, according to one report, Andalusia is about to set up for itself on a system of perfectly free trade with foreign countries. In the United States, where alone republican government is practically understood, it has been found necessary to give the central power exclusive control over duties on imports. There have been few odder proofs of the power of words than the predilection of the American people for any system, however unlike their own, which may call itself a Republic. No educated American can doubt that the Constitution of England is much nearer in practice than the newfangled Spanish Republic to that of the United States; yet the PRESIDENT in a State paper thinks it becoming to indulge in irrelevant rodomontade about the approaching universality of the Republic; and his Government hastened to recognize the new Republic in Spain, as if CASTELAR and his colleagues had reasserted a divine right which had been forgotten.

There is at present from one end of Spain to the other not a nucleus of order or of good government. It could scarcely have been supposed beforehand that the despised Monarchy was so absolutely indispensable to national and social existence. The sagacity and patriotism of PRIM in maintaining royalty even while he was unable to find a King are forcibly illustrated by the anarchy which follows the decapitation of the Government. Unfortunately PRIM had himself inflicted a fatal blow on the principle of monarchy when he aided in dethroning a Queen on the ground of her personal demerits. Kings and Queens may perhaps have no inalienable right to their thrones; but the nations which they represent have a right to the continuance of their hereditary institutions. King AMADEO was, through the effects of the previous Revolution, and also in his capacity of a foreigner, more unstably placed than Queen ISABELLA; but he also seems to have exercised a beneficial influence on the popular imagination as a recognized symbol of law, of order, and of national unity. In ancient Greece, in mediæval Italy, and in the United States, Republican institutions have occupied the place as objects of national loyalty which elsewhere belonged to the reigning sovereign; but in Spain, as in all places which have followed the precedents of the French Revolution, a Republic is understood to mean either the negation of government, or the prostitution of legal authority to the interests and passions of riotous mobs. It may be conjectured that honest and moderate Republicans would by this time give much for an opportunity of undoing their own hasty work, and restoring the institutions which they formerly denounced. It is doubtful whether the extreme revolutionists will suspend the execution of their schemes during the melancholy farce of the general election.

THE SOUTH WALES STRIKE.

EVEN if it were true that the South Wales strike is practically at an end, accurate local knowledge would be required to render perfectly intelligible the nature of the partial arrangement which has been effected. It has long been evident that the amount of wages formed a secondary consideration with the masters. During the continuance of the strike, and partly in consequence of its existence, the price of iron has risen still further; and in all the abortive negotiations of the last few weeks it has been assumed that the autumn rate of wages would without difficulty be restored at the beginning of April. The great object of the masters was to settle the dispute directly with their men, so that the interference of the Union and its agents might be formally repudiated. Mr. HALLIDAY and his colleagues have repeatedly asserted that the colliers struck of their own accord, and that the Union has only interfered in support of a contention which it regarded as just; but it is impossible to doubt that the colliers ascertained beforehand that they would be backed by the Union; and during the struggle the agents from a distance have repeatedly prevented the men from coming to an agreement with their employers. As the great majority of the whole working population had no connexion with the Union, it is not surprising that the

ironworkers at one place after another should have finally determined to resume work on terms which involved on their part only a slight or nominal concession. The reduced rate of wages is to be accepted for the remainder of the present month, when the ten per cent. abatement will be discontinued. The masters have on several occasions intimated their intention of behaving liberally to the men, and their assurances seem to command general confidence. At most of the works which were supposed to have been closed for want of fuel large stocks of coal appear to have been accumulated; and consequently they are able to resume business after a comparatively short delay. Unfortunately it appears that the colliers, who were the most formidable class of malcontents, still refuse as a body to return to their work without the consent of the Union agents; and, unless their place can be supplied, they will, as soon as the stocks of coal are exhausted, once more be able to interrupt the whole industry of the district. The Union will not fail to make great exertions to continue the contest until the demands which were originally preferred have been conceded. It is not impossible that at the end of March the strike may terminate without the conclusion of any formal treaty. The masters from the first fixed a term of three months for the payment of reduced wages; and they may accordingly return to the old rate at the expiration of the period without inconsistency. The colliers on their part can, if they think fit, profess to have succeeded in their object when they resume work at the old rate of wages. The main object of the Union leaders will be to satisfy the men that they have obtained a victory, as Mr. Fish still protests that he secured a decision on the Indirect Claims.

There is little use in arguing, like Mr. Roebuck, that combinations of labour against capitalists are morally wrong. The South Wales colliers and the Miners' Association will secure all the justification which they are likely to desire, if, even at the cost of a sacrifice on their own part, they ultimately force the masters to accede to their terms. The powers of either party are practically the measure of their respective rights, and to the present time the struggle, though it has lasted for many weeks, has not conclusively proved which of the contending bodies is the stronger. The colliers are, as compared with the whole industrial population of the district, few in number, and the great majority of them have a claim as members on the funds of the Union. The enormous wages which are at present received by the whole body of colliers and miners provide the means of maintaining the strike, perhaps for an indefinite time; and a large proportion of the men who refused to work in their own district are now earning money elsewhere, and are contributing to the support of their comrades. In a sermon or in an ethical disquisition a proof that the strike was morally culpable might be appropriate and perhaps convincing, but it is a waste of time to question the right of men to do what they will with that which is so peculiarly their own as their time and their labour. The misuse of any other kind of property may be checked by law, and in some extreme cases it is liable to be punished by confiscation; but compulsory labour, which is the only form in which the property of working-men could in any case be forcibly appropriated, is evidently out of the question. Nor is it more profitable to complain that in the natural course of events associated bodies of uneducated men are governed by leaders who may be plausibly denounced as agitators or demagogues. Abuse of Mr. Halliday is as ineffective as abuse of Cardinal Cullen and the Irish Bishops, who are also in the habit of organizing resistance to established authorities. As long as the obedience to a hierarchy or a Trade Union is voluntarily rendered, legal interference is ineffective, and indignant censure is wasted. As Mr. Lowe says, tempests and earthquakes must be endured, for the proverbial reason that they cannot be cured. No good result followed from either the legislation or the clamour which were provoked twenty years ago by the Papal aggression. The aggression of the Miners' Association and its delegates on the happy valleys of South Wales is an analogous and much more formidable dispensation. It is an unfortunate circumstance that the managers of the strike have so far a separate interest from their clients that they may be tempted to prolong the quarrel rather for the purpose of asserting the supremacy of the Union than in the hope of bettering the condition of the men.

The intelligent newspaper Correspondents who record the daily history of the strike, as of all other contemporary transactions, have thrown no light on the possibility of supplying the places of the malcontent colliers. Some of the colliers have returned to work; but the Unionists who form the great majority still hold out. It may be taken for granted that those who are accustomed to mining operations of any other kind could on occasion apply their skill to the extraction of coal, and it was reported some time since that the closing of the Aberaychan iron-field would disengage some thousands of miners, who would be enabled to obtain higher wages in the pits. As nothing has lately been said of the reopening of the coal-mines, while the ironworks are gradually resuming operations with the aid of fuel which had been previously accumulated, there seems reason to fear that the colliers on strike have found means of deterring competitors from occupying their vacant places. The influx of a new body of colliers into the pits would at once terminate the strike by rendering its successful prosecution hopeless; and if the theories of political economy were to work with ideal smoothness, labour would be immediately attracted to a highly profitable employment. The influence which trade organizations exercise, sometimes by intimidation, and sometimes by reliance on a rude sense of honour, practically obstructs the flow of labour from one occupation to another. It is impossible to suppose that Mr. Halliday and the Council which he represents would be blind enough to maintain the strike if it were known that the masters were able to provide themselves from new quarters with the labour which they require. If nevertheless even an inadequate number of working colliers can be enlisted, the masters will assuredly not concede any portion of the demands of the men. Although they have been deserted by one of their number, the great ironmasters have hitherto displayed unbending resolution; and they would perhaps be content to keep their works closed for another year, in preference to admitting Mr. Halliday and his fellows to a share in the regulation of industry which has hitherto been controlled by themselves. The partial reopening of the ironworks will at present prices enable them to recover a portion of the loss which they have sustained; and when their present stock of coal is exhausted, they will probably be prepared again to let their capital lie idle for a considerable time. It is hardly to be expected that they should tamely abandon their business as the alternative of humiliation and defeat.

The anomalous or novel demand that wages should bear a definite proportion to profits is founded on the assumption that the workmen possess a natural or artificial monopoly. In a perfectly open market wages are regulated not by the greater or less profits of trade, but by the proportion between the demand for labour and the supply. In prosperous times wages have generally risen because employers have required additional hands; but the claim for higher payment on account of increased profits to the same number of workmen has only been preferred in recent years. The masters in different trades have in many instances countenanced for their own immediate convenience a theory which, if it were consistently adopted, would create a kind of one-sided partnership between the capitalist and the workmen. The bargain can never be equal, because the labourer necessarily insists on a minimum which is indispensable to his subsistence, while he recognizes no upper limit to the possible increase of wages. Colliers and miners, and perhaps other classes of workmen, seem to consider that their claim to participation in profits is already recognized as the basis of negotiations on wages. The West Yorkshire colliers, who are now demanding an increase of twenty per cent. on the high rate of wages which they have hitherto received, complain that the masters, after raising wages on former occasions, have increased the price of coals in a higher proportion; and they add, with amusing simplicity, that they have no confidence that the same proceeding will not be adopted again. Their anticipations are perfectly reasonable, though it is difficult to understand why the colliers should object to a rise in prices. Nothing can be further from the mind of the model British workman than any concern for the interests of the consumer, whose sole duty and privilege is to provide a fund which capitalists and workmen are afterwards to divide in a scramble. The West Yorkshire colliers are perfectly willing that half the community should starve in consequence of the dearness of coal, but they resent the contrivance by which the masters seem to them to have taken for themselves more than their due share of the plunder. If profits were a fund belonging in certain proportions to masters and workmen, the colliers would have a right to demand an account of the distribution. It is not impossible that even on this assumption the masters might be able to justify their rise of prices. If the men in West Yorkshire resemble their class elsewhere, their increased wages probably caused a diminution of the supply of coal and a consequent increase of price. If without violation of law any class of workmen can extort from

employers a partnership in the profits of capital, the new method of distribution will become, like all existing relations, in a sense legitimate. The consequences to workmen as well as to employers of the establishment of co-operative industry are not easily to be foreseen, and it is certain that when any body of men has acquired a beneficial interest, it will take precautions against any external interference with its rights, or, in other words, against competition. The South Wales ironmasters are more or less consciously contending for the opposite system, which has hitherto prevailed without question in all departments of industry.

GERMANY.

THE EMPEROR finds at present the task of opening the German Parliament an easy and satisfactory one. He has only to talk of pleasant things past and pleasant things to come, for an affluence of money gilds every prospect. Everybody, he was able to tell his Parliament, loves him and the Empire, and is anxious to be on the best of terms with both. The meeting of the Sovereigns last autumn at Berlin gave an assurance of peace which he will do his best to foster, and he may reflect with comfort that his sayings as to peace and war are not like the dark sayings of other days at the Tuileries, when every phrase and word was scanned to see whether it was not meant to convey the contrary of its apparent purport. The Germans wish for peace, having got all they want, and their Sovereign honestly shares the feeling of his subjects. France, which provides the money that throws this hue of brightness over the situation in Germany, is also considerate enough to give no cause for apprehension in other ways. The EMPEROR referred with pleasure to the opinion he expressed a year ago that things would go on in France as quietly as could be wished until the bargain with Germany was fulfilled. Things have indeed gone on in France precisely as Germany would have wished them to go on, and enough security has been preserved to make the huge loan necessary for the payment of the indemnity possible, and to render the interference and even the complaints of the army of occupation impossible. Fortunately the intense antipathy of the population of the occupied districts to the enemy has been mitigated or kept under control, and there have been no collisions between the conquerors and the conquered. The EMPEROR expressly said that he had grounds for hoping that it would be possible to arrange for the complete evacuation of France at a comparatively early date, and that the final arrangements for this purpose would shortly be made. Three milliards and a half have been paid, and the French Government will be able to pay another half-milliard in May. This will leave only one milliard more to be provided, and the French Government will, it is expected, be able to arrange for the payment of this half-milliard in the autumn of the present year. The obstacle they have to face is not the difficulty of getting the requisite money or the securities they have to offer, but the danger of a possible disturbance of the money market. When every farthing has been paid, but not before, Belfort, the last pledge to remain in the hands of the Germans, will be evacuated. For some reason which they have never cared to state plainly, the Germans have devoted much time and money to increasing the strength of Belfort, and when the French get it back again they will find their solitary Eastern fortress a much more formidable place than it was when the capitulation placed it in German occupation. The Germans seem never to have felt sure that they would get the whole of the enormous sum they asked as an indemnity, and it may have occurred to them that their possession of Belfort as a place of great strength was the best incentive the French could have to make them eager to pay, while it was so placed as to give the Germans, until the money was paid, a hold on France equivalent to that of holding a much larger district than that actually occupied.

But the roses of the German Empire are not quite without their thorns, and the especial thorn of the EMPEROR and his advisers is Ultramontanism. The battle between Church and State is really an Imperial question, but as the battle-ground is for the present Prussia, it was not necessary for the EMPEROR to refer to the struggle when addressing the Imperial Parliament. It is because the position of the Emperor of GERMANY is endangered that the King of PRUSSIA is willing, and Prince BISMARCK is determined, to alter the whole relation of the Prussian State to the Catholic Church. This is a very serious business, and it is being pursued in a very serious way. Prince BISMARCK took charge in the Upper House of the Bill for altering the Constitution, and his exertions have been successful, the Bill having been passed by a majority of ten. The position of the Prussian PRIME MINISTER is not very well defined, and Count VON ROON appears to have acquiesced with the utmost readiness in being superseded by his great colleague on this occasion. What the Peers seem to have wished to know was the real honest answer to one of those questions which it is hard to put in direct terms. Did the KING and Prince BISMARCK really mean that the Bill must be carried? Reports as to the KING's hesitation have been flying about the Court for a long time, grounded apparently, not on anything he has ever let fall, but on the probability that he would be more or less moved by the whispers of persons very near to him who have strenuously maintained that the Evangelical Church was being sacrificed by the Government measure quite as much as the Roman Catholic. Prince BISMARCK, again, recently changed his official position, and the change was freely attributed to adverse Conservative influence. If it was rumours and surmises of this kind that were likely to agitate the mind of the Upper House, Prince BISMARCK was perfectly ready to administer a tranquillizing remedy. The KING was, he pointed out, more interested than any one in the passing of the Bill, for the contest is really one between the Monarchy and the priesthood; and subsequently Count ROON was most explicit as to the KING's views. For himself, Prince BISMARCK could safely say that he had not been deposed from the Premiership by adverse Conservative influence, for he does not see that the Conservatives have any influence. Their party, as he frankly told the Peers, is broken up; their power gone. There is no place for their ideas in modern Prussia. Liberalism is the order of the day and carries all before it, simply because it feels that there is and can be no serious resistance offered to it. In England a Liberal Minister forcing a Liberal measure on a reluctant House of Lords would have proceeded in a much tamer and smoother way, and would have been as courteous and flattering as possible, and tried to make the Lords believe that they were after all doing what they liked to do, or at least were making a sacrifice in a virtuous and magnanimous way. But Prince BISMARCK either thinks that complete frankness is the most efficacious of all instruments for producing obedience, or else considers that the members of the Upper House are proof against pleasant phrases, and will yield to no argument except that of stern necessity.

Count VON ROON acknowledged that he had received from the provinces many petitions requesting the withdrawal of the Bill, so that the Ministry has had to face more real opposition than would be indicated from the ease with which the Bill has passed the two Houses of Parliament. But he says that he and his colleagues and their Sovereign have been firm, because they look on the measure entirely as a political one, and one that for political reasons it is indispensable to pass. That the Bill is merely political and not adverse to any religious belief, and that the rupture with Rome has come from Rome and not from Germany, are the two main facts which the Prussian Ministry, and Prince BISMARCK above all, wish the public to get into its head. The clergy claim to disobey the laws and to oppose the Crown on the ground that they have to look to other laws and to obey another Sovereign. To make them, as Prussian subjects, obey the laws of PRUSSIA, and to make them yield precedence to no Sovereign over their own Prussian KING, is the main object of the Bill. To put enough pressure on them for the attainment of this end it is necessary to alter the legal relations of the Church and the State; but whose fault is that? Prince BISMARCK told his hearers that when the French war was over the German Government was desirous to cultivate the most friendly relations with the Papacy. Italy, he candidly acknowledged, had not so behaved during the war as to deserve much favour at the hands of Germany, and the new Emperor of GERMANY was quite willing to be the good friend of the prisoner of the Vatican. But his offers were contumeliously rejected; the Papal Government decided to enter on the most bitter opposition to the new Empire, and to use its powerful machinery to break it up if possible. Struck by this unexpected blow, the Empire has struck back in return. The existing Constitution of Prussia was based on a compromise such as moderate men love and can work. But a new spirit has come over the Church of Rome, and it now abandons all compromise. It will take nothing less than all it chooses to asks for, and what it asks for is that the State shall be the slave of the Church. This is Prince BISMARCK's account of the rupture of Prussia with Rome, and whether the measures he is taking are wise or not, no one can doubt that his chief

assertion is quite true. If any proof were necessary to those who have been reading for the last week the debates on the Irish University Bill, they have only to look at the strange address lately presented to the POPE by a band of ardent Catholics belonging to the chief European countries. They tell him that his wicked enemies are always trying to lure him into some compromise, and tempting him to live quietly with his neighbours; but that such enemies are only formidable when an attempt is made to negotiate with them, and that the true method, that to which the present POPE has given his adhesion with so much noble frankness and perseverance, is to refuse them everything, to oppose them in every way, to call them openly "Sons of Satan," and treat them as such on every possible occasion. This sort of spirit does certainly destroy what Prince BISMARCK describes as the *modus vivendi*. Nor do the new opponents of the State by any means confine themselves to words. They claim and assert the liberty of doing anything they please. Not long ago the civil power in Prussia decreed that primary instruction in certain districts of East Prussia should be given in German. This might or might not have been expedient; but it was a merely political act. The Archbishop of POSEN, however, did not approve of the order, and positively told his clergy to disobey it, and give primary instruction in Polish in the schools to which the Government order applied. Prince BISMARCK was naturally not sorry to have such an instance to quote of what he meant when he said that the struggle was a political one, and lay between the KING and the priesthood. Compromise, which Prince BISMARCK till lately thought possible and desired, is impossible now, and he cannot conciliate those who will not be conciliated, nor refuse to fight those who attack him.

THE SOUTHERN STATES OF AMERICA.

THE Southern States of America have not yet begun to recover from the ruinous effects of the war. The promoters of Secession committed a fatal mistake when they commenced a contest in which, as the result has proved, they were destined to be beaten. On the other hand, the victorious party have been disappointed in their confident belief that they could restore the spirit as well as the outward form of the Union. The problem was difficult, if not wholly insoluble, and it may be admitted that the measures which have been adopted have for the most part been suggested by plausible reasons. After the close of the war the sore and angry feeling of the defeated community might probably have soon disappeared, if, in accordance with the policy of Mr. LINCOLN and Mr. ANDREW JOHNSON, the Southern citizens could have been remitted to the political condition which had been interrupted by the war; but it was impossible that Congress should neglect to recognize the fundamental change which had been effected by the emancipation of the slaves. It was the plain duty of the Federal Legislature to provide for the protection of the coloured population; and American institutions admit of no protective mechanism except that of perfect political equality and universal suffrage. Popular rhetoric only expressed and illustrated the general conviction that the right of voting constituted the single and sufficient security against the oppression to which the freedmen might have been exposed; and accordingly it was enacted, in an Amendment to the Constitution, that no inhabitant of the United States should be subject to political disability on account of his race or colour. The immediate object of the measure has for the present been attained, although negroes in some Southern districts have been exposed to outrages which would under any political system have been gross violations of law. Universal suffrage may sometimes afford protection to the lowest and weakest class of a community; but it unluckily confers a share in sovereign power as well as facility for self-defence. Negroes, like all other living creatures, are entitled to immunity from wrong; but the liberated slaves of the Southern States are utterly disqualified from taking a part in the government. The belief in democracy which has become a superstition in the United States was originally founded on the not unreasonable assumption that the average American citizen was fully qualified to vote for representatives and public functionaries. Like all abstract propositions, the theory that universal suffrage is just and expedient has a tendency to become independent of the conditions which rendered it approximately true. The vagaries of the Irish civic constituency of New York have produced only a local scepticism, which is moreover confined to municipal administration. Respectable tradesmen who think that city taxpayers should control the administration of city taxes are still untroubled with a doubt of the right of every man to take part in Federal elections. With a blind faith in phrases, the Republican majority determined to extend the blessings of freedom and equality to three or four millions of negroes who were far below the level of the most backward and degraded inhabitants of any civilized country. It was true that there would have been great difficulty in devising an intermediate condition between absolute disability and full admission to political rights; but the experiment, although it may have been excusable, has thus far wholly failed. The newly enfranchised citizens have, as might have been expected, abused their privileges; and it is not impossible that they may suffer from a future reaction.

The utter ignorance and incapacity of the negro voters rendered it inevitable that they should become the tools of unscrupulous demagogues. In some places they have found leaders of their own race; but they have generally fallen into the hands of Northern adventurers who are known by the significant title of "carpet-baggers." In every State which is controlled by a coloured majority scandalous corruption prevails; and Governors, State legislators, and representatives in Congress exaggerate and parody the vices and follies to which popular government is liable. The respectable members of the community are excluded from power, and extravagantly taxed; nor can there be any doubt that they deeply resent the supremacy of an alien and inferior race. In Louisiana, and especially in New Orleans, the dominant faction is split into two hostile bodies, which from time to time elect antagonistic Governors and Assemblies, and which apparently dispose of rival armed forces. The Federal Government, which ought to exercise a moderating influence, habitually regulates its interference by considerations of party. General GRANT has invariably supported a faction which has been declared by a Republican majority in the Senate to have no legal right to represent the State. At the last election in Louisiana the candidates who obtained the majority of votes received certificates of election from unqualified officers, while the genuine functionaries gave a fraudulent certificate of election to the delegates of the minority. At present it would seem that there are no regularly constituted authorities in the State; nor is there any early prospect of a cessation of anarchy. In other Southern States elections of United States Senators have proved to be void; and some of the Governors have been guilty of enormous embezzlement. The great and ancient State of Virginia, notwithstanding the abundance of its natural resources, is unable to borrow money, because the Legislature and the Government command no confidence at home or abroad. The perverse iniquity of government by the greatest number of the whole population except in communities of an unusually high character, has never been so fully illustrated as in the reconstructed States of the South. As a recent and powerful writer remarks, multitudes can by no possibility really govern; and consequently the only question for constituent legislators relates to the method by which the actual rulers are to be selected. The facility of obtaining votes from an ignorant majority by intrigue or by the ordinary arts of a demagogue is the worst possible qualification for the exercise of political power. The principal motive for studying the contemporary history of other countries is the desire to ascertain the probable results of different political systems at home. There are happily no emancipated slaves in England, and all modern practice and opinion is utterly opposed to pecuniary corruption; but useful lessons may be derived from the practical reduction of a doctrine to absurdity in its application in an extreme case. It is by no means certain that the race of "carpet-baggers" might not be reproduced in England, if suitable constituencies were established as subjects for their speculations. A Parliament exclusively elected by artisans and labourers, though it might not sink to the level of Louisiana, would feel but little regard for the rights or interests of other classes.

It would be idle to blame the emancipated slaves for abusing powers which they were utterly incompetent to exercise or to appreciate; nor would they listen to a warning that they may perhaps forfeit the privileges which have been so ill employed. At present the negro majorities, though they are locally dominant, are in reality altogether dependent on their Republican patrons in the North. If the territory of the former Confederacy were independent, or if the Federal Government and Legislature were to abstain from interference in Southern affairs, the white population would at once reassume their former supremacy. It is not improbable that they might take an undue advantage of their victory; but it is certain that they would find means of relieving themselves

from oppression and degradation. Their opportunity, although perhaps it may be distant, will ultimately arrive. It is scarcely possible that the misgovernment of the South should not produce a reaction of popular opinion in the United States, and sooner or later some political party will find it convenient to form an alliance with the white citizens of the South. For one or two generations the Democratic party governed the Union in combination with the Southern representatives; and although the South can never recover its original share of electoral power, its support might still incline the balance in favour of one of two rival parties. It is not likely that the Amendment which provides for the enfranchisement of the negroes will be at any time removed from the Constitution; but if the party in power had resolved on depriving the coloured race of political influence, American ingenuity would contrive methods of accomplishing the purpose. The facilities which an artificial and mischievous distribution of power has afforded for pecuniary corruption will, more than any other proof of Southern misrule, tend to create a desire for a change. The best class of Americans are shocked and alarmed by successive exposures of bribery and embezzlement. The City of New York has made a desperate and partially successful effort to shake off the obloquy which it had incurred; but the Legislature of the State is still suspected of corruption, and the chief perpetrator of the City frauds retains his seat in the local Senate. The discovery that bribes had been administered to Senators, Congressmen, and to some of the highest dignitaries of the Republic, has caused deeper indignation, because the culprits impudently denied the charges which have since been proved. The exposure of the swindling transactions of a former Republican candidate for the Presidency will strengthen the impression which has been produced by domestic frauds. It would be too much to expect that even the most candid Americans should at once allow that the foundations of their political faith are shaken. There is an honest struggle to believe that equality and universal suffrage have no relation to the actual results of an infallible Constitution. Before a painful scepticism affects the foundation of the Republic, it will probably find occupation in considering the condition of South Carolina, of Florida, and of Louisiana. The conviction that all white men are free and equal is compatible with a strong suspicion that negroes enjoy only a figurative equality, and that they are unfit for that kind of freedom which really means the exercise of political power. It is not improbable that public opinion will coincide with party interest in discouraging or suppressing the supremacy in any State of the coloured population. As the North will be still unanimously opposed to the re-establishment of slavery even in an indirect form, precautions will probably be taken against the abuse by the white population of restored political ascendency. It is incredible that the anarchy of Louisiana or the misgovernment of South Carolina should be permanently tolerated.

FRANCE.

THE customary lull has followed the customary storm in the French Assembly. The several clauses of the Bill introduced by the Committee of Thirty have been hotly debated, but, except in the case of an amendment which was assented to by the Government, no change has been made in them. The Right have done their best to get the Assembly to pledge itself not to dissolve immediately upon the liberation of the territory. One amendment aimed at postponing until that time the discussion upon the Bills which the Committee have agreed that the Government shall bring in; another would have made the Assembly declare that it would not retire until it had exercised its constituent powers. Neither of these proposals had the approval of the Conservative majority. However anxious the deputies may be to keep their seats, most of them are too wise to assign any other date for a dissolution than the payment of the last instalment of the indemnity and the departure of the last German soldier. They have been able to stave off their fate hitherto because M. THIERS has no wish that it should overtake them sooner. Were they to go beyond this limit, they would exasperate the Republicans to a degree which might make it impossible for the PRESIDENT any longer to moderate between the factions which make up the Assembly. If M. THIERS were thus driven into a corner, there is little doubt which side he would choose. Even if the Assembly were more in favour with the country than there is any reason to suppose that it is, any sign of unwillingness to meet the electors when once the engagements it has entered into with Germany have been fully performed would be enough to make it unpopular. The majority know this, and, what is even more to the purpose, they know that the PRESIDENT knows it. There was a time when they talked of the liberation of the territory and the provision of definitive institutions as coequal parts of the mission entrusted to them at Bordeaux. Now it is only the Extreme Right that pretends any longer to combine these duties. The moment of dissolution can as yet only be fixed by inference, but it can be fixed in that way with quite sufficient accuracy. The conduct of the negotiations with Germany may hasten or defer it in some degree, but it is universally understood that by 1874 the existing Assembly will have given place to its successor.

The question raised by the Report of the Committee of Thirty is how this interval shall be employed. The Committee were originally of opinion that it should be devoted to the construction of a machine for managing the elections, over the working of which M. THIERS should have no control. If the design had ever borne fruit, it would have been interesting to hear it defended by men who, when the PRESIDENT's right to take part in debates was under discussion, had stood up for the absolute separation of the legislative and executive authorities. Under pressure, partly of circumstances, and partly perhaps of late developed common sense, the Committee gave up this notion, and proposed, at the invitation of the Government, to pass the time that yet remains to the Assembly in constructing a Second Chamber, in revising the electoral law, and in providing for the continuance of the Executive during the elections. The Right and the Left have opposed these recommendations on opposite grounds. The Right urge with much truth that to legislate on these subjects is really to organize the Republic, and, in particular, that as the composition of a Second Chamber must be different according as it is to co-exist with a Republic or with a Monarchy, to construct it under a Provisional Republic is to beg the question unfairly. They are not unwilling to submit to the Republic if the Assembly will definitively proclaim it, but they do not wish to find themselves committed to it without the claims of Monarchy having been fairly entertained and disposed of. This way of putting the case has an exceedingly reasonable sound. It presents the majority in the ludicrous light of a body of men resigned to doing what they dislike because they have not courage to say what they would like to do. Yet, notwithstanding this, the majority which is acting so absurdly has more sense than its critics. The Right go on the assumption that the Assembly really speaks the mind of the country, and if this were true, nothing could be more contemptible than its present reticence. The Centres are well aware that it does not speak the mind of the country, and though it is not convenient to avow this fact, they wisely think that it is well to recognize it in their acts. If the Assembly had to decide between a Monarchy and a Republic, and if each member were to vote according to his real wish, a Monarchy would have a decisive and probably a large majority. But the only result of this step would be to make the want of sympathy between the Assembly and its constituents needlessly apparent. So long as M. THIERS is at the head of affairs, the country has a representative at Versailles who estimates and gives expression to its views with far more accuracy than the Assembly, and the majority feel that in some unforeseen way M. THIERS would take care that any decision they might come to in favour of a Monarchy should remain a barren exhibition of unsatisfied desire. The Left have also something to say for their opposition to the constructive part of the Committee's Report. Why, they ask, should France be saddled in this sudden fashion with a Second Chamber which it does not want? It is by no means easy to give a satisfactory answer to this question. The nearest approach to such an answer is that M. THIERS has insisted upon having a Second Chamber, and that when you have an indispensable man at the helm of the State, you have no choice but to carry what sail he orders. Why he is thus bent upon setting up in France a pale copy of the United States' Senate, with the Federal element which makes the strength of that Senate necessarily wanting, is not evident. It is conceivable that he should want to strengthen himself against the possible Radicalism of the next Assembly—though, if the electors will only take the trouble to vote, instead of allowing the most extreme candidates to be returned and then shrieking for protection against them, this necessity is not likely to arise. What is not so conceivable is how he intends to make a Second Chamber serve this purpose. In France, at all events, the Senate, or whatever else it has been called, has in times of revolution been a simple cipher. A Second Chamber *is* an imposing engine of defence, so long as there is nothing in par-

ticular to defend. When M. THIERS first disclosed his wishes on this subject, it seemed probable that he meant to use the newly elected Second Chamber as an auxiliary in getting rid of the First Chamber elected two years ago. But this idea, if it was ever entertained, has long been laid aside. Throughout the negotiation with the Committee of Thirty it has been conceded on both sides that the Second Chamber, though it is to be constituted at once on paper, is not to come into existence until after the dissolution. This would seem to show that M. THIERS really believes in a Second Chamber as an institution valuable in itself, and is anxious to obtain it from this Assembly, lest it should prove harder to obtain it from the next. If so, it is a remarkable example of the way in which the fancies of youth can stand the wear and tear of half a century of political life.

A curious question may perhaps be raised hereafter as to the precise character which is to be attributed to these forthcoming Bills. As the Report of the Committee was presented, it gave the President a veto upon all the measures passed by the Assembly. On the motion of M. DE BELCASTEL, accepted by the Committee and acquiesced in by M. THIERS, constitutional Bills have been excepted from this veto. It was at first thought that this would operate as a serious check upon M. THIERS. The Right, if they could make up their quarrel with the Right Centre, might succeed in giving a distinctly monarchical cast to the coming legislation, and M. THIERS would have no choice but to carry it into effect, whatever its character might be. Calculations which rest upon M. THIERS finding himself thus deprived of alternatives are extremely treacherous, and a very ingenious interpretation has already been started, according to which M. DE BELCASTEL'S motion is not applicable to the measures about to be introduced. The preamble and the 5th Clause of the Bill now under discussion, taken together, recite that the Assembly reserving its constituent power, will proceed to pass laws upon such and such subjects. But according to this theory a law which is passed with the constituent power reserved is not a constitutional law, and M. THIERS will therefore be at liberty to veto it. As there is no authority except the Assembly, competent to declare what is and what is not a constitutional law, in the sense attached to the term in the BELCASTEL amendment, and as the decision of the Assembly upon this point as upon all others will be arrived at under the constraining influence of M. THIERS, it is not of much moment whether this interpretation is right or wrong. If the deputies should so far escape from the control in which they are usually held as to pass the Government Bills in a shape which the Government dislikes, they may be trusted to return to their allegiance after four-and-twenty hours' reflection. Whether they then rescind their own vote, or, by deciding that it is not a constitutional law, give M. THIERS the power of vetoing it, will not make much difference in the legislative result.

THE HOUSE OF LORDS AND DECEASED WIFE'S SISTER.

THE Deceased Wife's Sister has, it seems, a way of turning up in the midst of a Ministerial crisis, like the dog at the Derby. It was doubtful on Thursday night whether there was still a Government or not; but the House of Lords may perhaps have thought that, under the circumstances, there was all the more reason for doing what it could to keep up something in the shape of law. The propriety of permitting marriage with a deceased wife's sister is a very small part of the question opened up by this impudent and notorious Bill. It is a blow aimed, not only at the sanctity of marriage, but at the authority of law. In the opinion of the promoters of the measure an Act of Parliament is binding only on those who happen to approve of its provisions. Every man his own Statute-book is the simple code of the new reformers. If you do not like a law, break it, and then make your violation of the law a reason for asking Parliament not only to repeal it, but to put things in such a position as if it had never at any time been in existence. It is obvious that this principle, if once admitted, might be found to have a dangerously extensive range of application. Lord HOUGHTON tried to tempt the House of Lords by suggesting that by passing this Bill it would put an end to an unpleasant agitation; but the Peers did not require to be warned that the success of one such agitation would immediately be the signal for many others. It is true that the scandal of breaches of the law would be effectually prevented if there were no law to break, but if this process of accommodating the law to the passions, caprices, and irregularities of every section of the community were once entered upon, it would be apt to lead to some startling results. Widowers who want to marry their deceased wives' sisters are not the only persons who would like to have the law altered to suit their purposes. There are gentlemen who would be glad to have greater facilities than the Divorce Court at present provides for changing spouses, and others who pine for the larger freedom of polygamy. It has not yet, however, been thought desirable to abolish marriage in order to prevent adultery. Lord HOUGHTON and Lord STANLEY of ALDERLEY appear to have succeeded in emancipating themselves with tolerable completeness from some of the ordinary prejudices on the subject. After all, says Lord HOUGHTON, these things are only a matter of opinion; some people think one way, some another; why should not everybody do as he likes? Lord STANLEY seemed to think he had clenched the argument when he remarked that the only reason for "the restrictions imposed in the early days of the "Church was to strengthen the idea of the sanctity of "marriage." We are left to infer that the idea of the sanctity of marriage has passed away with the other superstitions of the primitive Church. Lord KIMBERLEY observed that in a question of this kind consideration must be shown for the "feelings, wishes, and passions of the people"; but it is evident that the people whose feelings, wishes, and passions are to be regarded as paramount are not the whole people of the country, who for the most part are quite satisfied with the present system, but only the people who have chosen to break the law and who now ask to be relieved from the consequences of their disobedience.

Lord SELBORNE'S weighty and statesmanlike speech gave emphasis to the division that followed, and will no doubt be accepted by the great body of moderate and reasonable men as a complete justification for the rejection of the Bill. This is, as he said, no party question. Nor, as far as Parliament is concerned, is it a theological or ecclesiastical question. It is really a question of social expediency. Is it for the good of the community that marriage with a deceased wife's sister should be allowed? The only persons who would be benefited by a relaxation of the law are the extremely small and insignificant faction of the community who have been seized with an ungovernable desire to marry their deceased wives' sisters. Lord SELBORNE'S inquiries confirm the results of the previous inquiries undertaken by Lord HATHERLEY and by the Royal Commission of 1847. It may be doubted whether, if it were true that working-men are in the habit of contracting irregular unions of this kind, it would necessarily follow that the law should be altered in order to legalize them, regardless of all other consequences; but in point of fact it is not true. These unions are by no means common among the poor; and the attempt to represent the matter as a working-man's question is only an example of the miserable claptrap and reckless mis-statement which have distinguished the whole course of this shameless agitation. All the evidence on the subject shows that there are really very few people who are anxious to avail themselves of the freedom which the promoters of the Bill are so anxious to bestow on all the world, whether they care for it or not. If the Bill were to become law, a petty and almost microscopic minority would be enabled to indulge their eccentric and ill-regulated passions under cover of the law. This does not strike us as a very important or valuable object, and it is natural to ask what would be the cost of attaining it. One of the fundamental principles of the marriage law would be subverted, the whole system would be thrown into confusion and disorder, and all sorts of other relaxations would immediately be demanded. The social consequences of disturbing the principle of relationship by affinity would be painful in the extreme. The soft and gentle ties which once bound families together would be snapped asunder, and the sister-in-law would be thrust out into the same position as that of any other marriageable woman. Is it possible, as Lord SELBORNE asked, that a man should treat a wife's sisters as his own if he were allowed to marry them? And what becomes of the argument that wives' sisters would prove the best stepmothers children could have, if children are at the same time to be deprived of the care of an affectionate aunt? The deceased wife's sister people would seem, from their own account of themselves, or at least from the account given by their friends—for they are strangely shy of coming to the front in person—to be a very peculiar people. We are always being told of a dying wife who summons her husband and her sister to her bedside, implores them to get married, and joins their hands with a nuptial benediction. We may be permitted to doubt whether this is a familiar incident in real life. It is scarcely credible that even deceased

wife's sister people should be so lost to all sense of natural feeling as to proceed with arrangements for a new marriage over the death-bed of a wife. But if the marriage does not take place immediately, who is to take charge of the bereaved family? The sister-in-law who expects, or is at least exposed to, an offer of marriage from the widower is necessarily excluded. In short, there would then be only one way in which the woman admitted to be best fitted to be the guardian of the family in the hour of bereavement could assume that charge, and that would be by a hasty contract of marriage with the disconsolate widower.

Even assuming that such marriages are not improper in themselves, the social and domestic inconvenience and injury which would be produced by allowing them are a sufficient objection to any change. Apart from the general question of the expediency of legalizing these unions, there are also overwhelming objections to the Bill in which the anonymous agitators embodied their desires. It deals with only a small fragment of a subject which should be dealt with either not at all or as a whole. It unsettles everything, and settles nothing. It knocks away an important principle, and throws open the door for all kinds of relaxations and innovations. But the most objectionable and dangerous part of the measure is that which proposes to give retrospective sanction to marriages contracted in open and contemptuous and deliberate defiance of the law. It is obvious that to pass a measure of this kind would be simply to proclaim that nobody need obey the law unless he chooses, and to encourage disobedience. It would, as Lord Selborne remarked, be tantamount to declaring that a certain amount of perseverance in systematic disobedience to the law will induce Parliament not merely to alter a law, but to provide *ex post facto* legislation in favour of the whole body of law-breakers for many years past. The majority of the House of Lords against the Bill was twenty-five, or only one less than last year. Thus the House of Lords would seem to be expressing a deliberate and settled judgment, while the declining majorities of the House of Commons on the other side disclose doubt and hesitation. Under such circumstances there can be no question that the House of Lords pursued the only course that was consistent, not merely with its own dignity and independence, but with its public duty, in rejecting the Bill, and there can be equally little doubt that in doing so it represented the real opinion of the country at large. There is unfortunately no reason to hope that we have seen the last of this discreditable and unscrupulous agitation, but it may be hoped that at least its true character is now pretty well understood.

POLITICAL PORTRAITS.

A SERIES of very clever and amusing sketches of public men which lately appeared in the *Daily News* has just been reprinted in a collected form at a singularly opportune moment. It is easy to make too much of the personal element in politics; but it is an element which, if less powerful than it used to be, still exercises an important influence on the course of affairs. Indeed we have just had a striking illustration of the dislocating and embarrassing, or, to use what Mr. Disraeli calls the phrase of the hour, bewildering results which may under certain circumstances proceed from it. Agreement on a general set of principles is of course the bond of party union, but in the application of those principles there is abundant scope for the play of personal temperament and bias. "Measures not men" represents an ideal of political criticism which is neither sound nor practicable. If a measure were simply an argument, it might be tested solely on its merits; as it happens to be an executive mandate, it is necessary to consider the spirit, temper, and aims with which it is likely to be administered. In practical politics men and measures must be judged together. The author of *Political Portraits* passes in review some twenty politicians, chosen pretty much at random from both of the great parties in the State. He has apparently been a close student of recent political history, and has had good opportunities of observing near at hand the men whom he describes; and his sketches display not only keenness and penetration, but a singular freedom from party bias. A sharp incisive style and a play of somewhat caustic humour give vividness to his portraits; which, taken as a whole, remind one of nothing so much as a collection of highly finished medallions struck in steel—hard, bright, cold, and clear. Nothing can be better in their way than his sarcastic pictures of Mr. Lowe as a neglected youth who, instead of being apprenticed to a respectable trade, was allowed by his friends to throw himself away on the dead languages; of Mr. Cardwell, "the steady young man of public life, who never had a loose political thought, or an ill-regulated political passion"; of the Duke of Richmond listening with complacent curiosity while Lord Cairns explains to the Duke and the House of Lords what the Duke really meant, although he might not have known it at the time, when he spoke a little earlier in the evening; of Mr. W. E. Forster as the Mr. Facing-Both-Ways of political life and the "best stage Yorkshireman" in the Parliamentary or any other theatre of the day; of Mr. Ayrton seeing everything—Queen, Lords, and Commons—in Ayrton, as Malebranche saw everything in the Divine Being; of Lord Halifax, a small politician hung on to a great title in a way that recalls Cicero's question about his diminutive son-in-law, "Who tied Dolabella to that sword?" In describing the race of semi-ecclesiastical statesmen and lawyers who have sprung up within the last generation, the writer observes that, "although Lord Westbury has declared that he owes his success in life to a habit of Bible reading, and to the formation of his character upon the precepts of the New Testament, he does not strictly belong to this order of lawyers and politicians." We must be thankful to a writer who does so much to redeem the dulness of political controversy, though we cannot help thinking that in some instances he is perhaps more brilliant than deep, and more witty than true. His freedom from party prejudices makes the vehemence of his personal antipathies the more remarkable. Mr. Lowe and Lord Halifax would appear to be types which he holds in especial aversion. An imputation of "something of the spirit of the servants' hall" is curiously inapplicable to one so rashly candid and independent as the Chancellor of the Exchequer: and those very defects which have always been conspicuous in Lord Halifax's public appearances might have suggested a warning against the hasty assumption that he was in every way a nonentity. Lord Melbourne, replying to an attack by Brougham, once asked the House of Lords to consider what must be the nature and strength of the objections which prevented a Government from availing itself of the services of so able and eloquent a man; and it might be urged on behalf of Lord Halifax that he must surely have great private merits in order to counterbalance his obvious deficiencies in the public part of his duties. In his wide knowledge of men and things, his mastery over business and capacity for getting quickly at the heart of a question, and in the shrewd, practical sagacity of his advice, Lord Halifax is understood to have few equals; and perhaps there never was a Chancellor of the Exchequer whom the City regarded with greater satisfaction. The suggestion that Lord Cairns was unable to retain the leadership of the House of Lords on account of "a consciousness of difference and incompatibility" between himself and the peers, such as that between "the trusted professional adviser of a great family" and his employers, and that "the brisk professional manner, the knowing look, the very attitude and gestures with which he pulls himself together to make a smart reply, as from a clever agent to a grambling tenant or a troublesome mortgagee, had probably disagreeable associations for the majority of the peers, in addition to their æsthetic objections on grounds of taste and style," is a pure exercise of ingenious fancy. When Lord Cairns retired from this position his delicate health supplied a very simple and sufficient explanation of the step. It is necessary that a leader in the House of Lords should not only be unfailing in his attendance at the sittings of the House, but should be in the way of familiar intercourse with those whom he represents; and the physical demands of such a life must necessarily be trying to any one not in robust health. When the writer remarks that Lord Salisbury's "revolt against Liberal policy and Conservative tactics is a revolt against the very conditions of Constitutional Government," he apparently forgets Lord Salisbury's declaration during the Irish Church debates. "On those rare and great occasions," he said, "on which the national mind has fully declared itself, the House of Lords must, no doubt, yield; but there is an enormous step between that and being the mere echo of the House of Commons."

The writer of these sketches admits the general distrust with which Mr. Gladstone is regarded, but tries to make light of it. Mr. Gladstone, he says, has certainly changed his opinions from time to time; he has traversed nearly the whole interval between Lord Eldon and Mr. Bright, but then he has been forty years about it. A light mind would have taken the jump all at once, but Mr. Gladstone's "scrupulous patience and careful integrity" required time for the accomplishment of the journey step by step. The awkward thing, however, is not so much that Mr. Gladstone should have changed his opinions, but "that he should require to be reconverted to the same principles on every fresh application of them." The only consolation that can be suggested is, that, after all, "his defects as a statesmen conspire to lend opportunity and effect to his special political faculties"—that is to say, to his power of giving legislative force to the policy on which the nation is supposed to have determined. In other words, if Mr. Gladstone had taken up with any principles on his own account, and had worked them out for himself, he might possibly have found himself either before or behind the nation. As it has happened, however, he has always been ready to adopt any opinion of the hour, or, as the writer puts it, to execute the mandate of the constituencies. We think this is really a very fair account of Mr. Gladstone's position as a statesman. The writer sees clearly enough that Mr. Gladstone has never possessed any fixed principles of his own, and that, even when he has adopted a set of principles, he has used them only for the purposes of the moment; but he either does not see or does not care to proclaim the whole truth on the subject. "All his life," he says, "Mr. Gladstone has been thinking aloud; you see not only the premiss from which he has started, and the conclusion which he has reached, but the road by which he has travelled from one to

the other." In point of fact, Mr. Gladstone's journeys have always been the reverse way. He has invariably started from a conclusion, and then set off in search of premisses, and as the latter are not at all for his own use, but only for other people's, he has never been very particular as to what they were. The first that have come to hand have usually answered his purpose. If Mr. Gladstone were conscious of the process by which he has arrived at most of his conclusions, he would probably confess that he could say nothing more about it than that somehow they were in the air, and that he caught them as a man might catch the infection of any other epidemic. Anybody who remembers the wild and visionary reasons which Mr. Gladstone has occasionally invented in order to justify his opinions will see at once how complete is the absence of any real connexion between the two. Take, for example, his famous "flesh and blood" argument in favour of a comparatively small reduction of the qualification for household suffrage—an argument which, if he had started from it, must have led him straight away to universal suffrage; or his extraordinary proposition that an increase of voters had converted the franchise from a public trust into a private privilege which required the protection of secrecy. Nobody but Mr. Gladstone himself could suppose for a moment that he was ever in the slightest degree influenced by such absurdly irrelevant arguments in making up his mind. The truth is simply that he had already been forced by party exigencies and by the general pressure of the political atmosphere on his sensitive moral nature to the conclusion that something must be done with the franchise and the Ballot, and the hunting out of reasons was altogether an after process undertaken for the satisfaction of minds less dependent than his own on mysterious inspiration and emotional faith for their political convictions. This peculiarity of mind fully accounts for the extraordinary character of the reasons with which Mr. Gladstone sometimes startles the House of Commons, and also for their odd and inconsistent variety. It also helps to explain why the most changeable of statesmen should, when he has pitched for the moment on a policy, be the most fanatically obdurate and immovable in clinging to it. It is simply because he has nothing else to cling to. A mind that reasons can pause at any stage of the process to measure the progress it has made and test the security of its footing, and, when it has got to some final point, it can pick its way back again, step by step, and can determine how far it is wise or necessary to push a principle. But the unreasoning mind, which does not work its way logically to a conclusion, but only finds itself suddenly possessed by one, is afraid to meddle with what has come to it, as it were, in the lump, lest it should fall hopelessly to pieces. Without a firm and clear appreciation of principle, it is impossible to know what are the really material parts of any project. A member of the present Government once said of Mr. Gladstone that he hated with concentrated malignity all thoroughgoing Liberalism in every department of thought, and it is at least true that the bent of his mind and the peculiar sacerdotal groove in which it works prevents his having any sympathy with the free play of thought. He deals only in revelations of dogma which must be accepted with unquestioning faith. The reasons of the distrust with which Mr. Gladstone is regarded may be simply explained. In the first place, it is impossible to say what line of policy he may not suddenly espouse under the influence of some spasm of emotion; and, in the next place, even assuming that his policy is right, the grounds on which he may be expected to advocate it are almost certain to contain within them the seeds of mischief. Mr. Gladstone's Irish policy has been a failure to the extent to which it has fallen short of the wild and extravagant expectations for the immediate fulfilment of which he recommended it. He has excited hopes and encouraged demands of which we are already reaping some of the results.

The writer of *Political Portraits*, without apparently having much sympathy with Lord Russell, does justice to his sterling and valuable qualities. Mr. Gladstone once said very truly and generously that, if orders were given for civil as for military services, Lord Russell's breast would be studded with stars, and covered with crosses and ribands; but his achievements mainly belong to a period which is already somewhat dim and distant for the present generation. In a happy phrase the writer speaks of Lord Russell's innocent nudity of mind. He has indeed been one of the most open and candid of statesmen, and has spent his life in thinking aloud. But, however rash and inconsiderate some of his views may have been, they have always been connected with a fixed set of principles, and it is impossible not to respect the healthy, breezy freshness of his mind. Of Mr. Disraeli the writer says nothing new, perhaps for the sufficient reason that there is nothing new to be said. His "detachment from any vital interest or absorbing conviction in English politics" is attributed to the isolation of his early life, of which an interesting account is given. This freedom from prepossessions has certainly allowed free scope for the exercise of the imagination, which, as Mr. Disraeli has himself said, is in the government of nations not less important than reason; but Mr. Gladstone has had the advantage perhaps of appearing more implicitly to believe in his own convictions. The sketch of Mr. Bright is rather in the conventional style. A simple-minded writer lately took the trouble to make a list of the abuses and evils of various kinds to which Mr. Bright had at different times referred in his speeches, and to which at some later period legislation had happened to be applied, and this was presented as a list of Mr. Bright's legislative achievements. The author of *Political Portraits* appears to favour this theory of Mr. Bright's statesmanship. Mr. Bright has certainly denounced with great vehemence and persistency abuses which have afterwards been remedied; but such statesmanship as he has shown has been purely destructive—the statesmanship of the petard and the battering-ram. He has rarely troubled himself with constructive projects, and when he has tried his hand at them they have not been found to have much practical value. The most effectual way to rouse the multitude is to persuade it that it is oppressed and cheated by a privileged class, and this is the familiar note of Mr. Bright's invective. His power has been derived, not as is suggested in this volume, from his sagacious common sense and skilful oratory, but from the passionate overflowing of a kind of religious wrath which made him pursue his opponents pretty much in the spirit of a Corsican vendetta. In his latest speech, after long silence and meditation, he could do nothing but rail against the wickedness of the people who had on political questions taken different sides from himself, and he seemed to say with Jonah, "I do well to be angry even unto death." Nobody will deny that in his time Mr. Bright has done useful work, but it is impossible to forget the rancorous and splenetic spirit which prompted his efforts; and it may also be doubted whether he has not sometimes retarded rather than advanced the reforms he advocated by the personal bitterness which he has infused into every controversy in which he has taken part. This side of his character is omitted from the picture. The favourable aspect in which Mr. Bright is presented contrasts significantly with the depreciation which is applied to such men as Lord Derby and Mr. Forster. The remark of a foreign critic, that if Columbus had been half as sensible as Lord Derby, he would never have discovered America, is quoted with approval, and Nicias, who, as we are reminded, is responsible for the greatest disaster of Greek history, is suggested as one of the earliest types of the safe man. It may be observed, however, that the qualities which made Columbus a successful discoverer are not exactly the qualities most essential in an English Minister. "There is," we are assured, "no adviser so perilous as one who applies ordinary rules to extraordinary occasions," but we should imagine that it was scarcely less dangerous to apply extraordinary rules to ordinary occasions; and as ordinary occasions occur more frequently than extraordinary occasions, the opportunities for mischief in the latter case would necessarily be more frequent. And this is just the evil from which we have for some time been suffering. The daring pilot who is always running on the sands to show his wit may be an heroic figure, but the qualms of the crew and passengers are not perhaps altogether unreasonable. Most sensible people, we should think, would rather be in the hands of a steady-going family doctor, who treated a fit of indigestion with a simple pill, or perhaps with nothing at all except patience, than in the hands of one who thought it necessary to resort to heroic remedies for the most ordinary ailments. There are some cures which are worse than the original disease.

What appears to have most deeply impressed the author of these brilliant and pungent articles is the tendency of Parliamentary leaders to deterioration in intellectual capacity. "If," he says in the preface, "the impression left on the reader by these sketches is that in England, as in other countries, political affairs are, with four or five exceptions of high and signal capacity, in the hands of men of ability and character indeed, but of second-rate ability and commonplace character, it is probable that the same impression would be made yet more strongly by the habit of listening to the Parliamentary debates, and by some acquaintance with public business." And elsewhere he remarks, "The smaller arts of management and persuasion in detail, rather than the larger gifts of wisdom and authority, are becoming essential in politics." There is an obvious decline in the political intelligence of the House of Commons, and "the standard of admission to the Cabinet, as in some of our best regiments, has had to be lowered an inch or two." There is undoubtedly a certain amount of truth in these remarks, but we must say that what strikes us most is a falling off, not so much in intelligence, as in courage. It is impossible to compare the younger race of statesmen with those of the previous generation, some of whom still survive, without being struck by the hesitation and timidity and the sort of self-annihilation which are characteristic of the former; and the contrast is still more impressive if we go back another generation. It would seem to be supposed that it is no longer the business of statesmen to lead opinion, or indeed to have any opinions of their own; all they have to do is to listen for orders and to execute what is called the "mandate of the constituencies" in a smart, business-like way. It is true that under a system of popular Government a Minister can do nothing unless he carries the people along with him; but, although the people have the right, if they choose, to dictate what shall be done, it does not follow that statesmen are therefore bound to renounce their own judgment, and simply to wait for their cue from the streets. What is wanted is that public men should have the courage to think for themselves, to say boldly what they think, and to refuse to be parties to any policy which they do not heartily and honestly approve. It is the sycophancy and subserviency to vulgar clamour of which Mr. Gladstone has set the fashion which is the principal cause of political deterioration.

MOVING HOUSE.

AMONGST the miseries which for various reasons we agree to treat rather with ridicule than with sympathy, few are more acute than those connected with a change of house. It would be a

curious inquiry why any evils which in themselves are real and serious should be regarded as placing their victim beyond the circle of a common humanity. Sea-sickness involves as much unhappiness for the time as the loss, say, of a first cousin; if more transitory, it is more acute for the moment, for few people lose their appetite for a day on the death of a relation, and still less do they contemplate suicide as desirable under the circumstances. Yet one of these is almost an invariable, and the other a very common, result of sea-sickness. We sympathize, it would seem, only with those forms of suffering which are susceptible of poetic treatment; and in other cases we feel—to alter the ordinary saying—that there is a comic side to the misfortunes of our best friends. This excuse, whatever its value, is not quite sufficient to account for the callous indifference with which we generally regard the victim of a change of houses. For surely there is something poetical about the feelings of a human being torn from the building which has become almost a part of himself. He is not, we assume, about to cross the ocean, or to break off any habit of familiarity. He is merely moving to a distance of a few hundred yards because some intrusive railway has demolished his former dwelling-place; or because an increase of his family, or a desire for better accommodation, or the imperious wish of the ladies of his household, has compelled him to shift his anchorage. However slight the change may be, he is breaking innumerable threads of association, of whose force he was never before sensible. For many of them it is probable that he is hopelessly unable to account. He cannot tell how many social meetings have hallowed particular rooms for him, and left behind an odour perceptible to the imagination, if not to the senses. He can only dimly guess that certain marked stages in his domestic life have been connected in the background of his consciousness with particular rooms or pieces of furniture. He feels, but he is unable to say why he feels, that his imagination is not so easily kindled, and that his pen does not run so easily, in the new and commodious study whose charms were set before him in the most glaring colours, as in the queer old dingy room where every angle, inconvenient as it might be, had somehow learnt a language of its own. He resembles the schoolboy who was reduced to sudden imbecility when the malice of his rivals had cut off the button which he always fingered in moments of difficulty. A man grows into a house as he grows into a pair of shoes; and he feels the change like a hermit-crab dislodged from the old shell to which his figure had gradually adapted itself. There is surely something pathetic, though there is of course much that is trivial, about such sufferings. Hawthorne argues in the *House of the Seven Gables* that all this attachment to old places is an old-world superstition; and that in the coming days we shall be wiser, and change a house with the same facility as we now change a coat. Our remote descendants will revert to the nomad state, though their tents will be made of brick and mortar instead of canvas. They will scorn to be bound by sentiment to any particular plot of ground. It is hard to prophesy what may be the mental condition of our remote posterity. A day may come when patriotism and family feeling may be regarded as idle superstitions; and in that era, an attachment to any special lump of matter will be a weakness of which every luminary of the twenty-somethingth century will be heartily ashamed. But meanwhile every person in whom the imagination is not quite an obsolete faculty clings more or less to an ancient domicile. He feels a perceptible wrench upon quitting it; and is painfully sensible that he is passing one more milestone on his road to the grave. We do not grow old at a uniform rate. Our steady downhill progress is varied by abrupt descents and sudden breaches of continuity. The stream of life has its rapids and its cascades as well as its smoother stretches; and the change of a house generally forms one of those conspicuous epochs by which we count our history. It marks one of the revolutions in our little kingdom, which may be in other respects for the better or the worse, but which is at any rate a step nearer to the end. Everybody knows how the whole character of a friendly meeting is often changed by the scene in which it takes place. A dinner party which would be sociable and talkative in a room of corresponding size becomes disagreeably noisy in a smaller, and painfully decorous in a more magnificent, apartment. In the same way, by some subtle and untraceable influence, our whole system of life seems to take its colour from its surroundings; the family whom we were all glad to see in Tyburnia somehow becomes disagreeable when transplanted to Mayfair, or *vice versâ*; and our private history is thus divided into acts, in which the scenery has more importance than we are sometimes willing to acknowledge. However this may be, the mere fact of cutting loose so many old associations as are necessarily destroyed in a domestic transmigration has something almost solemn about it to the mind which is not ultra-philosophical; and an optimist would have hoped, for the credit of human nature, that the concomitant sufferings were hallowed by the deeper emotions which they typify, instead of rendering the emotion itself ridiculous.

Unluckily it is not so. Undertakers, as we know, have succeeded in making a funeral almost ridiculous and quite vexatious to the spirit of man. Upholsterers are equally successful in casting an air of ridicule upon the parting, not from a lady, but from a house. It is out of the question to adopt an air of dignity. A man leaving No. 99 in a square cannot look like a baron driven from his ancestral castle. His sufferings may be quite as deep. The poor beetle which we drive out of his cranny may feel as great a pang as a millionaire turned out of his palace. But with all our benevolence, we only laugh at him. The man, at this possible crisis of his life, is a victim to those paltry cares which we agree to treat with contempt. He is harassed by wretched little perplexities about doors that will not fit, and blinds that will not draw up, and wardrobes that persist with an obstinacy worthy rather of animated beings than of mere material objects, in refusing to fit any available corner. A day comes on which he ought to be overwhelmed with conflicting sentiments at parting from his old penates. He has rehearsed the scene in imagination, and is prepared to shed an appropriate tear on quitting for ever the spot where he took his last leave of a near relation, or where his first-born child was presented to him. Before he has time to rise to the appropriate pitch of sentiment, a rabble rout of grimy workmen has diffused itself throughout every room in his house. They are tearing down his pictures, his books, and his china with a zeal worthy of German troops taking farewell of a French village. The only emotion which is naturally suggested by their appearance is a thirst for some fluid capable of slaking throats which are exposed to continual whirlwinds of time-honoured dust. The poor fragments of furniture detached from their accustomed resting-place seem suddenly to lose their beauty like a gathered flower. The rooms themselves become dreary like a field invaded by a flight of locusts. Sentiment is obviously out of place; and the only hope is to preserve sufficient temper whilst endeavouring to appeal to the tender mercy of those tyrannous invaders. The wretched householder feels himself to be little more than a useless obstacle, which has no real right to exist. He has fondly trusted in promises that his new abode will be swept and garnished in a surprisingly short space of time. If from want of experience he has been rash enough to put some kind of faith in these lavish assurances, he is speedily and rudely undeceived. A dreary and irritating period is in store for him. If he retires to some remote refuge, the whole ingenuity of his tormentors will be racked to put everything where he particularly wished that it should not be. If he remains at his post heroically, he will be tempted to think that furniture, as Butler thought of nations, may go mad; and he will be driven to the misanthropical conclusion that nobody ever keeps his promises, and in particular that that model of his species, the British workman, means, when he says that he will do a thing to-day, that he will begin to do some part of it to-morrow week.

What, to select one special scene of misery, can be more wretched than the fate of the man who really loves his library as every good man should do? We do not speak of libraries in the grander sense of the word—of collections of rare and precious editions, or of solid masses of literature which require special edifices to contain them. The fortunate proprietors of such libraries may be assumed to be rich enough to pass over their troubles to other people. We are thinking rather of such a modest library as frequently twines itself round the affections of a man of moderate means. It contains books upon which he has scrawled caricatures of his schoolmasters; and prizes marked with the arms of the college at which he distinguished himself; and miscellaneous books of no great value, but interesting because they have been picked up at bookstalls, or in out-of-the-way Continental towns; and cheap editions of celebrated authors which have been companions of travel and have provided amusement in leisure moments; with just a sprinkling of more ambitious volumes, which he has ventured to buy whilst carefully counting the cost. In the course of a few years each book has found its own appropriate nook on the shelves; he could find it in the dark, and would miss it if it were kindly borrowed by a friend; the whole library has acquired a certain organic unity; and even whilst quietly sitting in his chair he can imbibe the aroma of each division by allowing his eyes to ramble aimlessly over the familiar books. When it has been transported by the rude hands of illiterate workmen, who regard a book as though it were simply a thing, and has been shot down on the floor with no more ceremony than coals are deposited in our cellars, the sight is as pathetic as the mangled remains of an animal. It requires some nerve to begin the weary task of once more reducing chaos to some new kind of order, which yet cannot for a long period be as familiar as the old. It shocks one's sense of propriety to see the strange discords which have been produced by the fortuitous combinations of thoughtless hands. Stray volumes of Voltaire are mixed up with Butler and Jeremy Taylor; Shakespeare is being crushed under a pile of Blue-books or treatises on Political Economy, and Charles Lamb suffocated amongst a crowd of the books which no gentleman's library should be without. And then, as he turns over the volumes, he is lucky if disagreeable revelations do not obtrude themselves. Possibly he will discover that some of his cherished treasures bear the uneffaced inscription of a friend's name; and he will have to choose between conscious dishonesty and superhuman heroism. Then he will find presentation copies of poems, which he foolishly omitted to acknowledge by return of post, and dared not acknowledge afterwards, and which now stare him in the face with a reminder of neglected duties. Elsewhere he has a melancholy thrill as he turns up again some ponderous volume of history or science, speaking of studies of which he zealously entered the portal, but somehow failed to get much further. There are books that recall friendships now dead and buried, and files of dusty pamphlets reviving old scenes of intellectual contest in which he wasted his powers; and books which he reviewed abusively when he ought to have discovered the advent of a new genius, and many

more to which he was unduly clement when he ought to have *slashed* them with critical vigour; and possibly writings of his own which have been forgotten by everybody but himself, and which he had wished to forget also. But it would be endless to speak of the associations which may be suggested by once more disturbing the slumbers of the works that were resting so peacefully on their shelves. Nobody can have gone through such a task without many pangs of more or less acuteness.

A library is doubtless the most living part of the contents of a house. Nothing else excites so many emotions in the bosom of the wretched being doomed to leave his house. Yet his sufferings are generally treated with ridicule, and he is blandly informed that things will shake down and all will come right in that singularly indefinite period, "a day or two." It may be so; but human life does not include a large number of "days or two."

EXTINCT JOURNALISM.

ONE of the most interesting objects of the South Kensington Museum during last summer was the glass case which contained specimens of the successive editions of the *Times*. Visitors learnt how that journal gradually expanded from modest shape and indifferent letterpress to its present ample proportions; and they might also picture to themselves the transformation of the journalist from a mere chronicler of passing events to a leader of thought and civilization. But it would have been more interesting if the case could have been opened and the volumes inspected. We shall now endeavour partly to supply the gap from some volumes of a deceased journal which have fallen into our hands, and which have the double merit of containing a faithful picture of the social habits of our grandfathers in England and in India.

Towards the close of the last century a weekly paper was started in Calcutta, known to several generations of Anglo-Indians as the *Hurkaru*. The nearest English translation of this title would be the "Courier." After a time the weekly issue was exchanged for a daily; the circulation increased; the paper flourished; some of the best names in Eastern journalism used it as their vehicle of expression; and it recently ended an existence of more than seventy years by absorption into another contemporary. It appears to have occurred to the editor of the *Hurkaru* in its first season of 1795, that a few woodcuts would enhance the merits of the paper; and accordingly in the first page there is the figure of a man with the motto *Pede fausto*, intended to represent the well-known courier or runner who, before the days of mail-carts and railroads, carried the correspondence of the public all over the peninsula. In reality this person is a wiry, dark-skinned, and perspiring native, who, with a minimum of clothing and a wallet slung over his shoulder, runs a post of six miles in the space of an hour and a quarter in fine dry weather, and in two or, it may be, three hours, when ways are foul. The figure in the woodcut is, on the contrary, that of a well-fed and portly person adorned with a turban and clad in a coat and wide Turkish trousers, resembling the traditional Levantine pirate of a ballet or a burlesque. The absurdity of this appears to have attracted notice, for after a few issues this figure disappears, though the motto remains. It is tolerably clear that other illustrations were not drawn on the spot on stone or wood, but were supplied from England, and inserted without the slightest regard for dramatic propriety and consistency. A mansion in "Chouringhi," and a lower roomed house (*i.e.* a bungalow) with a flat roof, near "Tiretta's bazaar," are facsimiles of the red-brick house tenanted by the village doctor or attorney in a post town in England; a horse is advertised for sale, led in by an English jockey in topboots and a striped waistcoat; and the auctioneer himself, clad in a wig of Dr. Johnson's type, appears at a table, nodding to well-dressed Englishmen and Englishwomen, instead of to the motley crowd of subalterns, civilians, and native clerks that frequent a Presidency auction mart. We must premise that, for political reasons which we need not stop to explain, the selection of topics was comparatively limited. The Indian press was not practically free until the reign of Lord William Bentinck, nor legally enfranchised until the administration of his successor, Metcalfe. Editors were not allowed to discuss measures affecting the discipline of the native army, or such sacred subjects as the religious feelings of the natives, the good faith and loyalty of our allies, the motives of Governors and Councils, and the foreign policy of the Empire. The papers were consequently made up of advertisements, official and social, items of local news, storms and atmospheric phenomena, and very copious extracts from the European journals. It would be useless to ransack the files of a Calcutta journal of the last century to find out what the editor thought about Scindia or the Oude princesses, or what were the views of the Anglo-Indian and the native community as to the equality of all men in the eye of the law. But it would be no difficult task to say how our predecessors lived and amused themselves; what wine they drank, what books they read, and what strange customs they either tolerated or cherished. Lotteries on a grand scale were in fashion, and were patronized by gentlemen "of the first respectability," leading merchants, civilians, and barristers. The number of tickets varied from 3,000 to 5,000. Each ticket cost rather more than 10*l.* The prizes were 500 or sometimes 1,000 in number; the blanks from 2,500 to 4,000; and in the former were single sums of 10,000*l.* and 5,000*l.* and batches of nine hundred averaging 15*l.* each. Then gentlemen are invited to take tickets in a lottery for a "garden house," sum total 800*l.*, at eighty tickets of 10*l.* each. Private and public theatricals were then, as now, a resource against ennui. Residents are told to subscribe to a new comedy in five acts, termed *The Mirror*, "the scene of which is laid in Calcutta." H.M.'s 70th Regiment was to give *The Reprisal, or, The Tars of England*, followed by the farce of *The Old Maid*, and the editor patriotically reminds his readers that the parts will be filled by the same veterans who had lately distinguished themselves on the Mysorean Theatre at the representation of the Siege of Seringapatam.

The following examples of the severity of our criminal code ought to be remembered by all who wish to appreciate the labours of Romilly and Brougham. The sentences, we must observe, were not passed by an Indian magistrate in the interior, administering a barbarous relic of Mahommedan dominion without the aid of a barrister or the publicity of a press, but they emanated from learned judges dealing out law as it would have been dealt out by Lord Kenyon or Lord Mansfield. Two natives "of the Gentoo caste" convicted of stealing in a dwelling-house at Madras, were executed; and the same fate was experienced on August 11, 1795, by five Portuguese and one Hindoo, convicted of burglary. They were hanged "at the meeting of four roads near the office of the Justices of the Peace," in presence of a military guard of Englishmen and Sepoys, and "an immense concourse of people." About the same time one Lochan, for stealing half a gold-piece and some silver ornaments, was publicly whipped in the Burra Bazaar, and one Kanai Dŏh was also whipped from the south end to the north end of the same locality, and then back again. An Englishman for a like offence was similarly chastised, but privately, and all three prisoners suffered imprisonment besides. Two privates of the 3rd European battalion, for numerous robberies, were imprisoned for two years and burnt in the hand. At Bombay two natives had each fifty lashes and stood in the pillory; and for the serious crimes of mutiny and sedition five Sepoys were blown away from guns, and three were hanged. Our catalogue ends with the Governor of Madras—a Lord Hobart then as now—under some judicial powers which the Executive exercises to this day in certain cases, sentencing a servant of the Nawab of the Carnatic to capital punishment for having ordered a man to be flogged to death. We gather, however, that, in consideration of what the French term "des circonstances atténuantes," the extreme sentence was not carried out.

If judicial penalties were then very different, petty or local events were occasionally very similar to what may be read in any Indian journal to this day. We are told, for instance, of a violent storm at Chittagong, which had levelled bungalows, torn up trees by the roots, stranded or sunk half-a-dozen sloops, killed a "great number" of natives, but only injured "one gentleman"; of a like disaster at Ganjam on the Coromandel coast; of an alligator which had swallowed a colt; of two gentlemen drowned by the upsetting of a *budgerow*; of a complaint against certain Balasore bearers—*i.e.* domestic servants from a district of Orissa—who refused to touch a tallow candle for reasons of caste. We read how the heat in April had been 100° in the shade at 3 P.M., and how the crop of pepper had failed on the Malabar coast; how Mr. Erskine's speech in defence of Hardy had been received too late for insertion in "this morning's issue"; how perjury ought to be made a capital offence, because natives "stick at nothing"; how Mr. Squaretoes (*sic*) had been driven to distraction for fifteen sleepless nights and tedious days because his neighbour had collected a large supply of ducks, geese, and pigs for his sea stock, in addition to fifty noisy native carpenters; how one Captain Hay authorised the editor to deny that he was about to give a ball and supper on board of his ship, on the ground that it had been set on fire by a native craft, and the fire had been promptly extinguished; how Agrostis was prepared to enliven the pages of the *Hurkaru* with sketches of "General Ecclesiastical History"; and, lastly, how a subscriber in the year 1796 exhumed from his correspondence a letter written many years before, describing, first, the death of one Gokul Chandra, who had been the Banian of Governor Verelst, on the banks of a muddy creek, and then, immediately afterwards, the sacrifice of Gokul's young wife, aged twenty, by the well-known rite of Suttee. This contributor adds that he read the letter to a near relation of Gokul, who admitted that he had stood near the pile, and that everything happened just as described at length.

From Suttee, and alligators, and tropical heat, and Anglo-Indian customs, we turn to the picture of social life in England presented by the copious extracts from the journals of the day. The press seemed to have filled its columns by proceedings in Parliament, by speeches on political and other trials in the Court of King's Bench, and by extracts from Continental papers about the Stadtholder, the Seven United Provinces, and the French Revolution and Convention, varied by poetical epitaphs on distinguished personages, and contributions from Pye, the Poet-Laureate. The journals most quoted are the *Star*, the *Morning Herald*, and the *Sun*; and, occasionally, the *Leyden Gazette*. Leading articles are not very common, though we do find divers patriotic effusions about defence against the "common enemy," and invectives against "adulation offered, with the most degrading servility, at the shrine of the Corsican." This last appears in a short article of the *Hurkaru* itself, but it is capped by a lengthy obituary notice in England, of the Royalist Bishop of Arras, who had been "hated and persecuted by the Corsican assassin and poisoner." About the same time we find a meeting held at the Thatched House

Tavern in St. James's Street regarding the measures to be taken to protect the country from invasion. Mr. Wilberforce, Mr. Sturges Bourne (of whom Sydney Smith wrote in the Peter Plymley Letters that he would burn his capitulating hand like Scævola), Lord Hood, and Lord Camden, were present. Lord Hawkesbury, from the chair, declared that the "danger with which the country was now threatened exceeded that which had been experienced at any other period." The greatest loyalty and unanimity prevailed. The carters of London offered 1,000 horses and 420 carts or waggons, whenever called on. Jobmasters declared their readiness to allow the nobility and gentry to devote horses, when on hire, under certain conditions, to the same object; and schedules were circulated both at the meeting and in the districts near the metropolis, to be filled up with carts and horses by patriotic persons. Mr. Secretary Yorke, it is to be observed, had already offered his "chariot and horses," holding three inside and one out, with the service of "his own coachman" to boot. About the same time we have an account of a Lawless Court held by the owner of the manor of Rochford, in Essex. The proceedings took place at midnight, on the first Wednesday after Michaelmas Day, in the open air, on King's Hill. Everything was done in whispers; the minutes were written with coal, instead of pen and ink; and absent tenants were fined double their rents for every hour's absence. This custom, we are told, was intended to keep up the remembrance of a conspiracy of the inhabitants against their absent master, detected by him on his way home. Then Blanchard, the aeronaut, makes his sixty-sixth ascent, with nine other persons, 1,500 feet above the earth, where four ladies and four gentlemen dance a quadrille, until compelled to descend by the illness of three of the party. A Mahommedan jubilee takes place at St. George's-in-the-East, along the New Road, Cannon Street, Ratcliff Highway, and Shadwell; it was characterized by pantomimic dances, incense, and hymns from the Koran, and was intended to celebrate the commencement of the New Year and the translation of Mahommed into Paradise. The Duchess of York, the aunt of our Queen, faints during divine service at Weybridge, to the dismay of the congregation. A woman died at Abbey Lanercost, named Jane Forester, in the one hundred and thirtieth year of her age, who remembered the sale of a horse's head for half-a-crown during the siege of Carlisle by Cromwell in 1647, and who had a daughter living aged one hundred and three. Particulars are given of the execution of Robert Watt at Edinburgh. The prisoner was drawn on a hurdle from the Castle to the Tolbooth with his back to the horse, the executioner being seated opposite, with a large axe in his hand. Death was inflicted by hanging, but the body was cut down and stretched on a table, when the executioner severed the head at two blows, and displayed it to the multitude as "that of a traitor." It is a relief to turn from this picture, crowded with sensational details which we do not care to reproduce, to a critique on the "girls of the period," or what are termed "the masculine women of fashion." "Their hunting, shooting, driving, cricketing, faroing, and skating present a monstrous chaos of absurdity; not only making day and night hideous, but the sex equivocal." Further, we have notices of a fine young fellow, of respectable parents, who, having robbed a pieman of some halfpence on Hounslow Heath, was sentenced to death, but pardoned on condition of serving in the Royal navy; of the rise of the Chouans on the Loire and in Brittany, who were first smugglers and then Royalists; of the trial of Horne Tooke, and of the acquittal of Hardy, when Erskine's coach was dragged home in triumph by the spectators, in spite of his protests; of the completion of the telegraph from the Land's End to the Nore; of the death of Big Ben Bryant the pugilist, whose fistic merits are immortalized in a poetical epitaph as "bold Johnson's dread and Britain's glory"; of the hounds of Sir C. Turner, who hunted every other day for the amusement of the English forces at Arnheim on the Continent; of divers duels, and trials consequent thereon, which generally terminated in a prompt acquittal; of a sermon preached to the Loughborough Volunteers, embodied for the purpose of "fighting against the common enemy"; of the death of Prince Lee Boo and the joy of the islanders thereat; and of the intended abolition of the tax on "card-money," which is denounced as "an imposition upon hospitality, and an insult to friendship."

We could multiply extracts, but have only room for one more topic, and that is the marriage of the Prince of Wales. The anthem performed on this occasion was composed by Handel for the Prince's grandfather, Prince Frederick. The ceremony is described with all the fulness and liveliness of detail usual with Court chroniclers. We have the dresses of the bridesmaids; the tears shed by the Prince, when the King kissed him no less than thirty times; and the civility of the "first gentleman in Europe," who made Lord Harcourt a present of his own hat. Of course the Court muse was not silent, and some magniloquent lines describe Apelles painting Venus; and then declare that, had Caroline of Brunswick lived at that time, the Grecian painter, instead of combining the charms and graces of several maids into one, would have made "his finished plan" from her alone. Some ill-natured remarks are attributed to Lady J.—evidently Lady Jersey—regarding a certain duke and duchess; the demeanour of the Marquis of S—— is particularly described; and it is noted that one of the "Veteran Corps of the Maids of Honour" was distinctly heard to say "Amen" at one part of the ceremony. These incidents were confined to the proceedings inside the Chapel Royal. Outside, we regret to say, there was a little unpleasantness. For, though Mrs. Fitzherbert's empty White House was the first illuminated in Pall Mall, "with *green* lamps, branched like a forsaken *willow*," the chair of the Earl of Chatham was smashed to pieces, and his lordship had to "bolt" into the shop of Carr, the Pall Mall hatter. Lord Mansfield was "roughly handled," and termed one of the P——'s guinea-pigs; and the Marquis of Buckingham, who had forgotten that it was a night of rejoicing, had his memory jogged by the populace in "their rough manner." It must be confessed that these reminiscences have a disagreeable flavour about them, when illustrated by the subsequent career of the Royal couple. A considerable gap in morals and manners separates the end of the last century from the era of Victoria. But the difference between the rule of Lord Cornwallis or of Lord Wellesley in India, and that of Lord Northbrook, is in reality that not of eighty years, but of some two centuries of progress.

THE ANCIENT MONUMENTS BILL.

WE hinted some time back that Sir John Lubbock, at once banker and antiquary, who had done so good a turn to the bankers, was likely to do as good a turn to the antiquaries also. We have before us the fruit of his praiseworthy purposes in the shape of a Bill "for the Preservation of Ancient National Monuments." It wears on its back the names of four other members besides Sir John Lubbock himself, and the appearance of Mr. Beresford Hope and Mr. Osborne Morgan as fellow-workers may perhaps be taken as some sign that the proposed measure is not of a sectarian or partisan kind. How far the proposal of Parliamentary interference to save some at least of the ancient monuments of the land has been at all caused by the cry which went up at the late brutal havoc at Dorchester we do not pretend to guess. At any rate, here is a measure which, if it becomes law, will at least do something; and, where as yet nothing has been done at all, it will be a great point to secure the doing of anything.

We do not undertake to examine the technical framework of the Bill. It provides a Commission, to consist of the Enclosure Commissioners, strengthened by certain other persons likely to take a special interest in ancient remains. These Commissioners will have full immediate powers for the preservation of certain monuments named in the Bill, and they may, under certain circumstances, acquire powers for the like preservation of two other classes of monuments. We presume that it is expected that the work of the Commission will practically be in the hands of the experts, and, as the persons named are likely to be found in parts of the United Kingdom very far removed from one another, it is kindly provided that they shall be able to act without in every case meeting face to face.

We assume that the list of monuments which is added to the Bill, and to which the powers of the Commissioners are to be applied at once, is meant to be only tentative, and that the framers of the measure will be glad of any suggestions for the increase of the list. A clause, of which we shall presently speak, provides for the extension of the powers of the Commissioners to other monuments besides those named in the Act, but it will clearly be better to name as many as possible in the Act itself. On looking through the list, our first notion was that it was meant to be confined to what are commonly known as primæval monuments only. Almost the first thing that we looked for in the list was Dorchester Dykes: as they are not there, we suppose that they are by this time too far gone for any mortal Commissioners to preserve them. But the amphitheatre at the Dorsetshire Dorchester is put down in the list. It is therefore not intended to exclude Roman remains as such; and, if so, we at once ask why the list of Roman remains is not much longer? To begin with the greatest work of all, why is not the Roman wall put under the protection of the Commissioners? If the Dorchester amphitheatre is to be preserved, why not those at Silchester and Caerleon? Why not Silchester walls, and all that is within them? Why not Wroxeter? Why not Burgh Castle? The multangular tower of Eboracum may be thought to be safe in the keeping of the Yorkshire Philosophical Society; but there is another piece of the wall of the city which may well need protection: so there is at Leicester: so there is at Lincoln; the Newport Gate, if not quite the peer of the *Porta Martis* of Rheims or the *Porta Nigra* of Trier, is worthy of keeping, both as a memorial of the colony of Lindum and as the arch of triumph through which the Conqueror must have marched to take possession of one of the noblest prizes of his warfare. If any of the monuments of the land are held to need legislative protection, is Anderida itself, the spot which Briton and Roman, Englishman and Norman, may alike claim as their own, to be left without a defender? These are all spots which occur to us on the spur of the moment as spots, which if Roman remains are to be admitted, ought to hold a high place in the catalogue. Further research on the suggestions of persons familiar with various districts might doubtless make the list much longer.

Indeed even among the primæval monuments themselves there are some omissions which surprise us. Stonehenge of course is there and Avebury and Kit's Coty-House, the cromlech in Gower which fantastically bears the name of Arthur, and the scene of his real victory at Badbury. The two famous *giants'* chambers, Uleybury in Gloucestershire and Stony Littleton in Somerset, are both there. But the vast hill-fort of Worlebury, where Ceawlin overcame the Britons, and where the researches of Mr. Wairs brought to light the skeletons of victors and vanquished as

they fell in the grasp of death, finds no place in the list. Yet few monuments better deserve protection, and few need it more keenly, damaged as it has been already, and threatened as it daily is with utter destruction. Devonshire and Cornwall, out of all the remains with which Dartmoor and the Land's End district are studded, contribute only one monument each—the Three Hurlers in Cornwall, and the Grey Wethers in Devonshire. The primæval antiquities of South Wales are not summed up in the one cromlech of Arthur's Quoit; to mention one only out of twenty, there is a huge monument of the same class near Dyffryn, in Glamorgan, which, if Sir John Lubbock does not know of, the Home Secretary may. To be sure, under the third clause of the Bill it would be possible to include all these monuments and any others of the same kind within its operation. The clause runs thus:—

> This Act may, with the consent of the Treasury, and subject to appeal, in the manner hereinafter in this Act provided, be applied by the Commissioners to any British, Roman, or Saxon remains, or to any monument which is in the opinion of the Commissioners of the like kind as any of the monuments specified in the said first schedule, and which is not situate in any park, garden, or pleasure ground, and which neither is nor forms part of nor includes the ruins of any castle, fortress, abbey, religious house, or ecclesiastical building.

We confess that we should be a little puzzled if we were called on to define British or Saxon remains. What is to become of those who, not without strong show of reason, hold cromlechs and such like to be the works of a race earlier than the Britons? What will become of those sticklers for accuracy who might argue that in Yorkshire or Lincolnshire there could not be such a thing as a Saxon monument of any age, while in Hampshire or Somerset the name would apply to a work of yesterday? To be sure the words which next follow have a sanatory force, as they take in "any monument," whether British, Roman, Saxon, or anything else, "which is in the opinion of the Commissioners of the like kind as any of the monuments specified in the said first schedule." This would of course take in anything, without offence to the Danish antiquaries at the one end or to Mr. Fergusson at the other. Still it is better to avoid a clumsy and antiquated nomenclature, if it can be done. Yet perhaps talk about Saxon remains is not wonderful in a Session of Parliament which has listened to the proposal to shut out "Modern History" from University teaching, without its authors deigning to tell us at which of the many proposed dates from the call of Abraham to the French Revolution the line between Ancient and Modern History is to be drawn. This same clause, it will be seen, leaves all military and ecclesiastical remains unprotected; indeed we are not sure whether the word fortress might not shut out some of the Roman buildings for which we have already pleaded. We should be glad to put mediæval remains under the same protection as primæval remains. To destroy Tintern Abbey or Chepstow Castle would surely be as great an act of barbarism as to destroy Stonehenge itself. Still we are not disposed to find fault, as our feeling is rather that of thankfulness if we can get anything at all preserved; and it strikes us that the words which shut out castles and abbeys and churches would take in domestic buildings, if they are "not situate in any park, garden, or pleasure ground." Through this provision we might possibly find a loophole for saving here and there a few examples of a class of monuments which stand in greater danger than any other.

There is further consolation for us in Clause VII. The two classes of monuments of which we have already spoken—those namely which are put in the schedule and those to which the Act may be hereafter applied by virtue of Clause III.—may under the further provision of Clause VI. be put under the care of the Commissioners without the consent of their owners. Clause VII. seems further to allow the Act to be, with the consent of their present owners, applied to monuments of any class or of any date whatsoever:—

> This Act may, with the consent of the Treasury, be applied by the Commissioners to a monument of whatsoever kind and wheresoever situate, if the following persons give their consent to its application, namely:—
> (*a*) The occupier or occupiers of the site of the monument; and
> (*b*) Every person entitled to any beneficial interest in possession of the site of the monument, &c.

And other means are provided in the same clause by which the Commissioners may become possessed of monuments of any kind. A man may seemingly sell his castle or abbey to the Commissioners as much as his cromlech or his amphitheatre. Or a prudent father, who fears that his son may have less respect for antiquity than he has himself, may under another part of the same clause make over his interest in the monument to the Commissioners. The Bill, in short, will at once secure the preservation of certain classes of monuments, and it will make the preservation of monuments of any class a much easier business than it is now. Primæval monuments are to be put under what we may call compulsory protection; the protection of mediæval monuments still remains optional; but the Bill will make it much easier to preserve them from the caprices of momentary owners.

We need not go into the details of the powers which the measure confers on the Commissioners. But they come generally to this—that no "injury" will be allowed to be done to any monument brought under the Act without the consent of the Commissioners; and that if any question arises between the Commissioners and any one who thinks himself aggrieved by anything that they do, there will be a power of appeal to one of the superior courts of law or equity. It should be noted that the word "injury" in this Bill is used as a technical term, with a meaning which is defined in an explanatory clause. It has a rather odd sound when we hear of a person designing to "injure" a monument and of the Commissioners giving their consent to the "injury" of the monument. We might here stop to make a discourse on the abuse of language. In etymological strictness it can never be right to do "injury" to a monument or to anything else, because "injury" (*injuria, ἀδικία*) in itself implies something morally wrong, while to do mere physical harm or hurt (*damnum, βλάβη*), whether to a monument or to anything else, may often be needful. People talk nowadays of a man having received an "injury" in his bodily frame, though it may have been done by sheer accident or in the most righteous operation of war; yet the word still keeps so much of its old force that there seems something queer when we read of a man deliberately purposing to "injure" anything, and of a public body giving their consent to his doing so.

It is clear that the measure might well have had a wider sphere, although the compulsory preservation of mediæval monuments is, as things are, impossible; yet at least it would have been a gain greatly to enlarge the list of primæval monuments to which the Bill is to be applied at once. But perhaps it is not wise to ask for too much at once. It may indeed fairly be asked that the list may be enlarged in Committee. While we still cherish the hope of some day getting yet more, the Bill will at all events give us a great deal in a department in which we have hitherto had nothing.

ITALY FOR NERVOUS PATIENTS.

IT is presumable that every state of society contains some rough provision for the evils peculiar to it. Thus it is commonly recognized that one distinguishing bane of our present civilization is the great liability to excessive brain work; and its accepted remedy is a foreign tour, which has only recently become a possibility to a considerable number of persons. The reasons for adopting such means of restoration for those who are not physically incapacitated for travel, and to whom change of scene and agreeable diversion are more than a vacuous repose, are self-evident. They apply moreover with especial force to the inhabitants of a climate which M. Taine has recently painted with such merciless fidelity. There seems, too, to be every probability that these mischievous effects of our modern struggle for existence will, for some time at least, be on the increase; and one may therefore reasonably expect to find a growing number of the highest class of vertebrates seeking the remedy of disordered cerebrum in that species of irregular migration known as modern touring.

That Italy should so commonly be selected as the aim of these migrations is natural enough. The class of invalids to which we now refer is largely recruited from the professional ranks of society, and may be supposed to possess some amount of historical culture and artistic taste. To such minds no other country, one supposes, offers the same extent and variety of interest. A slight acquaintance with classic history will suffice to invest with attractive associations the ruins of Rome and Pæstum, the charming bay of Baia, and the beautiful shores of Sicily. The least artistic minds, too, may find some variety of pleasure among such copious treasures as the sculptures and bronzes of ancient Rome, the mural paintings of Pompeii, and the many fine pictures of the several Italian schools. In addition to these relics of the past, we find in Italy a natural scenery, a variety of race, a set of costumes and manners, and a form of language which are pretty certain to present points of interest to the artistic, the scholarly, and the simply curious order of minds. Not only are there offered these ample and various enjoyments, but also a climate that permits one to take the fullest advantage of them. Although, as every traveller in Italy knows, winds may at times be very bleak, and rains heavy and persistent, and during these inclemencies but little of our wonted domestic comfort is to be obtained, yet one is rarely precluded for many days in succession from all outdoor excursions. Finally, the less robust traveller may find here a tolerable amount of social order, and some of the newer conveniences of modern civilization.

The bare enumeration of these sources and conditions of enjoyment seems enough to justify the high reputation that Italy has obtained as a grateful minister to jaded minds. The hard-worked professional man who, tied by his duties at home, casts a wistful glance at his map, and fondly supposes that two or three months in the sunny Peninsula would restore nervous energy and mental tone, appears to be simply rational in his view of things. Yet here as elsewhere one strongly suspects that fancy is apt to paint the remote and unattainable in hues a little too brilliant. However certain it may be that a tour in Italy affords abundant variety of pleasing diversion, it is commonly attended with a few little drawbacks which are rarely perhaps taken into account by the class of invalids who hope to profit by its salutary influences.

For example, it appears certain that diversions which are intended to refresh minds already fatigued should not themselves be wearying, and it may well be questioned whether the sights of Italy satisfy this condition. It may be a comparatively easy matter for vigorous minds to content themselves with a sufficiency of interesting objects, even when there remains a large number close at hand still unexplored. But to many nervous persons this kind of self-denial is far from easy, and may act in a very injurious manner. A man who finds himself in possession of two or three months for seeing Italy easily gets infected with the prevailing tourist craving to see all. He is constantly goaded by the re-

flection that he may never have another opportunity of visiting places teeming with interest and easily reached; he becomes confused and distracted by the competing claims of city and gallery, ruin and natural scenery, as he hears them set forth by the different people he happens to meet; and out of this *embarras de richesses* flows new vexation for his irritable spirit. As a kind of amusement particularly liable to this fatiguing effect we may instance the vast picture-galleries of Florence and Rome, Venice and Milan. Few persons would like to admit with Mr. Spurgeon that they found nothing impressive in these collections. Yet, if everybody were exactly honest, we suspect that very many indeed would confess to having received little but a blurred, confused impression from most of their visits to these treasures of art. A person may possess real artistic taste, and yet experience the distracting and exhausting effect of trying to gain in the course of a few hours a clear and permanent conception of the best examples of such numerous productions. The very heterogeneity in subject and treatment of these modern galleries greatly adds to the indistinctness of the impression. Any one may see this by comparing with his recollection of one of those large and miscellaneous collections the impression left by such a limited and harmonious series of pictures as that in the monastery of St. Mark at Florence. After visiting this quaint laboratory of devotional effort, one is half inclined to regret the necessity of our spacious galleries with their almost depressing abundance and incongruous juxtapositions. It may seem very heterodox, yet it strikes us that only robust nerves are fitted to derive any considerable pleasure from this sort of sightseeing.

Even if this objection to touring in Italy be deemed frivolous, there are other sources of annoyance which most persons familiar with the country will admit to be real. We need not refer to such obvious little sacrifices as are involved in defective postal arrangements, the difficulty of obtaining one's customary light literature, the curious non-adaptation of Italian dwellings to inclement weather, and so on. We may presume, too, that our over sensitive traveller is not troubled with Mr. Spurgeon's irritable Protestantism, and that he is able to view with tolerable composure the many constant reminders of Catholic faith and priestly ascendency which he finds there. Assuming simply that he has fine moral instincts and deep sympathies with modern progress, we may be pretty sure that not a few phases of Italian character and life will prove uncongenial, if not irritating. It will be found, for instance, that although many of the common people work very patiently, the particular class with which the tourist has most to do exhibits a preference for indolence which easily appears vicious to our more energetic Northern temperament. So, too, their facility in misrepresentation of fact and invention of fable, practised for the express purpose of obtaining more of the *forestiere's* superfluous money, is a little trying even to minds of a robust type, and can scarcely fail to wound the morbidly sensitive spirit of invalids. It requires some strength of will to suppress the imagination that the whole troop of padroni, ciceroni, cocchieri, &c., are in secret league against the traveller's pocket; and such an idea, when it gains a certain persistency, can easily neutralize the cheering influence of many days of Italian sun. A lively self-interest, quite apart from disinterested sentiment, is sufficient to render the sight of these unsocial practices exceedingly depressing. The higher order of feelings, again, are apt to be wounded by the display of such offensive qualities as cruelty to animals. One may encounter elsewhere striking instances of indifference to brute suffering. We have seen in the course of a single walk in the streets of Berlin an amount of cruelty to horses that was really sickening. But we would fain believe that no such uniform torturing of draught animals as is to be witnessed in Southern Italy can be found in other countries having any pretence to the rank of civilized nations. Other moral attributes which disclose themselves to the more reflective observer are scarcely less painful to notice. For example, the prevailing want of a spirit of self-dependence and honourable pride in the lower classes cannot but pain a mind trained to regard these qualities as among the most valuable social virtues. It may perhaps flatter the unthinking vanity of some persons to have groups of abject poor cringing and fawning for the chance of a few soldi, but we imagine that to most tourists this interested servility can only prove offensive. In any case it would seem that the frequent experience of these hollow deferences must either debase or afflict the mind of the recipient. How often the former of these effects results will be estimated by those who are familiar with habitual travellers.

It may easily appear to those unacquainted with Italy that its disagreeable features are here unduly emphasized. And some apparent ground for this supposition may be found in the comparative silence of tourists on these points. The causes of the common unwillingness of people to dwell on these unamiable sides of Italian travel are not perhaps difficult to find. Most persons are apt to forget the drawbacks that accompanied a rare and delightful experience, even though at the time they were felt with considerable force. And it must be added that the Italians themselves are eminently qualified to allay one's irritation at some of their egregious faults. More particularly the artistic feelings of the traveller are very apt to go over to the side of the enemy in opposition to his moral sentiments. The many charms of costume, action, and light-hearted speech that invest this race seem to predispose the observer to regard them as Nature's spoiled pets, whom it would be harsh to condemn on strict Northern principles. However convinced the wary traveller may be that behind all the fascination of lustrous eye and graceful gesture, and the many honeyed devotions of speech, there is lurking a very decided plan of impoverishing him to the utmost, he finds it hard not to be entertained by the spectacle, at least in retrospect.

Yet, allowing the full force of these palliative considerations, we must still look on the evil as a very considerable deduction from the hygienic value of touring in Italy. To a person afflicted with a morbid degree of irascibility the frequent encountering of these anti-social dispositions, however prettily masked, is certain to be tormenting; and, as a matter of fact, we are inclined to believe that the process of recovering nervous tone has frequently been retarded by the sources of irritation we have been describing. If this be so, it appears worth while to have called attention to them. The ample recognition of them need not of course drive us to the conclusion that a sojourn in Italy is undesirable for the nervous patient. There can be little doubt but that, if he possesses sufficient width of sympathy, the abundance of beneficial diversion will more than counteract the effect of these disagreeable experiences. It may, however, be seriously questioned whether on the whole Italy offers as much salutary recreation as some other pleasant regions of travel which exhibit a more worthy type of society. And, finally, even if this were established, it might still be desirable for persons anticipating benefit from this means to be fully alive beforehand to the existence of its unfavourable concomitants.

MARRIAGE IN THE FIFTEENTH CENTURY.

"WHAT a sad waste of paper!" was the observation made by a practical man on seeing Mr. Edward Arber's large-paper edition of the *Paston Letters*. By the bibliomaniac, however, who revels in clear print and wide margin this volume will be amply appreciated; and when the two subsequent volumes shall have appeared, Mr. Arber will have made a most important addition to the labour of love which he is pursuing in his annotated reprints of early English literature. The history of the Paston family, even if it were not an authentic record, deserves to be far better known than we suspect it is. Whatever may have been the social position of his ancestors in Norfolk, William Paston must be looked upon as the virtual founder of the family. Brought up to the law, he was made a serjeant in 1421, and eight years later a judge in the Common Pleas. He added largely to his territorial possessions by the purchase of the manor of Oxnead, which continued for many generations the seat of his descendants, until the death of the last representative of his race, William, second Earl of Yarmouth, who married a natural daughter of Charles II. From Thomas Chaucer, a son of the poet, he bought the manor of Gresham, destined to prove a fertile source of litigation and violence to his successors. The judge increased his fortunes by marrying the daughter and heiress of Sir Edmund Berry, the Agnes Paston of whose letters there are a considerable number. Nothing shows the capacity of the judge more than that he was able to manage his wife. She appears to have been the most energetic of women, admirably fitted to look after a property in the absence of the owner, as sharp as an attorney, and a model of propriety. No indiscretions were tolerated in her household, and her son Edmund is forced to put a certain Gregory out of his service on account of his undue familiarity with a lady in the neighbourhood. Her weak point seems to have been a love of talking, and one of her sons writes to his brother complaining that "she will tell many persons of her counsel this day, and to-morrow she will say by God's faste that the same men are false." In addition to her other qualities, she seems to have possessed that of being as match-making a dowager as the present century could produce. We intend to give a sketch of the love affairs of her daughter Elizabeth, whose history may go far to reconcile the spinsters of to-day to their fate and to the times in which they live.

Before the judge's death, about the year 1440, his eldest son John, also bred to the law, had married Margaret Mauteby, who had received a present of a gown and a goodly fur upon the occasion. Her letters form a great portion of the family correspondence, written mostly from Norfolk to her husband in London. A country house in 1449 was anything but a safe abode, and it is difficult to understand the change from a defensive to an ornamental character which was taking place in the domestic architecture of that century. Reference is continually made to outrages and scenes of violence. Margaret writes to her husband praying him to get some cross-bows and bolts, as their house is so low that a long-bow could not be used, however great the need might be. Two or three short pole-axes, she suggests, should be kept within doors, as their enemies had made bars to bar the door crosswise, and wickets at every quarter of the house to shoot out at, both with bows and hand-guns, and five holes to fire through knee-high from the floor. The use of these warlike instruments was apparent enough, as in the following year, during the absence of her husband, Lord Moleyns attacked Margaret in her manor-house at Gresham, sending there "a riotous people arrayed in manner of war." They came with bows, arrows, shields, guns, and pans with fire, broke down the gates and doors with long trees, mined down the wall of the chamber in which Margaret was, broke up all the coffers, and stole stuffs of the value of 200*l.* Breaking of heads and wounding with daggers were everyday occurrences. Agnes

Paston had the greatest difficulty in maintaining her rights; at one time she is building a wall and stopping up the King's way, at another abusing her opponents, at another writing in all directions for a husband for her daughter Elizabeth, whose position at home cannot have been a very pleasant one. "She was never in so great sorrow as she is now," writes a cousin about the year 1449, "for she may not speak with no man whoever comes, nor with servants of her mother; but that she beareth her a hand otherwise than she meaneth. Since Easter she has been beaten once in the week or twice, and sometimes twice on one day, and her head broken in two or three places." Under these circumstances, it is not surprising that the chance of escaping from this virago of a mother, and marrying Stephen Scrope, was looked upon as pleasant. Yet Elizabeth shows that she is her mother's daughter in her anxiety about the state of his fortune, and the proviso, "if it so be that his land stand clear," is not omitted. This Scrope was a son of Sir John Fastolf's wife by a former husband, and the impression about him seems to have been that he ought to be encouraged, "without a better could be got," in which case he must disappear. This is expressed in the plainest language:—"Cousin, it is told me there is a goodly man in your inn whose father has just died, and if you think he were better for her than Scrope, it would be laboured, and give Scrope a goodly answer that he be not put off till ye be sure of a better." The writer ends her letter with the strictest injunctions to John Paston to burn it, which her correspondent seems to have regarded as most people do similar requests. The projected marriage with Scrope came, however, to an end, and plaintive cries of "forget not your sister," are heard at intervals from Agnes to her son. On the 30th of January, 1453, Margaret writes to her husband with regard to another match:—"My mother prays you to remember my sister, and do your part faithfully before you come home to get her a good marriage. It seems by my mother's language that she would never so fain be delivered of her as she would now. It was reported here that Knyvet the heir was to marry; his wife and child are dead. Therefore she wishes you to inquire whether it be so or no, and what his livelihood is, and if you think it would do to let him be spoken with thereof." But Knyvet the heir was not destined to be Elizabeth's husband, and was no doubt sold to somebody else. In spite of this discomfiture, John Paston does not remain idle, and labours for Sir William Oldhall to have his sister. Elizabeth, not unnaturally, is getting weary as each arrangement is broken off, and desires to have a full conclusion, while her mother gives her qualified approbation as usual—"If ye can think that his land stands clear, I hold me well content."

The next suiter who appears upon the scene is John Clopton, who in the beginning of 1454 enters into the matter in real earnest. He promises that Agnes Paston shall not be charged with her daughter's board after the day of marriage, which must have won for him the love of that economical housewife, and he assures his future brother-in-law that he has laboured to fulfil his wishes with regard to the jointure. The marriage articles provide for the payment by Agnes Paston of the sum of four hundred marcs dower, and the settlement of an estate of 40*l.* a year upon the heirs male of the wedding. The reader of the *Paston Letters* feels that a weight is taken off his mind when he finds that Elizabeth has at last succeeded in getting a husband, and it is with dismay that he discovers from a letter of Lord Grey of Hastings, on the succeeding 11th of July, that this match has shared the fate of its predecessors. Lord Grey writes to John Paston to say that, if Elizabeth is not married, he trusts to God he knows where she may be to a gentleman of three hundred marcs of livelihood, who is a great gentleman born and of good blood. John Paston is delighted at such an opportunity, and writes back on the 15th of the same month a most humble letter of thanks. As for his sister she is forsooth neither married nor insured to no man. He adds, without fear of contradiction, that there has been and is divers times and late communication of such marriages with divers gentlemen not determined as yet, and whether the gentleman his lordship meaneth of be one of them or no he doubts. Nevertheless he will take it upon himself that she shall neither be married nor insured to no creature until the Feast of the Assumption, during which interval he would like to know the gentleman's name, the place and country where he lives, and whether he has any children. John Paston concludes by assuring Lord Grey that it would be great joy to him that his poor sister (a most fitting epithet for Elizabeth) should be married according to her poor degree by Lord Grey's avise, trusting then that he would be her good lord. This letter may explain the rupture of the relations with John Clopton, to whom the Lord's nominee would certainly have been preferable. But poor Elizabeth was still to remain unmarried, for Harry Grey, the ward in question, would have nothing to do with her, and on the 6th of September the probability of Stephen Scrope's coming forward again is discussed. "Many would it should not prove, for they say it is an unlikely marriage. In case Cressener be talked of any more, he is counted a gentlemanly man, and a worshipful. At the reverence of God, draw to some conclusion. It is time."

It certainly was time. Scrope, Knyvet the heir, Sir William Oldhall, John Clopton, Harry Grey, Cressener, and no doubt many others, had for five years excited false hopes in the mother's breast of satisfactorily disposing of her daughter. We can only hope that the practice of giving marriage presents was not yet introduced, for, had it been, Elizabeth must have spent half her days in returning them. Her mother's temper, not a good one, as we have seen, at any time, is not improved by the disappointments she has to undergo. In some memoranda of the 28th of January, 1458, we have her educational views. If her son Clement will not behave himself properly, and do his duty in learning, she prays his tutor to "belassch" him, for his last master, the last he ever had, did so at Cambridge. If the belassching succeeds, his tutor is to have ten marcs reward. Afterwards mention is made of Elizabeth, who appears to have left her mother's house to stay with Lady Pole; 26*s.* 8*d.* are to be paid for her board, and she is recommended to work readily as other gentlewomen have done, and "somewhat to help herself with." This boarding out was, as is well known, one of the features of the age. Sir John Hevenyngham begs Margaret Paston to take care of a cousin of his, saying at the same time that he has laboured for her in other places, and that he will content her for her board. Frequent beatings and incompatibility of temper had no doubt induced Elizabeth's departure from home. The cost of communication with her suitors may perhaps have obliged her brother to economize, as among John Paston's accounts is an item of 10*s.* paid to William Wyrcester, "equitanti super negotia maritagii sororis." Some two hundred years later, in October 1667, we find Mr. Pepys in very much the same trouble about his sister Paulina. On the 10th of that month he was walking up and down the garden with his father, discussing the chance of a husband for his sister, "whereof there is at present no appearance; but we must endeavour to find her one now, for she grows old and ugly." The following year this exemplary brother succeeded in getting a Mr. Jackson for the purpose, whom he describes as a plain young man, handsome enough for her, one of no education nor discourse, but of few words.

Absence from her mother seems to have produced the desired result, and some time during the year 1458 Elizabeth Paston became the wife of Robert Poynings, who had acted as sword-bearer to Jack Cade during the insurrection of 1450. The bride writes to her mother a most affectionate letter on the 3rd of January following, in which she speaks of her husband as her best beloved, an epithet which has especial force when the large range of her acquaintances is considered. "He is full kynde to her," and, what Agnes Paston no doubt considered of far greater importance in the character of her son-in-law than any such sentimental nonsense, "he is as busy as he can be to make her sure of her jointure." Elizabeth had other reasons for writing, as she begs her mother that her best beloved fail not of the hundred marcs which had been promised to him on his marriage, and that Lady Pole, with whom she sojourned, might be paid all the costs done to her before her marriage. After this we hear no more of Elizabeth until the 12th of October, 1460, when she was expecting her confinement. "God send her good deliverance," is the wish of the writer, a sentiment which may fitly conclude this notice of her, and excuse us from entering upon the subject of her second marriage.

ULTRAMONTANE CRITICISM.

THE current number of the *Dublin Review*, the leading organ of English Ultramontanism, contains an article on "the Vatican Council, its Authority and Work," which is—though not perhaps to the ordinary readers of that periodical—quite a curiosity in its way. It is mainly occupied with an elaborate criticism of the *Letters of Quirinus*, reviewed in our own columns two years ago, followed by a shorter notice of Döllinger's *Lectures on Reunion*, to which we called attention last week. What makes the paper all the more instructive as a specimen of Ultramontane criticism is that the reviewer begins by insisting that he "has read *Quirinus* from cover to cover," and that "carefully;" so that he excludes *in limine* the suspicion or excuse of having ignorantly misrepresented an author whom he describes as "one of the greatest liars that ever lived"—"greater," it is added, "even than Macaulay's Barère"—and whom he labours in a note to identify with a very distinguished member of the Roman Catholic peerage. The article must therefore be taken as expressing the deliberate judgment of the *Dublin Review* as to the proper method of dealing with works of which it disapproves; and—putting aside the style, which is unpleasantly redolent of the fish-market—it is difficult to say whether its moral or intellectual peculiarities are the more remarkable. Ultramontane journalists are so fond of bringing wholesale charges of ignorance, stupidity, and dishonesty against writers whose opinions they dislike, especially if they happen to belong to the same communion with themselves, that it may be worth while for once to test the honesty and intelligence of their own criticism on a coreligionist who has dared to be candid in the statement of inconvenient facts. Such at least is the testimony of Bishop Strossmayer, whose alleged recantation, which reappears every six months or so in the Ultramontane journals, has, we may observe in passing, again been authoritatively contradicted. In a letter to Dr. Döllinger, quoted by permission in the *Guardian* of July 19, 1871, he says; "I have looked again through the *Letters of Quirinus*, and I repeat that they are the truest compendium which I have seen of the proceedings of the Vatican Council." We too read *Quirinus* "from cover to cover" at the time of its appearance, but we were inclined at first to think that our memory must have become rather hazy. It seemed scarcely conceivable that a critic just fresh from the study of the work could have fallen into such strange aberrations as these comments appeared to us to betray. We have therefore

refreshed our memory, and the result has been only to increase our amazement. Our readers shall judge for themselves. It is impossible of course to follow the reviewer through every detail of his elaborate indictment; but we will take the more important points in order as they occur. With purely theological questions we do not meddle here, and we shall therefore pass over the opening attack on Quirinus as half a Protestant and a Jansenist to the backbone, "with all that is worst and most odious in the worst and most odious form of that Protean heresy," with one remark. It strikingly illustrates the truth of an observation of the *Times* upon which the writer had just expended three pages of fierce denunciation as "a monstrous lie" (he is a considerable adept at abusing the plaintiff's counsel), to the effect that the Vatican Council has revealed to the public gaze the internal divisions which rend asunder the unity of the Roman Catholic system. Further evidence of the same fact, as will appear presently, is supplied in the course of the article. Nor shall we stay to discuss a passing reference to the first four Œcumenical Councils as having been presided over by the Pope or his representatives, which is notoriously untrue of all except the fourth; or make any comment on the startling assertion that no single authentic fact is produced by Quirinus which throws any doubt on the entire freedom of the Vatican Council. Many of our readers are familiar with the book, and many more will have learnt something of its contents from our columns. They can form their own opinion.

Passing over then the preliminary criticism on the *Letters* as "breathing the spirit of heresy from beginning to end, and reeking with its noisome odour," we come to the first definite charge. No reader of *Quirinus* is likely to forget his account, which indeed found its way at the time into several newspapers, of the Pope's outrageous treatment of the Chaldean Patriarch. It was derived, we believe, from the Patriarch's own lips, and, although he was terrified into submission for the moment, he has, since returning to his diocese, broken off communion with Rome altogether. We can well understand the irritation of the *Dublin* Reviewer at so ugly a disclosure, but it would have been wiser to pass it over in silence if he had no better refutation to offer than the following characteristic tirade:—"What an unruly, mischievous lad the Pope must have been in his schoolboy days; what a terrible fellow as a grown-up, bearded man [we were not aware that Italian priests wore beards], how peppery and pugnacious when now in his extreme old age, with the awful weight of Sovereign Pontiff pressing on his shoulders," he behaves in the manner ascribed to him. And then follows a long and slightly irrelevant story about a dishonest tradesman who cheated his customers, but was too pious to pay his debts on Sunday. Therefore "Quirinus is one of the greatest liars that ever lived." Q. E. D. The next offence charged against the unfortunate historian of the Council is his stating it to be well known in Rome that, small as are the intellectual qualifications required there of candidates for orders, "it was only out of special regard for his family that Giovanni Maria Mastai could get ordained priest." Considering how such matters are arranged in Southern Italy, and that the Pope, who is of noble family, passed from the army into the Church, there is nothing in the least improbable in the statement. It was of course quite open to the reviewer to bring forward any contrary evidence which he was in a position to supply; instead of which he devotes a page to drawing out in his own peculiar fashion all the alleged fact, "affirms" and "implies," and then observes, "It is surely needless to add a single word of comment." Quite so, but might it not have saved needless time and trouble to omit the whole page of comment which precedes the remark? The reviewer goes on to overhaul various passages referring to Archbishop Manning, which make him very angry; but there again all he has to say by way of reply is that a Cardinal's hat would be a less honour to that prelate than the "continuous, scurrilous, and even blasphemous invective" of Quirinus, which simply consists in uncontradicted statements of matters of fact. Be it so, but why not in that case leave the Archbishop in undisturbed possession of so flattering a distinction? The next comment we need notice affords a curious illustration of the temper of the reviewer. He is exceedingly wroth with Quirinus for the praise bestowed on the late Archbishop Darboy, for whom he can himself find no better description—though possibly from a lingering sense of shame he refrains from mentioning his name—than "a person who had given proof of an amount, not only of gross ignorance, but of erroneous doctrine such as we believe no other Bishop of the Church has exhibited since the Synod of Pistoia"—"the author of a condemned work." Considering the moral and intellectual qualities of the murdered prelate, and his noble bearing alike at the Vatican Council, in the dungeons of the Parisian Commune, and in the hands of his brutal executioners, we may reply in the reviewer's favourite formula, "Surely comment is needless." It is but one step from the sublime to the ridiculous, and it is amusing, just after this generous and appreciative estimate of one of the most distinguished ornaments of the Roman hierarchy of our own day, to be gravely assured that "the Bishops who displayed the most profound theological knowledge, united to the highest order of ability, were—the Spanish and Neapolitan." The announcement may sound startling, but there can be no doubt about the matter. For why? "They came from the countries of Suarez and St. Alphonsus Liguori." And does not every one know that Spain and Naples stand at the head of European thought and learning?

We have already said that it is no part of our business to discuss the theological differences of Quirinus and his critic. But the reference of the former to the Council of Florence gives rise also to a violent attack on what the reviewer terms, with his accustomed urbanity, "the gross dishonesty of the scientific historian," which we read with some surprise. Why a definition of the Council of Florence should not be spoken of as such, because a very similar decree had been passed two centuries before at the Second Council of Lyons, is not very obvious, but let that pass. The special gravamen of the charge against Quirinus is that he speaks of the Council as having "bequeathed painful recollections both to East and West," and as having been rejected by the French Church. As to the first point, it is hard to see how any Roman Catholic at least can speak or think of the ill-omened Synod in any other light, considering the utter and immediate collapse of the much-trumpeted "union," which never indeed had any existence except on paper and for a few brief hours in the Cathedral of Florence. But the reviewer summarily denies it. "Is this true? It is false." And his reasons are, that beyond all question the great majority of the Eastern bishops at the Council continued faithful to Rome, and thus "saved their immortal souls," and that they subscribed the famous canon about the jurisdiction of the Roman Pontiff. As this same canon is never quoted in any Ultramontane text-book, and hardly ever alluded to by any Ultramontane writer without being both mutilated and mistranslated, it might have been wiser not to foist it head and shoulders into the argument. But about the bishops, how stands the fact? The decree of union was subscribed by the vicars of the three Patriarchs of Alexandria, Antioch, and Jerusalem, and by nineteen other Eastern bishops or their proctors, but not till a treaty had been negotiated with the Pope, *after a good deal of* haggling over the terms, by the Russian Patriarch Isidore, binding His Holiness to supply them with so many galleys and men-at-arms in return for their compliance with his wishes, and to pay their journey money. On their return home, where they found the whole of their clergy and people sternly opposed to them, the bishops confessed that they had yielded to their fear of the Franks, and sold the faith; the Archbishop of Heraclea expressed bitter remorse for having suffered himself to be compelled to this act of base apostacy. The churches where the renegade prelates officiated were deserted, and the new Patriarch of Constantinople, Bessarion, who had been Bishop of Cyzicum at the Council, could not command the attendance even of his own officials without an Imperial order, backed by severe penalties. He had the discretion to return speedily to Rome, where he received a Cardinal's hat, and figured thenceforth on State occasions as the ornamental representative of the Church which had publicly repudiated him. As for the rest of the bishops, "it is beyond all question" that many, if not all, of those who had been induced to sign the decree of union soon afterwards retracted their signatures. And even had it been otherwise, in any writer less grotesquely onesided and fanatical the allusion to their "immortal souls" in connexion with what may accurately enough be called the Florentine swindle would sound like a piece of rather profane jocosity. We need not waste many words on the charge of "falsehood" urged against Quirinus for mentioning the notorious fact that the Council of Florence, closed in 1442, was not received in France, as the only counter-evidence alleged by his critic is the expressed or implied opinion of two French writers in the eighteenth century, and one in the nineteenth, that it ought to be considered Œcumenical.

By this time our readers have probably had almost enough of this candid and courteous reviewer. They will observe that as yet he has scarcely even attempted to disprove any one of the statements on which his reiterated accusations of wholesale mendacity are professedly based. But his closing indictment is framed, by virtue of a skilful manipulation of garbled extracts, to assume the semblance of an argument. He is dealing with the charge of a want of freedom in the Council, though it "requires not now any serious notice, when the lapse of more than two years has displayed to the world such stupendous evidence of the perfect unity of the Church"—more especially, we presume, in Germany and Switzerland. And of all the arguments of Quirinus there is only one, he adds, that would really tell against the freedom of the Council, if his statement of facts were true. The particular fact in question, which is not mentioned so much to disprove the freedom of the bishops as to expose the insulting arrogance of summoning them to ratify a foregone conclusion, is this—that the original *Schemata* of the decrees to be laid before them were prepared beforehand by a secret Committee, and in the case of the first constitution, *de Fide*, turned out to be a simple transcript of the lecture notes of a Jesuit Professor at the Collegio Romano. The reviewer does not venture to deny this; indeed he implicitly admits it, but he insists at great length that the two constitutions, as actually passed, differ widely both in form and substance from the original drafts. And thereupon he winds up with the flattering verdict, already cited, that "Quirinus is one of the greatest liars that ever lived, greater even than Macaulay's Barère." Will it be believed that he has arrived at this conclusion by deliberately transferring to the decrees as finally passed what Quirinus says of the original drafts submitted to the Council, and carefully omitting to state that the fact and extent of the subsequent changes is as explicitly pointed out in the work he is engaged in traducing as his own comments upon it? As regards the first constitution, Quirinus says that "those four chapters, having been subjected to the pruning and toning down of the Opposition, bear little resemblance to

the original draft of the Jesuits, and the minority may lay claim to a victory." As regards the second, he says that the Jesuit Franzelin received orders to revise it, and that it was reproduced in a completely altered form. In other words, he says exactly what this veracious critic, who has "read the book carefully from cover to cover," calls him "one of the greatest liars that ever lived" for denying. Such language is happily not usually met with in polite literature at the present day, and we certainly have no intention of copying it.

Our readers will hardly care, after this specimen of his moral qualifications, to follow the reviewer through his comments on Dr. Döllinger's Lectures. But, as they have already seen what he considers a decent and appropriate epitaph for the martyred Archbishop of Paris, they may perhaps be interested to know that his treatment of the sole living theologian of his Church, with one exception, who enjoys European celebrity and respect is quite of a piece with it. Dr. Döllinger's followers are "a miserable rag-fair of apostates," and "this old man" is himself "a miserable figure in the threadbare rags of a decayed Tractarianism." And, finally, warming with his subject into that exquisite vein of refined irony which is so charming a distinction of Ultramontane journalism, this gracious critic dismisses the venerable and venerated Professor as "a German Chollop." And now, to adopt his own phraseology, "we think we have quoted quite enough." One parting caution, which might have been useful to Mr. Lowe if it had been given a week earlier, is all that need be added here. There are not probably many of our readers who are in the habit of studying the controversial articles of the *Dublin Review*. But if any such there be, they will do well to remember that no single statement contained there can safely be taken on trust, and no sort of weight can be attached to any quotation till both the passage itself and the surrounding context have been minutely verified.

HABITUAL DRUNKARDS.

ONE set of fanatics desires to shut up drink-shops, while another set insists that the frequenters of them ought to be placed under restraint. The Permissive Bill and the Habitual Drunkards Bill are equally unlikely to be passed, either by the present or any future Parliament, and we may contemplate both these proposals with curiosity unmingled with alarm. It is indeed wonderful that persons sufficiently sane to obtain seats in the House of Commons should gravely urge that the tendency of working-men to spend their increased wages in drink ought to be counteracted by imprisonment. The existing laws against drunkenness are in the opinion of these persons inadequate, and require to be made more simple, uniform, and stringent. They would desire to legislate in the spirit of the Act of King James I., which imposed the penalty (at that time serious) of 5*s.*, with the alternative of six hours in the stocks. They propose to raise the penalty, and to enact that after three convictions within twelve months magistrates should have power to sentence the offender to a considerable period of detention in an "industrial reformatory for inebriates." The expense of providing such reformatories would alone be a sufficient objection to this plan. There are many thousands of artisans and labourers in England to whom occasional drunkenness is the only form of conceivable enjoyment. Some of the best seamen that go afloat hold the notion that it is not wrong to be drunk on shore. It would be very easy to collect from either of these classes numerous subjects for the application of the proposed law. There are trades in which the practice is to work hard for five days of the week and to drink hard for the remaining two days. In a town where such a habit prevails a reformatory might be filled at one sweep of the legal net. The difficulty would be to find sober men to do the work of the drunkards who were undergoing the process of reformation. In the event, however, of a severe law against habitual drunkards being passed, the police, if left to themselves, would be likely to mitigate it in practice, in order to escape a responsibility which would be intolerable. The Chief Constable of Leeds stated to a Committee of the House of Commons the view of this question which is taken by many holders of similar positions. The man who gets drunk on Saturday night, and yet goes to his work sober on Monday morning, and does his work properly and fairly, is not in this view an "habitual drunkard," although he habitually gets drunk, and he ought not to be interfered with. The discreet officer of police would not interfere with a man who, coming into town on a market-day sober, went away tipsy. He would consider that at any rate the man went away, and could trouble him no more that night, and herein he would resemble another discreet officer of police who, having allowed a thief to escape, thanked God that he was rid of a knave. If persons under the influence of drink go quietly home to bed, the police, unless stirred up by fanatics, would be unwilling to interfere with them. But if the Bill now before Parliament should pass, and if the law thus made should be administered in the spirit of its authors, the police will be compelled to give a great deal of trouble to magistrates and judges as well as to themselves. If drunkenness is to be considered as a crime against a man's own self or his family, it may deserve punishment irrespectively of any disturbance of public order. According to the Bill, a person who is three times within six months convicted of any offence of the definition whereof drunkenness forms part, shall be deemed an "habitual drunkard," and on a further conviction of an offence of the same character may be sent to a "certified industrial hospital," and there detained under treatment for a period of not less than three nor more than twelve months. The Act of last Session, if stringently administered, may produce a plentiful supply of patients for these hospitals, and there may perhaps be a difficulty in supplying hospitals to receive them. But it is highly improbable that the public will undertake such an extensive business as this of reforming drunkards. Indeed, if such a proposal were likely to succeed, we should pray in aid of our argument against it the valuable principle that freedom is better than sobriety. It is remarkable that the first Parliament elected on an enlarged basis of representation has been more occupied than any of its predecessors with proposals for restricting liberty. There can, however, be no doubt that the present Parliament allows much freedom in ventilating crotchets. Among other objections to this Bill, we do not half believe in the efficacy of the plan proposed by it. Like the Chief Constable of Leeds, we have not a very strong faith in reclaiming drunkards. The picture which he draws of the effect of prosperity on the working classes is melancholy, but it by no means follows that this Bill is the proper method of improvement. "We have had," he says, "three years of very good trade in Leeds, and that has increased the offence of drunkenness." The effect of what is called the Saturday half-holiday is pithily described by the same authority by saying that a man has now time on Saturday to get drunk twice before he goes to bed. The Head Constable of Liverpool gives similar testimony in the words, "I think that many of the labouring classes abuse the half-holiday very much." He also does not believe in any permanent reclamation of habitual drunkards. He attributes increased drunkenness to high wages, and it also depends very much on the weather. "If it is very hot, people do not stay in their houses; they are then induced to drink, and then to fight, and then comes the conclusion." All this is doubtless very sad; but we hardly expect a Bill to be brought in to compel the working-men of Leeds or Liverpool to remain indoors in hot weather. Almost the only practical check on drunkenness is to close the public-houses at an earlier hour of the night; and it is fair to the authors of the Licensing Act of last Session to admit that in this respect they do appear to have done considerable good. Drinking is so much a matter of habit that it is by no means certain that a man will begin earlier because he knows that he must leave off earlier.

This Bill proposes to confer upon the Court of Chancery power to appoint a guardian of the person of an habitual drunkard. An order may be made in a summary way on summons at Chambers on such application and evidence, or after such inquiry, as the Court thinks fit. A guardian appointed by such order would have power to request the reception of the ward into a licensed house, and the Court on application of the guardian may appoint a receiver and manager of the income and affairs of the ward. The foreign Governments which we delight to call paternal could hardly desire larger power than would be thus conferred on the Court of Chancery. A man becomes an habitual drunkard by getting drunk and making a noise, or perhaps by only getting drunk, three times in six months. Being an habitual drunkard, a guardian may be appointed of his person, who may shut him up in an asylum, and proceed under the sanction of the Court of Chancery to receive and manage his income and affairs. The judges of that Court would be certain to protest emphatically against any such authority being conferred upon them; and when the proposal is plainly stated its absurdity becomes manifest. It is further proposed that an habitual drunkard should have power to consign himself to an asylum, and when he is once in he could not get out until the appointed time. The advocates of teetotalism ought to admire an invention far superior to their pledge, which any man can take and break. "A patient received into a licensed house on his own application may be lawfully detained during the period specified in such application." It would be easy to induce a person feeling remorse after drunkenness to make such application, and when that person had entered the house he must remain there. It would be extravagant to suppose that any Parliament would pass such a Bill as this. Indeed, if it were passed, a court of law might possibly hold that the authority given by a man to detain his person could not, except by the clearest language of the Legislature, be made even for a time irrevocable. But the proposal does not deserve serious attention. Mr. Dalrymple will some day air his hobby on a Wednesday, and there will be an end. But if this is freedom, we should like to know what is slavery.

In two States of the American Union power is given to detain "inebriates" for treatment, but this power is subject to limitations which are not found in Mr. Dalrymple's Bill. In the State of New York, a justice of the Supreme Court or a county judge has power to commit an "inebriate" to the State Asylum, on production of affidavits by two physicians and two citizens that such inebriate is lost to self-control, unable to attend to business, or dangerous to remain at large. This is very different from giving power to every court of summary jurisdiction to declare a person an "habitual drunkard," and then order him to be detained for treatment. Again, in the State of Pennsylvania, any relative of an habitual drunkard may present his case to the Court of Common Pleas or Quarter Sessions, which appoints a Commissioner to inquire with a jury into the case. Evidence may then be given to show that the man is an habitual drunkard, and incompetent to attend to his own affairs, and if the evidence is

satisfactory, a Committee of the man's person and estate may be appointed. The Committee has full power to take the inebriate and put him in an asylum. There is also power to the officers of the Institution at Media to receive an inebriate for treatment on "voluntary presentation," but it is not stated that the inebriate may be detained against his will. It is added that justices have no right to commit to any other institution than the gaol.

In further manifestation of the spirit in which the Bill is framed, it contains clauses intended to discourage the bringing of actions in respect of anything done in pursuance of its provisions. If in such an action judgment passes for the defendant, he shall recover against the plaintiff full costs as between attorney and client. In ordinary actions the successful litigant only recovers costs as between party and party, and usually finds that he has a bill to pay to his attorney for extra costs. It is manifest that the introduction of this clause into the Bill tends to complicate the general law of costs. This is the way in which our legislation constantly tends towards confusion. The author of the Bill cares of course for nothing but his Bill. He gives large powers to magistrates and others, and as far as possible excludes the courts of law from interfering to control them. Happily, however, these courts are ingenious in finding methods to restrain injustice. It begins to appear as if the Court of Queen's Bench would become the sole security for liberty against the encroachments of a liberalized Parliament. Can it be on this account that some leading Liberals perseveringly oppose any measure tending to promote the efficiency of the Superior Courts? In discussion of various projects of so-called law reform, it is often assumed that these courts exist only for the carrying on of litigation between private parties. But the Court of Queen's Bench controls all magistrates and officers of the Crown, and the course of modern legislation tends to make such a court more than ever necessary. Happily the judges of that court have both the power and the will to keep a check upon foolish legislation

THE HAPPY LAND.

THE Court Theatre has now attained a success which it has long deserved. Everybody in London will go to see the *Happy Land*, and although caricature and personal allusions are forbidden, the audience will mentally supply what is wanting of the original representation. It is perhaps trifling to consider the fortunes of a theatre when the welfare of a nation is in suspense, but the remark is obvious that the resignation by Mr. Gladstone and his colleagues of their offices will be likely to interfere with the popularity of this burlesque. When the three mortals return from fairy land to earth, and a fairy who watches their homeward progress with a telescope announces that they are getting into a four-wheeler, and the tall one is bargaining with the cabman to take them to Westminster for a shilling, everybody understands the allusion to the official parsimony of Mr. Lowe. But a successor to Mr. Lowe must come from the other side of the House of Commons, where it must be owned that thriftiness of public money is not the most conspicuous virtue. Again, when the fairy who has undertaken the duties of chief lord of an unnamed department announces that she has spoiled a ship for the sake of a ha'porth of tar, and the tall gentleman observes that a farthing's-worth of tar would have sufficed, the allusion must lose its point on Mr. Goschen's making way for a successor. Some of the economies of Mr. Gladstone's Government have been unwise, and almost all have been unpopular, but it will be difficult to appreciate the most clever ridicule of his Administration after it has been dead and buried for three months. The manager of the Court Theatre has therefore a strong interest in the political crisis of the present week. The prosperity of that theatre would have been best promoted by a prolongation amid difficulties and humiliations of Mr. Gladstone's Government. "Here a kick, there a kick, everywhere a kick"; but you cannot kick effectively unless there is something to be kicked. The right of Mr. Gladstone and his colleagues as patentees of the great invention of international arbitration will survive their loss of office, but their successors must be taken from a party which, with all its faults, may claim to have been heretofore consistently regardful of the country's honour, and to be unlikely to listen to impertinent proposals even from more powerful potentates than the King of Bonny. After the first few performances of this burlesque, the spectators only saw three actors who had represented existing Cabinet Ministers. But when they only see three actors who have represented gentlemen who have been Cabinet Ministers, it may be feared that the interest of the spectacle will gradually subside. In the meantime, however, it is gratifying to observe that these actors are able to ensure the success not only of the *Happy Land*, but probably also of any piece that could be placed upon the boards of the Court Theatre. A sufficiently dreary representation of the difficulties of a provincial theatre becomes lively by the simple fact that the part of the manager is undertaken by the tall gentleman of the famous trio. The character of Major Oakley in the *Jealous Wife* affords small scope for the display of comic talent, but the audience seem to find amusement in the knowledge that the stiff military stock will be exchanged presently for a scarf of resplendent green. If indeed Mr. Lowe could remain Chancellor of the Exchequer, the umbrella of the tall gentleman would become almost as famous as that of Paul Pry, and the Highland fling might be repeated nightly until the recess of Parliament offered a fresh opportunity for addressing Scotch audiences upon current politics. But one soon grows weary of flogging a dead horse, and there is little flavour in allusions to the snubbing of a Government which has resigned office in deference to an adverse vote of the House of Commons.

The original performance of this burlesque was very good fun while it lasted, which unfortunately, but necessarily, could be only for a very few days. Political partisans who agree in nothing else must be almost unanimous in approving, although regretting, the action of the Lord Chamberlain under the circumstances. "It's naughty, but it's nice," must have been the verdict of the audience of the first four nights. Unless the censor had interfered in such a case, it would be difficult to perceive the utility of maintaining any censorship at all. A London manager has seasonably reminded his brethren that it is better to continue subject to the Lord Chamberlain than to be handed over to the magistrates, whose decisions in granting or refusing licences would be liable to fluctuate from year to year, according to the views of morals and religion which might happen to prevail upon the Bench. There are many worthy persons upon the magisterial bench who would desire to proceed against stage-players in the spirit of the statute of Queen Anne which was passed "for the more effectual punishing of rogues, vagabonds, sturdy beggars, and vagrants, and for sending them whither they ought to be sent." This statute was by a later statute made applicable to persons who should act plays for reward without licence from the Lord Chamberlain. Such persons were liable as rogues and vagabonds to be publicly whipped or sent to the House of Correction, and they might also incur further penalties, including frequent whipping, as "incorrigible rogues," or might be sent to be employed in the King's service either by sea or land. The effect of these statutes was, that no person could perform at all without patent or licence, nor with it, unless within the prescribed limits, which were the city and liberties of Westminster and the actual residence of the Sovereign. It subsequently happened that many great towns were desirous of having theatrical entertainments, and Acts of Parliament were passed enabling the Crown to authorise them. Afterwards a general Act was passed enabling magistrates to grant licences in places beyond the limits of the authority of the Lord Chamberlain. This was the state of the law during the period extending from 1788 to 1843, which is almost exactly identical with that to which we now look back as the most flourishing period of the history of the English stage. By the Act of the present reign which now regulates theatres, the performance of unlicensed plays incurs a penalty of 50*l.* nightly, but the performers in them are no longer liable to be treated as rogues and vagabonds. This Act authorises the Lord Chamberlain, "whenever he shall be of opinion that it is fitting for the preservation of good manners, decorum, or of the public peace so to do," to forbid the acting of any play; and it was in exercise of this authority that the Lord Chamberlain interdicted the original *Happy Land*. It is well to keep in such matters on the safe side, and as ingenious actors can generally contrive to imply that which they are not permitted to express, the audience does not after all lose much of the fun, and is able at the same time to congratulate itself on its own cleverness. In the French theatres under the Empire the difficulty was that audiences would find opportunities for expressing political feeling even where the author did not intend to give any. Even the standard works of the French stage were found to contain passages of inconvenient significance, and we believe that the last scene of *Tartuffe* was curtailed in consequence of a chance observation of a spectator, which was heard and applauded by the entire house. It has been urged that if the Premier may be caricatured in *Punch* or *Vanity Fair*, the same thing ought to be allowed upon the stage. But the former process is found compatible with the preservation of the public peace, which is at least likely to be endangered by the latter.

After all, the success of a piece depends not only upon good writing and good acting, but also upon a full and sympathetic house, and this the intervention of the Lord Chamberlain has secured for the Court Theatre. An audience possessed with a common sentiment will be satisfied with the mere pleasure of giving vent to it. This was a great cause of the success of theatres during the long war with France. The news of a victory in the morning would make any play which contained a few patriotic allusions tolerable in the evening. In the early years of this century the nation was united in hostility to a foreign enemy, and the public has lately become almost unanimous in dislike to the measures or the men of Mr. Gladstone's Government. Hence, if that Government could only have remained in office, the Court Theatre might have become the most popular in London. The ridicule of competitive examinations will still be seasonable, but after Mr. Gladstone has chosen between doing nothing, dissolving, and resigning, it is to be feared that three courses will not be open to him for some time to come. The talent for making two and two come to three or five according to circumstances is likely in the present entanglement of politics to be useful to politicians of either side, and it cannot be asserted that this talent belongs exclusively to one side. The notion that representative government must necessarily be applicable to fairy land is characteristic rather of a past age of Liberalism than of the present. Americans apparently believe that a Republic could be made to work in Spain or Turkey or the Moon, but Englishmen have learned to doubt whether the political system which they find existing in their own country

will bear transplanting. It is at least conceivable that the fairies who visited England cared more for the chops and bottled stout, and even for the women of the country, than for its political institutions. But of course the three right honourable gentlemen who visit fairy land might be allowed to believe in the superiority of the English form of government as long as they administer it. We can only regret, from a theatrical point of view, that this condition has become non-existent. When Ministers become private persons, a burlesque of their appearance and manner of talking must lose its interest. The manager of the Court Theatre will deserve sympathy in the event of the partial disappointment of a well-imagined and skilfully executed plan. Miss Litton states that she had been induced to believe that "the principle of personal reference to unpopular public characters" had been conceded by the Lord Chamberlain. It was perhaps going too far to assume that Lord Sydney had conceded that his colleagues in office were unpopular. "Here a kick, there a kick, everywhere a kick," may be almost literally true; but a kick at a Prime Minister ought not to come from the Queen's Household.

REVIEWS.

WYVILLE THOMSON'S DEPTHS OF THE SEA.*

IN no department of zoology has there been of late years a greater revolution than in that to which belongs the existence of life at great ocean depths. Not twenty years ago, it may be said, with almost all naturalists as with one not less distinguished than the late Edward Forbes, the belief in a zero of life, or a depth below which no animal existence was possible, was an article of the scientific creed. Under conditions of pressure, of defective light, temperature, and aeration, such as were held to prevail in the abysses of the deep sea, nothing approaching to known varieties of animal life could, it was thought, by possibility exist. Cases, however well authenticated, of animals comparatively high in the scale of life having been brought up by sounding lines from great depths, were set aside even by men of eminent standing in science, as having been due to careless observation, or to the fact of the creatures having got entangled in the line while floating near the surface. It is to the operations involved in laying and subsequently fishing up the Atlantic telegraph cable that the first great impulse towards an opposite belief is to be traced. Solitary or infrequent cases had indeed occurred to stir the thoughts of naturalists. There was the beautiful Medusa's head, fished up by Sir John Ross from one thousand fathoms in Baffin's Bay, lat 73° 37′ N., September 1, 1818, and there were the rich hauls of corallines, and other varieties of invertebrate life, obtained by Sir J. C. Ross in equally far Southern latitudes and from much the same depths, suggesting to those able explorers, though contrary to the received opinion of naturalists, that the lowest depth to which we might succeed in penetrating would be found to teem with animal life. The minute samples of Atlantic ooze brought up by the sounding apparatus introduced by Mr. Brooke in 1854 made known the existence and diffusion of microscopic forms not distinguishable from the fossil constituents of chalk, which the discovery of identical specimens from the Pacific showed to be in all probability distributed over the whole ocean floor. Doubt still existed whether these organisms had their life at the bottom of the sea, or were precipitated in fine showers after death. The opinion of Ehrenberg in favour of the first of these hypotheses was balanced by that of Professor Baily, of West Point, on the contrary side; Professor Huxley in 1858, in his report upon the problem to the Admiralty, expressing himself guardedly as on the whole inclined to believe that the Globigerinæ and other foraminifers and diatoms really lived at these depths. Dr. Wallich's dredgings in the North Atlantic, though not conclusive of the question, contributed much to strengthen the same belief, which was generally held to be established for good when Mr. Fleeming Jenkin showed the manifold specimens brought up with the submerged cable between Bona and Sardinia from depths extending to 1,200 fathoms, among which Professor Allman readily identified fifteen animal forms, including the ova of a cephalopod. Subsequent examination of organisms derived from the same source enabled M. Milne Edwards to pronounce the problem finally solved. In the spring of 1868, while engaged in Ireland with Dr. Carpenter in working out the structure and development of the crinoids, Mr. Wyville Thomson conceived the idea of urging on the Board of Admiralty the fitting out of a vessel for the express purpose of submarine exploration and research. The influence of the Royal Society having been brought to bear, through the agency of Dr. Carpenter, the *Lightning* steamer was placed at the disposal of those two naturalists during the summer of 1868 for a trial cruise to the North of Scotland; and the *Porcupine*, Captain Calver, R.N., was assigned for a much wider series of surveys, under the same gentlemen, with the addition of Mr. Gwyn Jeffreys, in the summers of 1869 and 1870. At the close of these operations it was thought right that those who had been charged with their scientific direction should, in addition to their official reports, lay before the general public some account of their proceedings. It should first be shown that the value of the additions thus made to the sum of our knowledge justified the outlay of public money on this object; and next there should be given such a popular outline of the main results of the enterprise as might stimulate general interest, and urge forward the progress of curiosity and research in the boundless field thus opened to the student of animal life.

Had this undertaking come about under the auspices of the French or German Government, we can picture to ourselves the systematic and magnificent series of reports which would have been given to the world; each prominent member of the scientific staff contributing his methodical and exhaustive statement of facts and observations, the whole subjected to strict editorial control, clear in arrangement, rich in illustration, artistic in the style of getting up. Under the economical rule which prevails amongst ourselves, we have to rest content with such slender and grudging aid to science and literature as consists in now and then fitting out a spare gunboat and charging a few thousands upon the Estimates for the bare necessaries of the voyage, leaving it to private liberality or the heavily taxed means of our scientific bodies to present the fruits of the enterprise in an available form before the public. It would be hardly fair to complain of the comparative poverty of the guise in which the result of this quasi-official undertaking comes before us, of the slight degree of system or arrangement manifested in its preparation, or of the discursive nature of a large portion of its contents. It is only as a popular reporter, not as an authoritative or specially qualified expositor of the truths of physics, that Professor Wyville Thomson claims to make himself the mouthpiece of the expedition. Having, in common with his colleagues, plenty of other things to do, he could hardly, we suppose, be expected to bestow more time and thought on sifting and organizing his materials. As it is, there are not a few signs of the pressure of that haste in compilation with which there is proverbially the less speed. With a little more leisure at his command, he might have spared himself the trouble of repeating in later portions of the book many facts and considerations with which he had already made his readers familiar in the introduction. Allowing, however, for these drawbacks, there is in his report an abundance of novel and interesting matter for which it behoves us to be grateful.

In the first of these cruises the chiefs of the survey seem to have been feeling their way tentatively, and even timidly; the greatest depth sounded having been 1,500 fathoms, which, by special leave from the hydrographer, they felt emboldened on the second trip in the *Porcupine* to extend to 2,500 fathoms at a spot indicated in the chart 250 miles west of Ushant. It was felt that if the existence of life could be established, and its conditions to a great extent laid down with accuracy, at that depth, the general question might be considered solved for all depths of the ocean. It was of course hardly to be expected that the haul of results from abysses like this should equal in fulness of organization those obtained from lesser depths or in nearer proximity to the land. None of the deeper products of the dredge can well be compared in point of development or beauty with the magnificent *Brisinga coronata*, a new star-fish of the genus first established by M. Sars in 1853, and named by him from a jewel (*Brising*), of the goddess Freya, the engraving of which to the natural size (fig. 5), is conspicuous among the admirable woodcuts of the volume before us for accuracy of drawing and definition of texture. This wonderful creature, with its dozen or so of long spines of unequal length, only one of the longer ones unmutilated, thirty centimetres in length, looks at first sight intermediate between ophiurids and star fishes, the arms too thick and soft for the former, while much more long and delicate than is generally found in the latter group. It was brought up from about five hundred fathoms, the bottom temperature being a little below freezing point, the thermometer at the surface marking 10° 5′ C., amongst a mass of rhizopods, sponges, echinoderms, crustaceans and molluscs. Other species of this splendid asteria have been found by M. Sars, measuring not less than two feet across the extended arms. Among the sponges a finely characteristic specimen, beautifully drawn to half the natural size, is the sea-nest of the Setubal shark-fishers, *Holtenia carpenteri*, an ovul or approximate sphere nine or ten inches in height, with one large osculer opening at the top, whence a cylindrical cavity passes down into the substance of the sponge, the outer wall of which consists of a complicated network of the cross-like heads of five-rayed spicules, in aspect resembling many well-known varieties of the cactus. When the sponge is living, Professor Thomson writes, the interstices of this siliceous network are filled up both outside and in with a delicate fenestrated membrane formed of a glairy substance like white of egg, which is constantly extending or contracting the fenestræ and gliding over the surface of the spicules. This sarcode, the living flesh of the sponge, is fed by organic matter carried in a constant current by the action of cilia through apertures in the outer wall, passing out by the large osculum at the top. From the lower third of the sponge a perfect maze of delicate glassy filaments, like fine white hair, spreads out in all directions, penetrating into the fine semi-fluid mud, and supporting the sponge in its precarious bed, while adding but little to its weight. Of more slender form, another elegant species is the *Hyalonema lusitanicum*, previously found off the coast of Portugal by Barboza du Bocage (fig. 66), closely related to the glass rope sponges of Japan, long a puzzle to naturalists; anchoring itself by sending right down through the soft ooze a coiled wisp of strong spicules, each as thick as a knitting-needle, which open out into a

* *The Depths of the Sea: an Account of the General Results of the Dredging Cruises of H.M. S.S. "Porcupine" and "Lightning," during the Summers of 1868, 1869, and 1870.* By C. Wyville Thomson, LL.D., F.G.S. &c. With numerous Illustrations and Maps. London: Macmillan & Co. 1873

brush as the bed gets firmer, and fix the sponge in its place somewhat on the principle of a screw-pile. The sponges of the deep water ooze are by no means confined to one group. "The *Hexactinellidæ* are perhaps the most common, but corticate sponges, even allied to those which look so rigid when fixed to stones in shallow water, send out long anchoring spicules and balance themselves in the soft mud." Such is the case with *Tiniphonia agaricoformis*, so named by Professor Wyville Thomson from its resemblance in shape to a familiar kind of fungus. We can picture to ourselves the ocean floor overspread for the greater part of its area with a richly variegated carpet of sponges of innumerable kinds.

After describing at length the interesting operations of deep sea dredging, with a full account of the apparatus and instruments employed, our author gives, in his chapter on Deep Sea Temperatures, a series of facts and carefully drawn-up tables of observations bearing upon the relations between temperature and depth, and the influence of both those conditions upon animal organization and development. Combined with what has been done towards the analysis of sea water from different depths (as detailed in the appendices), imperfect as that branch of inquiry remains as yet, a basis has here been laid for building up a wholly new system of submarine zoology, showing the laws of distribution and development in animal life in correlation with the laws which regulate the physical conditions of the medium in which it exists. It is of importance to trace with Professor Wyville Thomson the differences in size, in development, and in other features of organization that are to be seen between the denizens of warm and cold areas, or greater and lesser depths. To take an instance; among the innumerable echinoderms with which the cold area to the north-west of Shetland abounds, many of them added for the first time to the fauna of the British isles, were sundry diminutive species which our author considers to be as truly a pony form of echinus, as is the Shetland breed among the varieties of *Equus caballus*. It would be interesting to know for certain what share cold may have had in dwarfing or modifying the growth of echinus within this area, or to what extent it may be related to depth. In comparatively shallow water *Cidaris hystrix* was observed to be most abundant and of large size, while the large form of *Echinus flemingii* was rare; though, on the other hand, a form four times the size of the pony echinus, in no way differing in colouring, sculpture, or form of the pedicellariæ, was common in the deep water off the coast of Ireland. Foraminifera, we are told, are not very abundant in the cold area; here and there, however, in isolated patches, large and remarkable forms came up in numbers on the hempen tangles attached to the dredge, principally of the *arenaceus* type. Among starfishes, which the deep water yielded in abundance, the most conspicuous were the genera *Astropecten* and *Archaster*, with their allies; the tangles coming up within the cold area scarlet with *Astropecten tenuispinus*, bringing up as well a handsome new form of a peculiar leaden grey colour, with paxillæ arranged on the dorsal surface of the disc in the form of a rosette, or the petaloid ambulacra of a *clypeaster*. Within the same area were found many specimens of a fine *archaster* (fig. 17), with a double row of large square marginal plates, giving the edges a thickened square-cut appearance like those of *Ctenodiscus*, each marginal plate covered with miliary grains, and with a prominent rigid central spine. This specimen is some six inches across the disc, and forms one of the most striking additions to our naturalists' tale of known species. Numbers of the handsomest of the Northern free crinoids also came up in the cold area hauls, such as *Antedon eschrichtii*; with many interesting crustaceans, figured by the writer as highly suggestive of the source of the cold water. These are some of the gigantic forms of amphipoda and isopoda of the Arctic Sea, imperfectly represented hitherto from British waters. Among them is a strange kind of skeleton shrimp, *Caprella spinosissima*, which fixes itself by its hind claspers to branching sponges, waving its quaint grotesque body about in the water; and *Arcturus baffini*, which has the same habit of clinging to some foreign body, and possesses an enormous pair of antennæ for the retention of its young. A queer sea-spider, *Nymphon abyssorum*, of large size, frequently comes up clinging to the sounding line. The mollusca yielded by the second cruise were altogether subordinate as regards number and variety to the other groups, nor was the difference between the molluscan fauna of the warm and of the cold area by any means so great. But few fishes were procured, owing, it was thought likely, to the unsuitableness of the dredge for captives of this kind.

From the warmer area, dredged later in the cruise, specimens of extraordinary beauty and interest were obtained. What most gladdened the heart of our naturalists was *Calveria hystrix* (fig. 27), named from the esteemed commander of the *Porcupine*, an echinus of exceptional size and conformation, in colour a rich crimson, which it retained in spirit without much loss, showing the jaw pyramid, "Aristotle's lantern," large and strongly developed. Combined with two other allied specimens *Calveria* is found to throw light upon a puzzling fossil specimen or two from the Kentish chalk, pointing to the survival of a family or tribe otherwise not known in the geological record. In crustacea and mollusca the warm area proved abundantly rich. An attack of fever unfortunately preventing Professor Wyville Thomson from accompanying the *Porcupine* into more Southern latitudes, the charge of operations in the Mediterranean devolved upon Dr. Carpenter, whose results our author only feels called upon to indicate in general terms. Nor does he deem it possible as yet to give anything like a full and exhaustive account of what has been added by the expedition to our knowledge of natural history. In his chapter on the Deep Sea Fauna, however, he presents us with a valuable though brief outline of the distribution of the animal forms resulting from the dredgings, with reference at once to the conditions of depth and temperature under which they were found to exist. So rich and varied is the material thus acquired that it will take years of the labour of specialists in each of the larger departments to work it up. The sponges are now, we are glad to learn, under the able hands of Mr. Henry Carter; and a general sketch of the sponge fauna of the deep Atlantic has been already put forth by Professor Oscar Schmidt of *Gratz*, the highest authority upon the subject. To Mr. Gwyn Jeffreys we look for the identification and description of the mollusca. From the conclusions thus far announced by so competent an authority as to the Northern origin of most of the molluscan fauna, and their transportation to the Mediterranean, and even to the Gulf of Mexico, by the great Arctic currents, our author opposes his own view of the retirement of Northern species from the British area, at least at the close of the Glacial period, and the immigration of Southern fauna, supported as it is by numerous proofs drawn from the comparison of living and extinct species. The question of priority of age, as indicated by fossil remains, is, he shows, complicated by the fact that beds which correspond palæontologically in their involved fauna may be proved to be by no means contemporaneous, owing to one of them being found overlaid by strata of newer date while the other is still forming. Moreover, as he urges, the conditions of temperature and light of our Southern seas at great depths correspond very closely with those of much shallower water in the Scandinavian seas. Hence not only have we had an earlier and more thorough knowledge of the Northern species, but they have been met with superior in size and richness of sculpture or ornament, which has been taken to give them a presumptive priority in order and rank. The tendency to dwarfing in deep water has been already referred to. With regard to the evidence of light penetrating the abysses of the ocean, as suggested by the vivid colours and the well-developed eyes of animal forms dredged up from two thousand fathoms and more, the writer throws out the idea that, in the absence of sunbeams, the submarine light may, beyond a certain depth, be due to phosphorescence, which is known to be very general, particularly among the larvæ and young of deep sea animals. This is one of the problems which stand over for further investigation, as do many questions raised in the chapter on the Continuity of the Chalk, in which his conclusions have been challenged to some extent by Sir R. Murchison and Sir C. Lyell. One main difficulty which he confesses to having before him in establishing the identity of the recent Atlantic chalk mud and the ancient white chalk lies in the total absence in the latter of free silica. When speaking, however, of its having been shown by the analysis of our chalk strata that siliceous organisms were entirely wanting in the ancient cretaceous seas, we fail to see that he has taken due account of the flinty masses of which siliceous sponges formed unquestionably the nucleus, and of which he himself proceeds to give typical instances, although in some cases all that remains in the chalk may be the moulds and outlines of organisms from which the whole of the silica has been removed by solution or otherwise.

In his chapter on the Gulf Stream, with reference to the phenomena of Atlantic currents and temperatures in general, while adding immensely to our materials for studying the great problem of ocean circulation, by means of the numerous observations recorded and the valuable tables which embody so much patient labour, our author has strangely limited his view of the primary causes of the great ocean currents. To the theory of Captain Maury, modified to some extent by the later views of Dr. Carpenter, that the motive impulse is due simply to the oscillation of temperature between tropical heat and evaporation on the one hand and arctic cold on the other—"comparable to the circulation of the atmosphere"—he is content to oppose his own hypothesis, which as simply assigns it to the "drift of the trade winds." The first point that strikes us in contrasting the opposite theories advanced by such able men is the total absence of any reference to the rotation of the earth, as well in relation to oceanic as to atmospheric circulation. This strange omission must, as far as we are concerned, place either hypothesis alike outside the pale of discussion. In the next place, were we disposed to treat Professor Wyville Thomson's trade-wind theory on its independent merits, can it appear to him, we would ask, that the mere action of periodical (not perennial) winds on the surface is adequate to set in motion a mass of water six thousand miles long, several thousand miles in width, and in places a mile or two in depth—an effect to which he considers Dr. Carpenter's convection-of-heat theory utterly inadequate? Whatever we may think of the power of the sun's rays to penetrate and to heat the ocean abysses at those great depths, it calls for a stronger effort of the imagination to conceive the ocean mass to be stirred in any degree in its depths by any force of the atmosphere agitating its surface, far less to be set in movement in those rapid currents which are found to extend to the very bed of the deepest waters. How, too, would our author account for the circulation of the other great ocean basins besides the Atlantic? Is he prepared with a theory of the corresponding action of the trade winds in every case? We have here one of the weak points in a work which in most respects is marked throughout by logical com-

mand of facts no less than by patience and skill in accumulating them. The mastery which Professor Wyville Thomson shows over the results arrived at during this comparatively restricted series of explorations augurs well for the harvest of knowledge to be reaped, we may hope, in the course of the more adequately equipped and more extensive survey over which he has now gone forth in supreme control. Wishing God speed to the *Challenger* and the whole of her scientific staff, we look with confidence to her return with a freight of precious fruits, to which the volume before us, choice and ample as it is, will serve but as the prelude and the foretaste.

ANIMALS AND THEIR MASTERS.*

WE are all, it may be presumed, tolerably familiar with the "Friends in Council" whose moralizing has now been public property for many years past. It would be useless to criticize this little volume, which contains a report of their last debates from a general point of view. Everybody knows the amiable good sense, running a little into prosiness, of Milverton, and the amiable sarcasms, in which the amiable predominates a little too clearly over the sarcastic element, of Ellesmere. It is enough to say that they and their friends talk in the old style with no perceptible diminution of freshness and thoughtfulness. We may, however, dwell a little upon the subject-matter of their private debates. They indulge of course in a good many digressions, and repeat various anecdotes not strictly relevant to the main subject; but they resolve to devote themselves chiefly to the topic of the relation between man and his dumb slaves. Milverton, it appears, had lately an escape from drowning. After his deliverance from danger he reflected, characteristically enough, that there was one subject to which he had never yet done justice. He resolved that he would not get into a boat, or travel on a dangerous railway again, before he had "said his say upon the important question of the treatment of animals." If, which we earnestly hope may not happen, Milverton should be crushed by the next train which he enters, or drowned in a rash attempt to see the University boat-race, his last moments may be consoled by the thought that he has spoken a good word for our humble friends, and a word which is certainly much needed.

We are all agreed in theory that kindness to animals is an important duty. In practice we—especially if the pronoun includes pigeon-shooters, cabdrivers, and students of physiology—have a good deal to learn. To take two or three simple instances, mentioned by Milverton; the use of the bearing-rein inflicts a great amount of discomfort upon horses, in obedience to a silly fashion which persists in spite of common sense and in spite of the professed love of horses of the English race. Omnibus horses again, who have not in any way a very cheerful existence, have their mouths wrenched and their limbs strained every few hundred yards because omnibuses are not provided with drags. Sheep and oxen go through an incalculable amount of suffering from thirst and overcrowding because we do not choose to make proper regulations for their comfort in ships and railway trains. The horrors of vivisection are too disgusting to be noticed in detail by Milverton, and we are only too glad to follow his example. It would be easy to add to this a brief list of notorious cruelties which are daily perpetrated, some of which might be at once remedied by legislation, whilst more generally a slight improvement in the general standard of sensibility would be amply sufficient to effect a radical cure. The time at which any expression of compassion for brutes would be treated as ridiculous has fortunately passed, and all we have to do is to impress upon men's minds a duty which is generally recognized. We think, therefore, that Milverton's effort to prove that animals have rights is rather superfluous. No duty is plainer, though many are of more importance. The sufferings of a horse are a less evil than the sufferings of a negro; but then the horse, being unfortunately, as Ellesmere remarks, a dumb animal, is unable to help himself or even to complain of his sufferings, and is therefore so far more entitled than the nobler animal to assistance from above. It need only be added that by enforcing humanity we are not merely diminishing the mass of pain which exists throughout the world, but are putting down a most demoralizing practice. The present volume is certainly calculated to give a keener edge to our sympathies. The kindly feeling which is obvious in every page must of course do good to its readers; and two or three lines of thought are indicated, though they are not completely worked out, which would deserve a fuller investigation.

The Friends, for example, amuse themselves by looking up a variety of authorities upon the subject; and they give us a sufficient number of quotations to make us wish that somebody would write a small systematic essay upon the development of this department of speculation. There is really much to be said about it from a philosophical point of view. Thus it is curious to observe that the great enemies of animals, so far as theory is concerned, are the metaphysicians of the Des Cartes variety. In the religious writings of almost all sects we find the duty of kindness to animals inculcated, and often with surpassing tenderness. The legends of St. Francis of Assisi give the most beautiful expression of this sentiment, and Milverton quotes a pleasant story from Humboldt to prove that the monks of his order clung to the tenets of their great founder. A Franciscan who accompanied the naturalist on some of his journeys used to say, when a storm was threatening at night, "May heaven grant a quiet night both to us and to the wild beasts of the forest!" But as soon as we turn to the metaphysicians the natural milk of human kindness seems to be dried up under the influence of their abstract theories. Thus, for example, Aquinas says in his *Summa*:—"Animalia bruta non delectantur visibilibus, odoribus et sonis, nisi in ordine ad sustentationem naturæ"; and we all know the theory of animal machines which was common to Des Cartes and many of his disciples. The reason is doubtless, in a general way, that which Milverton gives us. Philosophers have a foolish prejudice against animals, for fear that they should set up a claim to the possession of a soul, which would interfere with the roundness and neatness of philosophical theory. Reason is the human faculty, and it is necessary to draw the widest and deepest line of demarcation between it and everything which appears to be analogous in the lower animals. A creature which is incapable of forming a syllogism must be regarded as scarcely worthy to be called a living creature at all. We need not add the perplexities which result from the admission or the refusal to admit that animals have free will. And thus reasoners of this class have fallen into gratuitous absurdities which are equally revolting to the natural philosopher and to the religious thinker. The greatest advocates of animal rights in recent times, so far as theory is concerned, have been the philosophers who have most objected to *à priori* methods—such, for example, as Jeremy Bentham, who becomes really eloquent in defence of humanity to brutes, and Mr. John Stuart Mill, who has spoken with equal effect on the same side of the question. We may hope that this part of their theories at any rate will prevail, and that the closer connexion between ourselves and the brute creation which Mr. Darwin seeks to establish will at least lead to a stronger interest in our poor relations. Milverton or one of his friends mentions that he has heard in his time 1,320 sermons, and says that he has not heard in one of them the slightest allusion to the conduct of men towards animals. We commend the subject to the attention of the dignitaries who have been advocating a crusade against drunkenness. Cruelty to animals may not have so widely corrupting an influence as intoxication, but when sermons are preached against one variety of vice, something may fairly be added against the other.

And this brings us to the further question, What practical steps can be taken to enforce this duty upon people in general? The power of legislation, though legislation may do something, is obviously limited. Milverton defends himself against Ellesmere, who had complained of the absence of any suggestion for practical remedies, by remarking that hundreds of thousands of transactions take place every day in London in which the treatment of animals by men is more or less concerned, and that it is out of the question to lay down rules by which they can all be regulated. The great thing to do, he says truly, is to introduce a new spirit. But how, it may be asked again, is that to be done? If it is meant, What device can be suggested which will within any limited period make men humane instead of brutal? the answer is only too plain. No such device can be struck out at a moment's notice, nor, properly speaking, can it be struck out at all. A change in the character of men and nations requires generations rather than years. Something, however, may be effected by judicious action in different directions. Milverton, for example, thinks that a book might be written for schools to inculcate humanity to animals. Such a book would of course require a vast amount of special knowledge; but it might be compiled by "a Huxley, a Wallace, a Frank Buckland, a Hooker, or a Wood, or the Bates who wrote that book upon the Amazons." If this suggestion be taken literally and prosaically, we fear that it would not come to much. No man, not even Professor Huxley or Mr. Frank Buckland, who is perhaps more qualified for this kind of work, can sit down and say, I will write a book which shall wean English schoolboys from cruelty; which shall prevent them from unseasonable birds-nesting, and tormenting cats, and throwing stones at deserted dogs, instead of trying to help them in their sufferings. But the suggestion, if taken up in a judicious spirit, might certainly lead to much. When education means something more than familiarity with the three R's, it may properly include some kind of study of natural history. Nine boys out of ten take some kind of interest in descriptions of animal life; and, though their infantile propensities take the form of teasing rather than protecting their helpless dependents, the childish instinct may easily be turned in the right direction. Both girls and boys have a natural propensity to make pets; a pet creature may be a wretched victim, or it may enjoy a really happy existence; the master or parent who will take the trouble to guide the instinct in the right direction, who will teach the child how much keen pleasure may be derived from attending to the wants and observing the habits of dumb animals, may find the means of giving both a moral and an intellectual education to his pupils. There is an unfortunate confusion in the public mind between the study of natural history and the ruthless destruction of all varieties of beasts, birds, and insects; and yet it is perhaps not too utopian to imagine that a day will come when people will recognize the obvious fact that kindly affections and habits of keen observation can hardly be fostered more easily in early life than by teaching children to take an interest in the creatures by which we are surrounded. Even in any great town there are

* *Some Talk about Animals and their Masters.* By the Author of "Friends in Council." London: Strahan & Co. 1873.

abundant opportunities of stimulating an interest in birds, beasts, and fishes, wild or domesticated, and a child that learns to take advantage of them has the power of enjoying a pure and elevated pleasure, such as he does not always acquire by the power of reading cheap books and newspapers. In short, without endeavouring to follow out a subject of which innumerable applications will suggest themselves to our readers, we may safely say that an intelligent study of natural history would be in every way an excellent mode of cultivating good relations between man and brutes, from which both sides might profit.

We will not touch upon other suggestions briefly noticed in this book, such as the precedent set by Lady Burdett Coutts of giving prizes for the encouragement of humanity to animals. We are content to take leave of the "Friends in Council" with the acknowledgment that their conversations are likely to be of great service in a direction where much is still wanted to be done; and that they have given us some pleasant reading into the bargain.

LANFREY'S NAPOLEON I.*

THERE are certain very obvious defects in M. Lanfrey's History of Napoleon. It is too argumentative, controversial, and didactic. M. Lanfrey does not, like an ordinary historian, tell his story in his own way, and have done with it. He is constantly turning to his audience to point out how much other historians have gone astray, and to ask people to observe what a consummate humbug and impostor the supposed hero really is when you come to look into him. And then he weakens the general force of his argument by tripping up the hero on rather small points. In 1801 Napoleon, being anxious to bend the Spanish Government to his will, threatened, unless his orders were obeyed, to expose an unsavoury scandal connected with the Royal family, and M. Lanfrey expends a great deal of virtuous indignation on this "Borgian trap," this "stab of a stiletto dealt in obscurity at an adversary disarmed." No doubt, in one way, it was a very low, ungentlemanly trick; but, after all, if it was a question between threatening to show up an exceedingly disreputable household and having a great many men killed in war, something might perhaps be said in favour of the milder remedy. Again Napoleon is unfavourably compared with Frederick the Great, and censured for his want of "philosophical irony." "Listen," says M. Lanfrey, "to Frederick explaining the motives which led him to take possession of Siberia: 'Ambition,' he says, 'interest, the desire to be talked of, made me decide on war.' This is grand." And then, by way of contrast, we are asked to observe Napoleon's mock heroics, and affectation of noble impulses. Most people will be tempted to think that there is really not much to choose between Frederick's cynicism and Napoleon's hypocrisy. So grave and weighty an indictment as M. Lanfrey is able with indisputable justice to frame against Napoleon is necessarily enfeebled by the introduction of trivial complaints. If a man has been guilty of murder and arson, the jury are more likely to be unsettled than confirmed in their impression of his guilt by a long argument to show that he has been known not to wipe his boots on the mat when visiting at a friend's house. These defects, as we have said, are obvious on the face of the book. It is impossible to deny that it smacks too much of the pleading of the *advocatus diaboli*. In order, however, to do justice to it, it is necessary to remember the circumstances under which it was written. It is true that M. Lanfrey's History is not like the narrative of an ordinary historian, but then his task is very different. He has not only to construct, but to destroy; to destroy, in fact, in order that he may construct. He has to clear the ground of a thick growth of fancy and fable before he can build up the temple of truth. It has become a phrase now to talk of the legend of Napoleon, but few people have any idea of the mass of falsehoods of which the popular history of this man is composed. Napoleon was himself one of the most unscrupulous and industrious liars that ever lived. He was utterly destitute of any sense of honour or truthfulness. He lied from morning to night; he told lies to everybody he met, even to the smallest people, and about everything he had to do with, even the most petty and trivial things. Some persons are restrained from telling lies by the reflection that the people to whom they are told must know the statements to be untrue. But Napoleon was far above this weakness. He would gravely declare that he had never uttered certain words or signed a particular document before people who were quite aware that he knew they had heard him use the words or seen him sign the paper. He destroyed official reports—those of the battle of Marengo, for example—and forged others. His private correspondence, which has been published in our own day, constantly contradicts his official statements, and is also full of falsehoods. His last years were spent at St. Helena in weaving a bewildering web of fable and misrepresentation. Highly imaginative historians have garnished this mass of lies with little fancies and inventions of their own; and hence it is quite as much M. Lanfrey's business to show what Napoleon was not as what he was. M. Lanfrey's History may not be a final and perfect History of Napoleon; but it is at present the only one worth reading, the only one that gives anything like a true account of the real man. Other histories are only myths and legends.

M. Lanfrey's work is addressed especially to his own countrymen, whose illusions on this subject are stronger and more obstinate than those of other people, but it well deserved to be translated. The present volume has an especial interest for Englishmen, for it deals with the hollow Peace of Amiens and the renewal of the war between England and France. This is a very important part of our history, and one as to which English opinion is not so clear and well informed as it might be. M. Thiers, it will be remembered, makes very short work of this passage in the career of his hero. England, he says, made peace because she was exhausted, and then went to war again out of sheer jealousy of Napoleon's glory. The truth is that in 1801 each side had good reasons for desiring a truce, if not a peace. England was suffering from bad harvests, famine prices, heavy taxes, and the uneasiness produced by the King's illness and the Catholic claims. Pitt had made way for Addington. The gladness with which the news of the Peace was received proves the eagerness with which it was desired. "Never, perhaps," says the *Annual Register*, "since the restoration of Charles II. was the general joy in England so high and extravagant." On the other hand, however, Napoleon had equally pressing and urgent motives for wishing a cessation of hostilities. The Consulate was about to blossom into the Empire, and it was necessary that the change should be effected at a moment when everything seemed prosperous and glorious for France. A vast empire stretching to the Alps and the Rhine had already been created. Belgium and North Italy were governed from Paris; Holland, Spain, Portugal, and Switzerland were held in virtual subjection, and French influence was paramount in Germany. There was enough here to dazzle the imagination and to satisfy the national ambition of France, which had never been so powerful even in the days of Louis XIV. Bonaparte had hoped before this to have struck an effectual blow at England, the nation he feared and hated the most, but just then circumstances were hardly propitious. Nelson's victory in the Baltic and the death of Paul I. had broken up the League of Neutrals, on which he reckoned for important naval help. Russia, from being the enemy, had become the ally of England. For the moment it was clearly better for Bonaparte to keep what he had, and get it ratified by treaty, and to settle accounts with England at some more favourable opportunity. It is significant of the spirit in which he acted that the progress of the negotiations did not interrupt his projects of aggrandizement. Before the Peace of Amiens was concluded, he was already carrying out three or four different schemes which could not fail to endanger its stability. He effected the definite confiscation of all those small States such as Holland, Switzerland, the Republic of Genoa, and the Cisalpine Republic, which since the Revolution had fallen under the control of France. The English Ministry naturally refused to ratify these acts of violence and usurpation, but they made no attempt to oppose them. It is evident that Napoleon had taken the measure of the men he had to deal with, and had come to the conclusion that for the sake of peace there was scarcely anything they would not submit to. In this he was mistaken, but when we review the facts we must admit that the mistake was not altogether unnatural. The episode is not perhaps without its lesson for our own day.

During the negotiations Napoleon had repeatedly urged upon the English Government that "libellers"—that is, writers who dared to speak ill of him—should be classed with assassins, and should as such be liable to extradition. It was inevitable that the request should be refused, but unfortunately the refusal was conveyed with a gentleness which was certain to be misunderstood. Even when a demand was subsequently made for the expulsion or punishment of Peltier, Cobbett, and others, "in the name of the law of nations," Addington, instead of at once declaring that anything of the kind was simply impossible and could not for a moment be thought of, was weak enough to instruct Lord Hawkesbury to give a temporizing answer. Napoleon was assured that he was no worse treated by the newspapers than the English Government itself, which always disregarded such attacks; but it was added that the Attorney-General would be consulted as to whether any steps could be taken. As to the refugees, a promise was given that those in Jersey should be sent to England, and it was hinted that possibly Georges and the principal Chouans might be despatched to Canada. Bonaparte's only reply was a formal demand for the suppression of "seditious publications," the expulsion of the refugees in Jersey, the deportation of Georges and his adherents to America, and the banishment of all the princes of the House of Bourbon. These things were asked for under the alleged authority of the law of nations. At the very time when Bonaparte was pressing these insolent demands he had, with the assistance of the infamous Barrère, organized a special press for the purpose of slandering and insulting the English Government, and to these wretched sheets he was himself not above contributing an occasional passage of coarse and brutal invective, or some more than usually audacious falsehood. A familiar phrase occurs in one of the numbers of the *Moniteur* about this time:—"What a difference between a people who make conquests from a love of glory and a nation of shopkeepers turned filibusters!" His next stroke was the definitive union of Piedmont and Elba to France—a defiance which was accompanied by a show of preparations for war. Bonaparte, encouraged by the idea he had formed of Addington's weakness and pusillanimity, imagined that it was necessary only to heap up insults and outrages on the English Government in order to terrify it into submission. On January 3 the official *Moniteur* published Sebastiani's report of his mission to the East, giving an enumeration of the English and

* *The History of Napoleon the First.* By P. Lanfrey. Vol. II. London: Macmillan & Co. 1872.

Turkish forces, and stating by way of conclusion that "six thousand French would suffice to reconquer Egypt." At the same time Bonaparte took a high tone with Lord Whitworth, our Ambassador at Paris. When reminded that he had violated the treaty by his proceedings with regard to Switzerland and Piedmont, he observed disdainfully that these were mere trifles, and that what he had taken he meant to keep. As the English Government did not yet give way, he thought he would try a stronger dose of insolent menace. Two days after his interview with Lord Whitworth the *Moniteur* published the annual report on the state of the country. It described England as given over to the squabbles of rival parties, and added that, "while the struggle lasts, there are measures which prudence dictates to the Government of the Republic; five hundred thousand men ought to be, and shall be, ready to defend and to revenge it." This was too much even for Addington, and war was soon after renewed. It would seem that Napoleon had formed an exaggerated estimate of Addington's weakness, and that in any case he had left out of account that the Minister's power depended on the will of the country, and public feeling in England had undergone a serious revulsion since the peace was signed. There had been doubts as to the first war, which though justified by the temper and threats of the Convention, had the appearance of being an attack on the domestic freedom of France. There were no doubts as to the second war, because it was seen to be demanded for the safety, not only of England, but of Europe.

We need not follow M. Laufrey through the history of the European war, which in this volume is brought down to Jena. We will only say that he underrates, in our opinion, the perils of England at the time of the threatened invasion, when our fleet was put on a false scent, and, but for a combination of rather lucky accidents, things might have gone hardly with us. One of the most interesting chapters is that devoted to the authentic history of the way in which the conspiracy of Georges and Pichegru was nursed by Bonaparte and his police, the entanglement of Moreau, and the murder of the Duke of Enghien. Scattered through the volume there are some curious passages, which we are tempted to bring together, bearing on Napoleon's connexion with journalism and literature. He always spoke with the greatest contempt of men of letters; but this contempt was only an affectation which betrayed, instead of concealing, how much he suffered at their hands. Nothing made him detest England so much as the freedom of the press, which was open alike to natives and to foreigners. His private correspondence shows the importance he attached to getting the writers on his side. So intense was the morbid vanity of the man that, even in the height of his greatness, he would writhe under a sharp sentence from some obscure or unknown journalist, and would even take up the pen himself to answer the attack, or, rather, to overwhelm his critic with the coarsest and most outrageous abuse. In 1803, of the twelve newspapers to which the Consular decree of the year VIII. had reduced the press of Paris, only eight remained, owing to fresh suppressions ordered by Bonaparte. These wretched prints existed only on sufferance. In one day Bonaparte, amidst all his labours, found time to write three letters to the Grand Juge Régnier about the press. In the first he ordered the Grand Juge to reprimand the proprietors of the *Journal des Débats* and of the *Publiciste* for having published news taken from German papers relative to the "pretended armaments"—which were very real armaments—in the ports of Russia. In another he directed an intimation to be sent to the proprietor of the *Citoyen français* that he must change his editor. The third prohibited the newspapers from republishing political news copied from foreign gazettes. "The journalists," he added, "are free to report the news published by the official paper." Fouché having sent him some notes on the powerlessness of Russia, written by one of his agents, Bonaparte directed them to be published "in a newspaper, as translated from an English paper; choose the name of one that is little known." Not content with "inspiring" the press through the Grand Juge and the police, Bonaparte was at times a frequent contributor to the *Moniteur*, the official organ, and in fact the only paper which was read by the people of France. There is the true Napoleonic ring in some of the diatribes against England. The whole nation is accused in one of the articles of having caught the disease of its King. The refusal of Catholic emancipation suggests the remark that "a prince, insane and without faith, had re-established the laws of Nero and Domitian." "Why," the *Moniteur* asks on another occasion, "why are we at war? Because the English people have no one to conduct their affairs but a mad King and a Prime Minister who is like an old nurse." This is exactly the style which Napoleon did not hesitate to introduce even into his public bulletins—such, for example as those in which he pursued the unfortunate Queen of Prussia with vile and malignant calumnies. He described her as the sole author of the war, and attributed her interference to her passion for the Emperor of Russia. "The explanation," he said, "was to be found in the engraving which represented on one side the handsome Emperor of Russia and the Queen close to him, and on the other the King stretching out his hand over the tomb of the Great Frederick. The Queen, dressed in a shawl very much like the engravings of Lady Hamilton in London, is placing her hand on her heart, and appears to be looking at the Emperor of Russia." "The shade of Frederick," adds Napoleon, "must have been indignant at this scandalous scene." And in a succession of bulletins he repeated the cowardly slander. On the renewal of the war with England the First Consul offered rewards for verses against the enemy, and a "humorous" poem on the Goddams, supposed to be written by a French dog, filled the columns of the *Moniteur*. An unknown person having written some stanzas without being paid for it, Bonaparte's suspicions were at once aroused, and he immediately wrote to the Grand Juge, "It is advisable to know who is the author of this song; although it appears written with praiseworthy intentions, the police ought not to be unacquainted with any movement." Napoleon, with many great qualities, was certainly on one side of his character one of the meanest and shabbiest creatures in the world; and in a true picture it is necessary that both sides should be shown, though, as we have said, we think M. Laufrey sometimes makes too much of trifles.

BRIGHT MORNING.*

THERE are enigmas enough in life, confused, contradictory, inexplicable; but the various forms of morality patronized by novelists are among the most puzzling of all. Now we have the ascetic school, where people qualify themselves for canonization by all sorts of works of supererogation and unnecessary self-sacrifice; now the sect which wears its virtues like an old glove, and, for the sake of a passionate will, scatters the most solemn obligations and duties like chaff before the wind. One hero breaks his manly heart and wrecks a useful life through despair at an involuntary crime; another, meant to be accepted as a good fellow in the main, commits acts of baseness and rascality without an effort to disentangle right from wrong. A sweet and sensitive heroine sails perilously near the wind in the matter of certain clauses in the Second Table, but never seems to know that such a thing as remorse exists; while an angel of the back slums preserves a seraphic purity in circumstances wherein it would be impossible to find even ordinary decency. Between these two extremes—the virtue which is so tender that it cannot bear the rude breath of actual life without pain, and the virtue which is so tough that it can go through the mill and come out at the other end as good as new—we are at a loss to understand what is the truth of human nature; and were we to follow the creed of the novelists, we should be lost in a swamp only to land in a jungle.

Bright Morning is a book which, bristling with many commonplace defects, has this peculiar quality of an original morality. It is a story abounding with the vices of the virtuous and the loveableness of the vicious, and no great blame to anyone. Indeed it seems to make very little difference whether the characters are labelled bad or good to start with, for they all fall short of ordinary morality as they go on, and end in a happy confusion of qualities wherein wrong is not so very wrong after all, and right is by no means distressingly rigid. When a young woman, broken-hearted because her handsome scampish lover has jilted her, marries an elderly, worthy sort of man for his money, and fails in every honourable fulfilment of her covenanted duties, the writer shows no sense of blame. Because she loves her boy, and looks pretty while she spends her time in caressing him in the sensual, silly way which novelists delight to depict, and which is profoundly untrue to real life, she is held free to encourage the child to disobey his father, while she herself defies her husband, and holds his reasonable demands as insolent interference. Because she has had a heart blow, she allows herself to cherish years of bad temper and unwomanly hardness; lamenting herself as a sacrifice when she is in point of fact a criminal, and hating her husband as her tyrant when he is all the while her victim. We have seldom met with a more inane and provoking creature than this same Beatrice or Trixie O'Neil. Wayward, passionate, undisciplined, she does not come before us with one recommendation to our regard beyond her beauty. Hence Miss Grant has built up her heroine on the slenderest base on which that odd simulacrum of womanhood can be constructed, and the result is a person whose claims to our sympathy and esteem would be gravely endangered by a fit of indigestion, and totally destroyed by an attack of small-pox or a pimple on her nose. Of depth or dignity she has none; of pure and wholesome affection none; her love for Godfrey Hamilton is due only to the fact of his physical beauty and muscular strength; and his own style of love-making—which, by the way, strikes us as being singularly unlike the love-making of a gentleman to a lady, but more after the pattern of that of a *roué* to a barmaid, and which is a compound of impertinent familiarity and thinly veiled sensuality—gives the key to the source whence the heroine's passion draws its nourishment and maintains its force.

Nothing is more damaging to the true merit of a work of fiction than this constant presentation of personal beauty as a make-weight against the crooked morality of a low nature. The one is only a kind of outside fact to the reader, a mere bit of colouring; the other is the very soul of the story. Intrinsic worthlessness is not rendered interesting by continually dwelling on the pair of dark blue Irish eyes that have such witchery in their glances; and a snob is a snob all through, though he has a crop of golden curls and stands six foot two in his stockings. And when we are expected to be interested in the former, and to feel benovolently towards the latter, notwithstanding their joint worthlessness and because of

---

* *Bright Morning.* By Maria M. Grant, Author of "Artiste." 3 vols. London: Chapman & Hall. 1873.

their joint beauty, we are only conscious of the author's unsubstantiality of treatment, and the want of a true insight and a high ideal.

The sensuality of *Bright Morning* is persistent and wearisome. It is stuffed full of dark eyes and scarlet lips, of hands that touch each other lingeringly in the twilight, and of heads that bend close together, with the dangerous consequences that follow. If a man looks handsome, a girl falls in love on the spot; if a woman looks bewitching, a man is ready to play the fool or the scoundrel, as his nature determines. Ogling is about the strongest line the fishers of hearts can throw; and Godfrey forswears Trixie, with whom he is desperately in love after his manner, because Adelaide Cathcart looks into his face, "and her eyes were very pleasing to him, so soft and dark, and so near his own." This Adelaide Cathcart, by the way, is a cold and heartless heiress with whom Godfrey has flirted in the past season, and made way. She has no love to give, having in her turn encountered the fate so liberally accorded by novel-writers to their ladies, which doomed her to a lifelong sorrow, effectually concealed by a liberal amount of flirting and the astuteness of an old gambler in making her game. She is rich, handsome, and a *parvenue*. It behoves her then to marry station for the one part and good looks for the other. At the moment when she looks into Godfrey Hamilton's face she is undecided between him and Lord Harry Palgrave. She has been questioning Godfrey of "the romantic story, you know, about your lady-love up in the North—your engagement, you know;" and he for answer has replied, "Rubbish; who could have told *you* such a story?" "Why not to me?" says Adelaide; and then their eyes meet, "hers dark and soft, and near his own." The scene goes on thus:—

"Why not to me?" she repeated.

"Because you are the last person I should have imagined could have believed such a thing," he answered her; and then his hand stole out in the dusky firelight, and for one moment his fingers closed fast on hers. She let him hold her hand for an instant.

He looked very handsome as he bent towards her in the fire-glow, a hot flush on his cheek, a bright glitter in his eyes.

"I think I will marry him!" she whispered to herself. "Harry Palgrave is such a hopeless fool!"

"Is it not true?" she said aloud, and her gaze still softened as it sank into his.

Ah, Godfrey! He would have found courage to face the bristling ramparts of a fortress, to walk to the very cannon's mouth; but with her eyes still upon him, with her hand still touching his, no courage came, no power to speak, in truth, the answer to her words.

"You are the last person who should believe such stories," he said.

And then some one interrupted them, and he rose from the sofa by her side.

"It is all a *canard*," she thought to herself; "he is fair game yet. I think I'll throw over Harry Palgrave, after all. Poor Harry!" and then she went off to dress.

After this we hear of a love-letter from Trixie, "warm and rich with tender names and little sweet love words," which "made his cheeks crimson and his heart beat anew." So Godfrey, or "Goff" for short, goes on for a few more sentences, vacillating between his love in the North and his enchantress in the South, with duns and debts to strengthen the hands of the latter, "whose subtle influence was gathering round him like a spell." It is some consolation to know that this "six feet two of such physical energies" loses both ladies; giving up one and being given up by the other; and that he disappears as a "failure," in the odour not of sanctity but of Basinghall Street.

After her disappointment through Godfrey, Trixie, having grown hard, and dangerous about the eyes, marries Mr. Forde, the wealthy shipbuilder, to whom she behaves with infinite ill-temper and want of feeling. He is not described as a very charming or fascinating man, but he is kind and generous, and he loves his pretty doll with truth and fervour, deserving better things at her hands than those she gives him. The marriage is unhappy, mainly owing to the young wife's morose humours; Mr. Forde, after trying to make matters better, yielding to the inevitable, and accepting his bitter fate with a spirit as hard and as morose as her own. They have a boy; and here Miss Grant's muse, from being sickly, becomes sickening. If such a child and such a mother were met in real life, how heartily tired of both we should be before ten minutes had passed! It is all in this strain:—

Trixie sat on a low chair near the window, and her boy, with his arms flung round her, leant his fair head back upon her shoulder, and was laughing in bright saucy triumph into her face.

They had been evidently having a contest, and Rupert had won; and she held him close to her, and bent over him a countenance flushed with exertion, and eyes full of eager tenderness, half-amused, half-unwilling, yet glad to yield, a countenance so lovely,—it seemed to Jim as if it came to him from his dreams.

* * * * * *

Jim looked into the handsome proud young face, and said nothing. It was such a curious picture to him, the combination; the little delicate features had the strong, determined expression he remembered in the countenance of the boy's father, and the blue shadowy eyes, the flushed cheek, the passionate quivering lip, were moulded and coloured with the rich warmth of his mother's beauty.

"Ru, go to your tea," said Trixie presently; "it is half-past five; it is more than time."

He looked at her from his contemplation of Jim with an indolent, half-rebellious glance, and hesitated a moment, then unexpectedly he made up his mind to go.

"Poor stern undemonstrative Andrew Forde," who "worshipped the child" and who happened to be only his father, is nowhere in this nursery idyl; and, by way of a last endeavour to exercise some authority in his own house, he takes the boy away in secret and puts him to a school where his mother cannot find him. On this of course Trixie goes mad, or what is equivalent to mad; and Godfrey, who has come home again, and is singeing his wings and hers by fluttering round the flame of an unlawful love, takes advantage of her distracted state to lure her away with him, and thus ruin her character for ever. If it had not been for "Jim," otherwise James Lindsay, her cousin, who had loved her undeclared and undetected all his life, she would have been destroyed in fact as she is in appearance. The incident is not too delicate, but it is only too much in harmony with the prevailing tone of the book; and, unpleasant as it is, comes in as the natural consequence of what has gone before. In the end the boy and the husband and Godfrey Hamilton all die; and Trixie is thus free to marry her faithful swain, and to reward a constancy that had withstood all assaults.

We have a word or two, however, to say about Jim Lindsay. He is the *preux chevalier par excellence* of the story; the man of merit and of virtue, pure, true, and manly. But even he can moon and gloat over the idea of seeing Trixie again when he returns from India to England, though he knows that she has been married for seven years; and when he goes with her to the nursery, and they both look on the sleeping child, "a wild, strong, intoxicating temptation" to tell her that he loved her, and had always loved her, nearly overpowered him. Because she did not love her husband, he argued that it "could *not* be sin now, surely, to bend over her in her utter loneliness, and whisper his lifelong devotion into her ear." We fear that Miss Grant's method would prove more pleasant than safe to souls battling with temptation and the Seventh Commandment; and that if the virtuous men think they may make love to a married woman over the bed of her child, because she has been an undutiful and unloving wife, there would be but little chance for poor shivering morality when it came to the vicious ones. If Joseph may palter with sin, what of Juan? Add to this questionable morality a loaded style, peculiarities of grammar that defy the authority of Lindley Murray, and a general air of slipslop that never deviates into correctness or dignity, and we have the main characteristics of a poor and worthless book.

THE REGISTER OF ARCHBISHOP GRAY.*

We are always glad to get a new volume from the Surtees Society. Their books always contain sterling matter, and their range spreads over so wide a field in point of time as to supply something for almost any taste which is a taste for past times at all. They give us matter ranging from the earliest days of Northumbrian Christianity down to the contemporaries of the Restoration of Charles the Second. Bæda and Cosin come alike within the sphere of Surtees editorship. The volume which Mr. Raine here gives us belongs to an intermediate stage. It has to deal with perhaps the most famous of the Archbishops of York in the thirteenth century. Walter Gray is, we suspect, best known from a wonderful story, to be found in Matthew Paris, or what we commonly call Matthew Paris (for of course it is really Roger of Wendover), and in a more modern form in Godwin's Catalogue, how he stored up corn for five years, how it was eaten of rats and mice—the later writer prudently substitutes "mures," a somewhat vague word, for the more definite and less likely "sorices," or shrews of the earlier—and how the snakes and adders and terrible toads put their noses out of the stack, and how "moreover they all heard an unknown voice saying unto them, Let the corne alone, for the Archb. and all he hath is the divel's possession." Mr. Raine evidently thinks much better of Walter Gray, who certainly was a man who played a great part both in national and local affairs; and even in the matter of the corn one would like to have some surer witness against him than that of toads, snakes, and unknown voices. Walter Gray held the see of York for forty years. And Mr. Raine tells us that he was the first English prelate who has left a Register behind him. He also tells us that this is the first Register of the kind which has been actually printed in England, though there is another—also from the province of York, though from the diocese of Durham—now printing in the series of Chronicles and Memorials. To the Register itself Mr. Raine has added by way of Appendix a great number of other documents in which Walter Gray was concerned, gathered together from various quarters. The Register itself consists of two distinct rolls, the entries in which begin in the year 1225, the records of the first two years of Walter's archiepiscopate having been lost. A great many of the entries are naturally only of a formal kind—records of institutions and such like ministerial acts. In these cases Mr. Raine has not thought it needful to reprint the whole of these documents, which of course include a great deal of mere legal phraseology which cannot differ greatly in each particular case. Documents of this class Mr. Raine has been contented to calendar, giving merely a summary in English. But he assures us that he has preserved every fact which these formal entries contain, and especially that he has given all the proper names in such shape as he finds them in the Register, whether right or wrong. Documents of any intrinsic interest he of course prints at length in the original. These different ways of treating documents which are brought close together in the same or in opposite pages give some parts of the book rather an odd look, and in the hands of some editors we can fancy that the practice might be

* *The Register, or Rolls, of Walter Gray, Archbishop of York.* With Appendices of Illustrative Documents. Published for the [Surtees] Society by Andrews & Co., Durham; Whittaker & Co., London, &c. 1872.

dangerous. We believe however that Mr. Raine may be trusted to settle what is worth giving in full and what is not, and certainly, for all general and for most local purposes, it is enough to have the names and dates without the endless repetition of the mere formulæ in each case. The documents which Mr. Raine has collected in his two Appendices are of course given at full length, and these are naturally more valuable for general purposes than the Register itself. Here is a specimen of the form which these documents take in the abridged form given them by Mr. Raine:—

Claverceburg, Kal. Dec. 14th, 1229.—License, with the consent of the prioress and convent of Selford, patrons, M. the rector and R. the vicar of Laxington, for dom. R. de Laxinton to build a chapel "in curia sua de Laxinton," and to have a chaplain ministering there, reserving the rights of the parish church. By the hand of Mr. Simon de Evesham.

Here we learn less than usual, for the names of some of the parties concerned are not given in full. But in this respect the perfect document itself could not have been any fuller, and we see how everybody was described, who was "Dominus" and who was "Magister." Mr. Raine's "Mr." has a singularly modern look as applied to these thirteenth-century personages. But as he uses it throughout as a received abbrevintion for "magister," there seems to be nothing to be said against it.

Mr. Raine in his Preface gives a general sketch of the state of things during the time that the see of York was held by Walter Gray. We must remember that during the fifteen years of his incumbency he was one of the chief persons in the kingdom, and was constantly employed in public affairs and holding great offices of all kinds. Yet it certainly does not seem that he neglected his own diocese, like his more famous successor, Wolsey, who never found time even to be enthroned till after his fall from temporal power. Walter Gray was evidently a great deal in his diocese, and he was constantly moving about to different parts of it when he was there. Mr. Raine gives a list of his movements during the year 1228, in which he appears in a great number of his houses and in other places in the diocese; indeed he seems seldom to have stayed a whole week in any one place. It must however be noted that, among these many places of archiepiscopal dwelling or sojourn, the metropolitan city itself is not to be found. The old connexion between the Bishop and his own church was fast falling asunder. Mr. Raine has a good deal to say about capitular matters. It is plain that in Walter Gray's time the Chapter had by no means lost its primitive character as the Bishop's Council, though the way in which it acted as such was beginning to take a rather strange form. Walter Gray seemingly did not trouble himself often to preside in the Chapter-house at York; but in 1227 he got a Bull from Pope Honorius the Third to allow "quatuor personæ majores et digniores Eboracensis ecclesiæ"—that is to say, the Dean, Precentor, Chancellor, and Treasurer, who were of course bound to strict residence at York—to come to the Archbishop wherever he might be, and give him the benefit of their counsels, without such absence being reckoned as breach of residence or involving any consequent loss of income. The license however ends with a warning against this liberty of occasional absence being turned into permanent non-residence:—

Dum tamen tales se per hoc ab ecclesia continuo non absentent per quod ipsa eorum obsequio defraudetur.

In another letter of the same Pope in the same year we find a question about a certain "Magister Laurentius de Sancto Nicholao," whom the Pope describes as "Subdiaconus et capellanus noster," who, like many other foreigners in those days, held English preferment in the form of a prebend at York. This prebend, it seems, had no particular endowment, but had simply a share in the common revenue of the church, whether its holder were present or absent ("tempore predecessorum ejus non erat alicujus certi valoris, nec consistebat in aliquo certo loco, sed tantummodo in communa, quæ quandoque plus quandoque minus pro temporum varietate valebat, ejusque proventus, sive præsentes essent sive absentes, percipiebant in duobus terminis annuatim"). But Archbishop Gray himself and his Chapter had lately made a statute, on account of the small number of canons who kept residence ("quia valde pauci canonici residentiam in ecclesia faciebant")—they at least did not look forward to a time when there should be only one—by which those canons only were to have a share in the dividend who kept residence and attended the services. By this statute the holder of the particular prebend held by Master Lawrence was to have as his corps a yearly payment of six marks, whether he resided or not, with a share in the divisible property if he resided. As these six marks formed a less income than that of the prebends in general ("quia prebenda illa quam contulisti prefato magistro respectu aliarum nimis videtur exilis"), the Archbishop had further given him the church of Trokelinton or Tockerington. On this the Dean and Chapter took occasion to refuse Master Lawrence his payment of the six marks on the ground of his being otherwise provided for, and the Pope writes to the Archbishop because this alleged wrong is to be redressed. This is one of those pieces of capitular history which show how nearly the same questions were going on in different places at the same time. Walter Gray at York was contemporary with Jocelin at Wells, and both were doing the same work, that of tempting their canons into residence, by making it their interest to reside. The stage of throwing hindrances in the way of residence, in order to increase the incomes of those who are already residing, came later.

Another matter about which there is a great deal in these documents is the jurisdiction of the Archbishops of York over the Archbishops of Scotland. Mr. Raine sets forth his private opinion on this matter in a shape which to many will sound startling:—

It is sometimes said that the Northern Convocation is too small in numbers. I long to see the Scottish bishops reincluded among the suffragans of York. The greatest blow that Scotland ever inflicted upon her Church was when she made it independent of York.

It is plain that in Walter Gray's time the Archbishop of York exercised full metropolitan jurisdiction over the see of Whitherne, or Candida Casa. At one time we find the Archbishop summoning the King of Scots to appear and discuss matters touching the election to that see. In another case we find Archbishop Walter and King Alexander joining to annul the election of the convent. Anyhow it is plain that the jurisdiction of the Archbishop of York in those parts was at least as fully acknowledged as that of the King of Scots, whom the convent speaks of in a somewhat significant way as "Dominus Rex Scotiæ qui modo Galwezzam tenit." But we do not find the Archbishop exercising any authority in any other diocese either of the kingdom of Scotland or of the other lands held by its King. We get however some notices of the Bishopric of Man, and of the fact, of which we should like some explanation, that the electors to that see were the abbot and convent of Furness. The see was then held to be suffragan to the province of Nidaros or Trondhjem in Norway; but as the perils of the sea were so great that the Bishops of Man could hardly ever get at their metropolitan, Innocent the Fourth allows that they shall be confirmed and consecrated by the Archbishops of York.

We mark in one entry of 1229 two persons described as Hugh the son of Waltheof and Edusa (Hadwisa?) the daughter of Alwy (Ælfwig). This is one of the endless instances in which we find the Norman names supplanting the English, the father being called after the elder, and the children after the newer, fashion.

We quote the following passage from Mr. Raine's preface:—

In one instance only do I find the archbishop mentioned in connection with education, and that is in the gift of a house in Oxford, called Black Hall, to the University, which was then really contained in the college of that name. In making this donation he had before him the example of one of his own friends—William of Lanchaun, Archdeacon of Durham and Canon of York. This brings the Archbishop into close connexion with the true founder of University College, and therefore of the University of Oxford, on which the gratuitous assumption of a remote antiquity confers nothing but the ridicule of scholars.

We are thankful to any one who will help us in showing up "the fable of the millenarians"; but we do not understand what Mr. Raine means by the University being "really contained in the College of that name," or by "founder of University College, and *therefore of the University of Oxford*." The University began in the twelfth century, the Colleges in the thirteenth. Nor do we quite understand Mr. Raine when he says:—

In the infancy of cathedral institutions the bishop resided at the cathedral church, and was its head, an *abbat* acting under him, with the title of vice-dominus, who was probably the deputy of the prelate.

He adds that at York Archbishop Thomas the First "placed a dean in the room of the ancient abbat." As York was always secular, we cannot make out about the "abbat."

It must not be forgotten that Walter Gray was one of the great builders of the thirteenth century, and that his works are to be seen both at York and in his other minsters and houses. Among them is Bishopthorpe, where he bought the manor and gave it to the Chapter in trust for his successors. In the manor-house—vulgarly called the "Palace"—his chapel still remains, with a building not designed by him standing over it. In the true Palace at York—now utterly forsaken for the rural retreat—he built the chapel which now forms the library where Mr. Raine so worthily presides over the capitular treasures.

PERSIA AND "THE DEBATABLE LANDS."*

IT would be difficult to over-estimate the usefulness of the task which Mr. Wheeler has lately undertaken to accomplish—the indication, namely, of "the political status of those countries which lie between Persia on the one side and Khiva, Bokhara, and Afghanistan on the other." But the difficulty, as well as the usefulness, of compiling trustworthy information on Central Asia has just been illustrated by our present geographical muddle over the boundary of Badakhshan, and also—we must say it—by the present work itself, for Mr. Wheeler's "political status" turns out to be something little short of chaos. The "Memorandum" reveals a state of things in which boundaries, principalities, and powers change and interchange in a manner suggestive of the doctrine of transmutation of energy. Mr. Wheeler very properly calls the border territories, of which he writes, "debatable lands"; and of these it would seem that Badakhshan is, or rather was, a continuation eastwards. To complete his sketch the author first submits a summary of modern Persian history, whose beginning is dated from about the year 1500, when religious bigotry or enthusiasm—always a convenient and potent political instrument in the East—enabled the Shiah prophet, Shah Ismail, to overthrow the Sunni successors of Timour, and

* *Memorandum on Persian Affairs; with a Supplementary Note on the Turkomans, Char-Eimaks, and Seistan.* By J. Talboys Wheeler, Secretary to the Chief Commissioner of British Burmah. Calcutta: Office of Superintendent of Government Printing. 1871.

to found the Sophi dynasty. Under the greatest of the Sophis, Shah Abbas, who reigned at the beginning of the seventeenth century, Persia reached the summit of its power and splendour—its limits reaching to the Oxus, and including Herat and Candahar. After him of course came the deluge; and Peria was despoiled of Georgia, Azerbidjan, and Koordistan. An Afghan reign of terror lasted from 1722 to 1730, when cannibalism was openly practised in the streets of the capital. But at the second date the usual saviour of society appeared in a Khorassan robber, Nadir Shah, under whom Persia included the whole vast tract of territory from the Oxus and the Caspian to the Indus, and therefore the homes of those lawless scoundrels, the Turkomans, whose "independence," as it is styled, has at all times been a curse to their neighbours. Nadir Shah was a Sunni, therefore not loved, and, probably for the same reason, murdered at the holy Shiah shrine of Meshed. After him came the Zend dynasty, whose representatives distinguished themselves by deeds of orthodox atrocity—poisoning their rivals, or beating out their brains "with wooden mallets." Even the noblest characters in that nation which has been styled an Oriental France occasionally break out like wild beasts. Lootf, last of the Zends, is described as "the ideal of an Iranian warrior"; yet he burnt a man alive for a comparatively slight offence, of which, after all, it was not clear that the victim was guilty. But the most appalling monster of them all was Agha Mohammed Khan, the first king of the now reigning Kajar dynasty. He is described as a shrivelled diminutive eunuch, who blinded 7,000 inhabitants of Kerman on the charge that they had assisted in the escape of his rival, and afterwards tore out the eyes of Lootf with his own hands. Agha's triumphal pyramid of skulls was seen by Sir Henry Pottinger in 1810, thirteen years after its erection. But the long reign—1796 to 1834—of Agha's nephew and successor, Futteh Ali, was a vast improvement upon that of any of his predecessors. The residence of English, French, and Russian representatives gave a new dignity to the Persian Court, whose interests were thenceforth intimately bound up with the course of European politics; and the moral force of the presence of a superior civilization was revealed in the abandonment of old and barbarous modes of execution, and in the gradual adoption of European manners. Yet our "Memorandum" shows how, even in Futteh Ali's time, the old Adam of savagery could break out on provocation. And Futteh's descendant, who, in spite of the pious arguments and warnings of the Mollahs, is determined to be the first Persian Shah to visit England, could tell tales of some unlovely scenes at which his own Majesty assisted—when headless bodies of Turkomans were dragged through the camp, and their bodiless heads paid for in hard cash.

Like other Asiatic princes ambitious of emulating Alexander, Darius Hystaspes, Timour, and other historic conquerors, Futteh Ali signalized his reign by repeated efforts to win back the limits of the old empire of Nadir Shah. Mr. Wheeler points out that some of these attempts were made in conscious violation of international law, according to which the Shah's claims must have become invalid after a lapse of sixty years. This argument, however, cannot apply to the case of the province of Khorassan, reconquered by Agha in 1796. Many readers will be surprised to learn how very recently it was that this important province became an integral portion of Persia. Indeed it would appear from the "Memorandum" that, until the year 1848, Khorassan might pretty correctly be described as "a debatable land." It was under the sway of petty chiefs who owed obedience to the "prince-governor" at Meshed, and paid it when it pleased themselves. Abbas Mirza, the ablest of these lieutenants, subdued the refractory chiefs in 1830; but they broke out again in 1835, during the reign of Mahmood Shah, the third Kajar. Once more they rebelled in the year 1848—the present Shah then reigning—while the Turkoman hordes went plundering over the province. Quite different, however, was the point of international law with respect to Herat, which Persia unsuccessfully attempted to seize in 1809, and again in 1817. The blood-and-iron argument having failed, the prince-governor, Abbas Mirza, in 1830 had the pleasure of securing the person of the Herati Minister, and then, by way of assuring him of the righteousness of the Shah's claims, drew two of his Excellency's teeth. It is gratifying to learn that the worthy Mirza had only the teeth for his trouble, and that Yar Mahomed went home to Herat with great *éclat*. It will hardly be necessary to remind our readers that the subsequent attempts of Persia on Herat ended in the Paris treaty of 1857, according to which "the Shah relinquished all claim to suzerainty in Herat and the countries of Afghanistan, and engaged to abstain from all interference in their internal affairs." Similar claims were made on Beloochistan in 1839, but that country revolted in about ten years, and since that time it appears to have remained independent. Lastly, after Nadir's death, the little territory of Seistan passed to the Afghans, and subsequently became independent. No doubt the public will soon be in possession of the political and geographical facts ascertained by the recent British mission to Seistan. Meanwhile we may state, on the authority of the "Memorandum," that "on every pretext" Persia renewed her claims every year after 1853; that in 1863 Lord Russell told the Persian Minister that the Shah and the Afghans must fight it out between them; that in 1867 the Shah established a permanent fort in the territory; and that in 1868 the debatable land formed part of the Persian district of Kayn. Now since, according to the "Memorandum," the districts on the north-western frontier of Afghanistan seem to be still more "debatable" than Seistan, it is not easy to understand on what grounds Lord Granville considers our "ally's" western frontier too well defined to be disputed. According to the map the Huzaras are the subjects of the Afghan Ameer; but according to this compilation the Huzaras are so much their own masters that their fellow-subjects the Heratis are, or have lately been, "a drug" in their slave markets.

The Persians, however they may have violated international law in their career on their Eastern frontier, have had reason enough for interference in Turkomania. Their endless and unsatisfactory wars with those whom we may call the dangerous classes of Cis-Oxania have been—sometimes at least—matter of absolute necessity. What were they to do with people who regarded plunder and kidnapping as the only respectable way of making a living, and who, being pious Sunnis, naturally counted the heretic Shiahs fair booty? Shah Abbas tried what Anglo-Indians would call a "buffer policy," by colonizing Koords on the frontier, and inducing them to keep the peace for a consideration. But in process of time these Koordish constables fraternized with the Turkomans, and became as arrant thieves as they. In 1830 Abbas Mirza marched against the Turkoman headquarters in Sarrakhs—now marked in Khorassan—and liberated three thousand Persian slaves, who fell on one hundred and fifty slave dealers and literally tore them to pieces. After that period they owed, it seems, allegiance to the Khan of Khiva, maintaining it of course only when convenient. Sarrakhs is called one of "the four chief cities of Khorassan"; but it would perhaps be difficult to say whether it is thoroughly Persian. Still more uncertain is—or lately was—the question of the ownership of at least the Northern portion of the Atrek valley. Quite recently a contemporary sounded the alarm over its discovery of "a secret treaty" by which Persia had in 1870 ceded the valley to Russia. But Lord Enfield has since declared, first, that the highest authorities both in Persia and Russia have emphatically disclaimed any knowledge of any such treaty; and, secondly, that "the territories described did not belong to Persia." In fact, the geography and "political status" of all the Turkoman tribes, or dangerous classes, south of the Oxus seem to be in the same state of glorious uncertainty. The Ersari Turkomans, for example, have over and over changed homes and masters, and at present their allegiance seems to be due either to the Khan of Khiva or to Russia's dependency—Bokhara. But of all the Turkoman cities, Merve has given most trouble to Persia. In 1860 the Persians suffered a terrible defeat there—retreating with only 2,000 men out of an army of 40,000. In 1840 Conolly passed by its slave-market, and its "pens," in which unfortunate men, women, and children were "handled like cattle." And in 1855 "the inhabitants were such desperate slave-dealers, that if a man or woman were incautious enough to go to the river alone, he or she were sure to be seized and carried off into slavery." In 1867 the Persians again joined issue with the Turkomans, with what result does not appear. We need not follow Mr. Wheeler's "Memorandum" any further, for the story of Sarrakhs or of Merve is that of every other Turkoman locality. Most readers will agree with the author that those lawless nomads can only be restrained by terror of some strong power. It seems at least that their abominable slave traffic might be suppressed simply by stopping the demand at Khiva.

GREGORY HAWKSHAW.*

IT were much to be wished that there were more authors who sought somewhat the same kind of renown as was gained last century by Single-Speech Hamilton, and who, after having written one good work, instead of writing more, would quietly rest on their fame, and hope that to their name might in time be tacked the epithet of Single-Book. And yet, however much the world noticed the after silence of a man who had shown that he knew how to speak, it might not perhaps be equally surprised at the silence of a man who had shown that he knew how to write. The range of subjects that fall within a speaker's knowledge and interest can scarcely be so confined but that he will from time to time find some matter coming up on which he can speak, and speak well; whereas a writer in his first work may have given forth all that he had to say on a matter which he had for years made his sole study, and which perhaps till he wrote had been but little touched on. Or he may have had in him a curious vein of humour which, though worth working, was nevertheless soon worked out. Or, without having any great literary power, he may have been brought by circumstances into a strange kind of life which he was able to describe with simplicity and truth. When it was said of Milton that he lost by *Paradise Regained* what he had gained by *Paradise Lost*, it was stated of him with an exaggeration that is carried off by the wit, what may, if generally expressed, be said with more or less truth, that a writer often loses by his second work whatever reputation he has gained by his first. More especially is this the case with the last of the three classes of writers whom we have just described; those, namely, who, not being really masters of the author's craft, have yet seen something worth telling, and have been able to tell it with a certain freshness and force. The author of *Tom Brown*, for instance, however successful he may have been in describing the life of a Rugby school-

* *Gregory Hawkshaw; his Character and Opinions.* By the Author of "Colonial Adventures and Experiences by a University Man." London: Bell & Daldy. 1873.

boy, failed utterly when he tried to write the life of an Oxford undergraduate. His first book, with all its faults of style, was interesting, because the writer had opened up a new kind of young life, and wrote with enthusiasm and knowledge. Many an author had told us of the tricks of naughty boys, and many an author had told us of the morality and the piety of good boys. But no one till Mr. Thomas Hughes wrote had traced the growth of that portent of these latter days, the Muscular Christian, who combines all the daring and liveliness of the naughty boy who used to be so dear to us in Smollett or in Marryat with the morality of a hero of Miss Edgeworth and the piety of a hero of Miss Yonge. Then, too, in Dr. Arnold he had to draw the character of a great man whom he had been happy enough to know in his youth, at the time when hero-worship comes most easily. There was nothing, however, in *Tom Brown's School Days* to lead any one who was capable of forming a judgment to suppose that its author would ever bring forth a second story worth reading. "Nec viget quidquam simile aut secundum" may be applied with truth to the first book of such an author as this, if he is so misguided as to follow it up by others. No doubt it now and then happens that one of those writers who are only able to bring forth one good book makes an improvident bargain with his publisher, and so gets little more than a name as his share of reward. He is little to be blamed in that case if he tries to trade upon his name, and to use the reputation of his first work to sell a second. More frequently, however, it happens, we suspect, that he himself, having no critical faculty, is unable to take a just measure of himself and his writings, and is utterly unaware how large a share in his success belongs to his subject.

Such, we have little doubt, is the case with the author of the work before us. His *Colonial Adventures and Experiences by a University Man* was a lively book, and was favourably received. We ourselves read it with interest, and had much pleasure in saying a good word for it. The author had not only a good deal that was interesting to tell of Queensland, the colony which he described, but he had quite as much that was interesting to tell of himself and of that unfortunate class of men—far too large—to which he belonged. His life, so far as it had gone, had been unsuccessful, and he was not ashamed to let the fact be known. He had done nothing at the University, and in the colony he had been little better than a hewer of wood and a drawer of water. Moreover, even at this drudge's work he had done but badly. He had learnt that the philosopher's stone is not to be picked up in Australia, and that if El Dorado is there, it refuses to open its treasures except to those who are good at pick-axe and shovel. He had come across a good deal of curious company, varied indeed in many respects, but almost all alike in having begun badly and gone from bad to worse. He was, as he himself tells us, saved from the utter ruin which befell so many of his comrades who had received a liberal education by the happy fact that he was disinclined to hard drinking. By the kindness of friends he was at last rescued from a life for which he was unfit, and came back to England to make a fresh start. Now, though he was by no means the first University man who had gone through the greatest hardships in one of our colonies, yet, so far as we know, he was the first to make known, not only how much he had suffered, but also how he had brought on himself what he had suffered. In the frankest manner possible he let us into all the foolish hopes he had dangled before himself when in England, and the utter hopelessness into which he soon sunk when in Australia. He had no false shame in telling us of the shifts he had been put to in getting food and lodging, or in making known to the world that a happy bodily temperament had saved him from a drunkard's fate. He had a curious story to tell, and he was lively in telling it. He wrote as long as he had anything worth saying, and when he finished his story, he finished his book. Now, even though a man has failed in a University and failed in a colony, and not only knows that he has failed, but is willing that the world should know it too, we do not therefore, lively though the narrative of his failures may be, at once jump to the conclusion that he is fit to turn author, and to write with a tone of authority on all the questions, little and big, of the age. We should have hoped that our author might, partly at Oxford and partly in Queensland, have attained that knowledge of himself which would have kept him from a third time falling into an absurd estimate of his own powers. He will have to learn by experience that, just as a luxurious college life does not fit a man for the backwoods, so the drudgery of the backwoods does not fit a man for oracular utterances on all matters, theological, moral, political, and social. We left him but a short while ago pleased with his simple modesty; we come back to him offended by his absurd conceit. We are acquainted with A. K. H. B. and his "Recreations," and of course Mr. Sala is not unknown to us; yet we do not believe that we ever read a sillier or a more wordy book than *Gregory Hawkshaw, his Character and Opinions*. We shall probably not do the author injustice if we assume that he himself is his own hero under the most transparent of disguises. Gregory had failed in his University career, had failed in the colonies, had come to England by the aid of friends, and had published a book which was a success. The delight is very evident with which he introduces Gregory's opinion on all kinds of subjects, expressed in the longest of passages. "Here," on one occasion he says, *à propos* of nothing, "by way of commenting I will insert an unpublished fragment expressing Gregory's views on prejudice." Thereupon follow six or seven pages on prejudice, beginning with its derivation from *præ* and *judicium*, which might have been stolen from the *Recreations of a Country Parson* or *A Gentle Life*. Who but has suffered under such passages as the following?—

> It is then of the abstract prejudice, which underlies and influences our feelings, that we wish here to discourse. If we are able to give a sensible reason for our tastes or antipathies, these are not prejudices at all, for if we judge the actions of others before the fact, our judgment is sure to be wrong, and contemptible, and stupid.
>
> All prejudice, or judgment, without a knowledge of facts, must be wrong and unfair.
>
> There are two distinct kinds of prejudice, one proceeding from weakness of intellect, the other from a twist in the understanding; this latter kind of prejudice we call bigotry.

Besides Prejudice, we find settled off for us more or less briefly, in no order at all, Compulsory Attendance at College Chapels, Special Training for the Church, Baptismal Regeneration, Special Providences, Women's Rights, Duties of Godfathers in Baptism, Marriages, High Church, Sunday Schools, the Elevation of the Cup in the Sacrament, Private Schools, Corporal Punishment, Natural Laws and Forces, Novels, Women, Belief, the Punishment of Death, and Mother with a capital letter and in italics. We have not in this list nearly exhausted all the subjects which Mr. Gregory Hawkshaw to his own satisfaction has so fully treated. We should do the author an injustice nevertheless if we were to lead our readers to believe that *Gregory Hawkshaw* is what is called a serious book, and one which, like the two we have named above, it would be a credit to be found reading on a Sunday. So far is this from being the case, that there is no doubt that the author, perhaps without knowing it, has copied from Sterne and from Thackeray, as well as from the severer moralists who still grace this age. When he wrote the opening chapters of the story he was probably fresh from *Tristram Shandy*, and thought that he, too, could catch Sterne's trick. How far he has succeeded the following extract will show:—

> But, good gracious! where, oh my pen, art thou conducting me?—I find that in these few pages I have actually had my hero born, christened, and married. He has written a love-letter which is waiting for an answer.
>
> I have alluded to so many events in his career, that, upon my life, I hardly know which to explain first. I have also introduced no less than three generations of Hawkshaws. I only hope I have not perplexed my readers as utterly as I have myself.

He soon, however, turns from Sterne to Thackeray, and we have him heading each fresh piece of moralizing by addressing his readers as "My friends," or "Oh! my brothers." It would have been well if he had remembered that *sibi constet* was the motto that Thackeray kept before himself, not only in the conception of a whole work, but also of every passage in it. Our author may, if he pleases, parody Thackeray as closely as he can, and bring in Amaryllis, Meliboeus, and Damœtas. But if he looks for his readers to keep in their laughter, let him not at the end of his fine passage turn Amaryllis into Hamaryllis and make a joke about "'am sandwiches." He is far safer in imitating Mr. Sala, as on the one hand he is much more likely to succeed, while, on the other hand, if he does not, his critics will regard his failure with indifference. We could have almost thought that it was the veteran Correspondent himself who was writing when we read:—

> How is it, I wonder, that a long pointed instrument, dipped in a black fluid, and placed in a man's hand, becomes instantly imbued with life and thought?

When a man begins to fall into such wondering as this, he had much better either keep clear of "long pointed instruments" and "black fluid," or else, if he must write, he should carefully commit what he has written with all speed to the flames. Our author's pen becomes "imbued" with memory quite as much as with thought. He tells a well-known story of the discovery by some settlers of a shipwrecked sailor who had been for years kept prisoner by the blacks, and coolly applies it to his own hero. The man, as the story is always told, when seen had called out "Don't shoot! me British object." Our author adds—though here at least we daresay we ought in fairness to allow that he is original—that his name was "James Morell." At all events, whether original or not, the name gives room for the following pleasantry:—

> His name was James Morell. "And," interrupted Gregory junior, with the idea of saying something witty, "was he the man who wrote the English Grammar?"
>
> "Of course he was," said Gregory. "Don't you see he wanted to prove that he really did know the difference between the subject and the object."

Nothing is more difficult than, without wearying our readers, to bring home to them the utter wearisomeness of a really wearisome book. A passage here and there from a book whose dulness spreads over 379 full pages can no more enable them to judge of the whole work than the brick or two which the man took with him enabled the purchaser to judge of the whole house. Dulness in itself is harmless enough; it is only when it is joined with flippant conceit that it becomes offensive. If any readers think that we have dealt too severely with *Gregory Hawkshaw, his Character and Opinions*, let them first, like us, wade through the book. When they have got to the end, we shall then be content to let our character as critics for justice and mercy rest in their hands.

ABBOTT'S LUCIAN.*

IT is not easy to estimate how much we owe to Lucian. If he did not, after dealing a death-blow to the crazy figments of heathendom and sham philosophy, assist in building up the faith that was permanently to supersede them, at least he opened a space for the new foundations by sweeping away the *débris* and rubbish of error. He taught the lesson, too, which has been studied with more or less success by modern satirists and humourists, of making truth and freedom of speech palatable and persuasive by a strong infusion of humour and gaiety. He dwelt for some time at Antioch, but without being led to embrace Christianity; he was possibly a friend of Origen's antagonist, Celsus, and certainly he was a writer to whom the stigma of scepticism has more or less attached itself. Lucian nevertheless would seem to have influenced Christian writers both of ancient and modern date by his lively exposures of the heathen mythology and his trenchant sallies upon the follies and vices of humanity. Few writers in any age have been able to enforce truth with a larger command of humour. Nor indeed, learned as he must have been, and encyclopædic in his researches into Pagan myths and philosophic dogmas, does Lucian frighten readers by any ostentation of learning. He is so bright and gay, and so much at ease with himself and his readers, that no part of the schoolboy's Greek curriculum comes to, or remains with, him more pleasantly. How far his "True History" influenced *Gulliver's Travels*, or how much Butler and Sterne and Rabelais and Cervantes owed to him directly or indirectly, is an inquiry into which we need not at present enter. But we may take for granted that the earliest notions of satire and of lively satiric dialogue which are supplied in the course of a liberal education come from the well-thumbed pages of Lucian in the *Analecta*, and in the *Scriptores Græci* (we speak from memory) in use at Eton. Hence it is that we are predisposed to welcome Mr. Abbott's selections from a favourite author more producible and easier to master than Aristophanes, and yet little, if at all, less entertaining. These selections include a fair sprinkling of the "Dialogues of the Gods," the "Dialogues of the Dead," and those of the Sea Deities, the two longer masterpieces of "Charon, or the Sight-seers," and "Timon the Misanthrope," and a probably early performance of Lucian, called the "Judgment of the Vowels," in which Tau is impeached by Sigma before the vowel dicasts for aggression and spoliation. This last piece will be new to many readers of Lucian, and it is curious as expressing his views on spelling and pronunciation, very much as in his Lexiphanes he gave his opinion about strange and obsolete diction.

Thus the samples before us belong chiefly to the period of Lucian's life (circa 165 A.D.) when he had given up rhetoric for literature, and was enjoying competence and learned leisure at Athens after a good many years of instructive vicissitude and not less instructive travel. The pains which he had taken to correct his originally barbarous *patois*, his experience of human nature, and his varied observation of life in different capitals, all combine to furnish matter for amusing reflections and sketches. "Every phase of life at all likely to interest a literary man of the period of the Antonines is brought before us in one or other of the dialogues or romances," whilst amidst dramatic surroundings which mingle East and West, and make us "verge at one time on the *Arabian Nights* and at another on the Dialogues of Plato," the cynic philosopher, the poor literary man, the demagogue, the parasite, or, on the other hand, the Greek God unveiled and in his naked inconsistency and abandonment to earthly passions, are figures that, one or other, always occupy the foreground. One learns to appreciate the extent to which the Olympian divinities were disestablished and undergoing disendowment in Lucian's day, when, as in the "Dialogues of the Gods," Ares and Hermes are made to mock at the fabled might of Zeus, the rays of whose lightning, we learn elsewhere, are sadly blunted and out of repair, through ineffectual launching at the sceptical sophist Anaxagoras ("Timon," § 10). In another Dialogue Apollo twits Hermes with the unreasonableness of the fabled immortality-by-halves of Castor and Pollux, an arrangement by which two notoriously devoted brothers could not possibly meet at any time after their apotheosis. In another ("D. Mortuorum," x.) it is Diogenes who finds a screw loose in Heracles's statement as to the distinction between his mortal and immortal parts, and, drawing him on by confusing questions, puzzles him as to the whereabout of his soul, his eidolon, and his body. This last Dialogue is in Lucian's happiest style of Plato travestied.

Amongst the shorter Dialogues—as well as in the "Charon" and the "Timon"—are to be found lively and telling hits at the prevailing wickednesses and vices of his age, which bring Lucian upon ground occupied in a bitterer humour by Juvenal. The same capitals, and kindred conditions of society, must have nursed the avarice which in Dialogue VII. is represented as having brought poison-cups into fashion, and in Dialogues VIII. and IX. exhibits its votaries in the character of legacy-hunters, outwitting one another by each naming the other his heir, and publishing their wills prematurely, ἐπὶ θανάτῳ, in the hope of the death of the legatee named. After death Cnemon admits that the little game of this kind betwixt him and Hermolaus has been a case of "diamond cut diamond." "And now," he says, "Hermolaus has got my property, like a big pike that, with the hook, has gorged the bait also." "Ay," responds his fellow-shade, "and the angler withal, so that you did but scheme a device against yourself." In the next Dialogue the shades of the cynics Crates and Diogenes exchange views on the subject, and Diogenes makes a reflection which is badly rendered in the translation "by various hands" (1711). In reply to the remark of Crates that no legacy-hunter courted him, because all he could leave was impalpable, Diogenes suggests the reason of this in a very vague sentence, which avoids paraphrase, but utterly ignores the gist of the philosopher's remarks. Literally rendered, these would run as follows:—"With good reason; for they could not receive such goods from us, because they were spoilt by luxury, like worn-out rotten purses; so that if ever one did put into them wisdom, plain-speaking, or truth, out these would slip and vanish away, because the bottom could not hold them, as in the case of the Danaids pumping into the perforated cask. But gold they would retain, tooth and nail, and in every way." Whilst we are on the subject of translations, it may be said, in passing, that Lucian has fared ill in this respect, at least as far as England is concerned. The version to which we have referred, and for which Dryden wrote a careless life, is scandalously unfaithful and perfunctory. That of Franklin is better, but not very good; and Tooke's (1820), though it gives the general drift of Lucian's Dialogues and romances, too often ignores the niceties of allusion and comparison which frequently contain the wit and humour of a whole passage. None of the three translations at all comes up to the capacity which Mr. Abbott, in the bits he has translated here and there, evinces for this task.

Among the "Dialogues of the Dead," there is one between Menippus and Hermes which treats of the frail tenure of beauty, and is appropriately headed in the notes, "No Loveliness in the Grave." The whole tenor of it, as well as the particular passage where Menippus wonders that the Greeks did not see how brief a thing, and how fleeting as to bloom, was Helen's beauty, for which they contended so long, reminds us of the hymns "De Contemptu Mundi" which are to be found in Latin Hymnology, and of which the stock examples are the same as, or counterparts of, those in Lucian. The "Marine Dialogues" are perhaps the most attractive of all Lucian's shorter efforts, by reason of the graphic style in which minor sea deities relate to their kinsfolk or patrons such tales as Arethusa's flight, Arion's preservation, the Cyclops's blindness inflicted by Odysseus, or the Apple of Discord flung amongst the guests at Thetis's wedding. Most interesting of all is the account of the ravishment of Europa told to Notus by Zephyr, who says 'twas the finest sea pageant he had ever witnessed since first he "began *to be and blow*" (ἀφ' οὗ γε εἰμι καὶ πνέω). The attitude of Europa in Tennyson's description is a little different from that in Lucian, but not more finished or beautiful. One seems to see Europa on her bull in the words ἡ δὲ πάνυ ἐκπλαγὶς τῷ πράγματι τῇ λαιᾷ μὲν εἶχετο τοῦ κέρατος ὡς μὴ ἀπολισθάνοι, τῇ ἑτέρᾳ δὲ ὑπεμωμένον τὸν πέπλον ξυνεῖχεν (§ 2), and it is no wonder that all the commentators should agree in surmising that Lucian had some picture in his mind's eye when he described Europa and her bridal procession. Mr. Abbott reminds his readers in a note that ancient pictures on this subject have been found at Pompeii.

The most popular Dialogue in the volume before us, however, will assuredly be the first of the two larger pieces, "The Charon, or Sight-seers," in which Lucian gives full play to his rare gifts of graphic description, gay fancy, and pungent satire. Charon gets a day's holiday to visit the upper world, and, fearful of stumbling in the unaccustomed light of the upper world, persuades Hermes to be his cicerone. To get a panoramic view, they borrow the giant's stale device of piling Pelion and Ossa on Olympus, with Parnassus to "crown the edifice." As the pile is a trifle steep and shaky, the lame boatman wants a hand, and complains of the elevation; whereupon his waggish conductor encourages him with the remark, which would be not a bad motto for modern Alpine climbers, that to be safe and a sight-seer are incompatible rôles (οὐκ ἔνι δὲ ἅμφω καὶ ἀσφαλῆ καὶ φιλοθεάμονα εἶναι) (p. 43). When the ascent is achieved, and Hermes has cried "Well done; all up!" and has perched himself on one peak of Parnassus, while Charon occupies the other, the boatman's sight is not clear enough for his present purpose till Hermes has improved it by a charm from Homer, which he applies at the same time with a quizzical injunction to remember the words and to have faith, and then he will see clearly. With his sight thus improved, Charon observes Milo the athlete, so soon to be tripped up by death, Croesus, and his conqueror Cyrus, Polycrates, and other types of uncertain earthly power; and comes to the conclusion, after general and particular scrutiny, that the upper world is a hive in which each bee has his own sting, and stings his neighbour, whilst a few wasps combine to pillage and plunder the larger and weaker body. He sees rare elements too of comedy in the manner in which the fondest hopes and ambitions are cut short, ὑπὸ τοῦ βελτίστου θανάτου, or, as Mr. Abbott neatly translates, "by good-man Death"; and he is at a loss to discover what life is but a series of smaller and larger bubbles, of which the smaller burst at once, the larger and more complex later, but not less surely. "You must have remarked" (we quote from Tooke) "those bubbles that rise in the spray of a rapid torrent and swell into a foam. Of these bubbles the generality are so small that they instantaneously burst and vanish; others remain somewhat longer, and meeting more in their passage, with which they become confluent, they grow to a bigger tumour, but presently break as well as the former, because by the nature of them it cannot be

* *Selections from Lucian; with English Notes.* By Evelyn Abbott, of Balliol College, Oxford, and Assistant-Master at Clifton College. London, Oxford, and Cambridge: Rivingtons. 1872.

otherwise. Exactly so does the life of man appear to me. All are for a short time tumid with the spirit of life, some more and others less; with many this inflation is of some, though very short, duration; others vanish the moment they arise; but break they must all" (Tooke's *Lucian*, vol. i. p. 377). When he has noted all this, Charon has a mind to proclaim it from his eyrie, but Hermes twits him with his simplicity. Does he not know that men's ears are full of wax, and that their minds are as Lethe? This lively drama ends with Hermes's answer to the inquiry of Charon as to the whereabout of earth's greatest and most historic cities. Nineveh is gone; Babylon is going; as to Troy, Hermes will not venture to show it to Charon, lest he should throttle Homer for a liar when he gets back to Hades.

To any one who approaches the other larger Dialogue, the "Timon," under Mr. Abbott's guidance, we can promise equal amusement and edification. A very graphic Dialogue, the characters in which are somewhat minutely and pictorially drawn before they severally appear on the stage, affords great scope for the editor's running commentary, illustrations, and explanations. As we have already said, his bits of translation are creditably accurate, and they are not cramped because they aim at being literal. In places where Lucian, unlike himself, is confused as well as prosaic—*e.g.* in the sections that relate to the mask of Plutus—Mr. Abbott's help is useful. First it is Plutus, he tells us, who is supposed to wear the mask; then it is the rich man, and, lastly, Plutus and the mask are identical (See § 28, note). In an earlier Dialogue, his note on the construction of the "cithara" by Hermes (p. 5, cf. 106) throws the clearest light upon a somewhat difficult passage.

We have no right to find fault with Mr. Abbott for having withheld in most cases the English equivalents for the harder words in Lucian's rich and rare vocabulary. Are they not written in the Lexicon of Liddell and Scott? The tiro who hunts for them there will retain the meanings longer. By the way, he will also find in this text-book authority for a slang adverb which does not seem to go out of fashion. Eros describes Athena to his mother as "awfully masculine," *δεινῶς ἀνδρική* (p. 6). Perhaps it may be doubted whether a zeal for stimulating youthful research does not go too far when, on a sentence in p. 3, it leads Mr. Abbott to say that it is an example of the figure *Chiasmus*. It would have been just as well to explain briefly the nature of this figure, which reminds us of a sum in proportion. For the most part we have found the critical and explanatory notes sound and serviceable. There is some oversight or mistake in the note on *ἀνθ' ὧν σε ἐκπορθμεύσαμεν* (cf. p. 19 and p. 119). In "Timon," §§ 45, too, we submit that *ἐξ ὑπερδοξίων ἀκροβολιζόμενος* means not "pelting them from a height *on the right hand*"; but rather, as the examples in Liddell and Scott would prove, "pelting them from a vantage ground." But these slips are extremely few and far between.

The sole objection to making Lucian a much more general text-book, out of which boys might gather knowledge of Greek and at the same time sharpen their wits, is that here and there (Mr. Abbott takes pains to show where), Lucian's Greek, good as it is, is not Attic, but decidedly post-classical. To children of an older growth who have kept up their classics sufficiently to enjoy the Greek authors, and who can afford to be indifferent to the possible corruption of style, Lucian's lively writings, and especially the Dialogues of which Mr. Abbott supplies such excellent samples, will be excellent and delightful reading.

PEARL AND EMERALD.*

PEARL AND EMERALD may be described as an *Arabian Nights* tale run into a modern English mould and cast somewhat on the model of Dickens's Christmas stories. The wildest extravagance of fancy runs riot through the whole, and the incidents outrage all experience and probability almost as much as the leading conceptions of the plot. In his brief preface Mr. Francillon stands on his defence against the objections he expects from his critics. In the course of it he makes some assertions which appear to us almost as daring as anything in his story, and he draws conclusions from them with a freedom perfectly consistent with the laws of the world of wonder which we are about to enter. Because the limits of the likely and unlikely are so inextricably blended that it is often impossible to distinguish between the two, he seems to argue that you may persuade people to accompany you any distance into the country of the unlikely without their becoming conscious of having crossed the border. He does not wish his "readers to transport themselves into an ideal world," but he does "wish them to bear in mind that few things are improbable, that nothing is impossible, and that in matters of art imagination forms a boundless territory, into which ordinary practical experience has no right to intrude." Let these premisses be granted, and we do not see where the logical deductions from them need stop. A sculptor may embody in marble the most extravagant conceptions he can fetch from the furthest confines of that boundless territory of the imagination, and impose these monstrosities upon us as pure, although peculiar, types of art. So with a writer who has madness in the blood, and has nursed his fevered brain on the more mystical fancies of men like Hawthorn, or the morbid horrors of sensationalists of the school of Mr. Harrison Ainsworth. He gives himself the spur, when they put on the curb, and heaven only knows whither his unfettered imagination may hurry him. We do not mean to say that Mr. Francillon has reduced his own audacious theories to practice, avowedly extravagant as his story is. His sound sense and artistic instincts have saved him in great measure, but others who accepted his teaching might be less discreet. The sculptor we spoke of might embody his monstrosities in marble, but, artistic or not artistic, they would find neither admirers nor purchasers; while Mr. Francillon has written a book in which the persons have a real individuality for us, and their actions a decided interest, in spite of the extravagance of the incidents which bring these various individualities into play. That it should be so is the more creditable to his undoubted power; for if, as he tells us, he does not wish us to transport ourselves into an ideal world, he does his best to remind us at every turn that we are not living in a real one. The consequence is that, lifelike as his leading characters are, his book suggests the playing of a pantomime where men and women are brought upon the stage attired like people in ordinary life; with their hats and umbrellas and shabby shawls, you might take them for respectable clerks and shopgirls going about their ordinary business, were it not for the paint and tinsel in the background, the professional costume of clown and harlequin, and the columbine's pirouetting in the dress of the ballet. If the triumph of fiction is to make the reader forget that it is fiction at all, it seems almost suicidal in an author wilfully to dispense with any possibility of creating an absolute illusion. While saying so much, however, we must give the author high praise for the dexterity with which in most instances he has confounded the commonplace and the extravagant; for the graceful art with which he has blended the probable, the possible, and the impossible. He mixes up matters of moonshine with matters of business in an easy and matter of fact way, as one might introduce an envoy from another planet in the act of negotiating a loan with a firm of financiers in the City. When you had once become fairly engrossed with the discussion over the terms of concession and the rate of commission, in studying the envoy's character and that of the City gentlemen with whom he does business, you might for the moment forget the intrinsic unlikelihood of Saturn seeking relief in the London money-market by borrowing terrestrial coin.

Thus the scenes of the tale lie for the most part in a thoroughly everyday world. The great house of Cranstoun has come to the ground with a crash, and the ruin has been even more widespread that the confidence reposed in it had been excessive. Its head, who has been trading for long on the phantom of his former credit, is unable to survive the disgrace of discovery and the loss of a reputation supposed to be spotless. His son Arthur, who is as honourable as he is eccentric, does his utmost to vindicate his father's name and credit by parting, for the benefit of the creditors, with all the property that has come to him by settlement. There is a sale of the priceless collection of pictures in the mansion in Grosvenor Square. The gems have been knocked down for fancy prices. Then the auctioneer puts up a worthless daub—a dead magpie, by Jones. The first bid is half-a-crown. Mr. Grode, a well-known dealer, notorious as a sharp hand, makes an advance of a shilling—by way of joke. A transcendently hideous Hebrew of the name of Levi outbids Grode. He sticks to the dealer, and as they run it up by trifling sums, he sees Grode endeavouring to suppress an excitement altogether out of keeping with the occasion. Thereupon he argues rapidly that whatever may be Grode's motive, it must be equally worth his while to outbid him. So convinced is he of this that he carries on the contest until his rival is constrained to come to a standstill from very inability to pay the price. Levi has the magpie for 80,000*l.* The scene is spirited from first to last, and indeed were we to criticize the novel by episodes instead of as a whole, we should cancel much we have written by way of prelude. We interest ourselves in the competition, although we foresee the result, and in our excitement we almost forget the staring improbability of a hard-headed and close-fisted Hebrew risking all the hard-won fortune of a lifetime on the idea that Grode must be in the secret of a miracle which makes a few inches of spoiled canvas cheap at 80,000*l.* Of course we understand what the lucky Levi does not. He carries his bargain home, and rolls on the ground in an agony of rage and grief when he finds there is nothing concealed under the coarse coating of the magpie. Had he found an undoubted Apelles, the portrait of Alexander by that artist, for example, it could not have brought him home his 80,000*l.* When morning breaks on his wretchedness, a faint green light from the floor aids the feeble glimmerings of the dawn. Levi is master of the great emerald of Kandahar, the noblest known gem in the universe. There can be no mistake about it; for all the trade knew its weight to a carat, and each point and peculiarity about it; and the great emerald of Kandahar is notoriously worth 6,000,000*l.* sterling, neither more nor less. Mr. Levi has not made a bad bargain after all, although a thing is only worth what it will fetch, and there are certain ugly flaws in his title which seriously embarrass him later. Meanwhile Grode is in despair. Grode knows all that Levi has got for his money. Somehow he had been admitted to the secret when the late Mr. Cranstoun chose this singular hiding-place for the priceless gem; a gem which the Czar of Caspia had pledged with him for an advance of 1,200,000*l.* Grode becomes more desperate still when he is visited by a certain Count Kromaski, who dresses like a Frenchman and talks perfect English. The Count is the Czar's envoy, sent over to search out

* *Pearl and Emerald.* A Tale of Gotham. By R E. Francillon. London: Smith, Elder & Co. 1872.

the missing emerald, that the Caspian monarch may wear it on a grand State ceremonial. The finances of Caspia have improved so much of late years that the Count is ready to pay the enormous arrears of interest he owes, for the use of the gem for four-and-twenty hours. But the credit of the kingdom will not extend to the payment of the money for which it was originally pledged, so that after it has figured in the ceremony it is to be restored to the custody of the lender's representatives. The Count has every interest in the success of his mission, for its failure is to cost him his head. Yet, with the confidence of a high-bred gentleman, he accepts Grode's assurances that the gem will be forthcoming by the day he must start for Caspia; and in the meantime he makes his mind tolerably easy, and kills the time with the ordinary distractions of society. We have told enough to indicate the course of the story. Levi, like the man in the parable, has spent his all to become the possessor of the gem of great price; but, unlike his Scriptural prototype, his purchase proves his misery. He is reduced to the verge of starvation; he sees his mother dying slowly of want—he was really fondly attached to her—and finally he is deprived of his treasure by Grode, who takes advantage of his private information and Levi's extreme necessity. Grode gains nothing by the cruel bargain he imposes on his enemy. The stone sold at the sale was a false one. The real emerald was set in an old-fashioned brooch given to his daughter, "the Pearl," by her lover, Arthur Cranstoun, a brooch he had seen her wear under his eye at the very time he was chasing the sham that has proved the will-o'-the-wisp to him and to Levi.

We need hardly say the author heaps absurdity on absurdity, for the audacity with which he sets all possibility at defiance is his very merit, and no trifling one either. In many instances his absurdities are introduced with admirable cleverness; nor do we find the slightest fault with him when he talks of a stone worth six millions; when he makes Levi throw away his fortune in a desperate speculation; or when the Czar's European envoy assumes as a matter of course that in the event of his failure he must go quietly back to Asia to meet an inevitable doom. All these impossibilities are legitimate, and they preserve throughout the colouring that is appropriate to the story. But we submit that, the more the author ventures in this way, the more he is bound to be carefully accurate in what would be the hinges of an ordinary plot. Swift invented the Lilliputians, but he was scrupulously attentive to preserve the relation of proportions in the realm of Lilliputia. Thus, when the shrewd Levi had got the priceless emerald he loved better than his soul, he was scarcely likely to leave the shutters of his hovel open, so that his enemy Grode might see his acquisition and his raptures over it. Nor is Mr. Francillon wise in saying in an offhand manner that it does not concern us to know how it came about that a young clerk like Grode should learn the momentous secret of a great millionaire like Cranstoun. This seems to us precisely a point on which Mr. Francillon for his own sake should have been as minute and satisfactory as possible, if he desired to raise a mirage and cast a glamour over our eyes. Nevertheless we are bound to recognize the great merit of some of Mr. Francillon's psychological studies. The contrasts may be characteristically violent, and the displays of feeling and passion exaggerated, if not distorted. Yet the Jew Levi is very excellently worked out, when his love for the stone which has become all the world to him has turned to the very insanity of adoration; when his nightly rapture over its charms, and all the power and pleasures it represents, consoles him for days of abject misery and gnawing famine, and sustains him even against the remorse he feels at the idea of his mother being slowly sacrificed to his idol, although his nature nearly falls to pieces in the struggle. Then we have some good love scenes; and a pretty picture of romantic devotion in Felicia Grode, "the Pearl," who becomes the wife and ministering angel of the ruined Cranstoun. We do not like that touch of Dickens in the epilogue, when the stone that had shone like green glass in the old brooch throws of a sudden a flood of emerald light on the *dénouement*. But the faults of the book are those of the design, while all its merits are the author's; and though readers may differ as to how far they like it, we can tell them that at all events it will repay perusal.

GERMAN LITERATURE.

FEW topics of the day possess more vital interest than that of the reorganization of the French army, and the part which that force may be expected to play, whether in relation to neighbouring countries or to political parties in its own. Captain Max Jähns * offers a contribution to the question in the shape of a history of the official organization and individual temper of the French army from the Revolution to the present day. Historically, the work is little else than an indictment against the spirit of the force, supported by countless well authenticated instances of its insubordination. The judgment of a German staff officer cannot be slighted; nevertheless it appears to us that Captain Jähns decidedly underrates both the efficiency of the French troops during the period of which he treats, and the probability of their again becoming formidable after their late disasters. He writes, we are inclined to think, too much from the point of view of a German officer educated in the severest school, to whom anything like indiscipline is intolerable. In the abstract he is undoubtedly right, but perhaps he may not sufficiently consider that the very recklessness and levity of temperament which render such aberrations familiar to Frenchmen help them over their evil effects; that a certain amount of license is inseparable from the idea of a popular army, and that the army has always been popular in France in the sense of maintaining a lively sympathy with the body of the people. Whether this sentiment can survive in the midst of civil distractions is indeed a serious question, but one which it would be premature to determine until the issue of those dissensions is more apparent than it is at present. France will at any time acquiesce in any Government which can persuade her that she is looked up to by the world, and the mere fact of the present uniqueness of her Republican institutions among the constitutions of the principal European States will, should the Republic ever be consolidated, go far to enlist national pride in its favour, and establish discipline on its firmest basis—that of willing submission to restraint. Captain Jähns, on the other hand, thinks that the French army is going the way of the Spanish, and will in process of time become a degenerate Prætorian Guard, formidable only to the nation. This could hardly be the case if the system of universal compulsory service were fairly carried out; but this again he considers a system alien to the national genius. In thus deciding he seems to overlook the omnipotence of a strong centralized administration in France, and the probability of the Government being at no distant date in the hands of men pledged by their interests as well as their professions to rely upon the great mass of the people, and to make compulsory service a reality. In a word, the book is that of an able military critic, applying himself to questions whose solution demands a large share of political intelligence besides.

The first volume of Herr A. L. Ewald's history of the Conquest and Conversion of Prussia * includes the long and sanguinary struggles, attended with great vicissitudes of fortune, which preceded the organization of the Teutonic Knights, down to the assignment of the country to that Order by Pope Gregory IX., and the death of the Grand-Master Hermann von Salza, in 1239. By this time the obstinate contest was virtually decided. Herr Ewald's work evinces a thorough study of his materials, and is as clear and interesting as the confusion and obscurity attaching to his subject allow.

Dr. Julius Krebs † has explored an interesting department of the politics of the Thirty Years' War, which he finds to have been imperfectly investigated by Gindely. From the Bernburg archives he has extracted a large amount of material concerning the negotiations of Prince Christian von Anhalt, the confidential adviser of the Elector Palatine, previously to the acceptance of the Bohemian Crown by the latter. The unfortunate issue of these affairs is ascribed by him to the political shortcomings of the Prince, who is represented as a man of lively talents, but fickle, over-sanguine, and disposed to chimerical projects. One of the latter was an alliance with the Duke of Savoy, which occupied much of the attention of the Palatine Cabinet at the time, but ultimately came to nothing.

Ernest Augustus, Duke of Saxe Weimar ‡, the grandfather of Goethe's patron and friend, played no very important part in the politics of his day, but showed in a rudimentary form some of the qualities which made the fame of his descendant. To the taste not uncommon among princes for building and military display he united a turn for science, which seduced him into a quest after the philosopher's stone. On the whole, though politically insignificant, and as an administrator about midway between the few good and the many bad among his princely contemporaries, he was sufficiently interesting to justify the selection of his biography by Baron von Beaulieu-Marconnay as a contribution to the history of German culture in the eighteenth century.

Professor Nitzsch's work on the Roman Annalists § consists principally of a detailed inquiry into the sources of information of which Livy and Dionysius of Halicarnassus availed themselves. The result arrived at is that these historians were largely dependent on the works of Valerius Antias and Licinius Macer, composed about the time of Sulla in the interests of political faction, and from diametrically opposite points of view. By the time of Augustus this party tendency had dropped out of sight, and the unsuspecting use of their irreconcilable narratives, without due allowance for the motives which prompted their composition, is, Dr. Nitzsch considers, the principal cause of error and confusion in the accredited versions of Roman history.

Dr. Gustav Fritsch's comprehensive work on the Aboriginal Races of South Africa ‖ is a most important contribution to anthro-

pological science. The author, having in the first instance qualified himself for the description of these people by a long residence among them, has since his return to Europe made himself master of the rich literature previously extant upon the subject, and now presents himself in the character of a critic of the labours of his predecessors, as well as a contributor of fresh material. Many of the observations of former travellers are, according to him, highly inaccurate. One fertile source of error has been the constant tendency to embellish savage life by the unconscious importation of European conceptions into a sphere to which they are wholly inapplicable. Thus, for example, the belief in a Supreme Being, discovered by many travellers among the Hottentots, resolves itself on inquiry into the veneration of a deified ancestor, and the greater part of what has passed for religion among the Kaffirs is simply magic. Traces of religion, however, occur everywhere, even among the Bushmen. While, generally speaking, the morality and intelligence of savages have, under the influences of philanthropy or idealism, been represented in much too favourable a light, the Bushman has hardly received justice. Nothing can be more surprising than to find art, the last refinement of humanity, existing among these homeless, lawless wanderers in a far more developed state than among the Kaffirs with their settled abodes and tribal organization. The facsimiles of Bushman paintings here given leave, however, no doubt of the fact; their analogy to the primitive representations of the cave bear and mammoth must strike every one. Dr. Fritsch contests the theory of the Bushmen being merely degenerate Hottentots, though he appears to admit the possible affinity of the two races. They are alike in their incapacity, not precisely for civilization, but for the retention of their national integrity under its influences; they dwindle and disappear, while the Kaffir race adapts itself readily to circumstances. The work is arranged in sections corresponding with the eight tribes of which it treats: every material particular relating to any of them is circumstantially stated; the illustrations, partly included in the book, partly accompanying it in the form of an atlas, are numerous, and well executed. The author is not unconscious of the bearing of his researches on the problem of the origin of man, but considers it as yet premature to express any opinion on this point.

Keate's narrative of Captain Wilson's shipwreck and residence upon the Pelew Islands* belongs to the classics of English travel, and the Captain's interesting *protégé*, "Prince" Lee Boo, was within our own recollection one of the heroes of the nursery. It is, therefore, gratifying to have the means of renewing acquaintance with an archipelago so endeared by romantic associations, even although the account we receive of its present condition is less satisfactory than could have been desired. Dr. Semper, the well-known traveller in the Philippines, who visited the group in 1861 on board of an English merchant vessel, and spent nearly a year upon it, found the islanders suffering from the chronic mischief of dissensions among themselves, and still more from the sinister interference of foreign adventurers. One of these, a Captain Cheyne, known as an author on Polynesia, but represented by Dr. Semper as an unscrupulous man of singular craft and audacity, appeared at the date of the traveller's visit in a fair way to establish his authority over a considerable portion of the group. He had concluded a treaty with the principal chiefs (the text of which is given, and which is certainly a great curiosity) securing to himself a monopoly of the trade. He went a little too far, however, and shortly after Dr. Semper's visit was murdered, or perhaps justly put to death, by the natives. Dr. Semper comments in very strong terms on the retribution which an English naval officer was, in his opinion, misled into exacting for his death. A somewhat similar affair had taken place just before the arrival of the traveller, and was denounced by him in a communication to the *Diario de Manila*, here reprinted. No great blame can be attributed to the English naval authorities, who naturally make the protection of their countrymen their first object, and are in a manner compelled to rely upon the *ex parte* statements of the latter. Evidently, however, the residence of an authorised agent on each of these groups, charged with the protection of the aborigines, would have prevented not only these, but the far more lamentable and disgraceful transactions which we have had to deplore in connexion with Queensland. It is to be earnestly trusted that the matter will not be lost sight of. No remedy, it may be feared, will suffice to arrest the decay of the native population, which, though the Pelews have suffered less than most groups from actual intercourse with Europeans, has dwindled from 40,000 to 10,000 within the last century. The principal among its numerous causes is, in Dr. Semper's opinion, the abrupt introduction of firearms and other conveniences of an advanced civilization, which has destroyed the springs of energy and vitality by making life too easy to an indolent race. The pride and ingenuity of the Polynesian were previously called forth by the preparation of his weapons and implements; he now receives them at second-hand from the foreigner, and vegetates where he formerly lived. Dr. Semper's picture of the amiability and simplicity of the islanders is most attractive, and corresponds in all material respects to Captain Wilson's; the beauties of scenery and the picturesque traits of manners and customs are also vividly painted; and, notwithstanding the painful character of many of the details, the book produces on the whole a very agreeable impression.

The leading idea of Dr. H. Maurus's work on "Freedom in Political Economy"† appears to be that employers and employed are at present too much interfered with in some respects and left too much at liberty in others. It is easier to abolish restrictions than to impose them, and we do not clearly comprehend how the writer proposes to deal with the second branch of the evil he indicates, or indeed how he demonstrates its existence. Some disquisitions on incidental topics are clear and cogent. Without precisely belonging to the Socialist school, Herr E. Richter's "Humanity and Capital"‡ is an indictment of the latter. The writer would wish to see a less partial distribution of wealth throughout the community, but is apparently better qualified to denounce the evils of excessive accumulation than to propound any practical plan for abating them.

With German exactness, and un-German symmetry and conciseness, Professor E. Schrader§ has condensed the results of investigation into cuneiform texts into a moderate-sized volume. In the first part he treats of the materials; in the second of the method of decipherment; in the third of the grammatical rules and vocabulary elicited by this process. The last section of the book gives the Babylonian text of the trilingual inscriptions of the Persian monarchs at Behistun and elsewhere, with a translation and glossary. In his introduction the author states that he has formerly put forth an essay on the subject tentatively, in the vain hope of extorting a statement of the grounds of their incredulity from those who professed scepticism as to the value of cuneiform researches. The present challenge cannot be overlooked, and we trust that its effect may be to induce German scholars to enter freely upon a field of inquiry where they are so highly qualified to excel.

Karl Strack's interesting and instructive history of public education in Germany‖ describes the principles which have swayed it from time to time, and their effects as manifested in the educational legislation and organization of the various States, from the Reformation to the present day. One acceptable feature of the work is the full account of the ideas of the theorists like Rousseau, and the systems of the practical instructors like Comenius, by whom the development of educational methods has been principally influenced.

Dr. Weske's¶ little book is intended to lay the foundation of a comparative grammar of the Ugrian languages, on the plan of Bopp's great work. The writer has the advantage of being himself an Esthonian by birth, which has, he states, enabled him to correct many errors committed by his predecessors.

On January 13, 1869, the inhabitants of Gross-Gerar were disagreeably reminded of the originally volcanic character of the Rhineland by a smart shock of earthquake, which phenomenon has since been frequently repeated. To considerations on the causes of earthquakes in general, and of this Rhenish one in particular, Herr F. Dieffenbach** has subjoined a very useful chronological table of all the earthquakes and eruptions in any part of the globe which have been recorded from January 1869 to July 1872.

Professor Huber's essay on the Darwinian theory†† is chiefly valuable for a highly interesting analysis of the principal works which have appeared on the subject. As the general result of his examination we may gather that the conception of evolution is now accepted by most naturalists, that natural selection is usually admitted as a real element in the process, that hardly any one regards this factor alone as an adequate explanation of the phenomena, that evolution is consequently conceived as the development of some inner formative principle, or the embodiment of a pervading impersonal life. The substantial concurrence of so many independent inquirers is very remarkable, and affords proof of the concurring tendencies of modern scientific speculation. All the works here noticed, it is to be observed, were published before the appearance of Dr. Bastian's researches, which would have strongly corroborated the conclusions of the majority among them.

The second volume of L. Geiger's work on the origin of language‡‡, left imperfect by the deceased author, is principally devoted to retracing terms either employed in industry and art, or of ethical or metaphysical signification, back to the simple rudiments from which they originally sprang. In so far as the process can be depended upon, it is an invaluable aid to the reconstruction of the most primitive human epoch, but almost every derivation may be more or less the subject of controversy.

In proportion to the cordiality of our concurrence with Dr. Gistel * as to the interest attaching to the biography of Linnæus is our regret that the task should have fallen into such absolutely incompetent hands. It might not be fair to describe Dr. Gistel's zeal for the subject of his work as a zeal not according to knowledge, inasmuch as his knowledge is obviously extensive and accurate; but it is certainly a zeal not in accordance with discretion and good sense. Linnæus's greatness was such that even his biographer's appreciation of it can perhaps hardly be pronounced excessive; what is really exceptionable, almost ludicrous, is his total incapacity to "deliver himself of it like a man of this world." The book is, from beginning to end, a series of funny little explosions of admiration, resembling the ineffectual spirts of a squib that declines to go off. Being conscientiously compiled from authorities, it does no doubt abound with interesting particulars, which will be enjoyed in proportion to the reader's resolution and success in ignoring the grotesque commentary with which the author has seen fit to accompany them.

The life of Franz Schubert † was not eventful, and although Herr August Reissmann, already honourably known as the biographer of Schumann, has bestowed due diligence on the external details, he is evidently more at home in musical criticism. The most generally interesting part of his criticism is the chapter on Schubert as the typical representative of the romantic school, the composer in whom, as the author considers (perhaps overlooking the influential genius of Weber), its peculiar tendencies first found adequate musical expression. The influence of Schubert on his successors Mendelssohn and Schumann is also analysed; the recent revival of interest in his compositions, begun by Schumann and carried to its height by English musical critics, is not noticed so fully as it might have been. A catalogue of Schubert's works is added, as also an appendix of some unpublished juvenile compositions and a facsimile.

A translation of Mr. Forster's *Life of Dickens* ‡, by Dr. F. Althaus, deserves especial notice for its remarkable excellence. It is at once very literal and very spirited.

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 907, MARCH 15, 1873:

The Resignation of the Ministry.
The Chancellor's Defence of his Bill. The Irish University Bill and the Irish Vote.
Spain. The South Wales Strike.
Germany. The Southern States of America. France.
The House of Lords and Deceased Wife's Sister.

Political Portraits.
Moving House. Extinct Journalism. The Ancient Monuments Bill.
Italy for Nervous Patients. Marriage in the Fifteenth Century.
Ultramontane Criticism. Habitual Drunkards.
The Happy Land.

Wyville Thomson's Depths of the Sea.
Animals and their Masters.
Lanfrey's Napoleon I. Bright Morning. The Register of Archbishop Gray.
Persia and "the Debatable Lands." Gregory Hawkshaw. Abbott's Lucian.
Pearl and Emerald. German Literature.

CONTENTS OF No. 906, MARCH 8, 1873:

The Position of the Government—President Grant's Message—The Irish University Debate—Progress of Disorder in Spain—M. Thiers and the Republic—Railway Property—Difficulties of European Government—Mr. Plimsoll's Motion—The Three Right Honourables.

Culpable Luxury—Silchester—Deputations to the Archbishop of Canterbury—The Forged Bills—Soldiers and their Pocket-Money—Hairs and Money-Lenders—Rabbits—Coins in the British Museum.

Döllinger on the Reunion of Christendom—Disraeli's Jest and Earnest—Sagas from the Far East—Macleod's Economical Philosophy—Johannes Olaf—The French Indo-Chinese Expedition—The Test of Quality—Sir George Pollock.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

CRYSTAL PALACE.—PARTICULAR ATTRACTIONS.
THIS DAY and NEXT WEEK.
Saturday (March 15).—Twentieth Saturday Concert, at 3.
Monday, Wednesday, and Friday.—Exposition of "Spiritism," &c., at 4, by Messrs. Maskelyne and Cook; and other attractions.
Tuesday.—Opera, "Lucia di Lammermoor," at 3.
Thursday.—Opera, "Lurline," at 3.
Saturday.—Twenty first Saturday Concert, at 3; Special Exhibition of Spring Flowers.
The Fine Arts Courts and Collections, including the Picture Gallery (the Works, the Technological and Natural History Collections), all the various illustrations of Art, Science, and Nature, and the Gardens and Park always open.
Admission, Monday to Friday, 1s.; Saturdays, 2s. 6d.; Guinea Season Ticket, Free.

CRYSTAL PALACE OPERA.—A SERIES of SIX PERFORMANCES will be given in the new Theatre before the Easter Holidays, preliminary to the commencement of the regular Season in May. They will take place on the Tuesdays and Thursdays, March 18, 20, 25, 27, April 1 and 3, on which occasions the following Operas will be presented:—Lucia (Donizetti), Lurline (Wallace), L'Elisir d'Amore (Donizetti), and on Tuesday, March 25, will be produced, for the first time, an entirely new Opera, entitled "The Corsair," by Charles Bellfi, the Libretto founded on Lord Byron's Poem. The undermentioned Artistes have been engaged:—Miss Blanche Cole, Miss Fanny Heywood, Miss Angela Goodall, Miss Thirlwall, and Mdlle. Arnault (her first appearance at the Crystal Palace); Mr. George Perren, Mr. Nordblom, Mr. Frederick (his first appearance at the Crystal Palace), Mr. Celli (his first appearance at the Crystal Palace), and Mr. Maas (his first appearance at the Crystal Palace). Chorus from Her Majesty's Theatre. Full Orchestra. Conductor, Mr. MANNS. The incidental Ballets by Madame Collier. The new Scenery by Mr. F. Fenton and Assistants. Mr. T. H. Friend, the Company's Stage Manager. Subscription now open; Central Stalls for the Series, Half-a-Guinea; Single Stalls, Half-a-Crown; Unnumbered Seats, One Shilling; and all exclusive of Admission to the Palace.

CRYSTAL PALACE OPERA.—REBUILDING of the OPERA THEATRE.—During the recess the Theatre has been reconstructed and greatly improved. The floor has been altered so as to rise gradually from the stage to the back of the house, by means of which an uninterrupted view of the performance will be afforded to every one present. Commodious side galleries (with excellent view of the stage) have been constructed, and the end gallery has been enlarged and raised, and provided with a solid roof, which makes it an excellent position both for seeing and hearing. Fresh entrances and exits have been formed, and at the same time the acoustic properties and the ventilation of the house have received careful consideration.

MORNING BALLAD CONCERT.—Mr. JOHN BOOSEY begs to announce a MORNING CONCERT, at St. James's Hall, on Monday, March 24, at Two o'clock, when the following Artists will appear: Miss Edith Wynne, Miss Jessy Pratt, and Madame Patey; Mr. Sims Reeves, Mr. Nordblom, and Mr. Santley. The London Orpheus Quartett. Pianoforte: Mr. Sydney Smith. Conductors: Mr. J. L. Hatton and Mr. Lutz.—Stalls, 5s.; Family Tickets (for four), 21s.; Balcony, 3s.; Area, 2s.; Gallery and Orchestra, 1s.—Tickets of Austin, St James's Hall, and Boosey & Co., Holles Street.

MR. SIMS REEVES and MR. SANTLEY beg to announce that they intend to give a BALLAD CONCERT, on Wednesday Evening, March 26, at St. James's Hall, for the BENEFIT of their old and esteemed brother artist, Mr. J. L. HATTON. Mr. Sims Reeves and Mr. Santley most respectfully solicit the patronage of the Public on this special occasion. A New Duet will be sung by Mr. Sims Reeves and Mr. Santley, and a New Ballad by Mr. Sims Reeves, both composed expressly for the occasion by Mr. J. L. Hatton. Tickets from 1s. to 5s.; to be had of Boosey & Co., Holles Street, and Austin, St. James's Hall.

MADAME SCHUMANN begs to announce that she will give TWO RECITALS of PIANOFORTE MUSIC, in St. James's Hall, on Thursdays, March 20 and 27. Vocalist, Madame Otto-Alvsleben. To commence each day at Three o'clock. Sofa Stalls, 5s.; Balcony, 3s.; Admission, 1s.—Programmes and Tickets at Austin's, 28 Piccadilly; and at Chappell & Co.'s, 50 New Bond Street.

THE PERKINS LIBRARY.

MESSRS. GADSDEN, ELLIS, & Co. have received instructions from the Executors of ALGERNON PERKINS, Esq., deceased, to SELL by AUCTION, during the ensuing season, in the Great Library, at the Mansion, Hanworth Park, 13 miles from London, the unrivalled COLLECTION of ILLUMINATED MANUSCRIPTS and PRINTED BOOKS, formed by the late HENRY PERKINS, Esq., at the beginning of the present century. Among the Literary and Fine Art treasures comprised in this most important collection may be mentioned the Mazarine Bible, printed on vellum (a matchless copy)—The same important book printed on paper, in perfect condition—The Latin Bible of 1462, printed on vellum (from the La Vallière Library)—Jenson's Bible of 1476, printed on vellum—The first printed German Bible—Coverdale's Bible, 1535—The Mozarabic Missal and Breviary, first editions—The Vallambrosa Missal, printed on vellum—A splendid MS. of Lydgate's Siege of Troy, the identical one which he presented to King Henry V.—Œuvres diverses et le Roman de la Rose de Jean de Meung, with 72 very fine miniatures—Christine de Pisan, Histoires de Troy, a most beautiful MS., with 115 large miniatures—Lectionarium, MS. of the Tenth Century, in the finest preservation, richly illuminated—La Sainte Bible, MS. of the Thirteenth Century, with 130 most choice miniatures of the highest class of French art—Biblia Sacra Latina, Italian MS. of the Thirteenth Century, with 146 beautiful miniatures—Numerous very richly illuminated Horæ and Service Books, choice examples of the presses of Caxton, Wynken de Worde, Pynson, &c.—The most important County Histories, including Nichols's Leicestershire, large paper—Dugdale's Warwickshire, by Thomas, large paper—Drake's York, large paper—Horsley's Britannia Romana, large paper—Gough's Sepulchral Monuments, an uncut copy—Ashmole's Berkshire, large paper—Aubrey's Surrey, large paper—Ormerod's Cheshire, large paper—Hutchins's Dorset, large paper—Morgan's Sphere of Gentry, large paper—Whitaker's Richmondshire, large paper—Very fine copies of all the most valuable Library Books. It is impossible to convey in one announcement more than a slight idea of the riches of this important Collection. A further list will be given in future advertisements. In the meantime, every information may be obtained of Messrs. GADSDEN, ELLIS, & Co., 18 Old Broad Street, City.

THE PERKINS LIBRARY.

IN ADDITION to the VALUABLE BOOKS ABOVE ANNOUNCED, may be further mentioned, the First Four Folio Editions of Shakespeare's Works, all perfect, and in very fine condition—The Bible of 1537 (quite perfect), being the first edition of the Scriptures printed in England—Cranmer's Bible of 1540—The Salisbury Missal, 1527, printed on vellum—Les Grandes Heures de Verard, 1486, printed on vellum, in old morocco binding—The Holy Gospels, in Latin, a most valuable MS. of the Twelfth Century—Horæ B.V.M. ad usum Ordinis Fratrum Minorum, a very beautiful MS. of the Fifteenth Century—Les Epîtres et Evangiles, à l'usage de Paris, an exquisite MS. of the Fourteenth Century, the Paintings of the best period of French art—Gratiani Decreta, a most important Italian MS., with Illuminations of the highest class—Pontificale Romanum, a grand MS. of the Fifteenth Century, executed for the Bishop of Tournay, formerly in the Townley Collection—Romance of the Life of Christ, a most precious MS. in Latin Verse, but of English execution, with 150 Drawings of the Thirteenth Century—Chronique de la Boucachardine, a French MS. of the Fifteenth Century, richly Illuminated—Le Pelerinage de la Vie Humaine, par Guillaume de Guileville, MS. of the Fifteenth Century, with 100 large Miniature Paintings—Le Doctrinal Morale, a MS. executed at Bruges in 1427, and containing 19 Miniatures of the greatest value and artistic merit—Vie de S. Denis, from the Collection of Marie de' Medici—a most exquisite MS. by Nicolas Jarry, from the Le Tellier Collection—A splendid Set of the Auctores Classici ad usum Delphini, in old red morocco, with arms on the sides (including the rare volumes—Gower's Confessio Amantis, printed by Caxton—Higden's Polychronicon, printed by Caxton, quite perfect—Vitas Patrum, printed by Wynken de Worde, a magnificent copy—The Life of King Arthur, printed by Copland, a very fine copy—The Ship of Fools, printed by R. Pynson, a very fine copy—A fine and perfect Copy of Purchas's Pilgrims—Froissart's Chronicles, by Pynson and Middleton, a beautiful copy—Hasted's History of Kent, 4 vols.—Surtees's History of Durham, large paper—Ashmole's Order of the Garter, large paper—Dugdale's Baronage, large paper—Dugdale's Monasticon, large paper—Dr. Dibdin's Works, on large paper; besides a great variety of other Books of equal and greater importance.

CRÈME de la CRÈME (the New Court Note Paper), made from Charta Perfecta, Registered.—The Public are respectfully CAUTIONED that the NEW COURT NOTE PAPER is to be had only of JENNER & KNEWSTUB, to the Queen, Heraldic Engravers and Stationers by Special Appointments to their Royal Highnesses the Prince and Princess of Wales. No. 908, Vol. 35. March 22, 1873. [Registered for Transmission abroad.] Price 6d.

THE MINISTERIAL CRISIS.

THE history of the late Ministerial crisis has been revealed to the public in the fullest and most explicit manner. That Mr. GLADSTONE resigned immediately after the vote on the Irish University Bill, and that Mr. DISRAELI at once and definitively declined office, were facts which every one knew, and it was in accordance with general expectation that Mr. GLADSTONE'S Ministry should resume office without change in the distribution of departments. What was obscure, and what the public wished to have explained, was why the crisis lasted three days after Mr. DISRAELI'S refusal. We now know the solution of the mystery. Mr. GLADSTONE held that Mr. DISRAELI had no business to refuse office. He had placed the Government in a minority, and was bound to accept the consequences. To this idea Mr. GLADSTONE clung with his accustomed tenacity, and he would not take Mr. DISRAELI'S refusal as final until it was repeated. He thought he had got his adversary at a disadvantage, and he did not like to let the opportunity go by. The Premiership was in his view a penalty which by the laws of Parliamentary warfare he had a right to call on Mr. DISRAELI to bear. In this view it is impossible to agree. The House of Commons would be far too much in bondage to the Minister of the day if he must carry every Bill and determine every question as he pleased, unless the Opposition was prepared instantly to assume office on defeating him. Already he has two powerful checks on his supporters—he can dissolve, and he can resign; and the chance that the Opposition may wish to take office if he does resign, and the weakness which resignation inflicts on his party as well as on himself, make the power of resigning a formidable one, even although resignation may not immediately lead to a transference of power. Whether Mr. GLADSTONE was right in resigning depends on whether he was right in coupling the fate of the University Bill with the fate of the Ministry; and although Mr. DISRAELI threw some doubt on this, Mr. GLADSTONE has no cause to regret the course he took. He believed that he had charge of a measure which in the interests of justice it was imperative to carry, and yet which it was confessedly difficult to carry; and the only chance of success lay in making the rejection of the Bill a very serious matter. Having resigned, he himself, as well as others, had to bear the cost of the step he took, and he was quite aware that this must be so; and one of his chief objections to resuming office was that, as Parliamentary history shows, a Ministry resuming office is almost necessarily a weak and a discredited one. He, however, very prudently, in making his explanation on Thursday night, removed one obstacle from his path. He gave it to be distinctly understood that the Ministry had not resumed office with the intention of recommending an early dissolution. The life of the present Parliament will be shortened or prolonged according to the reception which the measures of the Government meet with in the House of Commons; nor will Mr. GLADSTONE abandon any of the measures he was prepared to propose. We may take it for granted that the Irish University Bill will be allowed to die, although Mr. GLADSTONE seems to have carefully chosen words which would allow him to proceed with the Bill if he saw reason to do so. And the course which the Government will take with regard to Mr. FAWCETT'S Bill is still very uncertain. Apart from this burning question, the Ministry will go on, or try to go on, as if nothing had happened. They will bring on the measures they have prepared or announced, and if the House supports them there will be no need of a dissolution this year. Undoubtedly this was the only line for Ministers to take that gave them a chance of living on through the Session with credit and self-respect. But whether they will be able to carry it out is very uncertain, for any moment a question may arise which will be so handled as to make men look on a dissolution as the only means of settling it; and the variety of hopes and fears which the prospect of a dissolution excites is so great that a Ministry which has lost the hearty confidence of its followers may at some unexpected moment find that those of its followers who have hopes of being re-elected prefer to take the risk at once rather than lessen their chances by a year of anxious waiting.

Mr. DISRAELI entered into very full explanations as to the position of himself and his party. He published, in fact, a great Conservative manifesto. In the first place, he had to account to his party for not taking office, and here his general task was easy, although he chose some reasons which are certain to provoke criticism. If he had taken office he must have dissolved; and the QUEEN, it need not be said, was quite ready to agree to a dissolution. But he could not have dissolved before May, and in order to dissolve even then he must have accepted the Estimates of his predecessors and have taken votes on account; and his experiences of 1852 showed him that this is a very inconvenient course when a hostile majority dictates at every step the terms on which the Government is to be allowed to take these preliminary measures. If he had waited until the end of the Session, he would have been carrying on business for months under circumstances that must have placed him in continual difficulty. He would have had to govern with a House of Commons that was living, as he said, in a Paradise of abstract Resolutions. One member would denounce the Income-tax, another the expenses of the Diplomatic Service, another the exclusion of agricultural labourers from the franchise; and the minority would have no strength to resist motions which, although not leading to any practical results, would damage the Government by showing their inability to offer immediate resistance. There was also another reason to which Mr. DISRAELI very briefly referred, but which was of the greatest practical importance. He stated what the expectations of his party are as to the results of the next election. He hopes for a majority, but for a very small one. This was, of course, putting matters in the most favourable light. Perhaps if he had been at liberty to speak with a strict accuracy that might have damped the spirits of his followers, he would have said that he hoped for a great gain, but that he could not tell how nearly this gain would bring him even to an equality with his opponents. Under such circumstances it is a great advantage for his party to be out of office when the election comes. They will be the attacking party, and will have all the enthusiasm and confidence of the attacking party. Each seat will be a triumph to them, whereas, if they were in office, each failure to gain a seat would make their position insecure. A gain of forty seats would be to the Conservatives out of office a glorious triumph, but to the Conservatives in office a gain of only forty seats would mean that at any moment they would be subject to defeat. His supporters must have been quite ready to acquiesce in Mr. DISRAELI'S arguments, and if their disappointment needed soothing, it must have been very easily soothed. For the future he could only bid them regard themselves, and offer themselves to their constituencies, as the steady supporters of social order, at a time when every institution is attacked. But he took care to remove one stumbling-block out of their road. He wished to silence by anticipation the suggestion that the Conservatives are the allies of the Ultramontanes whose support lately placed them in an accidental majority. He said that he and his friends had been quite willing to erect and endow a Catholic University, but that the disestablishment of the Irish Church henceforth placed a permanent and insuperable bar to the adoption of any such measure. As a party move this declaration deserves the

highest credit. To Irish Catholics it represents that the Conservatives would have given them everything they wished, had not the perverse folly of the Catholics themselves made it impossible. To English Protestants it represents that the Conservatives are now the most firm opponents of the Irish hierarchy; and it leaves the party perfectly free to advocate Denominational endowment and Denominational education in England, and to insist on the retention of the English Church as the indispensable condition of these objects being attained.

But Mr. DISRAELI was not content with saying what no one could object to. He went out of his way to assign a very singular reason for not accepting office. He said that he could not have dissolved in May because he should have had no policy to offer to the country. To have a policy, he said, it is necessary to be in office, and the new Ministry would have been so short a time in office that it could not have got up its policy in time to tell the country what it was. He referred more particularly to the Central Asia question, to the payment of the *Alabama* indemnity, to the interpretation of the new Rules of the Washington Treaty, to the French Treaty of Commerce, to the scale of national expenditure, and to the readjustment of local taxation. These are the really important topics of the day, and a Minister going to the country must shadow forth his policy with regard to them, or the nation would have no confidence in him. But to pronounce an opinion on them he must, we are told, have had access to the mass of materials in the exclusive custody of Government departments. He must know how far the country is already committed, what are our real relations with foreign Powers, and what is the exact financial position of the country. Only men who have been some time in office can possibly know enough on such matters to give an opinion worth listening to. There is a sort of truth in this. The opinions of persons who have not had access to the best information attainable is on many political questions not worth very much, and no one but a person in such a position can deal practically with such questions as those to which Mr. Disraeli referred, can venture to commit the country with regard to them, or can frame measures with regard to them for the consideration of Parliament. But something very different is expected from a Minister who is merely issuing a general programme on the occasion of a dissolution. He either keeps silent regarding difficult matters, or he indicates the broad outlines of his opinions, and that is quite enough. If the public has confidence in the holders of office, it does not expect or wish for statements which, if minute, might be imprudent. Most people would not dream of looking for a decisive judgment on the Central Asia question in an electioneering manifesto penned by Mr. DISRAELI. They would simply ask themselves whether Lord DERBY was not as likely to take care of the interests of England as Lord GRANVILLE. No reference to the archives of the Foreign Office is necessary before a general opinion is arrived at as to whether England ought to admit the interpretation placed on the new Rules by the Arbitrators. If Mr. DISRAELI were now in office and wished to announce that in due time he would deal with Local Taxation, he could do no more in an election address than say that he would do justice to all parties. He could not, without having studied many complicated statistics, pronounce that land or houses were unduly burdened. But then no one would expect more of him. We are obliged on such an occasion to look to the man and not to the possible measures, and those who wish the Conservatives to be in office would think that on the whole it was best that the task of framing a measure with regard to Local Taxation should be left in the hands of Mr. DISRAELI. Mr. DISRAELI cannot think that at the time of the election of 1852 it would have been any gain to him to have been able to announce the scheme of the unfortunate Budget which, as soon as Parliament met, terminated his official existence. The truth seems to be that Mr. DISRAELI has erected into a general theory a proposition applicable to the circumstances of a particular time. The Conservatives have no policy on these subjects, but think that it might answer to have one. They look to Ministers to give them one. They entertain a legitimate hope of being able to make capital out of the debates on the Washington Treaty, on the Budget, and on Local Taxation. It so happens that just now none but Ministers who have been some time in office can furnish the Conservatives with a policy; and Mr. DISRAELI elaborated this fact into the sweeping assertion that none but Ministers who have been some time in office can ever have any policy at all.

MR. GLADSTONE'S ADMINISTRATION.

MR. GLADSTONE'S Administration from its commencement to his recent resignation has, as his admirers justly boast, been the most active and eventful in modern English history. Mr. BOUVERIE, who contributed his share to the late defeat of the Government, may boast of having by an inopportune taunt given the first impulse to a sustained burst of energy which is perhaps not yet exhausted. Five years have passed since Mr. BOUVERIE complained that the Liberal party had a leader who would not lead, surrounded by supporters who would not follow. Immediately afterwards Mr. GLADSTONE announced his resolution of destroying the Irish Church Establishment; and before the Session was ended he had carried against the Government a Bill providing that Irish ecclesiastical appointments should be suspended to await the decision of Parliament. The whole Liberal party at once rallied round their chief, who has assuredly never since incurred the imputation of deficiency in boldness and vigour. The election in the late autumn of 1868 afforded a superfluous illustration of the suicidal character of Mr. DISRAELI's Reform Bill. Even at that time there were many indications of the Conservative reaction which has perhaps now assumed larger proportions; but the followers of Mr. GLADSTONE were united and sanguine, and the result proved that they had been justified in expecting an overwhelming majority. The Irish priesthood spared no exertion to ensure the destruction of the schismatic Establishment, and the prejudices of English Nonconformists and of Scotch Presbyterians for once coincided both with the policy of Rome and with the deliberate judgment of dispassionate and enlightened politicians. Mr. GLADSTONE himself fought with characteristic tenacity a losing battle in Lancashire, where the close vicinity of a large Irish population has apparently not created sentiments of neighbourly affection among the indigenous population. It is possible that the familiar tendency of rhetoric to run into triads may have tempted Mr. GLADSTONE into an unnecessary pledge which has since produced untoward consequences. In a copious series of orations he promised to redress the grievances of the Irish in the matters of Church and Land; and, by way of climax, he added a rash undertaking to provide them with a satisfactory system of education. On his failure in Lancashire he easily found for himself a seat at Greenwich, and as soon as the results of the election were fully known, Mr. DISRAELI wisely retired to make room for his fortunate adversary.

In the following Sessions friends and enemies concurred in appreciation of the triumphant employment of Mr. GLADSTONE's marvellous powers. The wisdom and justice of his policy might be disputed by hostile critics, as historians may discuss the propriety and expediency of a war; but the energy and ability which were again and again rewarded by victory could not give rise to any difference of opinion. The combination of impetuous passion with unrivalled mastery of detail was equally conspicuous in the debates on the Church Bill of 1869 and on the Land Bill of 1870. It has been said that soldiers prefer a leader in battle who invites them to come on to one who merely orders them to go on. Mr. GLADSTONE in a great Parliamentary contest gives neither direction; but, like one of his favourite Homeric heroes, he prefers to fight alone in front of his army. With the exception of Mr. CHICHESTER FORTESCUE, none of his colleagues in the House of Commons gave the PRIME MINISTER any conspicuous aid in either struggle. Lord GRANVILLE on both occasions displayed much ability and temper in inducing an unfriendly majority in the House of Lords to concur, after much hesitation, in two unpalatable measures. Both the great Irish Bills had been in the first instance framed with extraordinary ingenuity and care. When the Church Bill was first introduced competent judges at once said that much of the impending opposition was by anticipation disarmed. There was a risk that the elaborate provisions for the security of life interests might be injuriously affected by any material alterations in the framework of the Bill; and even if the House of Lords had, in accordance with its inclination, rejected the Bill in 1869, it was not certain that equal securities would have been obtained at a later period. The most important speeches against the Bill were in the nature of protests rather than of arguments directed to a practical result. Thoughtful statesmen would gladly have profited by the opportunity to pacify the turbulent priesthood of Ireland by a modest provision of houses and glebes which would have given them an interest in the defence of property and order; but the Nonconformists clamorously denounced the policy of concurrent endowment; and the priests, in accordance with the conditions of the temporary alliance, abstained from asking for a concession which Parlia-

ment was at the same time afraid to offer. Mr. GLADSTONE perhaps apprehended correctly the practical impediments to a judicious system of endowment; and, according to his usual custom, he invented reasons which seemed to him at the moment to account for the conclusion which he had adopted. The Irish Land Bill, by which a large amount of property was transferred from the owners to the occupiers, could only be excused by urgent reasons of State necessity. Parliament felt that, if the Bill had been rejected, its provisions would ever afterwards have been regarded as the acknowledged minimum of the legitimate demands of the Irish tenantry. In some degree Mr. GLADSTONE had created the pressure which enabled him to carry his Bill. In the House of Commons his own resources were adequate to all the demands of the controversy; and in the last resort his solid majority easily overbore a faint-hearted and hopeless Opposition. The House of Lords, with patriotic prudence, submitted to an inevitable measure which had perhaps not a dozen genuine supporters among their body. Lord DUFFERIN, who had written one of the ablest treatises on the relations of Irish landlords and tenants, plainly intimated in his speeches in support of the Bill his belief that its provisions were extravagantly partial to the tenant.

In the same Session Mr. FORSTER confirmed and increased his Parliamentary reputation by his single-handed conduct to a successful issue of the Bill for improving elementary education. To the principle of the Bill, which combined a provision to supply existing defects with the maintenance of the voluntary machinery of education, Mr. FORSTER resolutely adhered. Though the details of the measure were subjected to prolonged discussion, all parties more or less willingly accepted an equitable compromise. It was at a later period that the more pugnacious Dissenters and Secularists discovered that the Bill had not inflicted any serious blow on the influence of the Established Church. Neither Mr. FORSTER nor Mr. GLADSTONE has yet consented to exclude religious teaching from schools; but it is probable that the measure which was this year announced in the Speech from the Throne may contain some concession to the demands of the Birmingham Education League. In 1871 Mr. FORSTER carried through the House of Commons the Bill for secret voting which had been previously introduced. Mr. GLADSTONE and the majority of his colleagues announced their conversion to the principle of the Ballot soon after their accession to office; and Lord HARTINGTON undertook, as a zealous proselyte, the charge of a Ballot Bill in 1870. Mr. FORSTER, who had always supported the Ballot, was more appropriately selected to conduct the more serious contest in the following year; but he found himself compelled to withdraw several of the provisions of the Bill; and the House of Lords rejected the measure, which had only been sent up from the House of Commons immediately before the close of the Session. A few democratic politicians who attempted to promote an agitation against the House of Lords utterly failed in their efforts; and when the Bill was with better fortune reintroduced in the Session of 1872, Mr. FORSTER candidly confessed that the House of Lords had been fully justified in giving time for reconsideration. The most important measure of 1871 was Mr. CARDWELL'S Bill for the reorganization of the army, which was finally passed in its integrity, though it was thought necessary to supply the place of one of its provisions by the irregular, if not unconstitutional, procedure of a Royal Warrant. With the exception of Mr. GLADSTONE and his Irish Bills, Mr. CARDWELL has been the author of the most comprehensive project of constructive legislation which was introduced by the Liberal Government. The merits of the new army system are variously estimated by professional judges; but it is easy for civilians to appreciate Mr. CARDWELL'S boldness of conception, and the remarkable skill and temper which he displayed during the long Parliamentary discussions. He may share with Mr. FORSTER the credit of never having provoked unnecessary opposition, either by want of courtesy to his adversaries or by the utterance of unnecessary declarations of abstract opinion.

The dissatisfaction which found practical expression in the late debate and division began to be generally diffused when the Ministers had been three years in office. Mr. GLADSTONE, in a speech delivered about that time to his Greenwich constituents, extemporized in his well-known fashion a general proposition that Governments always decline in popularity after three years of office. If it had suited his purpose, he might have accounted for the result which he acknowledged without resorting to arbitrary theories. The Royal Warrant, and the apology which the Ministers produced in the form of a testimonial from Sir ROUNDELL PALMER, had caused general and just offence. One or two official appointments in which Mr. GLADSTONE had gone out of his way to evade the meaning of Acts of Parliament increased the growing irritation, and little confidence was reposed in the resolution of the Ministry to resist the encroachments which the American Government was attempting under colour of the Treaty of Washington. The Budget of 1871 had been one of the most unfortunate on record; for the first proposals of the CHANCELLOR of the EXCHEQUER were withdrawn partly through the intimidation of a mob, and in some degree in deference to the general dissatisfaction of the House of Commons. The final Budget consisted of provisions which Mr. LOWE had originally denounced as unjust; and the Ministry had thus displayed unexpected want of ability in the department where they were thought to be strongest. Mr. BRUCE'S unfortunate Public House Bill had still more seriously impaired the popularity of the Government; nor perhaps have the effects of the project on elections even now been wholly exhausted. As the Session of 1872 proceeded the position of the Government improved, and the final failure of the sharp practice of the agents of the United States removed a principal danger. The Scotch Education Bill passed almost without opposition, and the House of Lords prudently acquiesced in the establishment of vote by ballot. At last the Government, though its majority had not been seriously reduced, succumbed in the attempt to solve an impossible problem. The Liberals and Nonconformists with whom Mr. GLADSTONE professes to agree are irreconcilably opposed to concurrent endowment, which alone will satisfy the demands of the Irish Roman Catholic hierarchy. There is perhaps no sufficient reason why the confidence reposed by the party in Mr. GLADSTONE should be impaired by a solitary failure; but, as a local shock often produces unexpected injury to the general bodily constitution, there can be little doubt that the strength which Mr. GLADSTONE derives from the allegiance of his followers will be for a time diminished. His best chance of an immediate rally of the party was lost when Mr. DISRAELI declined to form a Government.

THE EVACUATION OF FRENCH TERRITORY.

THE news that in less than six months the last German soldier is to leave France has been received throughout the country with natural and apparently universal satisfaction. It is a very great triumph for France and for M. THIERS. Last June the French Government was thought to have made a very good bargain when it got the Germans to agree that two departments were at once to be evacuated, and, subsequently, the third milliard paid; that two more departments were to be evacuated in March of next year on the payment of the fourth milliard; and that the remaining two of the occupied departments and Belfort were to be evacuated on the payment of the last milliard in March 1875. The object of this arrangement was at once to gain time, so that, if the proceeds of the intended loan could only be slowly realized, France might not be hardly pressed, and also to get some portions of French territory out of the grasp of the foreigner at an earlier date than that contemplated by the Treaty of Peace. But the loan was a great, and indeed an astonishing, success, and the necessary funds have been at the command of the French Government much earlier than was anticipated. The whole of the fourth milliard will have been paid by the beginning of May, ten months before it was due, and the French are ready to pay the remaining milliard by four monthly instalments of ten millions sterling each, on the 5th of June and the three following months. As they can pay off the whole indemnity by the 5th of September next, eighteen months in advance of the stipulated time, the Germans have of course to go when they have got all they have a right to demand, and within a fortnight after the 5th of September the evacuation is to be completed. But meanwhile the French are to receive a very welcome reward for the anticipation of the payments due from them. On the 1st of July the evacuation of the four departments now occupied is to begin, and it is to be completed within a month, and Belfort is to be given up. The Germans will then have to receive only twenty millions sterling out of two hundred, and in a few days after the evacuation is completed ten more will be payable to them. But they have asked for security for these last payments, and it has been agreed that they shall keep Verdun until the last franc has been swept into the German treasury. At first the Germans wanted to keep Belfort for the purposes of this final guarantee, but M. THIERS knew that the national satisfaction would have been very incomplete if this famous fortress had been left in foreign

hands; and the Germans have behaved so mysteriously about Belfort, and have spent so much money in strengthening it since it came into their possession, that the French would have had a very uneasy suspicion that, in spite of all their efforts to pay the money due, they were not meant to get this object of their hopes and affections restored to them. The military party at Berlin, who have a strange love for Belfort and cannot bear to give it up, pressed the EMPEROR to keep it to the last moment that a strict adherence to the letter of existing engagements would allow. But Prince BISMARCK of all people in the world came forward as the friend of France, and under his influence the EMPEROR was persuaded, with apparently a cordial concurrence on his part, to agree that Verdun should be substituted for Belfort; and thus the long negotiations by which the new arrangement has been effected were brought to a happy conclusion.

M. THIERS hoped to have been able to announce the good news to the Assembly before its sitting came to an end on Saturday last. But he was not in time, although, with a pleasing civility which even M. ABOUT must own to be noticeable in a man who has run off with so many thousand clocks as King WILLIAM, the EMPEROR hurried on the signature in order that he might have the pleasure of congratulating in person the French Ambassador, a concert at whose house he was engaged to attend. When the Assembly did hear what had happened, it was in a state of great excitement, and immediately proceeded to draw up a manifesto. Every one agreed that M. THIERS should be declared to have deserved well of his country, but the Right protested that a little share of the credit of the arrangement ought to fall to the Assembly. That an Assembly should thus recognize itself seems unnecessary, but the Assembly is perhaps obliged to bring the fact of its existence to the notice of a public which is too apt to think only of one man. Nor was this all. It was thought that not only should the assistance rendered by the country at large be acknowledged, to which no one could object, but that a tribute should be paid to the exertions of the colleagues or subordinates of M. THIERS. It was in vain that one of them protested that they did not wish to be thanked, and that in this matter M. THIERS had done everything. The majority were determined, as they had to thank M. THIERS, to thank every one else that could possibly be thanked, so that as much as possible might be done to mitigate the solitude of his eminence. The Left were in a state of boisterous rapture. They were determined that the triumph should be specially their triumph, and after first shouting "Vive la République!" which stung the Right to the heart, they rushed off to be themselves the bearers of the vote of congratulation to M. THIERS. M. ABOUT next day informed the public that the good news had produced a truce between parties that might last twenty-four hours. But he seems to have been mistaken. Party spirit seized on this, as it does on every occasion in France. The Republicans made no pretence of being even momentarily calmed into moderation and charity. They at once associated M. THIERS and his new treaty with themselves, vowing that he was their man, and that the treaty was their treaty, and roundly asserting that the Right secretly lamented an arrangement which would hasten the dissolution of the Assembly, and remove their friends the Germans, to whom they look for the preservation of the order they love so dearly. To welcome the new treaty sincerely shows patriotism, but as members of the Right are never patriotic, they cannot possibly, according to the simple logic of their enemies, be sincere when they say that the treaty is welcome to them.

To have concluded this treaty is the greatest success M. THIERS has ever obtained, and every one must agree in admiring the inflexible determination with which, amid all the noisy and wearisome contests of French parties, he has kept his eye fixed steadily on the one great object of his policy, to get the foreigners out of France. The resources, the energy, the patience, and the adroitness which he has displayed in fulfilling the task he assigned himself are beyond praise, and certainly he may truly be said to have deserved well of his country. It must also fill Frenchmen with just pride to think that their country has paid so gigantic a sum of money in so short a time, and has attracted capital so widely by the confidence which the willingness of all to bear their burdens has inspired. Nothing can detract in these respects from the merits of M. THIERS and of France. But there are questions not only as to the political, but as to the financial, state of France which the new state of things suggests. What is the real financial position of France? When the last payment shall have been made in September next to the Germans there will still be a considerable sum due on the last loan. But the whole of the loan was wanted for the payment of the indemnity and the interest, and for other indispensable purposes; although the amount payable for interest will of course be largely diminished, and so will be the expenses of the army of occupation. The Government has also agreed to reimburse Paris a portion of the eight millions sterling paid on the capitulation, and large sums are ascertained to be due to the departments that suffered most from the war. It is idle to suppose that there is any surplus from current taxes. The indirect taxes showed a deficit as compared with the estimates during the early part of the financial year, and it is only lately that the yield has been satisfactory. If it is true that the Government propose to augment the direct taxes both on land and on personal property, the want of money must be serious after the repeated declarations of M. THIERS as to the injustice of throwing greater burdens on the payers of direct taxes. It is impossible to believe that the taxes on raw materials have at all answered the expectations of M. THIERS; and many of the smaller taxes, such as the match-tax, which last week was the subject of an animated debate in the Assembly, have caused the Government much difficulty and annoyance. The discussion of the Budget will come on shortly, and then more will be known; but, so far as is known at present, it is prudent to hesitate before accepting without qualification the enthusiastic accounts of the financial position of France which the news of the Evacuation Treaty has awakened. All that we can be said to be sure of is that France has borrowed with great rapidity an enormous sum at six per cent., and has very nearly provided for the interest out of current revenue. How much she will have borrowed when all the accounts of the war are liquidated, what it will have cost her, and how severe will be the pressure of the whole amount of consequent taxation, are questions that ought never to be forgotten, although it is at present impossible to answer them.

MR. MILL ON LANDED PROPERTY.

THE owners of land are exposed to the assaults of two classes of enemies, or rather of one eminent theorist and an indefinite number of ignorant and greedy communists of a more practical character. Professor THOROLD ROGERS indeed, and a few other advocates of the new land doctrine, belong, like Mr. MILL, to the educated class; but it may be said without disrespect that they would scarcely obtain a hearing if they were deprived of their leader. Mr. MILL's influence with the multitude is of a peculiar kind, but it is natural and intelligible. Greedy or ambitious politicians of the humbler sort are astonished to find that a scholar and philosopher comes down from the clouds to offer them, on grounds which they could never have discovered for themselves, the long coveted objects which they have always thought desirable. Democratic leaders like Mr. BRIGHT are perfectly intelligible to followers whose aspirations they share, while they express them with an eloquence beyond the reach of ordinary agitators; but when Mr. MILL appeared in the House of Commons, he seemed to descend from unknown regions. Those who had, not without a consciousness of immorality, simply wished for their neighbour's property were delighted with an unexpected revelation that they had all their lives held doctrines conformable with the most transcendental doctrines of justice. Mr. MILL would make the application of his principles dependent on various and complicated conditions. Although he unsettles all the foundations of property, he proposes to compensate landowners for everything which they possess at the present moment; and it is certain from his character that he would insist as strongly on those rights of property which he still recognizes as on the contingent interest of the State in the future increment of value. The audience which applauded his speech on Tuesday last cares only for one side of the bargain; and the ODGERS and BRADLAUGHS whose aid would be indispensable to Mr. MILL if he attempted to expropriate the landowners avow, with a candour which rises to effrontery, in their Land and Labour League and other revolutionary Clubs, their intention of seizing the land without reference to the rights or interests of owners. Mr. MILL is in all his sophistical schemes original and independent; but if the agitation which he promotes is ever to produce any practical result, he will only have been an auxiliary in a rude scheme of confiscation.

It was scarcely worth while to bestow the feeling and passion which characterize all Mr. MILL's economical judgments on the secondary question of the inclosure of commons. By far the greater part of the available common

land in England is already inclosed, and it seems probable that a few zealous patriots in the House of Commons will prevent for a considerable time, if not permanently, the further progress of inclosure. The main result of their efforts will be the prevention of improvements which can only be effected on land held in separate ownership. Large tracts of Welsh mountain might be more advantageously depastured if there were no concurrent or conflicting claims of common, and many of the lower slopes of the hills might with great advantage be drained and fenced, and in some instances cultivated. The London artisans who cheered Mr. MILL are not aware that the great sheepwalks on common land are by no means occupied by the poor. A man must have a flock large enough to pay for the employment of a shepherd if he keeps sheep at all on the hills, and unless he, his men, and his dogs have a certain aptitude for fighting, it is highly probable that he will get less than his share of the common pasture. The only losers by inclosure would, as a general rule, be admirers of scenery and tourists, who would find the smallest possible sympathy among Mr. MILL's adherents. The smaller commons in other parts of the country may be either inclosed or preserved in their present condition without producing any perceptible effect on the state of the population. Even Mr. MILL's faculties and attainments fail to secure him against the exaggeration and the absence of sense of proportion which always affect the judgments of angry and enthusiastic politicians. His larger project of appropriating to the national use the increase in the value of land is more serious; and if it imposes on the popular mind, it may possibly become more formidable. It is intolerable to Mr. MILL that private owners of the WESTMINSTER, or PORTMAN, or STANLEY estates should be enriched by the growth in the value of their property which may be attributed to the increase of general wealth and prosperity. As might be expected, Mr. MILL lays no claim to the additional wages which accrue to miners and artisans from almost exactly the same causes. If Lord WESTMINSTER is not to profit by the increase of rents in Belgravia, the State ought in common justice to compensate the owner for the losses which his land had suffered when the squares and streets of Bloomsbury went out of fashion. Mr. MILL says that a man's savings and earnings ought to be sacred; but if they are invested in land, in the hope of profit by a future re-sale, the imprudent speculator will forfeit the gain earned by his foresight to the State. It will be quite as easy to take all the rest of the property as to appropriate the so-called increment; and those who attempt the smaller operation will not stop short of total confiscation.

The strongest objection to Mr. MILL's schemes is one which his intellectual temperament inclines him to undervalue. In conformity with a theory and a sentiment, the so-called land reformers propose to subvert a great part of the social and economical institutions of England. Their ulterior purpose is either to vest the ownership of the land in the State, or to offer artificial and legal encouragements to the establishment of a peasant proprietary. The present system may at least claim to be considered as a natural result of a long succession of circumstances. The great feudal estates have with few exceptions been long since dispersed; and the modern accumulation of land has been formed by purchases from voluntary vendors. It has been thought worth while by the majority of landowners to content themselves with a small return of income in proportion to the saleable value of the land; and consequently they have outbidden the occupiers or speculators who may have only sought for a profitable investment. The preservation of landed estates in families for two or more generations has been tolerated but not enforced by law; and it is agreed on all sides that it is only by a compulsory division on the French plan that the traditional practice could be effectually checked. All the results of the existing system are distasteful to Mr. MILL and his adherents; but they are exclusively due to the habits and inclinations of the wealthier class of Englishmen. It is not enough to show that the practice is liable to plausible criticism, unless it can be made certain that a revolutionary change would produce desirable and definite effects. No civilized country has prohibited private ownership of land; nor would it be possible without the exercise of minute and constant vigilance to prevent the growth of some kind of estates in land. In those parts of India where the sovereign power is supposed to be the universal landlord, it has again and again been deemed just and necessary to secure to the lessees a greater or less fixity of tenure, which in the majority of cases constitutes a beneficial interest. If all the land in England were appropriated by the State, it must be demised to tenants who, unless they paid an extreme rack rent, would have a margin between their payment and their receipts. Even where the subdivision of property is enforced by law, the mortgagee takes for some purposes the place of the landlord. Nearly all personal incomes consist of charges on some kind of visible property; and rent is as legitimate and harmless a form of revenue as interest or dividends. Unless the whole spirit of legislation is fundamentally changed, property must at some point or other be let alone. A great change in the tenure of land made once for all would expropriate actual or expectant possessors; but unless interference were incessantly renewed, the relations which seem to Mr. MILL to be abuses would gradually revive. On the other hand, it is certain that constant or periodical revisions of the distribution of property would be found odious and intolerable. The claim of the State to what is called the natural increment of the value of land could only be made good against a small number of owners who might be too weak to resist oppression. No Government which has ever existed in France could compel three or four millions of proprietors to part with the excess in value of their estates which might be attributed to the general growth of wealth. Mr. MILL himself would probably infringe ancient rights and disturb the security of present and future owners with philosophic impartiality; but all the popular support which he receives proceeds from envy, or perhaps from disapproval of large landed possessions. It would be easy to show that many other kinds of property besides land grow in value in proportion to the general prosperity without trouble or merit on the part of the proprietor; nor would it be possible to argue that a different rule ought to be applied to the respective increments of realty and of personalty. Mr. MILL would perhaps accept the inference that in all cases the State should assert its imaginary right; but it would be absolutely impossible to distinguish between the various kinds of property to which the principle would apply. Through the increase of wealth, and therefore of demand for expensive luxuries, the price of horses has been largely raised within two or three years; but the profit on a re-sale of a horse bought two years ago would escape the clutches of Mr. MILL.

There is no need to call the attention of landowners to the menaces of Mr. MILL and of their less philosophical enemies; but it is highly desirable that those who are interested in other kinds of property should understand the inevitable consequences of a total or partial confiscation of land. It is impossible in default of experience to say positively whether society could exist or thrive without the institution of property. It has often been shown that a communistic tenure of property would involve the necessity of a strict despotism; but some zealots would *willingly* sacrifice freedom to equality. Whatever may be the merits of communism, the door must either be open or shut. Property capriciously taken or left according to the fancies of social theorists would no longer have any value or security. The task of transferring all the property in the country from those who have to those who want, though it is the natural and logical consequence of Mr. MILL's theories, would not be unattended with difficulty.

ULTRAMONTANISM AND LIBERALISM.

IT would be a matter for sincere self-congratulation if we could believe that no more would be heard of the difficulties of which the Irish University Bill was the symbol and expression. It is true that the particular recognition given to those difficulties in the defeated measure is not likely to be again accorded to them. The Government has been overthrown in a sincere and energetic attempt to redress a grievance the existence of which was denied or doubted by a majority of its supporters, and its overthrow has been the work of the very persons whom the Bill was designed to benefit. Mr. GLADSTONE's Irish policy would have been far more popular and intelligible if it had included only the disestablishment of the Church and the protection of the tenant; he would have pleased his party better if he had treated Irish University Education as an open question, and allowed them to say No to his proposals without fear of any ill consequences to the Government. He introduced the Bill at risk and cost to himself, because he thought that the Roman Catholics of Ireland were not fairly treated as regards the higher education. He pressed the Bill even after Cardinal CULLEN had refused to accept it as an adequate settlement, on the ground that it is the duty of Parliament to redress proved grievances, whether the attitude of those who suffer under them is reasonable or unreasonable. But when a Minister has been defeated by his own clients, and has resigned office in consequence, he may fairly abandon the effort

to serve them any further. Indeed it is no longer possible to contend with anything like assurance that the grievance which the Government undertook to remedy really exists. That grievance was the inability of the Roman Catholic laity of Ireland to give their sons a University education. The Bishops have virtually said that the grievance which Parliament ought to remedy is not the inability to procure a University education, but the inability to procure it at an endowed Catholic University. If the Bishops are right, there is no use in further argument. Their demand involves an impossibility. If the Bishops are wrong, the Roman Catholic laity have only themselves to thank for contentedly allowing them to become the mouthpieces of Irish sentiment on the Bill.

It is not, however, the attitude of the Irish opponents of the University Bill that is most calculated to suggest uneasy reflections as to the future. Unfortunately Ultramontane intolerance is not the only nor the most formidable intolerance that the Liberal party has to fear. Ultramontanism is an open enemy, and you know pretty well the worst that it can do. It is very noisy just now and very aggressive, but in the region of politics it is nowhere really powerful. It has not prevented revolutions in France or Spain. It has not maintained the POPE on his throne. It has not kept South Germany and Prussia from making up a single Empire. Its greatest achievement has been to keep an English Minister out of office for a week, but even in this case the catastrophe was brought about by an accidental combination which is never likely to repeat itself. As a religious influence it is mischievous in a very high degree; as a political influence it would be daily growing less important if it were not for the short-sighted policy resorted to by some of its adversaries. If anything can give the Roman Catholic Church a new lease of power in Germany, it is the sort of treatment to which Prince BISMARCK is now subjecting it. So long as PIUS IX. lives the Church will probably derive no benefit from this cause. The POPE is too old to adapt himself to a changed position, and a lifetime spent in defending his temporal sovereignty is a bad preparation for a policy which requires as the first condition of success a frank identification of the Church with revolutionary rather than with conservative forces. In the meantime there are not wanting even in this country signs of an outbreak of intolerance similar to that of which Prince BISMARCK is the author in Germany. The position taken up by the Radicals upon educational matters is one of these symptoms. In England they have set themselves against Denominational education in elementary schools; in Ireland they have set themselves against Denominational education in Universities. If they hold Denominational education to be in itself an evil which the State is justified in preventing by all the means in its power, they are no doubt consistent in their opposition to it. Many of them, however, are not prepared to go this length. They still cling to the old Liberal doctrine that religious differences lie outside the sphere of politics, and that if religious fanatics insist on ignoring the frontier line, that is no reason why Liberals should follow their example. But a doctrine which has already ceased to govern men's conduct cannot long be trusted to govern their convictions. The tendency of Radicalism is more and more to treat those who hold any definite religious belief as natural and irreconcilable enemies; and it must be admitted that the language and acts of many of those who do hold a definite religious belief give some colour to this view. But the prophet of this variety of Radicalism is not to be found among the Radicals; it is theirs to find the practice, but a writer in the *Pall Mall Gazette* stands always ready to supply the theory. The latest, and perhaps the most unmistakable, exposition of it will be found in the number for Monday last. It is so remarkable that we will not venture to reproduce it except in the writer's own words. The way to beat the Ultramontanes, he says, is to encounter them "with a creed which, while "equally definite and thoroughgoing, is more reasonable. This "creed is that religion is matter of opinion and probability; "that whoever claims to know much more about it than other "people, and in particular whoever claims to be the exclusive "guardian and authorised interpreter of a Divine revelation, "is condemned *ipso facto*, and that the fact that he makes "such pretensions disentitles him to any advantages which he "may claim from public authority." The holding of this creed by "the enormous majority of rational men, whatever "their nominal religion may be," will some day lead the Englishmen to tell the Ultramontanes that they will not only not be bullied by them, but that they will consider very seriously how far they are justified in allowing them to bully their dupes. "Once in its history the English nation had occasion "to express in an emphatic way its opinion of the POPE and "all his works. If it is baited beyond a certain point, it will "be apt to express the same opinion still more emphatically "and with a wider sweep; and if it does, it is to be hoped it "will make much cleaner work than it did before."

Considering that the Ultramontanes have lately been baiting the English nation by throwing out a Bill which this writer probably thought worthy of all contempt, it is a little hard to take this particular occasion for warning them of their coming destruction. Putting this aside, however, it will be wise to consider how far the doctrine of the *Pall Mall Gazette* is better than the old Liberal "commonplace" that in politics religion should be treated as a matter of indifference. On the Continent the way of looking at religion which this writer desires to see prevail in England has been common for some time. There Clerical is as much a recognized political epithet as Liberal; if you know a man to be a Catholic or a free-thinker, you know at the same time to what political party he belongs. The *Pall Mall Gazette* is perfectly alive to the consequences of this state of things in France and Spain. "The clergy have con- "trived to associate themselves with the Conservative view of "things," and the Liberals are thus thrown into the dilemma of having to go "against the clergy, in which case they are prac- "tically forced into violent revolution," or to "go with the "clergy, in which case they have to give up their character "as Liberals." This is a very natural result from the Continental habit of identifying religious and political controversies; but it hardly constitutes a reason for introducing the same habit into England. It would have been very much better for France if the Liberals did not hold themselves forced to give up their character as Liberals if ever they find themselves on the same side in politics as the clergy. It is a further disadvantage of this doctrine that it tends, not only to force Liberals into positions which they do not wish to take up, but also to force religious partisans into equally extreme positions on the other side. The writer in the *Pall Mall Gazette* is obliged to give a definition of Ultramontanism which includes every religion which has any genuine title to be called a religion. He is tolerant up to a certain point. He does not propose to subject any one to disabilities for merely holding an opinion on religious subjects, provided that he shows by his conduct that in practice he regards it "merely as an opinion "about a matter in which you cannot get beyond proba- "bilities." But whoever claims to know "much more" about religion than other people—a trifling excess in this direction will apparently be passed over, but if a man is prepared to lay more than five to four on his creed he may get into trouble—becomes a fit object of penal legislation. In other words, every religion that has ever exercised any influence over mankind is the natural enemy of the State. We can conceive of nothing that would give so much well-grounded satisfaction to Ultramontanes as the diffusion of this view throughout Europe. They have always insisted that Christianity and Ultramontanism are really identical, and they would then be able to point in support of their theory to the fact that the State everywhere regards them as identical. To elevate the impossibility of arriving at certainty in matters of religion to the rank of an established creed, the denial of which entails upon the dissenter all manner of civil disadvantages, is to entangle the State once more in the inconveniences which, since the loss of unity of belief, have always followed upon the effort to make religious agreement a condition of political co-operation. We should like before entering upon such a path to be shown much more clearly than has yet been attempted what are the evils which await us if we do not enter upon it. In proportion as we agree with the *Pall Mall Gazette* that "at "no very great distance ahead of us lie the most vehement con- "troversies, religious and social, that have yet occurred in "human history," we should be indisposed to aggravate those controversies by investing them with a political character which does not necessarily belong to them.

MR. HARCOURT ON THE INCOME-TAX.

THE tradesmen who are urging the repeal of the entire Income-tax for the purpose of getting rid of Schedule D, and re-erecting Schedule A in an aggravated form, were lucky in catching Mr. VERNON HARCOURT to take the chair at one of their meetings. Mr. HARCOURT, whose position in the House entails political responsibility, is not equally to be congratulated on his temporary association with one of the

obscurest and least reasonable of the numerous Leagues which have been organized for various special purposes. The Chairman was not even in harmony with his scanty audience, whose opinions were probably expressed with appropriate vehemence by a certain Mr. JONES. Mr. HARCOURT has persuaded himself that the revenue arising from the tax could be spared even without any extraordinary reduction of expenditure, and he hastily infers that the whole question of the expediency of a tax upon income would be solved by the simultaneous reduction to the same extent of direct and indirect taxation. He remarked in the course of his speech, with perfect truth, that the tax pressed most heavily on the owners of small fixed incomes, and he appreciates the difficulty of distinguishing between different amounts of income arising from similar sources. There are strong arguments against Mr. HARCOURT's conclusions, but they undoubtedly admit of a plausible defence. There is no reason why he should not express his opinions in the House of Commons on fit occasions, but it was a mistake to lend his name to Mr. ATTENBOROUGH's agitation. He would probably find on inquiry that not a single owner of a fixed income, large or small, has taken an active part in the movement of the shopkeepers. The abolition of Schedule D would inevitably increase the burden on rent, on interest, and on dividends, although it may for the moment suit the purpose of the agitators to offer relief to all classes of the contributors to the tax. Mr. JONES candidly blurted out the real object of the agitation when, after applauding the House of Commons of 1816 for repealing the tax, he proceeded to demand that the whole expense of the naval and military establishments should be exclusively borne by the landowners. There is no doubt that it would be possible to exempt trades and professions from taxation if the entire burden were transferred to one special kind of property. Perhaps some of the attendants at the meeting may have suspected that there was a kind of anomaly in relieving moneyed capitalists at the expense of landlords; but, as far as fundholders are concerned, there would be a reason, not suspected by Mr. JONES, for abstaining from taxing their dividends, since, according to their contract, they are not to be subjected to burdens which are not equally imposed on every kind of income. It was perhaps for the promulgation of such doctrines that Mr. HARCOURT expressed his gratitude when, with touching humility, he assured the meeting that he came to learn and not to teach, and when he added that he had attained his object. He disavowed any feeling of regret for the absence of numerous members of Parliament who had been invited to attend, probably on the ground that they could have added nothing to the ripe wisdom of Mr. JONES. Although it may seem invidious to criticize excessive modesty, it is nevertheless true that in assemblages of small and unknown politicians the business of an eminent member of the House of Commons is rather to communicate than to imbibe wisdom. Mr. HARCOURT could, if he had thought fit to become a teacher, have explained to the meeting that the main objection of the House of Commons of 1816 was to the tax upon land. He might also have suggested that it was not the business of Finance Ministers and Parliaments to readjust the relative wealth of different sections of the community. It is not easy to understand the nature of the valuable information for which he thanked his supposed instructors, who seemed not inclined to follow him in his calculations of possible surpluses of revenue over expenditure in successive years.

It might have been hoped that the opinions expressed by Mr. GLADSTONE several years ago would not, after so long an interval, have been quoted as conclusive against the Income-tax. In 1862, and for some years afterwards, Mr. GLADSTONE was Chancellor of the Exchequer, and he has now for four years exercised an undisputed control over the whole policy of the Government. If his colleagues were to dissent from his proposals on ordinary questions, they could scarcely fail to defer on a question of taxation to the judgment of the greatest living master of finance. Whatever Mr. GLADSTONE may have said in 1853 or 1862, he has firmly maintained the tax down to 1873; and when Mr. LOWE's unfortunate Budget collapsed two years ago, the PRIME MINISTER was not less responsible than the CHANCELLOR of the EXCHEQUER for the increase of the Income-tax by one-half. When Mr. GLADSTONE denounced the Income-tax under Lord PALMERSTON, he was indirectly pointing at a scale of expenditure which he never heartily approved. In talking of the tax as the last reserve of the nation, properly applicable only to a time of war, Mr. GLADSTONE for rhetorical purposes forgot that in the Crimean War the rate was exactly four times as great as the present percentage. Mr. HARCOURT relied exclusively on Mr. GLADSTONE's authority, which is, unless occasional phrases are to be considered more significant than systematic acts, entirely on the side of the tax. One or two of the minor speakers at the meeting complained, not without justice, of the frauds which are exclusively perpetrated by the contributors under Schedule D. As the promoters of the agitation profess to represent the very persons who commit the frauds, their grievance seems to admit of a simpler remedy than the abolition of the tax. Conscience-stricken tradesmen are at liberty to make honest returns, if they choose to do so.

According to Mr. HARCOURT's calculation, the tea duty and the Income-tax might be repealed in three or four years without disturbing the financial equilibrium. The annual growth of the revenue is undoubtedly considerable; but the anticipation of a surplus of 9,000,000*l.* in a short period is, to say the least, sanguine. The question would be better worth discussing if there were any reasonable probability that Mr. HARCOURT's proposals would be adopted. It may perhaps be practicable at some future time, with the aid of popular agitation, to repeal the tax; but the same force which might be capable of destroying the present system would be sufficient to revive the imposition of a heavy tax on property. Although Sir ROBERT PEEL promised the ultimate abolition of the tax when he introduced it thirty years ago, and although Mr. GLADSTONE twenty years and ten years ago repeated the same prophecies or pledges, the owners of incomes beyond a small amount have now for an entire generation been compelled to pay a percentage to the State. If they were to relieve themselves from their burden by Mr. HARCOURT's exertions, they would be assailed by irresistible and not wholly unfounded clamour. The advocates of direct taxation as the only mode of raising revenue have many plausible arguments in their favour; and they would easily convince the constituencies that the exemption of wealth from taxation was intolerably unjust.

One change in the mode of assessment might perhaps be advantageously adopted, although it would extend an existing inequality. The deduction which is allowed in the return of incomes below a certain standard might, without practical injustice, apply to a somewhat larger income. Through the great and sudden rise of prices, the value of all incomes which are chiefly expended in necessaries has within a few years been reduced, perhaps by a third. There would, therefore, be no innovation in adopting a higher standard for the exercise of an exceptional, but not unreasonable, indulgence. Whether it would be possible at the same time to raise the limit of total exemption is a question to be principally determined by the amount which would be sacrificed. An income of 150*l.* a year is now worth about as much as an income of 100*l.* a year in 1842. If the revenue could afford the sacrifice, there would be some advantage in removing the inequality between the poorer middle class and the highly paid artisans who contrive to evade direct taxation. It would perhaps be possible to excuse the exemption of the working classes on the ground that they are the patriots who drink the country out of its difficulties; but it is unsatisfactory to know that the incomes of a numerous section of the community at present escape the taxation to which they are legally liable.

THE AUSTRIAN REFORM BILL.

A SUCCESSION of exciting events in other parts of Europe has diverted the attention of Englishmen from the progress of constitutional government in Austria. Yet Austria, partly by the moderation and good sense of her people, and partly by the character of the changes which have taken place in other countries, now deserves to be ranked among the favourites of fortune. The Hungarian difficulty belongs only to history. The discontent of the non-German provinces included in the Western half of the Empire, to which the triumph of Hungary served as a natural stimulus, is slowly being laid to rest. It has not, as it was in Hungary, been made more intense by recollections of civil war and of tyrannical usage, nor is it now kept alive by any resistance to the popular wishes, except as regards the one impracticable demand of local independence. While France has been reduced—speaking constitutionally—to something like primitive nakedness, and the resurrection of the German Empire has been signalized by a revival of religious persecution, Austria has by degrees brought her Constitution into working order, and has done this without having recourse to measures either of exceptional violence or of exceptional intrigue.

One of the most important of the measures by which this has been effected is the Reform Bill which was read a third time in the Lower House of the Council of the Empire

on the 6th of March, and the adoption of which has just been recommended by a Committee of the Upper House. Hitherto the Lower House has been elected by the Legislatures of the several States, so that if a bare majority in any Provincial Diet happened to be hostile to the Government, this view was exclusively represented in the members whom it returned to the Council. In Bohemia and in Galicia this arrangement has been especially inconvenient. It has inflicted practical disfranchisement on the Germans in the former kingdom and on the Ruthenians in the latter. The German population of Bohemia is superior both in wealth and in practical capacity to the Czechs, and it is far from desirable that any part of the population of Galicia should feel that it has neither share nor interest in the proceedings of the Legislature at Vienna. The inconsiderate obstinacy of the Particularist deputies has made it unexpectedly easy to apply a remedy to this state of things. As to what the remedy must be there was no room for doubt. The direct election of the members of the Council by the constituencies would give the minorities in the Provincial Diets an opportunity of making themselves heard in the Council of the Empire. Under the system of election by the Legislatures, the real majority in the Empire might constantly be set aside by a majority obtained by the simple process of striking the separate minorities out of the calculation. Supposing a hundred German deputies to be returned by half the population of the Empire, and a hundred and one Particularist deputies to be returned by the non-German races, the latter would have a majority in the Council; although in the Legislatures by which the latter had been returned, the Particularist element might have been the stronger only by a few votes. In this way a majority in the Council of the Empire need only have represented a little over a fourth of the whole population.

The difficulty was that the consent of two-thirds of a House constituted after this manner had to be obtained to the Reform Bill. The Lower House consists of 203 members, and out of the 136 votes necessary for a majority only 116 could absolutely be counted on. But here the Particularist members came to the aid of the Ministry. There were 36 deputies who had never taken their seats, and the rules of the House provide that, if they persist in staying away after a formal summons, their seats are forfeited. When the form of calling them was gone through, they one and all refused to attend, and by this convenient obstinacy the actual number of the House was reduced to 167. In the subsequent debate this policy was severely and justly criticized by a Particularist deputy from Southern Tyrol, who attributed the success of the Reform Bill to the folly of his own party in resorting to a Parliamentary strike. It is possible that they may have better reasons than are apparent to outsiders for taking such a course, but it certainly is hard to see the wisdom of abstention when their presence in the Council would have ensured the defeat of the measure to which they are opposed. The necessary majority was thus brought down to 112. The passing of the Bill was therefore assured, and the minority against it was further reduced by the secession of the Polish deputies before the division. The plea on which they defended their action was the incompetence of the Council of the Empire to change the mode of election without the consent of the Provincial Diets. This question had already been argued with much elaboration in the Report of the Committee on the Bill. The position of the Ministry is that the right of the Diets to send members to the Council of the Empire was conferred on them by the Constitutions of 1861 and 1867, and that this right can consequently be taken away by a constitutional amendment. The Diets were not parties to a contract with the Council; they were simply the recipients of a right created by a particular instrument, which instrument admits of being varied, provided that certain conditions are complied with. These conditions have been complied with by the adoption of the Bill by a two-thirds majority, and to ask the consent of the Diets to the change would be a mere constitutional superfluity. There was a precedent also for the Bill in the law of last year, which gives the Council the power of ordering direct election whenever the Diets refuse to elect members, or the members elected refuse to take their seats. To this it was answered that the right of election was reserved to the several Diets by their provincial statutes; but the solitary speaker on that side does not seem to have met the difficulty that, as the Council of the Empire only exists by virtue of the Austrian Constitution, it cannot be unaffected by valid amendments of that Constitution. In the end the Bill was passed by 120 votes against 2, one of the minority being the Tyrolese deputy who had protested against Parliamentary strikes.

It now remains to be seen how this reform will be received in the provinces. Will the Diets ignore it altogether, and go on electing deputies to the Council as though it had not been passed? And, if they do, how far will the populations play into their hands by keeping away from the direct elections? The latter expedient, which is the only one that can cause any real inconvenience to the Government, is not likely to be tried on a large scale. It is dull work for a majority to sulk at home and see a minority profiting by its ill-temper. Yet this is the only result which the abstainers could promise to themselves. In every constituency probably there will be a minority favourable to the Austrian Government, and if the Particularists stay away from the polls, the effect will be that, instead of the Government getting a slightly increased majority in the Council from elections here and there going in their favour, they will get a very largely increased majority from the elections going universally in their favour. Nor is it by any means certain that the Particularist majority in the constituencies will take the same view of the situation as the Particularist majority in the Diets. There are obvious advantages in sending your representative direct to the Council instead of having him sent there for you by a body in the return of which you have only a fractional share. It is probable that in electing the members of the Diet the voters have usually had only local politics in view, and that the thought that their vote will help to determine the choice of a representative in the Council of the Empire has seldom occurred to them. In this case the institution of direct elections will appear as a new right conferred on themselves rather than as a right taken away from the Diet. The Particularist resistance in Austria would hardly perhaps have maintained itself in its present vigour if it had not been seconded by the Ultramontane resistance. If the Austrian Liberals prove superior to the temptation to copy the German Liberals by declaring open war against the Catholic Church, the religious opposition is not unlikely to lose much of its force. However much the Austrian clergy may dislike the course things are taking, they cannot wish, unless they are playing a very deep game indeed, to irritate the Government into substituting a policy of religious oppression for a policy of religious indifference. The alliance which has hitherto subsisted between the Ultramontanes and the Particularists will come to an end if the Ultramontanes begin to doubt whether their interests do not point to exerting influence over the central Government rather than to helping the Diets to paralyse its action. The direct election of the members of the Council may tend to raise this doubt by bringing the clerical electors into contact with the Council. Hitherto they have had to choose between supporting the Particularists and throwing their votes away. In future they may prefer that their representatives shall swell a Catholic minority rather than a Particularist minority. As regards the consolidation of the Empire, such a division of the hostile forces would be an appreciable gain.

GOING TO THE COUNTRY.

WHEN are we going to the country? is the question of the hour, but this time it is a political and not a domestic question. Domestic jaunting may perhaps in some degree depend upon the answer, but the answer, it may be assumed, must be determined by political considerations. It is a question which is heard everywhere except among the supporters of the just re-established Ministry. It was an old Court custom in France never to allude to such an uncomfortable thing as death. "Feu roi d'Espagne!" cried Louis XV. in horror when he came on the unlucky phrase in a State paper. "Monseigneur, 'tis a title they take," replied the ready Secretary. In those days polite conversation was based on the tacit assumption that great people never died. In select Ministerial circles at this moment it is deemed a sad breach of etiquette to hint at the possibility of a dissolution. Dissolutions are not perhaps unknown in history, but they are occurrences which it is not quite decent, or even humane, to mention in the hearing of Ministers or of their devoted friends. Somehow the ugly word slipped out in Mr. DISRAELI's brief statement on Monday and produced a dreadful effect on the nerves of Radical journalists. The *Daily News* was shocked, the *Telegraph* scandalized. It was pointed out that the use of this painful expression was not only revolutionary and unconstitutional, a blow at the Monarchy and a dagger stroke at political freedom, but also very bad manners. A real gentleman would be quite incapable of indulging in such an indelicate and uncalled-for observation. It is not without a severe effort that the Radical prints can bring themselves to allude even to the fact that, by an old and awkward rule, Parliaments must be renewed every

seven years—which the unwritten law of usage rigorously interprets to mean six—and that the existence of the present Parliament cannot be stretched beyond next year. Their logic, however, if good for anything, would seem to point to a proposal for the immediate abrogation of this inconvenient custom. "As matters stood a month ago," says Mr. GLADSTONE's more peculiar and private organ, "it was a fair inference "that Parliament would run out its term and die a natural "death in 1874"; and we are given to understand that all that has just happened merely suggests that it is a pity it should die so soon. In this trying hour the organ consoles, or at least distracts, itself by dipping into history. In 1812 there was a state of things, we are assured, very similar to the present. A Government went out, and came in again, and stopped in for fifteen years. "We "have yet to see," observes the faithful and ecstatic worshipper, "whether the renowned GLADSTONE Ministry is to "have an equally long lease of power." This is indeed one of the sights we have yet to see, but whether we are destined to see it is another question. Fifteen years of heroic remedies, sensational legislation, and sentimental confiscations is not altogether a cheerful prospect, and it is hard to say what would be left when at last the Government went out. Mr. GLADSTONE has certainly been a much abused man, and perhaps he is not perfect; but at any rate it is clear that he is not malicious. He carries into statesmanship the precepts of Christian meekness. Smite him on one cheek and he immediately offers the other. Once he had a majority of one hundred, and now he is in a minority of three on a question on which, as he repeatedly intimated, the Government staked its existence; but the only effect of finding himself in a minority is to make him cling more closely, affectionately, and resolutely to the House of Commons which has just chastised and humiliated him. Unkind and distrustful as the present Parliament may be, yet he is loth to part with it, and his humble content supplies perhaps the measure of his fears.

Everybody may have been mistaken, but there was certainly a general impression at the beginning of the Session that the Government, which of course then hoped to carry its Bill, would dissolve in the course of the summer. It is only a week or two since the House of Commons had a little discussion as to the best time for taking the air in the country, and Mr. GLADSTONE, with his easy capacity for fermentation, worked himself up into quite a pretty enthusiasm about the glories of the country in June. He bewailed the dismal fate of unfortunate legislators doomed to linger on the hot pavement of the town during that genial and delightful season, and when he thought of the London shopkeepers, who, as he said, are debarred from studying the beautiful processes of nature at the most interesting and instructive period of the year, his emotion almost overcame him. It is difficult to imagine what might be the effect of a June holiday on the moral nature of this sensitive and poetical class. After gambolling among the buttercups and daisies, they might possibly come back converted to co-operation and discount for cash, and virtuously resolved to repudiate Mr. BRIGHT's insidious justification of adulteration as a form of legitimate competition. Three weeks ago Mr. GLADSTONE was ready to do almost anything in order that legislators and West-End tradesmen might have a taste of early summer in the country. He was quite sure then that there was no month like June, and that life was hardly worth living unless one had a chance of spending June in the country. But all at once his passion for June has been dissipated, and he does not seem to care now how long it is before he sees the country. He spent last Sunday, as he next day told the House of Commons two or three times over, in the country. This is quite in accordance with Roman precedents. The statesman lays down his power and goes quietly back to his turnips, or to some friend's turnips kindly placed at his disposal for the occasion. Messengers are sent to seek him among the turnips, and to bring him back to power. It is a familiar trick of a certain school of poets to represent the landscape as sympathetically responding to the feelings of the person who is gazing on it. If you are merry, then all nature is gay and frisky too; the sky smiles, and the trees nod with quite a waggish air. If you are sad, the scene mourns with you, the foliage droops, and the very sunshine is pathetic. Since his enthusiasm about June Mr. GLADSTONE has perhaps been looking at the country through the gloomy medium of the division of March 12, and it would seem at any rate that his anxiety to get away to the country at an early date has suddenly declined. It is announced that the Government returns to office unpledged as to the period of the dissolution, or, in other words, resolved to postpone it as long as possible. The natural inference would appear to be that the existence of the Ministry is bound up with the existence of Parliament. Had all gone well, there would in all probability have been a dissolution in June or July. Nothing succeeds like success, and if the Ministers had carried their University Bill, they could have pointed to it as the finish of the Upas-tree programme which Mr. GLADSTONE sketched out at the last election. But just at present the Upas-tree is not exactly the sort of thing to parade up and down the country. It awakens dangerous hopes and uncomfortable recollections. The defeat which Mr. GLADSTONE has just sustained is a striking example of poetical as well as political justice, and supplies a significant commentary on his Irish policy. Ireland was to be governed strictly according to Irish ideas. The Irish alone knew what they wanted, whatever they wanted was sure to be good for them, and they were told that they had only to ask for it in order to get it. It has been found that concessions made in this spirit have led only to a continual increase of demands, and that the complete realization of Irish ideas is not compatible with Imperial legislation. Expectations were raised which could not possibly be fulfilled, and a message of peace which took the form of a promise of unconditional surrender has produced its natural and inevitable results.

The present situation of affairs is really so simple, natural, and obvious, that it is not worth while to attempt to disguise it by flimsy pretences. The plain truth is that the Ministry are in want of a cry. They have done some great things since they have been in office, but the great things are beginning to look distant, and some of the consequences of the way in which the great things have been done are just now unpleasantly conspicuous. Gratitude dies out more quickly than resentment, and to go back on the past would be treading on delicate ground. On the other hand, there is no great subject sufficiently ripe for a new cry. It is perhaps a melancholy reflection that a pious and heroic Minister should be reduced to the necessity of competing with the Tadpoles and Tapers in concocting a cry for the elections, but the hard necessities of things, however much they may be lamented, cannot be ignored. A cry is not to be got up on the instant. It must have time to become familiar to the common ear, to grow in volume, to multiply itself by all kinds of natural and artificial echoes. The Ministry, no doubt, hope that if they had only another year for their preparations, they would be in a better position to face the constituencies; but will they get this other year? At first sight it might seem as if the anxiety of the Government not to dissolve would be likely to propitiate members of the House of Commons; and if the preparations for a dissolution could be postponed as well as the date of the dissolution itself, this would perhaps be the case. Unfortunately things have now reached a point at which even members who are doubtful whether they will ever return to the House of Commons are beginning to think of a dissolution as a welcome release from anxious and painful suspense. Anybody who reads the daily column of election intelligence in the morning papers will be able to understand what a sitting member has at present to endure. He is exposed to all kinds of private pressure from his constituents; an election may happen any day, and he must have all his friends in good humour and well in hand. In obliging his friends he must be careful not to exasperate his enemies, and he knows that all the while rival candidates are doing their best to undermine his position, to prepare subterranean explosions, and even to marshal forces openly against him. He finds himself, in fact, in the very thick of an election contest, with the actual election indefinitely postponed. It may be next month, the month after, or not for a year and more. While Parliament is sitting questions are constantly turning up on which he has to take sides under the watch of vigilant malicious eyes; he cannot fight for his seat with the same free hand as during a general election, and all the trouble, expense, and vexations of the struggle are multiplied many times over. It may be doubted whether many members possess a sufficient share of Spartan fortitude to endure this kind of torture for another year. Anything, they may reasonably think, would be better than the agony of this long suspense. Human nature is selfish at bottom, and members will be apt to consult their own comfort rather than the convenience of the Ministry. A beaten army is always for a time demoralized, and Mr. GLADSTONE's temper will be only too likely to land him in the traps of his enemies. Even his own better qualities, his earnestness, generosity, and daring, will be turned against him, and no pains will be spared to fan his petulance and impulsiveness, and to entice him into committing himself by rash, ill-considered language. There were symptoms of the malady even before

the recent division in the feverish way in which he plunged into the small squabble about the County Court Judges' travelling expenses. On the other hand, Mr. DISRAELI's peculiar gifts will be brought into play in teasing and provoking his antagonist, and tempting him into false and undignified positions. A policy of sarcasm and negation suits the political circumstances as well as the natural talents of the leader of the Opposition, and on Thursday we had a foretaste of the sort of sport that may now be looked for. On the whole, we should say, Mr. GLADSTONE and his friends will not have a pleasant quarter of an hour to spend before the elections come off.

OPTIMISM AND PESSIMISM.

THE question is often asked—and one would think at first sight that it should admit of an answer—whether any man would choose to live his life over again. A plausible reply of Burke's is reported by Boswell. It was plain, he argued, that everybody would wish to live his past life again, because almost everybody, even at an advanced age, is willing to go on living. Now a man, say, of sixty or seventy cannot expect to have as much enjoyment in the future as he has had in the past. If, therefore, we are all anxious to drink the lees of life, it cannot be doubted that we should all be willing to take the first fresh draughts a second time. The argument is perhaps satisfactory as regards the immediate question at issue. No doubt if an angel could appear to any of us and offer us a fresh start, we should accept his offer thankfully. The reason for hesitation is that we do not generally answer the question quite fairly. We look back with a certain weariness upon the long devious track of our past existence, and fancy ourselves starting again with the knowledge of what is to come, or at least with the shadow of our actual experience cast back upon our earlier past. The real question is, of course, whether we would live again with the old hopes and the old freshness; and not whether we would go through the same performances with spirits jaded by the weary journey of later years. Admitting, however, that Burke's reply is as true as it is ingenious, it does not answer the underlying doubt which prompted the question. That we should choose to live again is probable enough; but would our choice be wise? Have most men on the whole enjoyed a surplus of pleasure? If, before accepting the offer of a repetition of life, they were calmly to consider that problem, they might return a different answer. Burke's remark as to our willingness to go on living does not show that we have good grounds for expecting happiness, nor even that we do in fact expect it. Very few people sit down to make a calculation of their prospects and determine to live or not to live according as the balance inclines in one or the other direction. If the practice were at all common, suicide would not be so rare as it is. The instinct of self-preservation is strong enough to make people accept almost inevitable misery; and what we call love of life may be nothing but a prejudice against the act of dying. Thus we can by no means accept this short cut to the solution of the difficulty. Men do not make the calculation imputed to them; and it may be added that, even if they did, their calculation would be worth exceedingly little. A man can hardly say, if we look into it fairly, whether he has on the whole led a happy life or not. He has forgotten a very large fragment of his earlier life altogether; he no more knows what he felt before he could talk than he knows what he will feel next year; and several years elapse before memory becomes at all continuous. Even the memory of his later years is altogether distorted by perspective. He remembers accurately a few conspicuous events, but the long hours of monotonous existence which fill by far the greater part of every man's life pass away without visible trace. Then the true nature of his feelings at the time is often quite perverted by associations of later growth. The man looks back upon the pleasant games and friendships of his boyhood, and forgets the bullying, the isolation, and the absurd importance attached to childish trifles. Because he now sees that a broken toy is a very slight grievance, he forgets how many tears it cost him in his infancy. Because he is now vexed by many troubles he fancies that a time when he had no such troubles must have been happy. These delusions are tolerably familiar: but they affect our estimates of life much more widely than we sometimes observe. Few men are trustworthy witnesses in regard to the happiness of their schoolboy days: and not very many can be relied upon even for the present time. Ask a man whether he enjoyed a dinner-party yesterday; he ought to know, and he will probably give a confident answer: and yet a bystander may often see reasons for doubting his accuracy. Perhaps he was laughing and talking in the highest spirits till the very end of the evening, but the memory is entirely poisoned for him by some rebuff which he received as he was taking leave; or, *vice versâ*, he was bored to death, till some pretty compliment which he gathered at the last moment irradiated the whole dreary scene in memory. Most people, if they are asked whether their lives are happy, apply some test which is manifestly insufficient. A man thinks that he ought to be happy because he has a wife and children with whom he never openly quarrels, and therefore, both to himself and others, sinks the fact that they bore him to death, and that three-quarters of his waking hours are passed in providing for them by some distasteful occupation. "I had ought to be a happy cove," says one of Leech's characters, who reposes his argument on the fact that he has an unrivalled bull-terrier and a wife that can thrash any woman of her weight. Even such advantages do not always produce unmixed felicity in this world, as the hypothetical mode of statement seems to imply; but most people argue from what they "had ought" to be to what they actually are.

Nothing, therefore, is more hopeless than to discover from a man's own evidence whether or not he enjoys a surplus of happiness; and yet it is difficult to see what better evidence could be produced. Further, as we generally argue from our own case to that of the world at large, our estimates of the average happiness of the world vary within the widest limits. One set of moral philosophers, for example, base their arguments on the supposed fact that, even in this world, the amount of happiness is incomparably greater than the amount of misery. That amiable old gentleman, Abraham Tucker, calculates (though it is true that he has to venture upon some very bold hypotheses to make out his case) that the proportion of pain and pleasure may be accurately represented by the case of a man who has one minute of misery to twenty years of enjoyment; and Hartley says, though he uses words in a non-natural sense, that every man not only will be in the long run, but actually now is, infinitely happy. These observers, however, include another state of existence in their calculations, and arrange it according to their own notions. Yet they hold that the facts given to us by observation are sufficient to justify this sanguine estimate of the amount of happiness in existence. The other extreme finds equally energetic and perhaps more able advocates. According to Butler, for example, a mitigation of misery rather than positive happiness is all that we are entitled to expect in this life; and perhaps the deepest thinkers are most ready to accept in sober sadness, and not as a phrase of rhetoric, the opinion that all worldly happiness is mere vanity and vexation of spirit. The fact however, if it be a fact, that the deepest thinkers take the gloomiest view, raises no presumption that they are right. Optimism is the natural frame of mind of men who do not like to look facts in the face, and prefer to cover the ugly side of the world under a flimsy sort of rhetoric. Pessimism, on the contrary, implies a certain intellectual courage, as well as a width of sympathy and a capacity for deep emotion which naturally accompanies a strong understanding and a vivid imagination. But the testimony can in neither case be accepted as of much value. One man is sad when he contemplates the world, and another is cheerful, and each naturally assumes that his emotion is produced by the objects presented to him. But every one can see, in all cases but his own, that the condition of the observer tells for more than the condition of the thing observed. The disorder in the philosopher's liver, and not the disorder in the world, really saddens him. A great thinker generally remarks that most men are fools; and he is naturally vexed at the consequences. But, properly speaking, his remark merely comes to this—that he and some others are much cleverer than the average. Stated in this way, the fact gives cause for congratulation rather than for sadness; and one statement is just as accurate as the other. Everything depends on the level from which we start. To an Australian savage white men should appear marvels of intelligence; to Mr. Carlyle they appear incredibly stupid; that is merely because Mr. Carlyle is much above, and the Australian much below, the ordinary level. When we judge of the folly or happiness of mankind at large, we are mistaking a relative for an absolute assertion. The same result will appear to be good or bad according as we choose to fix the zero point upon our thermometers.

If the observations even of the ablest men are thus vitiated by their inevitable prejudices, the attempt is scarcely more hopeful when we try to take an objective view of the question. We may endeavour to attribute our own feelings as little as possible to other people, and to obtain some external test of their happiness. The first and most obvious fact that meets us is that the overwhelming majority of mankind live by manual labour, and are more or less engaged in a struggle for existence. Does that imply a balance of pleasure or of pain? A certain intensity of struggle is necessary in order to call out a man's energies, and it may be argued that an exertion of our faculties is always more or less agreeable whilst we are in the normal condition of health. But the principle is rather difficult when we come to the application. Take, for example, one of those peasant proprietors who are so much admired by the school of Mr. Mill. He is certainly so far relieved from anxiety that he is tolerably certain of a sufficiency of food, fire, and clothing. On the other hand, his intellectual activity, except so far as the needs of his occupation are concerned, is reduced almost to a minimum. He labours day by day from early morning till night, lives on scanty fare, enjoys a rare holiday, and his keenest enjoyment is probably in cheating his neighbour at a bargain. Is such a man to be counted as happy on the whole? Looking at him from our own point of view, we are apt to exaggerate his discomforts because we pity his incapacity to gratify tastes which he has never developed. His own account of himself will be equally untrustworthy because he regards as an evil all the conditions of his life which force him to exert his faculties. To arrive at a fair estimate we must credit him with a great deal of what we may rather paradoxically call unconscious enjoyment. Such enjoyment indeed obviously exists. The large fraction of our life which is spent in sleep is probably an agreeable, if not the most agreeable, part of our existence; but we are utterly unable to

estimate its value, for the simple reason that the enjoyment is forgotten at the instant that it is felt. In like manner it may be said that most healthy labour is in some sense enjoyable. The contraction of a muscle, when not overworked, is in itself pleasant, only that we do not attend to the pleasure distinctly enough to remember it. Thus a man who has been digging all day in a field may have been quietly enjoying himself, though his enjoyment has been of that evanescent kind which never distinctly emerges into consciousness, and of which he would therefore deny the existence if it were suggested to him. And thus it is conceivable, though it is hardly demonstrable, that a very large proportion of the total aggregate of human pleasure is of so unobtrusive a character that we can never distinctly grasp it in imagination, and much less determine accurately its value.

Many other sources of apparently insuperable difficulty might easily be suggested. How, for example, are we to compare pains and pleasures of different classes? Is an hour's toothache sufficient to cancel an evening of pleasant conversation, or two evenings, or half an evening? When you have decided which you would choose, you are still unable to say whether you would choose rightly, and probably your choice would vary indefinitely according to the passing humour of the moment at which it was made. Without pursuing the subject further, we certainly feel that no one has hitherto answered, and perhaps nobody can ever satisfactorily answer, what nevertheless appears to be the most important question, whether, on the whole, the optimist or the pessimist has most to say for himself. The chief consolation is that the question is hardly so important as it seems. We are enveloped in mystery on all sides; but, whatever the facts, it is equally clear that, whether the world is on the whole a scene of misery or of happiness, we have to make the best of it. For practical purposes that is enough.

CAPRI.

WE can hardly wonder at the love of artists for Capri, for, of all the winter resorts of the South, Capri is beyond question the most beautiful. Physically indeed it is little more than a block of limestone which has been broken off by some natural convulsion from the promontory of Sorrento, and changed by the strait of blue water which now parts it from the mainland into the first of a chain of islands which stretch across the Bay of Naples. But the same forces which severed it from the continent have given a grandeur and variety to its scenery which contrast in a strangely picturesque way with the narrowness of its bounds. There are few coast-lines which can rival in sublimity the coast-line around Capri; the cliff wall of sheer rock broken only twice by little dips which serve as landing places for the island, and pierced at its base by "blue grottoes" and "green grottoes," which have become famous from the strange play of light within their depths. The reader of Hans Andersen's *Improvisatore* will remember one of these caverns as the scene of its closing adventure; but, strange as Andersen's description is, it is far less strange than the scene which he sketches, the deep blue light which turns the rocks into turquoise and emerald, or the silvery look of the diver as he plunges into the waves. Twice in their course the cliffs reach a height of thirteen hundred feet above the sea, but their grandeur is never the barren grandeur of our Northern headlands; their sternest faces are softened with the vegetation of the South; the myrtle finds root in every cranny, and the cactus clings to the bare rock front from summit to base. A cliff wall hardly inferior in grandeur to that of the coast runs across the midst of the island, dividing it into an upper and a lower plateau, with no means of communication save the famous rock stairs, the "Steps of Anacapri," soon to be replaced by a daring road which is being driven along the face of the cliff. The upper plateau of Anacapri is cold and without any striking points of scenery, but its huge mass serves as an admirable shelter to Capri below, and it is with Capri that the ordinary visitor is alone concerned. The first thing which strikes one is the smallness of the place. The whole island is only some four miles long and a mile and a half across, and, as we have seen, a good half of this space is practically inaccessible. But it is just the diminutive size of Capri which becomes one of its greatest charms. It would be hard, in fact, to find any part of the world where so much and such varied beauty is packed into so small a space. The visitor who lands from Naples or Sorrento mounts steeply up the slopes of a grand amphitheatre flanked on either side by the cliffs of St. Michael and Anacapri to the white line of the village on the central ridge, with the strange Saracenic domes of its church lifted weirdly against the sky. Over the crest of this ridge a counter valley falls as steeply to the south till it reaches a plateau crowned with the grey mass of a convent, and then plunges over crag and cliff back again to the sea. To the east of these central valleys a steep rise of ground ends in the ruins of the Palace of Tiberius and the great headland which fronts the headland of Sorrento. Everywhere the forms of the scenery are on the largest and boldest scale. The great conical Tors, Tuoro-grande and Tuoro-piccolo, the boldly scarped rock of Castiglione with its crown of mediæval towers, lead up the eye to the huge cliff wall of Anacapri, where, a thousand feet above, the white hermitage on Monte Solaro glimmers out fitfully from its screen of cloud. Among the broken heights to the east or in the two central valleys there are a hundred different walks and a thousand different nooks, and each walk and nook has its own independent charm. Steeps clothed from top to bottom in the thick greenery of the lemon or orange; sudden breaks like that of Metrompain, where a blue strip of sea seems to have been cunningly let in among the rocks; backgrounds of tumbled limestone, slopes dusty grey with wild cactus; thickets of delightful greenery, where one lies hidden in the dense scrub of myrtle and arbutus; olive-yards creeping thriftily up the hillsides, and over the cliffs and down every slope, and into every rock-corner where the Caprese peasant-farmer can find footing; homesteads of grey stone with low domed Oriental roofs on which women sit spinning, their figures etched out against the sky; gardens where the writhed fig-trees stand barely waiting for the foliage of the spring; nooks amidst broken boulders, and vast fingers of rock, with the dark mass of the carouba flinging its shade over them; heights from which one looks suddenly northward and southward over a hundred miles of sea—this is Capri. The sea is everywhere. At one turn its waters go flashing away unbroken by a single sail towards the far-off African coast, where the Caprese boatmen are coral-fishing through the hot summer months; at another the eye ranges over the tumbled mountain masses above Amalfi to the dim sweep of coast where the haze hides the temples of Pæstum; at another the Bay of Naples opens suddenly before us, Vesuvius and the blue deep of Castellamare and the white city-line along the coast seen with a strange witchery across twenty miles of clear air.

Beautiful as the place is, it is luckily dull enough to escape the rush of visitors which is fast turning every nook of the Riviera into a little Brighton. There is as yet no kind of society: the strangers are few; an English resident or two, a dozen winter exiles, half-a-dozen artists make up the foreign world of Capri. The casual Yankee girl who runs over to "do" the Blue Grotto votes the place a bore in an hour or two, and sails off to the balls and cotillons of Nice. Even the rheumatic dowagers, the botanical young maidens, and the inevitable chaplain who hover vulture-like over the pretty nooks of the world, find Capri too "uninteresting" for their swoop. Its one shop is the barber's shop in the Piazza, its one public building the communal round-house where the solitary offender against the laws of Capri may be seen playing cribbage through the lattice with the sympathizing loungers without. There is but a single road, and that still incomplete; and there are no wheeled vehicles beyond a single cart, the first which has appeared in Capri and at which its children still stare as at a prodigy. The island is a paradise of silence for those to whom silence is a delight. One wanders about in the vineyards without a sound save the call of the vine-dressers; one lies on the cliff and hears a thousand feet below the dreamy wash of the sea. There is hardly the cry of a bird to break the spell; even the girls who meet one with a smile on the hill-side smile quietly and gravely in the Southern fashion as they pass by. It is the stillest place that the sun shines on; but with all its stillness, it is far from being the home of boredom which the American girl votes it. There are, in fact, few places in the world so full of interest. The artist finds a world of "studies" in its rifts and cliff walls, in the sailor groups along its beach, and the Greek faces of the girls in its vineyards. The geologist reads the secret of the past in its abruptly tilted strata, in the deposit of volcanic ash, in the fossils and bones which Augustus set the fashion of collecting before geology was thought of. The historian and the archæologist have a yet wider field. Brief as was the period of its historic glory, Capri is a perfect treasure-house of Roman remains. Twelve Imperial villas were crowded into the little island, and the remains of two, the so-called "Palace" and "Baths" of Tiberius, still exist on the largest scale. But the whole island is a mass of broken fragments. One can hardly dig without coming on the wreck of Roman houses, on tesselated pavements, and marbles, and stuccoed walls, on hypocausts and drains, on urns and sepulchres. Every peasant has a handful of Roman coins to part with for a few soldi. In later remains, as might be expected, the island is far poorer; but the ruins of mediæval castles crown the heights of Castiglione and Anacapri, and the mother church of San Costanzo, with its central dome supported by marble shafts from the ruins hard by, is an early specimen of Sicilian or Southern Italian architecture. Perhaps the most remarkable touch of the South is seen in the low stone vaults which form the roofs of all the older houses of Capri, and whose upper surface serves as a terrace, where the women gather in the sunshine in a way which brings home to one oddly the recollections of Syria and Jerusalem. For loungers of a steadily uninquiring order, however, there are plenty of amusements of a lighter sort. It is hard to spend a day more pleasantly than in boating beneath the cliffs of Capri, bobbing for "cardinals," cruising round the huge masses of the Faraglioni, as they rise like giants out of the sea, dipping in and out of the little grottoes which stud the coast. On land there are climbs arounds headlands and "rock work" for the adventurous, easy little walks with exquisite peeps of sea and cliff for the idle, sunny little nooks where the dreamer can lie buried in myrtle and arbutus. The life around one, simple as it is, has the colour and picturesqueness of the South. The girl faces which meet one on the hill-side are faces such as artists love. In the church the little children play about among the groups of mothers with orange kerchiefs on their heads and heavy silver rings on every finger. Strange processions with cowled faces and crucifix and banners borne aloft sweep into the piazza and up the church steps. Old women with Sibyl-like faces sit spinning at their doors. Maidens with water-jars on their head which might have been dug up at Pompeii;

priests with broad hats and huge cloaks; sailors with blue shirts and red girdles; urchins who almost instinctively cry for a 'soldo' and break into the Tarantella if you look at them; quiet, grave, farmer-peasants with the Phrygian cap; coral-fishers fresh from the African coast with tales of storm and tempest, and the Madonna's help—make up group after group of Caprese life as one looks idly on, a life not specially truthful perhaps, or moral, or high-minded, but sunny and pleasant and pretty enough, and harmonizing in its own pleasant way with the sunshine and beauty around.

As we have already said, "dulness" and distance have as yet saved Capri from a flood of visitors which would rob it at any rate of the silence and solitude which now give it half its charm. But this exemption from the common doom of really beautiful places can hardly be expected to last long. The completion of the railway from Nice to Genoa will probably bring about the flight of a good many winter exiles from the Riviera, where Mentone has become almost as bustling and as dear a place as Nice, and San Remo is on its way to become as bustling and as dear a place as Mentone. The difficulty of the voyage to Algiers and the discomforts of Sicily may again draw the attention of wanderers in search of health to a spot which has gone out of fashion ever since the days of Tiberius. If the climate of Capri is inferior to that of Catania, it is distinctly superior to that of either San Remo or Mentone. Those who remember the Riviera with no little gratitude may still shrink from the memory of its sharp transitions of temperature, the chill shade into which one plunges from the direct heat of its sun-rays, and the bitter cold of its winter nights. Out of the sun indeed the air of the Riviera towards Christmas is generally keen, and a cloudy day, with an East wind sweeping along the shore, will bring back unpleasant reminiscences of the England one has left behind. Capri is no hotter perhaps in the sunshine, but it is distinctly warmer in the shade. The wraps and shawls which are a necessity of health at San Remo or Mentone are far less necessary in the South. One may live frankly in the open air in a way which would hardly be safe elsewhere, and it is just life in the open air which is most beneficial to invalids. It is this natural warmth which tells on the temperature of the nights. The sudden change at sunset, which is the terror of the Riviera, is far less perceptible at Capri; indeed the average night temperature is but two degrees lower than that of the day. The air, too, is singularly pure and invigorating, for the village and its hotels stand some four or five hundred feet above the sea, and there are plenty of fairly level and accessible walks along the hill-sides. At San Remo, or in the Eastern bay of Mentone, one purchases shelter by living in a teacup, and the only chance of exercise lies in climbing up its sides. Of the beauty of the scenery and the quiet of the place we have already spoken, and we may add that it is of all winter resorts as yet the cheapest. But it must fairly be owned that these advantages are accompanied by some very serious drawbacks. If Capri is fairly free from the bitter East wind of the Riviera, the Riviera is free from the stifling scirocco of Capri. In the earlier part of the winter—in the early part of December, for instance, during the past year—this is sometimes almost intolerable. The wind blows straight from Africa, hot, dusty, and oppressive in a strange and almost indescribable way. All the peculiar clearness of the atmosphere disappears; one sees every feature of the landscape as one would see them through a raw autumn day in England. The presence of fine dust in the air—the dust of the African desert; to which this effect is said to be owing—may perhaps account for the peculiar oppressiveness of the scirocco; certain it is, that after two days of it every nerve in the body seems set ajar. Luckily, however, it only lasts three days, and dies down into rain as the wind veers round to the West. In the spring its effects are far less annoying, but they are never pleasant, and though it is easy to escape the worst violence of the scirocco by choosing a home in the Northern instead of the Southern valley, this is a course hardly open to an invalid. As we have said, one of the great advantages of the island is the shelter which one can find either in one quarter or another from almost every wind. On the other hand, its position and its hills make its winds very violent ones, though fortunately they are seldom very cold. But it is the want of adequate medical advice and of domestic comforts which puts Capri out of question as a residence for persons suffering from extreme ill-health. The hotels are simply superior country inns, fairly comfortable, and very cheap, but rough in their style of accommodation, and certainly unsuited for very delicate invalids. There are no villas such as often make a residence in the South tolerable to those who cannot bear the inevitable discomforts of hotels. There is one good Italian practitioner, but there is no English doctor, and in any serious or critical case it is necessary to obtain medical assistance from Naples at a very serious cost. For invalids, too, who are not strong enough for walking or riding, the want of roads and carriages is a terrible drawback, although it is in great measure compensated by the use of litters. If we add to this the distance of Capri from England, and the difficulties of communication with the mainland, from which its residents are utterly cut off by bad weather, we may perhaps find ground for hoping that the island will for some time yet remain uninvaded by the horde of winter exiles.

LONG AGO.

SOME time back we stumbled on a paper bearing the name of the *Antiquary*, and now we have before us two numbers of another paper called *Long Ago*, but which, we are told, was very near being called "The Olden Time." By a shorter description than its rival or brother the new paper styles itself "A Monthly Record of Popular Antiquities." Now what are Popular Antiquities? If the study of antiquity or any other study can be made popular, so much the better. We only ask that it shall not be made popular at the cost of ceasing really to be a study. And we are quite certain of this, that scientific and accurate treatment is really the way to make anything popular. After much reflection we have made up our minds that the mass of mankind, the general reader and his brethren, are by no means such fools as at first sight they might be thought. So far as they are fools, it is mainly because those who undertake to teach them will persist in treating them as if they were fools. Of course there are some people who are absolutely hopeless, who cannot be got to make any intellectual effort of any kind, who will read nothing and listen to nothing which requires the smallest process of thinking. Yet, even with many of these, we suspect that it is much more will not than cannot; and we suspect that the unwillingness often comes from the dull and uninviting shape in which things are set before them. There are plenty of people who are not great scholars, who are not specially intellectual, as the phrase goes, but who still wish to learn something; and they are a great deal more likely to learn something if things are clearly put before them, in their right order and their right relations, with their causes and with their effects. To put things forth in a scholarlike and orderly way is really a more popular way of treating things than to shovel out masses of facts without order or connexion. People really understand and remember better when they are called upon to make use of their understandings and not simply to burden their memories.

We have been led into this train of thought by looking at what we suppose are the chief articles in the two numbers of *Long Ago* which are now before us—those which seem meant to form a series, called the "Olden Laws of England," by the Editor. Here is a most interesting subject, and one most thoroughly capable of really popular treatment. But we maintain that the really popular treatment of such a subject is not to jumble together a confused mass of scraps out of Acts of Parliament and elsewhere, but to trace out everything scientifically—that is, clearly and simply—from its beginnings and its first principles. The first chapter of the series is headed "King, Lords, and Commons." Here is a field for tracing out in a terse and simple way the origin and growth of kingly power, the changes which have happened at various times in the nature and extent of the kingly authority and of the kingly title. But the editor of *Long Ago* simply throws together a mass of stray facts about the royal style and anything else that has to do with King, Lords, and Commons, without any attempt at order, and without any attempt to set forth a reason for anything. We start with Henry the Eighth and then run backwards and forwards anyhow, and we meet with the strange comment that "of course the further we go back, the greater do we find the tendency to assume an arbitrary power on the part of our Kings." We suspect that after all *Long Ago* is not so very long ago, and that the process of going back has not yet reached the days when Alfred so modestly laid his laws before his Witan. The earliest fact to be found is that "the early Norman Kings" called themselves *Reges Angloruw*; but of the gradual change from the national to the territorial title, and all that is implied in that change—just one of those things which could be so easily and so usefully dealt with in a really popular way—we get not a word. At the other end we read as follows:—

> With the Hanoverian succession came the addition, "Brunsvicæ et Luneburgii Dux, Sacri Romani Imperii Archithesauri et Princeps Elect"; but in the reign of George III. the absurd appendage of "Francia" was dropped from the king's style.

We print this as we find it in our text, but the titles as given are so amazing that one really suspects that our instructor did not understand the abbreviations for "Archithesaurarius" and "Elector." And if the thing was to be popular, it would surely have done somewhat to enliven the dryness of all these Latin formulæ if some explanation had been given of titles which certainly would not carry their meaning with them to every one, and if the searcher into popular antiquities said at what stage of George the Third's reign and for what reason it was that the title of King of France was given up. Presently the editor lights, in a parish book in Kent, on a document of the time of Philip and Mary, which he gives at length with a somewhat curious comment:—

> "Our Sovaigne Lorde and Lady Phillip and Mary, by the Grace of God, Kinge and Queene of England, France, Naples, Jerusalem, and Yreland, Defenders of the Faythe, Prince of Spaine and Cycele (Sicily), Archduke of Austrya, Duke of Acquittan, Burgundy, and Brabant, Countys of Flanders and Tyrolle." All that Philip seems to have done for the crown of England seems to have been to bring a number of empty titles to it; but it strikes the student of our laws that he was more completely recognized as king regnant than readers of our ordinary histories would discover.

We should really have thought that any one who took upon himself to teach others about King, Lords, and Commons hardly needed to go to the Church-book of Burton Bleen in Kent to find out that Philip was King of England for Mary's lifetime. Perhaps it was lucky that the document on which he lighted was older than the abdication of Charles V., or he might have found a great many more titles, some of them perhaps not altogether

empty, added to those which he has given us. But mark further the minute accuracy of the Kentish document, and all that its minute accuracy implies. It reminds us, what many people do not remember, that Philip was a King when he married Mary. He was, as the Church-book of Burton Bleau describes him, King of Naples and Prince of Sicily. And he was the only person who ever could have been so described. Very few people have ever called themselves Kings of Naples, because very few people have ever held the Neapolitan kingdom without either holding or claiming the insular Sicily as well. But of those few Philip was one. His father had given him the continental kingdom, but had kept the Island. He was therefore King of Naples and Prince of Sicily. He might have called himself "Rex Siciliæ citra Pharam"; but it was simpler to call himself "Rex Neapolis," as Lewis the Twelfth had done before him. The abdication of his father made him King of the Two Sicilies as well as of many other kingdoms besides. Jerusalem, it may be noted, seems to be treated as an appendage to the continental kingdom. The document hidden in this Kentish church, which seems to have so puzzled our editor, is really a very instructive one.

Then come a number of odds and ends about the two Houses of Parliament, scraps from statutes, journals, and other places, winding up with a little notice of the practice of the House of Commons as to letting in and keeping out strangers The following is rather a choice bit of English:—

> Before closing the subject of the House of Commons, we must allude to the remarkable fiction by which it has been governed for centuries, the pretended seclusion in which the business is conducted.

There is also a kind of summary of what has been done in the way of repealing obsolete statutes; but of anything likely to give the popular mind clearer notions than it sometimes has of the origin and constitution of either House of Parliament there is not a word.

The second chapter of the "Olden Laws of England" has not reached us, but we have the third, headed "Trial by Ordeal and Wager of Battle." It begins by telling us that *ordeal* is "a word compounded of the Saxon 'or,' meaning privacy, and 'del,' not guilty." For this wonderful etymology we are sent to Coke's *Reports*. Where Coke got his "or" and his "del" from it is not for laymen to guess; but *ordeal* is simply itself, simply *ordæl*, in the High-Dutch form, *Urtheil*. We may here remark that most people sound this word in three syllables, as if it were a Latin adjective *ordealis*, whereas the *deal* is simply *deal*, *dæl*, *Theil*, and the word is one of two syllables. The confusion is one of the same kind as that by which people treat the good English substantive *bridal* (*bride-ale*) as if it were an adjective. In this, to be sure, it does but suffer the same fate as the more dignified substantives *Church* and *Gospel*. Our editor goes on to give us nearly five pages about the ordeal and the wager of battle, in which we do not see a single reference to original authorities. Except one or two statutes, all is made up from modern law-books. We of course get all about the corsned; and will it be believed that in 1873 the following words are gravely printed in a journal of popular antiquities?—

> The latest case we have on record of this form of ordeal being had recourse to was in the reign of Edward the Confessor, when Godwyn, Earl of Kent, accused of the murder of the king's brother, claimed to be tried by the Corsned. Unlucky appeal! the "morsel of execration" stuck in his throat and killed him.

We had really thought that this monstrous fable had by this time been handed over to its proper owners, the comparative mythologists. To say nothing of this—to say nothing, too, of cutting down the Earl of the West-Saxons, "totius pene regni dux et bajulus," into a mere local Earl of Kent—it is at least hard to deprive his name of its masculine ending, and to turn the male Godwine into a female Godwyn. In the like sort it is not many days since we saw Baldwyn as the name of a man—the great Count of Flanders, the "marchio potentissimus," the father-in-law of the Conqueror, being thus cruelly cut down into a Countess.

About the wager of battle we get some curious learning:—

> Selden preserves a list of appeals to battle which he had collected, beginning soon after the Conquest:
>
> *Tempore* William Rufus, he records that one William de Owe, accused of treason to the king, challenged his accuser, but he does not tell us the result.
>
> Edgar, son of Malcolm of Scotland, accused by Orgar, an Englishman, of claiming to be heir to the Crown, challenged and "foyl'd his false accuser."

It was not likely that Selden could find many instances of this distinctively Norman practice before the Conquest; but in treating of the wager of battle as part of the olden laws of England, it might not have been amiss to point out that it was a distinctively Norman practice, and how often in Domesday the Norman appeal to "bellum" is opposed to the English appeal to the "judicium Dei." "One William de Owe" is a strange way of describing a near kinsman of the King, of the great line of the Counts of Eu, and if Selden "does not tell us the result," the Peterborough Chronicler, Florence, and Orderic have none of them forgotten to record the fearful punishment which fell upon the man who was convicted of treason by wager of battle. Now as to the story about Edgar, it rests on very poor evidence, not being mentioned by any contemporary writer. Still, even in repeating a legend, it is as well to repeat it in its received shape. We should put very little faith in any one who told us that Tell shot Gessler, but we should put still less faith in any one who told us that Gessler shot Tell. The story will be found in the twelfth book of Hector Boethius, at page 261 of the Paris edition of 1575, and therefore in the *Buik of the Cronicles of Scotland*, ii. 690. The story is there told, not of Eadgar the son of Malcolm, afterwards King of Scots, but of his uncle, Eadgar the Ætheling, who was charged with having brought his nephews out of Scotland in order to set up their rights against the reigning King, William Rufus. The following is to us quite a new view of an Act of Attainder:—

> A peer can only forfeit his nobility by attainder; but there is only one instance upon record, occurring in the reign of Edward the Fourth, when George Neville, Duke of Bedford, was degraded by Act of Parliament on account of his poverty, which rendered him unable to support his dignity. The Act of Attainder ran thus: "Forasmuch as oftentimes it is seen that when any lord is called to high estate and hath not convenient livelihood to support the same dignity, it inducèth great poverty and indigence, and causeth oftentimes great extortion, embracery and maintenance to be had, to the great trouble of all such countries where such estate shall happen to be: therefore," &c.

We are bound to say that the instructor from whom we have learnt all this has in some sort a modest notion of the capacity of himself and his helpers, though it might be wished that their studies had gone so far as to teach them the proper spelling of the word *Sphinx*:—

> We are no Sir Oracles nor modern sphynxes, and do not undertake to solve problems; but we invite queries nevertheless, and trust to a spirit of literary reciprocity for the interchange of information where our own imperfect knowledge fails us. In this department we trust to have a large circle of "friends in council;" and country investigators, removed from the great centres of inquiry, shall have through our columns, the aid of practised members of our staff specially retained to make researches in our metropolitan storehouses of historic volumes.

"Metropolitan storehouses of historic volumes" sounds like something almost as much beyond our reach as "a spirit of literary reciprocity." Yet one would think that such storehouses must contain the more obvious original sources of English history, and that any one who undertakes to expound the olden laws of England might have taken the trouble to turn to them, instead of taking things wholly at secondhand. We may indeed say in the words of Earl Simon's poet:—

> Nec cuncti provinciæ sic sunt idiotæ.

Even "country investigators removed from the great centres of inquiry" may sometimes have the means and the will to turn to the genuine sources of history, while it seems that practised persons "specially retained to make researches" can get no further than the compilations of lawyers. We should really have thought that, after all that the present and last generation of scholars have done, we had got beyond this. But what shall we say when we found the following sentence in a number of the *Times* a few days back:—

> Last year there was a considerable discussion whether the University of Oxford was a thousand years old or only, perhaps, nine hundred; and the impression left was that there might have been *something of the sort* in Alfred's time, or before.

What impression may have been left on the *Times* is a subject too mysterious for us, as is the prudent vagueness of the words "something of the sort." But one would have thought that even the *Times* might have known that there was no "discussion" about the matter. There cannot be said to be a discussion when there is notaing but the exposure of a monstrous fiction whose defenders had nothing to put forward beyond a few paltry jokes after dinner and the convenient doctrine that it did not matter whether things were true or false. Will the *Times* tell us who suggested the date of only nine hundred years as an alternative to a thousand? The only thing we can think of is, that the *Times* may somewhere have seen it said that the *town* of Oxford is first mentioned in history in the tenth century. The *Times* perhaps does not descend to such subtle distinctions as that between the University and the city, though the difference is one which at various times, especially in the fourteenth century, has led to serious results. Altogether our friend in the *Times* seems one degree more hopeless than our friend in *Long Ago*. The one has never heard of things, and may therefore perhaps some time learn them. The other has heard of at least one thing, but he has heard of it in a spirit on which all facts and arguments are thrown away.

PIUS II. AND PIUS IX.

SOME of our readers may have come across two papers in recent numbers of *Macmillan's Magazine*, on the career of one of the most remarkable, though by no means most widely remembered, of the long line of pontiffs who have sat in St. Peter's chair. Mr. Creighton's sketch of Pius II., better known as Æneas Silvius, is an interesting though somewhat unkindly one, and hardly does justice to the really great qualities of the single Pope of the fifteenth century who has left an abiding reputation by his greatness and not by his vices. We are not, however, going to review the articles in *Macmillan*, and shall only refer to them so far as may suit our immediate purpose. The life of Æneas Silvius Piccolomini is sufficiently various and eventful to bear being treated from many points of view, both as a study of personal character and as it illustrates a critical epoch in the history of the Papacy. It is difficult not to be struck, in spite of several obvious points of contrast, with some curious resemblances, besides the probably accidental coincidence of name—for Pius V. was, we believe, the chosen model of his present Holiness—between Pius II. and Pius IX. Both obtained the tiara at almost the same unusually early age—the former being 53, the latter 54, at the time of their

election. Both were in early life great travellers: for Pius II., though he could not of course visit South America like his Papal namesake of our own day, had visited what were then the equally remote regions of Scotland and Norway, and indeed almost every country in Europe. If Pius II. has been called by a late writer "the most genial character among all ever raised to the Papal throne," it is fair to remember that the praise of geniality has been almost universally conceded to Pius IX. It is a more important coincidence that both Popes had originally professed strongly liberal opinions, which they afterwards as emphatically retracted; and again, that Pius II., as we shall presently see, displayed in his pontificate, like Pius IX., a remarkable recurrence to mediæval ideas, though he has been justly called by an Italian writer "the first Pope of a transitionary era"—*in eo primum apparuit sæculi mutati signum.* On the other hand, it is of course equally true that Æneas Silvius, unlike Mastai Ferretti, was one of the first scholars and ablest writers of the day, and that he rose by sheer force of genius from a very humble position (he was one of eighteen children of a decayed, though noble, family, and had to work in the fields as a boy at his native village of Corrignano) to the highest dignity in Christendom. He had been of a studious and religious disposition from boyhood, and at eighteen he was sent to study law at Siena. On his leaving that city six ducats were all his father could give him, on which he lived till he became secretary to Cardinal Capranica, whom he attended to the Council of Basle. That there is some truth in Milman's censure of his "treachery" in first coming forward as "the bold apostle of ecclesiastical freedom, and then skilfully preparing his own way to bishoprics and cardinalates, and finally to the popedom," cannot certainly be denied; but as little, we think, can it be fairly doubted that there was also another and a nobler side to his character, which came more to the surface as life advanced. His future greatness might seem to be foreshown by his hair-breadth escapes in childhood. At three years old he fell from a wall and was taken up for dead, and at eight he was tossed by a bull. A brief notice of his career, which naturally divides itself into the period before and after his elevation to the Papacy, may not be uninteresting to our readers.

Æneas Silvius first came into public notoriety at Basle, where he was named secretary and reporter, and then one of the twelve presidents of the Council, and where his eloquence made him a great power. Though still and for many years afterwards a layman, he obtained his first piece of preferment there, in the shape of a canonry of San Ambrogio at Milan, and he preached on the feast of St. Ambrose a panegyric of that Saint before the Council with much applause. At that period he threw himself heart and soul into the cause of the Council as against Eugenius IV., and became the secretary and main supporter of the anti-Pope, Felix V. Indeed he had been strongly urged to qualify himself for election by taking orders; and it should be recorded to his credit that he steadily refused on account of his irregularities of life, which at the time would have been readily overlooked in a priest, or even in a pope. Later on, however, he gained a reluctant permission from Felix to transfer his services to Frederick III., the new Emperor, by whom he was crowned poet-laureate, though in fact poetry was the least conspicuous of his many literary gifts. At the age of forty he took orders, having then abandoned his juvenile immoralities, and rapidly rose in Court favour and influence under the patronage of Gaspar Schlick, the Imperial Chancellor. Gradually, and without indecent haste, he came round to the side of Pope Eugenius, only following, it must be allowed, the general current of feeling in the Catholic world; for the Council of Basle had played its cards so badly that the cause of Felix V. was rapidly losing ground. There is no reason to doubt that Æneas Silvius was doing what he really believed to be best for the interests of the Church, though he was also of course gratifying his own ambition, when he undertook an embassy from Frederick III. to Pope Eugenius, in order to effect a reconciliation between the Church of Germany and the Holy See; but the terms of the agreement, and still more the means employed for securing their acceptance by misrepresentation and wholesale bribery, it is impossible to excuse, except indeed by saying that such devices were far more common, and less severely condemned by public opinion, than in our own day. Eugenius IV. was too discreet not to receive such an envoy favourably. He made him apostolic secretary and Bishop of Triesto; and his successor, Nicholas V., continued him in those offices, and in 1450 appointed him bishop of his native city of Siena. Calixtus III. raised him to the cardinalate. He had meanwhile negotiated the marriage of Frederick with the Portuguese princess Leonora, and his coronation at Rome by Nicholas, as well as the resignation of Felix V., and the Concordat of Aschaffenburg. In 1458, on the death of Calixtus III., he was elected Pope, and took the name of Pius, as he characteristically explained, in memory of Virgil's *pius Æneas.* The reference to his classical tastes leads us to say a word of his literary productions, which embraced a wide range of subjects from theology and Church history to love letters, and even one novel, *Lucretia and Euryalus,* all of which were still allowed to circulate freely after he became Pope. His published works cover 1,100 folio pages in the Basle edition of 1571, which is by no means a complete one, and there are also many manuscript writings of his extant, including a treatise "On the Nature of the Horse," besides many more which have been lost. His *Commentaries,* describing minutely many incidents in his early life, and exhibiting an appreciation of natural scenery very unusual in that age, were dictated after he became Pope; and it is to be regretted that the work, eventually published under the name of Gobelinus, a priest of Bonn, was touched up and somewhat mutilated by his favourite secretary before publication.

The pontificate of Pius II., which only lasted six years, was not a long, and cannot be called a successful, one; but it has a grandeur and unity of its own. We have already seen that he retracted as Pope what he had written as a private person. He even issued a Bull especially condemning appeals from a Pope to a General Council, in direct contradiction to his uncompromising vindication, in his history of the Council of Basle, of the decrees of Constance on the superiority of Councils to Popes; and he managed to induce Louis XI. to revoke the Pragmatic Sanction of Bourges, which the Council of Basle had approved, and which Bossuet considers the foundation of the Gallican Liberties, as he had already by the Concordat of Aschaffenburg reimposed the yoke of Papal absolutism on the German Church. But if Pius II. strove to reconquer for the Papacy all its mediæval splendour, he also desired, with unquestionable sincerity, that its powers should be used for the highest interests of Christianity. The one grand enterprise to which all his energies were devoted, even before he became Pope himself, and in which he sacrificed his life, was a common European crusade for the recovery of Constantinople from the Turks. It has been said indeed that he never suffered this design to interfere with his personal or political interests; and it may be allowed that he was a nepotist, in an age when nepotism was universally practised and hardly ever seriously condemned, and that he was unwilling to do anything to imperil the temporal prerogatives of the Papacy, which he probably believed to be a sacred trust committed to him. But his nepotism sprang from genuine family affection, not from self-interest, as we may gather from his crying like a child on his deathbed to think that henceforth there would be no one to look after his nephews; and he always sought to further his objects, whether public or private, by conciliating opponents; not, like his fellow-Cardinal, and afterwards his successor, the infamous Alexander Borgia, by killing them. No doubt the age of crusades had passed away, and, like his modern namesake, Pius II. was vainly trying to galvanize a dead idea; but his aim was not the less a noble one. Feeble as he was, and suffering from a complication of diseases, he set out from Rome in the midwinter following his election to hold a Congress at Mantua for organizing the new crusade. His speech of three hours length, frequently interrupted by tears, kindled a warm though only temporary enthusiasm in his hearers. It may still be read, and the advocates of women's rights may be interested to hear that female eloquence was also called into play on this occasion. Two illustrious ladies, Ippolita Sforzia, wife of Alfonso II. of Naples, and Isotta Nogarola, whom Cantu describes as "filosofessa, teologante, letterata," addressed the assemblage. Nor was Pius II. content with appealing to the zeal of Christian Europe. He also wrote an elaborate letter to the Sultan Mahomet II., remarkable alike for its evident earnestness and its skill and force of reasoning, entreating him to embrace the true faith, and thus qualify himself for recognition as Emperor of the East. But neither the Sultan nor the Christian sovereigns responded to his call. One last attempt he made to move the sluggish conscience of Christendom, which cost him his life. "Perhaps," he said, "when they see their father, the Vicar of Christ, aged and infirm as he is, setting out for the holy war, they will be ashamed to remain at home, and will embrace with courage the defence of our holy religion." In June 1464 he left Rome for the last time, so ill that he had to be carried in a litter on the weary journey to Ancona, which he reached on July 18, to put himself at the head of the crusading forces. But he was too feeble on his arrival even to receive the Doge of Venice, who had come with eleven triremes to join the expedition. For a month he lingered, and on the Feast of the Assumption (August 15) he expired with his arms round the neck of his favourite Cardinal of Pavia, who has minutely described the scene, saying, with his last breath, "Do good, my son, and pray for me."

A modern writer has described the pontificate of Pius II. as a bright gleam flashing across the evening sky of the mediæval Papacy, and shedding on its decline a bright but passing ray of glory which contrasted strangely with the utter darkness that was immediately to follow. He failed, it is true, to read the signs of the times, and attempted to achieve the impossible; but we must remember that the news of the capture of Constantinople in 1453, only five years before his accession to the Papacy, caused a shock throughout Europe which it is difficult for us to realize, and was not unreasonably felt as a serious menace to the whole fabric of Christian society and civilization. No sacrifice could be too great to avert the seeming danger of a horde of Oriental unbelievers reversing the labour of centuries and plunging Europe afresh into barbarism. Pius II., as we have shown, had some points of contact with his latest successor, but his history recalls with a far deeper reality that of the greatest of all his predecessors, Gregory VII. Like him he had stood behind the Papal throne and shaped its policy through several reigns before he himself ascended it; like him he laboured with consummate ability, but with very inferior success, to make the formula of Papal coronations which describes the Pontiff as "lord of lords, king of kings, emperor of emperors, supreme Vicar of Christ, our Lord on earth," into a living reality; and, like him, too, he died in exile. If his last words lacked the epigrammatic force of the famous sentence in which Hildebrand sought to sum up the labours of a lifetime, they display more of Christian humility. Whatever may have been the faults of Æneas Silvius, he possessed a charm of manner and warmth

of genuine affection which made him beloved in life, and combined with the tragical romance of his premature death at Ancona—an exile like Hildebrand, though by a self-imposed sentence of banishment—to invest his memory with almost the halo of martyrdom. It was currently reported that a Camaldulese hermit, the Blessed Pietro Cornelio, keeping his solitary vigils on the Tuscan Apennines at the still night hour when the Pontiff passed away, beheld a choir of angels conducting his glorified spirit to the mansions of eternal bliss. There is a quaint mixture of wisdom and common sense in the recorded apophthegms of Æneas Silvius, "useful for the guidance of life," preserved by Platina, a few specimens of which may fitly close this notice of him. "Literature ought to be as silver to the people, as gold to the nobility, to princes in place of jewels." "As all rivers flow into the sea, so do all vices meet in the courts of the great." "The vagabond monk is a servant of the devil." "With good reason were the clergy formerly forbidden to marry, and there is still better reason now for permitting it."

IRISH JURIES.

ON the 29th June, 1871, Mr. Glass, cashier of the Northern Bank at Newton Stewart, was murdered in the back office of the bank. The murder was discovered by a servant-girl about an hour after the closing of the bank, and it is presumed that it must have been committed within that hour. The doors of the bank were shut at three o'clock, and almost immediately afterwards three men standing just outside thought they heard strange sounds like the dragging of a bench or table and then a fall accompanied by a moaning sound. Their suspicions, however, were not aroused. When the house was examined it was found that a sum of 1,695*l.* had been carried off, and most of this money was afterwards discovered in a gravel-pit at Grange Wood, along with a billhook, the shape of which corresponded to the wounds on the head of the murdered man. The only man who is known to have been about the bank on the afternoon of the murder was Sub-Inspector Montgomery of the Constabulary force. He is known to have been in the bank at half-past two o'clock, and was next seen leaving it soon after three. He opened the door, looked out up the street, went back into the house, returned with a waterproof coat on his arm and a stick in his hand, and walked in the direction of Grange Wood, where the money and the billhook were found. Several persons met him as he was going this way, and he was seen in the same neighbourhood next morning as early as two o'clock and afterwards at six. These circumstances naturally pointed suspicion at Montgomery. He had been a clerk in a bank before he joined the Constabulary, was acquainted with Mr. Strahan, the manager of the Northern Bank, and with Mr. Glass, and knew all about the arrangements of the office, where Glass usually sat, where the money was kept, and so on. When he called at half-past two he saw Mr. Strahan's aunt, and learned that he was absent. It will be observed, therefore, that Montgomery was the only man known to have been in the bank between the hour of closing and the discovery of the murder; he was seen leaving the bank and going off in the direction where the money and the billhook were found; he was seen hovering about the same spot twice next morning. It would appear that the murder was committed with a view to plunder, and it was shown that Montgomery was at the time under the pressure of pecuniary difficulties. He owed 30*l.* to one of the constables, of which payment was required before the 1st July; the murder was on the 29th June; he had received 800*l.* from his brother and lost it; 200*l.* had been entrusted to him by another friend to invest; and all these sums had to be made good. Circumstantial evidence must always be received with great caution, but in this instance it certainly seemed to point very strongly to Montgomery. In his defence he urged that he had no ill-will against Glass, but then it was a murder which had been committed rather with a view to robbery than revenge; and that he was not in want of money, which was shown to be untrue. He also laid great stress on the fact that there were no stains of blood on his clothes. This was certainly a point in his favour, but it was attempted to account for it by his having taken the precaution to wear the waterproof when he attacked his victim, or by the blood from the wounds of the latter flowing another way. It was of course not a conclusive piece of evidence, like a well-established alibi. Montgomery was tried on the charge of murder last summer, but the jury could arrive at no conclusion, and had to be discharged. He has just undergone a second trial, and again the jury have been discharged without a verdict. It is understood that a third attempt will be made to get a verdict one way or the other.

We have, of course, no right to assume that it is beyond doubt that Montgomery murdered Glass, but the course of the trial which has just terminated without a verdict suggests some rather uncomfortable reflections as to the capacity of Irish jurymen. If a constable had been the victim of a murder instead of being the accused person, a political reason might perhaps have been suggested for the reluctance of the jury to convict the murderer. There are parts of the country where the murder of a constable would probably be regarded as rather a meritorious act. But here it was a constable who was on his trial, and there is no suspicion of political partisanship. The murder had nothing to do with any of those questions which touch the hearts of Irishmen; it had nothing to do with creed, nationality, or land-holding. It was an ordinary brutal murder, perpetrated for the sake of plunder. We must suppose, therefore, that the jury were not particularly biassed in favour of the prisoner, although it may be suspected that in capital cases generally Irish juries have got into a habit of rather taking sides against the Crown. None of the jurors in this case had ever served as such before, and they seem to have had very vague ideas both as to the nature and exigency of evidence. One day a thirteenth man got mixed up with them when they were consulting, and spent some time with them. At the close of the trial a juror obtained leave to recall two witnesses. One was the coroner, who was asked whether he had held an inquest on a blind woman who was killed at a railway crossing: and the other was the county inspector, from whom it was elicited that if he wished to detect persons committing outrages on the railway *he* would go by the more private routes. This was all, and it is difficult to imagine what bearing this testimony could possibly have on the question of Montgomery's guilt or innocence. After the jury had been locked up for two hours they returned into court, and the foreman put it to the judge whether the law permitted a man to be convicted of a crime which no one had seen him commit. The judge of course replied that a man could certainly be convicted on circumstantial evidence. Two hours afterwards they again came back to say that they could not agree; they were locked up once more, and were finally discharged at midnight without having been able to arrive at a verdict. It is said that ten jurors were for a conviction, while the foreman, who apparently still held to his distrust of circumstantial evidence, and another juror were for an acquittal. As we said before, we have no right to assume that the jury were bound to return a verdict of guilty, but the questions which some of them asked, and especially the doubts raised by the foreman as to the right of convicting a man unless he had actually been seen committing the crime charged against him, would seem to justify the doubts which are entertained as to the capacity of the jury. Unfortunately this is not an isolated case. There was a discussion in the House of Lords the other evening in which numerous examples were given of the hopeless stupidity and ignorance of Irish jurors, who are now, it should be noted, drawn from a lower class than formerly. In the same impression of the *Times* which contains a report of the conclusion of Montgomery's trial there is a letter from a gentleman who says he has lately served as foreman in several trials in Ireland, and that his experience during the recent Sessions showed the impossibility of getting together into a jury-box twelve trustworthy men able to comprehend the cases put before them. "How," he asks, "can we expect a lot of humble, poorly-educated farming-men suddenly to shift themselves from the plough, the manure-heap, or cleaning out pig-styes, to travel from ten to thirty miles to be penned up in a jury-box bolt upright, for hours together, listening to and trying to comprehend the nice distinctions and different statements of counsel, of highly educated men?" In one simple case he turned to a man behind him in the box, and asked him his opinion, and the man answered very frankly, "I know nothing about it, I don't understand it." In the course of the trials arising out of the Galway Election Petition similar complaints were made of the ignorance and incapacity of jurors. One old fellow in a long frieze coat, who had gone out at the lunch hour to get a penny roll, could not find his way back again for some time, and the proceedings had to be suspended until he reappeared. The Chief Justice remarked that a man who was unable to find his way through the passages of a Court did not seem to him to be very fit to be on the jury-roll. Many of the jurors are quite illiterate, and scarcely understand the language used in Court.

It is easier in a case of this kind to point out the evil than to suggest a remedy for it. It has been found that in England we have gone too low in reducing the qualification of jurors, and one of the objects of the Attorney-General's Bill is to raise the qualification, and to secure the presence of men of good education and social position on common juries as well as on special juries. In Ireland a still lower depth of ignorance, stupidity, and incapacity has unhappily been tapped. It was thought that jurors under the old system were composed in too large a proportion of Protestants, and one of the concessions negotiated by the present Lord Chancellor of Ireland on behalf of the Church to which he belongs was a reform of the jury arrangements which would introduce a larger number of Catholics. In order to carry out this change, the qualifications were lowered, various checks which formerly existed, such as the sheriff's power of preliminary selection, were abolished, and juries are now made up too often of men who barely understand the language in which they are addressed, and who are utterly incapable of comprehending either the drift of evidence or the arguments of counsel. But then religious equality had to be satisfied, and the question was not how to get really intelligent and competent jurymen, but how to give to the adherents of a particular religion a balance of authority. It is idle to say that the Irish are quite unfit for trial by jury. It is no doubt perfectly true that the great body of the people have no conception that the institution has any other purpose except to enable them to indulge their personal sympathies, and even if they could understand the duty of forming a strictly judicial opinion on the cases put before them, they would, from their want of education, be scarcely able to fulfil it. Trial by jury, however, has been established in Ireland, and it would now be impracticable to disturb it. It is doubtful indeed whether even the false step which has lately been taken can now be retraced. The Catholic clergy value the influence which they derive from the presence of their flocks—especially the more ignorant and submissive of them—in the jury-box, and

would probably resent the suggestion that they are deficient in education and intelligence. This is only another example of the disastrous consequences of the policy which has been pursued by the Government of managing Irish affairs, not in accordance with sound common-sense principles, and with a view to wise and efficient administration, but only, or at least mainly, with a view to conciliate and appease the pretensions of the Roman Catholic priesthood. From all parts of the country—from Clare, Limerick, and Galway, from Roscommon, Monaghan, and Clonmel—we have the same story of justice mocked, and law frustrated by incompetent jurymen. It may be said that this is only governing Ireland according to Irish ideas, and that if the Irish are content to be tried by jurors who are destitute even of an elementary conception of their functions, that is their business and not ours. It is evident, however, that there are many people in Ireland who do not relish the present state of things, and who feel that, apart from the injury which may be done to the interests of private persons, the scandals which are connected with almost every trial that takes place cannot fail to impair the dignity of justice and popular respect for law. The ignorant peasants who are dragged from their ploughs and muck-heaps to stare and slumber through a long bewildering trial are by no means grateful for the privilege which has been conferred on them, and it may be doubted whether there ever was any eager desire on their part to obtain it. Universal suffrage, without regard to education or capacity, even though admitted in politics, had better be kept at arm's length from the processes of justice.

LIFE IN CUBA.

WHEN all is said and done, it is not surprising that Spain should cling to slavery and Cuba, for the two mean one and the same thing, and without slavery Cuba would be worthless. It is not a mere question of the pride and *Españolismo* which hold to all that is left of the magnificent Empire of the Indies, and shrink from accepting the humiliation implied in the renunciation of the Queen of the Antilles. In spite of troublesome Creoles and mutinous slaves, notwithstanding the drain on the army and Exchequer of Spain kept up by the partisan war of Cespedes, the fact remains that, thanks to slave labour, Cuba, so far as the State is concerned, has paid its way and more. But naturally the State benefits comparatively little compared with individuals. Cuba has long been the paradise of the Spaniard who has energy sufficient to bestir himself in search of money and bliss. The old Iberian Peninsula still in more ways than one makes good its claims to the epithet "dura" which the poets bestowed upon it. A living is somewhat hard to come by there; the scorching sun of its semi-tropical climate bakes the shadeless soil and makes it slow to repay cultivation. Trade stagnates in the towns, except where foreign commerce enriches the merchants of the greater seaports, for the penurious people are very chary of their reals and maravedis. The barren mountains that glance in the blazing sunshine are a type of the country generally; a little gaudy show covers a sore lack of the substance of prosperity. As for the Government Exchequer, that is of course always far below low-water mark. The official who has expended a world of intrigue and patience in arriving at his place is doomed to fret himself to death while he worries the Treasury for the accumulating arrears of his pay and allowances. To venture on a metaphor suggested by a traveller's common experience in the country, the hungry flea that starves in domestic grazing is ready enough to hop away and feed and fatten in foreign parts. The Captaincy-General of Cuba has from time immemorial been the ambition of those Spanish soldiers who are intriguers and politicians as well. A voyage to Havannah and a brief sojourn there was like a voyage to El Dorado or a dip in Pactolus. The rich stream of the Cuban customs flowed through the empty pockets of this fortunate official, leaving a precious sediment behind. Proconsuls, after administering the colony for a few years, came home with fortune sufficient to support the dignity of the title that was generally in store for them. A Captain-General of Cuba might look forward to buying anything, short of the grandeeship of Spain, which was a matter of blue blood and quarterings; and so it was with his various subordinates in their several degrees. But, after all, the gains of Government officials were limited, like the posts which there were to be filled. It was cultivation and commerce that offered a really boundless field to enterprise and avarice. The Spaniard who could carry capital to Cuba might watch it growing and multiplying with scarcely an effort or a risk. He found a system all ready organized: if he betook himself to sugar and coffee raising, he had only to fall in with it, and his fortune was assured. He purchased his plantation with the slaves on it. The district in which he selected it decided the crops he was to grow. He engaged a competent overseer, who professed to know how to hit the happy mean between letting the negroes shirk their work and using them up by excessive labour and over-parsimonious arrangements. Whatever may have been the occasional disproportion between the overseer's professions and performance, there was always an ample margin left to make good indiscretions or incompetency. The Spanish Antilles had thriven on the misfortunes of their neighbours, and English emancipation and free-trade in sugar had raised the production of Cuba twentyfold or more. Rich planters in the country made rich merchants in the sea-ports. Petty trade flourished as well as the commerce that was carried on on a grander scale, and every class in the island shared in the common prosperity. The *Times'* Special Correspondent, in the interesting letters he is at present sending from Havannah, tells what an easy and lucrative business is done by the small shopkeepers there. It is too hot to higgle, it is not worth while descending to small economies where the climate is so warm and life so precarious. The very Gallego water-carriers made so good a thing of it that it is hard to understand why so many of the fraternity should remain to drudge in Madrid, when they can do so much better in the Indies. They are a race as prudent as they are steady, and their moderate gains very quickly roll up into savings which might enable them to emigrate. Perhaps it is their native prudence which prevents their hasting to be rich in a land where the chances of surviving to attain your object are disagreeably numerous.

It is indeed its uncertainty that gives its marked character to life in Cuba as elsewhere in the West Indies. It is not exactly the "let us eat and drink for to-morrow we die" of the old Jamaica planters, for the Spaniard is constitutionally temperate, and by no means so freely disposed to hospitality as the more jovial Briton. It is not his way to keep open house for all comers, with tables groaning under loads of European cheer, supplemented with turtle, land-crab, and all manner of tropical dainties; with buffets covered with decanters filled with the ardent wines of Southern Europe, with rummers of sangaree, and "beverage" perpetually on the flow. He has rather imported the more frugal fashions of the Peninsula; he throws his house open in tertullias and dances in place of giving dinner parties; he offers by way of refreshment the light iced drinks which certainly come like the nectar of Olympus to the scorched palate when the thermometer is standing at something like ninety odd; you have fragrant coffee, and chilly water with *azucarillos*, and salvers heaped with fruits that are fair to the eye and pleasant to the taste, although death or disease may be the penalty of indiscreet indulgence. The harp and guitar and piano are in these Cuban feasts, and there are unhealthy white complexions and eyes unnaturally bright, and figures which want of exercise makes over-voluptuous, or which are somewhat wasted by a climate that dries up the blood in the veins. But the people take thought for the morrow even less than in Jamaica; for, although not much given to thinking, there is a vague impression on them that the future is absolutely uncertain. There may be a few who, under the strength of that impression, wisely make up their minds to be content with a competency—more than they are ever likely to want—and then to go home. But, as a rule, they find it difficult to stop when they are busy in the pursuit of wealth, and when everything is going on prosperously. So they stay on, with the idea that Cuba is not their home, but only a place of temporary sojourn, persuading themselves that they mean to return some day with a fortune to end their lives in old Spain. All the time they are probably conscious that the temptations to linger where they are will always be too strong for them; that they will drop out of existence some sunny day, very likely when they least expect it. Yellow-fever, cholera, and the terrible *vomito prieto* are the scourges of the island. Malaria in its most malignant shape lurks in the richest districts; in Havannah itself the town is wretchedly drained, and the fresh breezes from the sea blow over poisonous mango swamps or are tainted by the decaying abominations that strew the beach. So life in the capital is marked by a certain recklessness and an utter indifference to the morrow. The municipality pays no attention to sanitary arrangements. Wealth elbows poverty; palaces rise in the most squalid quarters, and many of the most imposing houses are whited sepulchres. When the present prosperity comes to an end, as it must ere long now that slavery is irrevocably doomed, the place will tumble into ruins in a few years, and the men who make its prosperity now will shun it as if it were a city of the plague. In Jamaica Englishmen and Scotchmen have fought doggedly against the ruin that was brought upon them by a succession of disastrous, if inevitable, legislative measures. We doubt whether the Cuban Spaniards will give proof of English muscle and fibre; it may be that the Cuban climate is more relaxing than that of the English islands; it is certain that the Spanish race always deteriorates terribly even in the first generation, and runs altogether to weeds in the second.

We must rejoice of course that slavery is doomed, even if Cuba and the Cubans perish with it. Assuredly they have not done much either to deserve our respect or win our compassion. Never perhaps did a community attain prosperity so entirely by absolute *laissez-aller;* their wealth has all been gathered for them by others, while they lay placidly on their backs looking on, listening to their slave-drivers cracking their whips. Yet we must own to a certain sentimental regret, such as one feels when contemplating some picturesque grey ruin on the Rhine which in the days of its pride and power was a den of thieves founded upon torture-chambers; or such as we felt when we heard that Rome had passed from under the rule of the Pontiffs, that the brooms of the new Italian kingdom were to sweep away the old Roman associations with the old abuses and all the cruel iniquities of a suspicious and tyrannical Government. Rome, however, may possibly flourish under its new masters as it has never done since the days of the Antonines; but, happen what will to Cuba, it can never see the good old easy days again. If the Americans are sensible and unselfish enough to leave it alone, it will be delivered over to the creoles, the negroes, and anarchy. It needs no prophet to tell that the towns will crumble into ruin and the plantations run to jungle; that the harbours will be choked up, and the few

roads that are left will yield a precarious livelihood to the brigand bands who will swarm on them. If the Americans do take the island, as they very possibly may, then we may expect to see a sight that will gratify the shades of the old Spanish slave-masters —smart and spry men struggling manfully with impossibilities. They will have to settle and strive to work hard in a climate which is fatal to white life, and utterly hostile to severe exertion. They will have to keep order among hordes of emancipated and uneducated blacks, to train them to appreciate their new responsibilities as free citizens and enlightened electors of the Union, persuade them to work if they can, and prevent them, while their education goes forward, from cutting the throats of their instructors. Failing success with the blacks, they will have to attempt the problem of successful cooly immigration. In any case they will have to replenish the white garrisons in which the men are dying off like flies. Amid mortality, hostility, anarchy, anxiety, and general gloom, it will be their business to endeavour to make the island show a satisfactory balance sheet, while they attend to their private fortunes at the same time. It will be a life that will offer them abundance of objects and plenty of excitement, but certainly it will be neither so easy nor so agreeable a life as that which the Cubans lead at present.

A QUESTION OF PEDIGREE.

A CURIOUS example of the operation of the law of descent has been afforded by a case tried last week at Maidstone. The land which was in question in the case is "customary freehold," and the manor of which it is held has been in existence more than nine hundred years. The tenants pay a quit rent, which probably has not been altered in amount since Saxon times, and on the death of a tenant a "relief" is also payable. On the death of a tenant without heirs his land would "escheat," not to the Crown, as in the case of an ordinary freehold, but to the lord of the manor, of which the land is held. Speaking generally, however, a man cannot die without heirs, although it may be difficult or impossible to produce an heir of the deceased. In the present case the lord of the manor of Aldington, in Romney Marsh, claimed an estate by "escheat," and it was claimed on the other hand by a person who alleged kindred with the deceased tenant as descending from a common ancestor who lived about two hundred years ago. The jury, being unable to agree, were discharged, and thus the case remains undecided. But although the claimant has not succeeded in proving the alleged kindred, he came very near doing so, and the case is at any rate useful in showing the sort of evidence by which such a claim may be made out. The tenant of the estate in the early years of this century was John Chapman, who died in 1826, leaving three daughters his co-heiresses. These three ladies all died unmarried. On the death of the last survivor of them intestate in 1869 the lord of the manor claimed her share for want of heirs. There was no doubt that John Chapman had left no lineal heir, and, so far as he and his daughters knew, no heir at all. But a claimant appeared and set up the following case. He alleged that John Chapman was descended from William Chapman, who was born in 1650, in the time of the Commonwealth, and died in 1731. This progenitor of the Chapmans left two sons, John and William, and the late tenant of the estate, John Chapman, was descended from the latter. But the former also left a son, and his issue still survive, and should be heirs to the last surviving daughter of John Chapman, although she never heard of their existence. The case thus set up involved the proof of a pedigree upwards from John Chapman, through three generations to William Chapman of the Commonwealth, and then downwards from the common ancestor through four generations to the claimant. In the result the claimant proved his own descent from the common ancestor, but doubt was thrown upon the proof of the ascending line. In other words, the claimant proved that he was descended from William Chapman of the Commonwealth, but he failed to satisfy the jury that John Chapman, father of the three ladies, was descended from the same William Chapman. The difficulty arose in identifying William Chapman, the younger son of William Chapman of the Commonwealth, with a William Chapman who was undoubtedly the grandfather of John Chapman, the father of the three ladies. According to the pedigree produced by the claimant, William Chapman, the younger son of William Chapman of the Commonwealth, was baptized in 1683, and therefore would probably have been sixty-five years old in 1748. But there exists in Westwell Churchyard a tombstone with an inscription stating that William Chapman died in 1748 aged seventy-seven years. This William Chapman was an admitted ancestor of the last tenant, but, if he was seventy-seven years old in 1748, he could not be identical with William Chapman, son of Chapman of the Commonwealth, who in that year ought to have been only sixty-five.

Upon the credit given to the tombstone the decision of the case seems to have turned. It was shown that a William Chapman had been born in the neighbouring parish of Badlesmere, who would have been seventy-seven in 1748, and it was suggested that this was the William Chapman who was buried at Westwell. On this theory the connexion upwards with Chapman of the Commonwealth would have been severed, and the claim of the descendants of Chapman of the Commonwealth would have been defeated. It is so common to find a particular name prevalent in a district that it would be going too far to assume that a William Chapman baptized at Faversham was identical with a William Chapman buried at Westwell, even if the age stated on the tombstone corresponded with the age obtained by supposing baptism to follow a few weeks after birth. But here the claimant's case was helped by a piece of family tradition. It was admitted that William Chapman, buried at Westwell, the ancestor of the last tenant, married Martha Manooch, and the claimant produced a witness, a member of his own family, who stated that he had heard his grandfather say that "he was connected with the Manooch family."

The ordinary rule of law which excludes "hearsay" evidence is relaxed in these questions of pedigree from the necessity of the case. The witness already mentioned had heard his grandfather talk about his family, and he was allowed to repeat much, but not all, of what his grandfather had said. If he had been allowed to repeat all, he might have proved the pedigree from himself and the claimant to the Commonwealth Chapman without further evidence. But the Lord Chief Justice ruled that the witness might be asked as to his grandfather's statements as to his (the grandfather's) father, but not as to his grandfather, if he had not known him, nor could have known him. It may be doubted whether this ruling does not unduly narrow the limit within which tradition may be received. But the claimant was able to prove his descent from the Commonwealth Chapman by other means. It would appear, however, from reported cases, that if the grandfather of the witness had written down all that he told the witness the whole might have been received. It is stated in one of these cases that "an old pedigree, professing on the face of it to be compiled from registers, wills, monumental inscriptions, family records and history, and going back to a fabulous date, is not evidence, though proved to be signed by members of the family, except so far as it relates to persons presumably known to the party signing it, or respecting whom the party signing it may have obtained information from other members of the family." It seems unnecessary to quote authority to show that a pedigree "going back to a fabulous date" is not entitled to be received in its entirety as evidence. The pedigrees of some Scotch families do go back to a period which we will venture to call fabulous; and doubtless the members of those families devoutly believe the whole of them. There are many families in the peerage, or immediately below it, which can produce unquestionable pedigrees of several centuries; but when we descend into a lower stratum of society, and get among the Chapmans, the task of proving a pedigree becomes more difficult.

It is not unlikely that this case may attract the notice of the philosophers who are now engaged in framing proposals for altering the land laws of the country. To the philosophic mind the mention of a manor and of a pedigree must be almost equally exasperating, and we shall expect to hear from some disciple of Mr. Mill a suggestion of a short method of settling the question which has puzzled a Kentish jury. But it is to be feared that the love of English lawyers for groping amid musty records of the past is ineradicable. There is hardly another country in the world where such an inquiry as this into the pedigree of the Chapman family would be possible. Yet in England, in spite of the philosophers, such inquiries are interesting to many persons besides lawyers, and such inquiries occur not infrequently. There is little doubt that the elaborate report of this case in the *Times* has been read by many thousands of persons with as much care as the reports of the Tichborne case, and the arguments for and against adopting the statement of the tombstone will have been canvassed with the same attention as was bestowed upon that famous controversy. If such inquiries are to be prosecuted, it is highly important that parish registers should be preserved with a care which until lately has seldom been bestowed upon them, and also that inscriptions in churches should be treated with a reverence which may be sometimes inconsistent with the full accomplishment of the desires of ardent church restorers. In a case which is often cited in this branch of law, an inscription in a chancel containing a pedigree of a family had been copied in pencil by a person employed in certain repairs which involved the obliteration of the original, and the pencil marks had been inked over by another hand, supposed to be that of the incumbent of the parish. This document, and also a copy of it, bearing an endorsement by a member of the family, were among the evidence produced by the claimant in that case, and the endorsed copy was admitted. It would seem to follow that if, instead of a written endorsement, there had been a verbal adoption of the paper by a deceased member of the family, the paper would equally have been admissible; and, if so, the whole of the statement of the grandfather of the witness as to the Chapman pedigree would appear to be admissible. In the "Troutbeck Case," which excited great interest some forty years ago, a paper in the handwriting of a deceased member of the family, purporting to give a genealogical account of the family, was held to be admissible, though never made public by the writer, erroneous in many particulars, and professing to be founded partly on hearsay. In that case the claimant sought to recover from the Crown an estate which had been "escheated" for want of direct heirs. There are certain industrious persons who occupy themselves in prosecuting genealogical inquiries, and occasionally make bargains for a share in the result of litigation, which the law calls by the old-fashioned names of "maintenance" and "champerty." In a recent case a plaintiff alleged that, in consideration that he would take steps to contest a will, and would advance money and obtain evidence for that purpose, and instruct an attorney, the defendant promised to share with the plaintiff the property which might come to him by reason of such proceedings; and

it was held that this agreement was "champerty," and could not be made the foundation of an action. In the argument in this case another case was cited in which a professor of genealogy had stipulated to supply a claimant "with evidence that should be sufficient to enable him successfully to recover the property." It was rather too audacious to come into court with a claim founded upon an agreement which appeared to assume that evidence was a commodity capable of being supplied to order. But these things can be done, and habitually are done, in a more decent way. It is very seldom that a plausible claim to an estate fails of prosecution for want of means. There is always an air of romance about such cases which makes them interesting, and we fully anticipate that the full and accurate report of the Chapman case in the *Times* will be made the foundation of a novel in three volumes by some popular performer in that branch of art. Indeed the reading public may think themselves fortunate if they get a novel with so much foundation as this case would supply.

THE *VANITY FAIR* ALBUM.

IF there is not much fame nowadays, at any rate there is plenty of notoriety, and in the crush of public life the famous, the infamous, and the notorious get oddly mixed. To judge by the display of photographs in the shop-windows, the interest of the public in men and women of the day is singularly comprehensive and impartial. The eminent statesman, the last new murderer and his victim, judge, jury, and counsel, bishops and ballet-girls, the fashionable medicine-man, the popular actor, the pet singer, the successful author, and the most recent arrival at the Zoological Gardens, appear to meet together on a footing of perfect equality. The gazing crowd seems to be as anxious to fix on its mind the features of the great criminal as those of the philosopher or hero. Making a figure in the world has ceased to be a metaphor, and may be taken literally. Everybody who gets into the papers is sure to be seen next in the shop-windows, and we become as familiar with his physiognomy as with those of our country cousins in the family album. In this way the list of public characters is continually increasing, and may be expected before long to include the greater part of the community. Even the humblest and most insignificant of us have now a fair chance of at some time becoming notorious. There are those who are born to this sort of greatness, and who begin life under the "fierce light" of newspaper paragraphs and photographic cameras; others have it thrust upon them; while to many it appears to be an object of ambition, and one not very difficult of achievement. A very simple accident or a little pushing will bring a man into the focus of public curiosity. Any of us may be summoned as a juror, and jurors share the notoriety of the criminals they try. Only let a name be mentioned often enough, and the public is miserable until it has found a face to match with the name. The multitude of faces gets bewildering at last, and, meeting suddenly a familiar countenance in the street, one is puzzled to say whether it is an Australian uncle or the murderer of a month ago.

This desire to know how people in any way distinguished or notorious actually look in the flesh is no doubt natural and legitimate in itself, although it may be associated with a morbid curiosity. It is scarcely possible to think of any one without instinctively, and perhaps unconsciously, conjuring up some mental image of him—a fanciful deduction perhaps from the phrases of a letter or some fragment of news. And one of the most curious experiences of life is that of meeting for the first time a man with whom we have corresponded, or of whom we have heard a great deal, but whose personal appearance is altogether unknown to us. A familiar saying warns us not to judge people by their looks; but it is difficult to feel that we really know a man until we have seen him, or at least his likeness. What is meant by the caution of the proverb is not, we presume, that looks should be altogether put out of the question in judging of character, but only that we should be on our guard against too hastily and confidently passing judgment from looks alone. Personal appearance is not bad evidence as far as it goes, and no biography can be considered complete which does not give us a portrait. A portrait will not tell you all you want to know about a man; but it throws important light upon his character, and supplies a clue to much that might otherwise be dark and hidden. It is this which invests the admirable caricatures of *Vanity Fair* with a kind of historical value. They are an abstract or brief chronicle of the age, a necessary supplement to the *Times* and the news of the day. In the preface to the latest series of these sketches the Editor observes that portraits are usually a failure, because of the artist's desire to disguise or improve upon the handiwork of Nature. "The avoidance of that desire is," he adds with innocent humour, "the central feature of the work here given." It will be admitted that the illustrations do not err on the side of aiming at too high a standard of ideal beauty. In some of the pictures there is an evident, sometimes even a painful, straining after comic effect, and the result is, as might be expected, a failure. But, as a rule, the artists are content to seize upon certain striking peculiarities of feature, expression, or bearing, and to allow them to speak for themselves. Of course the figures are presented in familiar moods and attitudes, as remote as possible from the grim solemnity of the photograph, or the heroic grandeur of the "portrait of a gentleman." Even the greatest men have an everyday look and everyday walk, or, it may be, shuffle. Napoleon is not always crossing the Alps on a prancing charger, with arm extended and his cloak floating in the wind; and Mr. Gladstone has moments when he dozes over Homer and a cup of tea, and lets the upas-trees alone. The object of the caricaturist is to present the man as he appears "in those unguarded moments when alone he is himself." "Unfortunately," the Editor remarks, "the result occasionally appears droll." Between good portraiture and caricature of the higher kind there is but a narrow line. Mr. Millais's portrait of an eminent contractor which was exhibited at the Academy not long since would have done very well for *Vanity Fair*, and it would be refreshing to find some examples from the latter "on the line." The excellence of a portrait lies in its vivid presentment of dominant characteristics, which to an ordinary eye would perhaps be lost in a crowd of other details. This forcing of points may of course be overdone, but it is the secret of all good portrait-painting. When any of the principal characteristics of face or figure are very strongly emphasized, the portrait becomes a caricature; and it is to this style of portraiture that the pictures in *Vanity Fair* belong. The object is to show how much human nature there is in men.

Either by accident or design, the Presidents of the two great Republics appear on succeeding pages. It is impossible to imagine a greater contrast than is presented by these two figures. The intense vivacity and self-assertion of the Frenchman seem to quiver through every fibre of his diminutive frame, as he strains on tip-toe, while his hair curls into a cockatoo tuft of imposing grandeur. The American, still, silent, and imperturbable, disposed to take things easy, but with a clear, quick eye, and a great reserve of latent force, lounges in a rocking-chair, with his half-smoked cigar between his fingers. His support of Providence would appear on ordinary occasions to take the shape of passive approval. It is a good likeness of General Grant, but it is impossible not to suspect, comparing it with other American portraits in this volume, that the influence of partisanship is here observable. In Grant we get the President rather than the man, while the picture of Greeley represents only the burlesque side of an oddly mixed character. Nothing can be better than the portrait of the American Foreign Secretary, Mr. Fish, who figures under the title of "Consequential Damages;" his rough vigour, aggressiveness, and consequential, not to say bumptious, air are vividly portrayed. "Mr. Fish's qualifications," says the Editor in his biographical notice, "for managing the foreign affairs of the Republic are various. He is very rich, he is sixty-three years of age, he has cultivated considerable natural talents by much reading and travel, and he has never yet learnt to write English." Mr. Fish is evidently just the man to make things lively for his diplomatic friends. Since he has been in office he has insisted for personal reasons on the removal of four foreign representatives from Washington. Mr. Sumner is a heavy-looking man with a massive head, become mane of shaggy hair, a broad, square forehead, and full passionate lips that twitch with temper and caprice. "For us of the old country," the Editor observes, "it is lamentable and humiliating, and should also be instructive, to find that the foremost man among those of our own blood who have gone out from among us should take for the key-note of his politics a profound distrust of, and animosity towards, the rulers of England." We should be disposed to suggest that Mr. Sumner's hostility applies to the English nation, and not merely to its rulers, and that, however lamentable and instructive the fact may be, it is humiliating for others rather than for ourselves.

Turning to the domestic sketches, we are confronted with Mr. Walpole, and the day of Hyde Park is fully explained in the respectable but rather bulb us forehead, amiable eyes, weak, flaccid lips, and feeble chin. You see at once how soft and flabby this sort of statesmanship must be; mere jelly-fish stuff that looks to have shape and substance as it floats calmly in the clear water, but collapses into pitiful pulp the instant it is handled. Mr. Glyn, the Liberal Whip, comes next—brisk, dapper, fussy, with half-shut eyes, as if demonstratively anxious to put himself on a level, in the transaction of business, with ordinary people, and not to take too much advantage of his own cleverness; the odd cerebral development towards the back of the head is perhaps suggestive of a large stock of brains being kept there, not for current use, but in accordance with sound banking principles as a reserve against an emergency. Mr. Hardy's portrait has somewhat of the hardness of a photograph, though his shrewd, practical air and common-sense expression are happily caught. Sir Wilfrid Lawson, the representative of Permissive Prohibition, is portrayed too much like a gloomy ascetic, and we lose the humour of the contrast between the bluff, genial fox-hunter and the harsh fanaticism of his pet crotchet. People who know Mr. Samuel Morley only through his association with the promiscous tribe of revolutionists for whose benefit he maintains a bountiful civil list, will perhaps be surprised to find him a mild, meek, soft-spoken, elderly gentleman, clad in the sober garb of a Dissenting magnate. He does not wear a red cap, or wave a torch, and the Insurance Company which not long ago raised the insurance of the hall at Bristol where he was going to speak, would perhaps have imagined there was some mistake if he had called personally to demand an explanation—

> Is this the Talbot so much fear'd abroad,
> That with his name the mothers still their babes?

To complete the picture, Mr. Morley's allies should be represented in the background, so that, pointing to the mob, he might say, with Talbot, "These are my substance—sinews, arms, and strength." There are some things which must be seen to be believed, and perhaps it is enough to say that the portrait of the Irish mem-

ber who desires to abolish specie payments (No. 130) is not a wild caricature, but a prosaic reality. If a famous French actor had not invented Macaire many years ago, Mr. Delahunty might have accused him of plagiarizing his appearance. As it is, the plagiarism, we suppose, must be the other way. Mr. Horsman greets us in these pages with all the condescending superiority of a most "superior person;" Professor Fawcett, the prize schoolboy, lectures in his jacket; Roger, "whose name for postal purposes is Eykyn," smiles with cheerful sympathy on the nobility, gentry, and policemen; and Mr. Charles Villiers, who "advocated Free-trade before it was safe to attack Protection," gazes with amused wonderment, which is evidently about to find expression in an epigram, on the headlong pace of statesmen who have long outstripped the old-world Liberalism which identifies itself with freedom and abhors despotism in every shape. Admirers of "Tom Brown" will be pleased, though perhaps surprised, to see him in the flesh, and "the realization of the ideal" in Mr. Ruskin throws light perhaps on his social philosophy. Mr. Kingsley is represented in a fit of righteous indignation, perhaps at the Parson Lots of our own day. His "intimacy with the counsels of Heaven," says the Editor, "which his religious language has always implied, seems to have grown closer and closer with his worldly success, until the attitude of the Canon towards Providence and the aristocracy are almost equally puzzling to the ordinary mind." The other portraits of contemporary divines are evidently a divergence from the principle of these caricatures. One preacher in a pulpit is very like another; human nature should be sought beneath the gowns.

REVIEWS.

LLOYD'S HISTORY OF SICILY.*

WE gladly welcome a fresh explorer in the border-land which lies between the regions of mythology or folklore and that of continuous contemporary history. There was work to be done among the popular traditions and the disconnected historical notices or fragments relating to the early fortunes of the Greek colonies in Sicily, and it was likely that in this field any one would work to some purpose who did not approach it armed with Mr. Rawlinson's method of ingenious conjecture and with the instruments which can extract history from the stories of Ninus, Belus, and Semiramis, and therefore, of course, from those of Alpheus, Arethusa, and Phalaris. Mr. Watkiss Lloyd happily does not belong to this band of guessers, and we admit the more readily at starting that his book is one which the historical student will be the better for reading, because our remarks must be chiefly taken up with an examination of those parts of his work in which he has failed to give to such a student the guidance without which his researches must tend to little profit. Mr. Lloyd has chosen to break ground in a period for which we have little more than a traditional history. Fragments of genuine contemporary materials happily we do possess; and Mr. Lloyd has done good service by giving us a careful translation of the most valuable of these materials in the Sicilian odes of Pindar. If for such a period the history is to be reconstructed at all, it must necessarily be by a complete examination of the evidence at every step, and by putting before the reader, not merely the conclusions which, after mature thought, the writer may accept as true, but the conflicting versions and statements from a comparison of which those conclusions have been derived. Mr. Lloyd has, we doubt not, worked conscientiously throughout; and some of his chapters, and especially the pages which he gives to the career of the Sikel Ducetius, deserve high praise; but he has by no means always thought it necessary to lay before his readers either the full evidence of the case or the sources from which that evidence is obtained; and as the object of the historian is the attainment of truth, our task must be confined to those points on which we have to charge Mr. Lloyd with such shortcomings.

These shortcomings would have been fewer and probably more slight if Mr. Lloyd had employed everywhere the comparatively strict method which he applies to the legend of Phalaris. Mr. Grote, who regards the story of the brazen bull as resting on sufficient evidence, justifies his belief by a reference to the passage in which Pindar speaks of the monster, as well as to the statements of Polybius, Diodorus, and Cicero, and dismisses the matter with the assertion that the bull, after having been carried away to Carthage, was on the fall of that city restored to the Akragantines by Scipio. Mr. Lloyd perceives that the figure brought back by the conqueror of Carthage tells as little for the story of Phalaris as the pickled sow kept at Lavinium in the days of Cato tells for the story of Æneas, and he admits that "we come upon credible testimony of the existence, in later days, of his instrument of torture with something of the surprise that would greet such a claim for a fragment of the Trojan horse or the cow of Pasiphaë." In truth we have for it no credible testimony at all. Pindar, the nearest to Phalaris in point of time, was born at least half a century after the alleged date of his tyranny, and he distinctly speaks of the bull and its master as a matter of hearsay. Polybius, in a passage amusing from its unbridled vehemence, reviles Timæus as a virulent and malignant liar for daring to assert that the Akragantine bull never had any existence. Facts had refuted his impudent scepticism, and the very bull had been restored from Carthage. Diodorus merely echoes Polybius, and neither of them says that the figure had any inscription or mark to connect it with the tyrant or the city of Akragas. The words of Cicero are worth nothing; and when we turn to those of a real contemporary of Phalaris, the poet Stesichorus, we find something which exhibits him much in the same light with other Hellenic despots, but not a word about his bull. Mr. Lloyd is, however, fully justified in saying that

> The tradition of such a contrivance at Akragas may be relied on as proving that at some time Phœnician customs had obtained a prevalence in Sicelist settlements, that revolted the more humane Hellenic sentiment, and induced a revolution which decided the final subjection, if not extrusion, of Phœnician savagery.

This sentence cannot be called a specimen of clear or smooth English; and unfortunately far too many of Mr. Lloyd's sentences are of this awkward and rugged sort. But in this instance we have nothing to urge against his conclusion. It is otherwise when we come to the story of Aristodemus Malakus of Cumæ. About this tyrant Mr. Lloyd tells us that he was general of the Cumæans in a war caused by an attack of confederated Tuscans, Umbrians, Daunians, and other barbarians, in enormous force; that in this war he slew the general of the enemy; that being deprived of the reward due to him for gaining these *spolia opima*, he took to the trade of demagogue; that being sent some years later with a rotten fleet to the aid of the men of Aricia, he again came back after an astonishing victory, and having again slain the enemy's leader; that then, slaying the Cumæan Senate by stratagem, he became tyrant; that he then sought to guard himself especially by debarring his subjects "from the use of liberal Hellenic education, and so reducing them to servile manners and conditions or to effeminacy"; and that, finally becoming unbearable, he was murdered. Not a word is said of the sources from which this narrative is derived, nor is any hint given that any other narratives were in existence. Of the writers who speak of Aristodemus, the oldest and the most respectable is the Halikarnassian Dionysius. From whom Dionysius may have received his materials we cannot say; but before he wrote, four or more centuries had passed since the events which he proposes to relate are said to have taken place. At once then we regard with the extremest suspicion a narrative which begins by telling us that, in the first year, Aristodemus with five thousand Cumæans completely vanquished half a million confederated Daunians supported by eighteen thousand horsemen, and which goes on to say that he twice won the *spolia opima* which, in all Roman history, are said to have been won only thrice. It is scarcely fair in Mr. Lloyd to reduce to a mere prohibition of a liberal Hellenic education the ridiculous details which Dionysius gives of the tyrant's measures; and when Mr. Lloyd adds, with doubtful grammar, that, "excluded from the city, and dispersed about the country, he hoped that they would grow up dull, debased, and ignorant," he jumbles together the grown youths who were sent out to be shepherds with the young boys who are ordered to be brought up like girls, going to the dancing schools attended by women to fan them and shield them from the heat of the sun. This absurd picture clearly reflects the advice of Crœsus which Cyrus is said to have adopted for the more complete subjection of the Lydians, while the story of the death of Aristodemus, as given by Dionysius, only repeats that of Zopyrus at Babylon, which reappears in the legend of Sextus Tarquinius at Gabii. The story is thus seen to be internally weak; it becomes worthless when, turning to Plutarch, we find that Aristodemus, before he becomes despot, is sent to aid not the Aricines, but the Romans; that the war, far from being decided in a single battle, is a long one, and that he gives a wholly different account of the tyrant's death.

The same inadequate treatment of the evidence marks Mr. Lloyd's narrative of the battle of Himera. The story of the interview of the Spartan and Athenian ambassadors with Gelon he translates in full from Herodotus, and notes the failure of the embassy in the following wonderful sentence:—

> So came to an end a scheme of such an extended combination of the Central with the Western Greeks, that the Central Greeks gained their chief triumph by effecting among themselves—but once—incompletely—for a short time, and were ruined by inability to compass ever again.

Mr. Lloyd admits the difficulty of believing that in this interview Gelon could have spoken as though all danger from Carthage had passed away; but for the mission which follows this embassy he accepts the account of Diodorus, and therefore states that the horsemen of Gelon forced their way into the Carthaginian camp by stratagem, and having slain Hamilkar in the midst of his preparations for sacrifice, set fire to the fleet. Now, Herodotus speaks of Hamilkar as living until the issue of the battle was decided against him, and Herodotus lived four centuries nearer to the event than Diodorus. Still more strangely, after noticing the Carthaginian version of the story, and the divine honours paid to Hamilkar, he adds:—

> On what principle this extraordinary veneration was paid to an unsuccessful general, even though of royal standing, it is not easy to conjecture—can it be that Carthage recognized that by this disastrous expedition had at any rate been warded off an attempt of the Greeks previously impending upon Carthage itself, or at least on its Sicilian dependencies, which remained thereafter free from molestation?

We must take the account of Diodorus as a whole; and if we do this, we shall see in it a tradition disfigured throughout by the vanity of the Sicilian Greeks. As in one version of the Eastern story Xerxes was suffered to reach the Asiatic shore with only one

---

* *The History of Sicily to the Athenian War; with Elucidations of the Sicilian Odes of Pindar.* By W. Watkiss Lloyd. London: John Murray. 1872.

solitary boat, so with Diodorus a single vessel reaches Carthage with the miserable remnant of the army which Hamilkar had conveyed to Sicily in more than two thousand ships. There is, in fact, no limit to their humiliation. Carthaginian envoys fall in tears at the feet of Gelon, praying him in the name of humanity to have mercy upon them. His wife Damaretè plays the part of Queen Philippa in the scene between Edward III. and the burgesses of Calais, and the Carthaginians are pardoned on condition of paying two thousand talents as the cost of the war, and building two temples in which the treaty of peace might be preserved. Like men reprieved from a sentence of death, they accept these terms with a gratitude which finds expression in the gift to Damaretè of a golden crown two hundred talents in weight. Such trash as this it would not be worth while to notice were it not for the striking contrast which it presents to the words of Pindar, who, writing a very few years after the event, prays that Zeus may put off as long as possible the conflict then impending with the Carthaginians, which he feels must be 'a struggle for life or death. But the prayer of the poet sufficiently explains the difficulty which Mr. Lloyd feels about the honours paid to Hamilkar, and implies, although it does not assert, that the battle of Himera was not that decisive victory for Gelon which the traditions of later generations represent it to have been. It is perhaps even more wonderful that Mr. Lloyd should accept as historical the scene in the Syracusan Agora with which Diodorus completes his extravagant romance. The time which immediately followed the battle of Himera Mr. Lloyd thinks was one which Gelon might well deem favourable for challenging "during the first contentment with glorious effect recognition of his foresight and of his patriotic energy." The scene is painted for us by Diodorus, and not by Herodotus, and by the former it is connected directly with the story of the embassy from Sparta, when he asserts that Gelon was thus merciful to the enemies whom he had crushed because he was anxious to take part in the continental war against Xerxes; that, before he could set sail, tidings came of the victory of Salamis and the retreat of the tyrant; that, on receiving the news, he summoned the citizens to appear armed in the Agora, and going thither unarmed, and even without a tunic, entered into a review of his acts and policy, and was hailed with acclamation by his subjects as their benefactor, their saviour, and their king. In one point only does this agree with the Sicilian tradition mentioned by Herodotus, which stated simply that Gelon wished to aid the central Greeks, but was unable to do so. It is only necessary to say further that, according to the romance of Diodorus, the battle of Himera took place some time before the battle of Salamis, while, according to Herodotus, it was fought on the same day. So thoroughly unhistorical are all the details relating to this struggle between the power of Syracuse and that of Carthage.

Generally, then, Mr. Lloyd, dealing with a period for which on the whole we have only a traditional history, seems to have begun his task without defining precisely the canons which he intended to apply in sifting the evidence. His chapter on the primitive population and the Hellenic settlements of Sicily may be favourably contrasted with the speculations of many ethnologists; but he is not on his guard himself, or at least he does not set his readers sufficiently on their guard, against those chapters in which Thucydides treats of the early occupants and the later Greek colonization of Sicily. It may be true that "the historian recounts as of knowledge, and with a satisfied precision that cannot be mistaken, the diversity of resident races and their local distribution"; but it would be rash to say with Mr. Lloyd that this precision cannot be mistrusted. Thucydides is not less precise in his chronology for events stretching back to the Trojan war; and Herodotus, who in some places draws the sharpest lines of distinction between Pelasgians and Hellenes, in others speaks of them as practically the same people, and as speaking the same language. If the Pelasgians called the Gods Theoi from their government of the Kosmos, they not only spoke Greek, but were able to devise new names from Greek roots by not very obvious analogies. In all matters of ethnology the statements of Thucydides must be received with the greatest care; and on the migrations of Sikeli and Sikani the traditional accounts are utterly conflicting and contradictory.

JOHN OLDHAM.*

SOME time in 1676 or 1677 the Free Grammar School of Croydon was honoured and startled by a visit of a company of fine gentlemen of wit, pleasure, and quality from London—Lord Dorset, Lord Rochester, Sir Charles Sedley, and others. They were introduced to the head-master, whom they did not want to see, and they inquired for a young usher of the school, some of whose poetry in manuscript had come to their knowledge. This was John Oldham, then three or four-and-twenty years of age, destined soon to attain great fame by his Satires against the Jesuits, and fated to early death after a short but most brilliant poetical career. It may be presumed that Dryden, as he is not mentioned, was not of the company who did homage at Croydon to the humble usher. Dryden had not then quarrelled with Rochester, and Dorset and Sedley were his lifelong friends. Fierce and vigorous satire is the great point of resemblance between Dryden and Oldham; but Dryden did not begin to write satire until several years after this Croydon visit, or until after the publication of the Satires of Oldham. Early non-satirical poems of Oldham's show that he had most diligently studied and even learnt by heart the early inferior compositions of his senior Dryden—senior by two-and-twenty years. Lines of Dryden in his first and very stiff poem on the death of Lord Hastings are reproduced by Oldham in his elegy on the death of his friend Charles Morwent; and in Oldham's paraphrase of David's Lamentation for the Death of Saul and Jonathan lines of Dryden's "Annus Mirabilis" reappear. These were boyish imitations. Oldham could soon trust his own wings; he needed not to copy. From usher at Croydon Oldham became tutor in the family of Baron Thurland, a judge of the Exchequer, living near Reigate; and there, in 1680, he produced his Satires on the Jesuits. He had been recommended to Baron Thurland by a barrister—Mr. Harman Atwood—on whose death he afterwards wrote a Pindaric ode; and it helps to show the fame of Oldham for some years after his death, that the matter-of-fact historian of Surrey, in which county Atwood lived, near Baron Thurland, says of Atwood that "his reputation can never die while any respect is due to exemplary virtue, or while the celebrated Oldham bears any vogue in the world." Oldham died of small-pox in December 1683, in the house of William Pierpoint, fourth Earl of Kingston, where he had been for some time housed as an honoured friend and guest, after refusing to be Lord Kingston's chaplain. He was only thirty when he died. Dryden bewailed his death in beautiful lines. *Absalom and Achitophel*, and *The Medal*, and *Mac Flecknoe*, had now been published, and the two poets were fellow-satirists; and the author of the *Spanish Friar* and of *Religio Laici*, later to become a Roman Catholic, pursued now common game with the great anti-Jesuit satirist:—

> Farewell, too little and too lately known,
> Whom I began to think and call my own;
> For never were souls more near allied; and thine,
> Cast in the same poetic mould with mine,
> One common note on either lyre did strike,
> And knaves and fools we both abhorred alike:
> To the same goal did both our studies drive,
> The last set out the soonest did arrive.
> Oh, early ripe! to thy abundant store
> What could advancing age have added more?
> It might (what Nature never gives the young)
> Have taught the numbers of thy native tongue;
> But satire needs not these, and wit will shine
> Through the harsh cadence of a rugged line.

Waller too, now in his seventy-ninth year, whom Oldham held cheap as a poet, poured out some weak artificial lines to his memory. The wits of Wills's styled him "the darling of the Muses." Bishop Burnet has called him the lustre of his age. His fame did not die with him, though now he is little read and little known. His poems had reached a seventh edition in 1710—twenty-seven years after his death. Another edition in two small volumes, with many engravings, was published in 1722; and, again, another in three small volumes appeared in 1770, under the injudicious care of Captain Thompson, the eccentric and unskilful editor of Marvell. The Satires on the Jesuits, the chief foundation of Oldham's fame, had neces-arily owed much of their success to the time at which they appeared, in the height of the Popish Plot fury. Their occasional character, and the calm that has come over the bitter religious controversy which Oldham so bitterly treated, will go far to explain why interest in his poems has died away. His other poetry, though creditable and meritorious, has not had sufficient character to stand by itself. The exceeding grossness of Oldham's language in his Satires—not worse, however, than Marvell's—has been in later times a great impediment to the circulation of his poetry. He is not in any way a licentious writer; but he called bad things by bad names; he waged war with a tomahawk against Jesuitry, the vices of monasteries, and the abuses of the confessional. The custom of the times also permitted words which modern delicacy proscribes. Pope, who studied Oldham and acknowledged his power, describes him as indelicate and his satire as Billingsgate. But Pope was a Roman Catholic. There is nothing so indelicate in Oldham as what is to be found in Pope's youthful translations from Chaucer. Pope has suggested that Oldham's not being a man of the world accounts somewhat for his lavish indulgence in gross words; his youth must also be remembered, for he died at thirty. He emerged from quiet diligent private-tutorship to live for a couple of years, until Lord Kingston took him into the country, in the gay dissolute society of the London fashionable wits; and the profligate Rochester was his chief friend. There is a youthful ostentation in his profusion of bad words and his display of newly acquired knowledge of fashionable vices. The two years which he passed in London did detriment to his scanty purse and to his health, never lusty, and for the time to his morals; but late poems of his which remain, and a solemn confession in prose, "A Sunday Thought in Sickness," show that after temporary aberrations he recovered a sound heart and healthy conscience.

Amid late general neglect, Mr. Hallam has given a high estimate of Oldham's powers. He justly ranks him considerably above Marvell as a satirist, and places him near Dryden. An accomplished American critic, Mr. Lowell, has, in his admirable essay on Dryden, suggested that Mr. Hallam's praise of Oldham is because he had not read him. This unworthy imputation is repelled by Mr. Hallam's known conscientious carefulness, and for literature like Oldham's there can be no safer critic. In comparing Oldham with Dryden, the ages of the two poets must be thought of.

---

* *The Poetical Works of John Oldham.* Edited by Robert Bell. Annotated Edition of the English Poets. London: Parker & Son. 1854.

Oldham was but twenty-seven when he published, and was younger when he wrote, his astonishing Satires on the Jesuits. Dryden did not produce his first satire, *Absalom and Achitophel*, until he was fifty. Dryden produced nothing at all till he was twenty-seven, when he wrote his poem on the death of Cromwell, giving little promise of his future fame. If Oldham had lived to prune and polish, to smooth his numbers and soften harsh cadences of rugged lines, what might not have been expected at fifty from ripened wisdom and regulated power? We are not sure that he has not even more native power than Dryden. If Dryden's satire may be likened to a grand and stately cascade, Oldham's is as a fierce and raging cataract.

We quote some lines, which are an average sample, from the prologue to the Satires on the Jesuits, in which Oldham opens his war:—

> It is resolved; henceforth an endless war
> I and my muse with them and theirs declare:
> Whom neither open malice of the foes,
> Nor private daggers nor St. Omer's* dose,
> Nor all that Godfrey† felt or monarchs fear,
> Shall from my vowed and sworn revenge deter.
>
> * * * * * *
>
> The rage of poets damned, of women's pride
> Contemned and scorned, or proffered lust denied;
> The malice of religious angry zeal,
> And all cashiered resenting statesmen feel;
> What prompts dire hags in their own blood to write,
> And sell their very souls to hell for spite:
> All these urge on my rank envenomed spleen,
> And with keen satire edge my stabbing pen,
> That its each home-set thrust their blood may draw,
> Each drop of ink like aquafortis gnaw.
> Red-hot with vengeance, thus I'll brand disgrace
> So deep no time shall e'er the marks deface;
> Till my severe and exemplary doom
> Spread wider than their guilt, till it become
> More dreaded than the bar, and frighten worse
> Than damning Popes' anathemas and curse.

Dryden's Satires were of a special character, directed against individuals, against Shaftesbury and his political followers, against Shadwell and fellow-poetasters. Oldham followed Horace and Juvenal, and was a satirist of the manners of the time. He has contributed much towards Lord Macaulay's well-known description of the domestic chaplain of the seventeenth century:—

> Some think themselves exalted to the sky
> If they light in some noble family,
> Diet, an horse, and thirty pound a year,
> Besides the advantage of his lordship's ear,
> The credit of the business and the State
> Are things that in a youngster's sense sound great.
> Little the inexperienced wretch does know
> What slavery he oft must undergo,
> Who, though in silken scarf and cassock dressed,
> Wears but a gayer livery at best;
> When dinner calls, the implement must wait
> With holy words to consecrate the meat;
> But hold it for a favour seldom known,
> If he be deigned the honour to sit down.
> Soon as the tarts appear, Sir Crape, withdraw,
> These dainties are not for a spiritual maw;
> Observe your distance, and be sure to stand
> Hard by the cistern with your cup in hand;
> There for diversion you may pick your teeth,
> Till the kind voider‡ comes for your relief.
> For mere board wages such their freedom sell;
> Slaves to an hour and vassals to a bell;
> And if the enjoyment of one day be stole,
> They are but prisoners out upon parole.
> Always the marks of slavery remain,
> And they, though loose, still drag about their chain;
> And where the mighty prospect after all?
> A chaplainship served up and seven years' thrall,
> The menial thing, perhaps, for a reward
> Is some slender benefice preferred;
> With this proviso bound, that he must wed
> My lady's antiquated waiting-maid,
> In dressing only skilled and marmelade.

A stanza from Oldham's "Ode on St. Cecilia's Day," in which he preceded Dryden by several years, will give a specimen of another style of his poetry:—

> Music's the cordial of a troubled breast,
> The softest remedy that grief can find;
> The gentle spell that charms our care to rest,
> And calms the ruffled passions of the mind.
> Music does all our joy refine,
> It gives the relish to our wine;
> 'Tis that gives rapture to our love,
> And wings devotion to a pitch divine;
> 'Tis our chief bliss on earth, and half our heaven above.

The chief interest of Oldham's poems is now historical; for the drawing-room, and for ladies who are not philosophers, they cannot be recommended. But the student of the manners and literature of the times cannot dispense with them, and their merit is sufficient to require an adequate supply for English gentlemen's and public libraries. In 1854 Mr. Robert Bell conceived the idea of republishing Oldham in what he called "a revised and carefully annotated edition of the English poets." The series was a lamentable failure. Mr. Bell, though skilful in writing biographical sketches, was without scholarship, and without critical knowledge of English language and verse; and his texts, though much vaunted, are, from ignorance and gross negligence, singularly faulty. His edition of Oldham furnishes abundant proof of this statement. *Groat* is printed for *goat* in the following couplet:—

> Those who did first in tragedy essay,
> When the vile goat was all the poet's pay.

Carthaginian is printed *Carthagenian*. Father Simon, a well-known French writer on divinity, is Father *Simeon*, probably from some confusion with a late Cambridge preacher of the name.

> Discourse all Reynolds *and* the Passions through

is Mr. Bell's change from "Reynolds *on* the Passions." Dr. Reynolds, Bishop of Norwich, was author of a treatise on the Passions and Faculties of the Soul of Man. *Strangury* is printed *stranguary*. *Through* and *thorough* were used in Oldham's time indiscriminately; but Mr. Bell must needs substitute, in violation of metre, *thorough* for *through* in this line:—

> Give me your through-paced rogue who scorns to be.

Sheriff and *sheriffalty* were Oldham's words, the accent being on the syllable *iff*, and the *e* of the first syllable all but elided in pronunciation. With this caution, the two following lines of Oldham sound all right:—

> Whether for sheriff he has been known to pine,
> And all the under-sheriffalties of life not worth a name.

But Mr. Bell prints *shrieve* and *under-shrievalties*. *Prentice* and *complice* were the current words for *apprentice* and *accomplice*. Mr. Bell, where he can, turns *a prentice* and *a complice* into *apprentice* and *accomplice*; and where there is not the *a* to help him, puts an apostrophe before *prentice* (*'prentice*). Similarly he puts an apostrophe before *scape*, the word of that day, thinking that it must be an abbreviation of *escape*. Oldham, warning a poor poet of his bitter end, writes:

> Mayst thou go on unpitied till thou be
> Brought to the parish-badge and beggary.

Mr. Bell changes *parish-badge* to *parish-bridge*. *Courtesy* he must turn into *courteousness*. *Common-shore*, the spelling of the time, he alters to *common-sewer*; the pronunciation *shore* is not extinct; it here fits the rhyme:—

> The common-shore
> Where France does all her filth and ordure pour.

Mystery, the obviously correct word, is turned by Mr. Bell into *mastery* in the following passage:—

> One of the meanest workmen in the town
> Can imitate the nails or hair in stone,
> And to the life enough perhaps, who yet
> Wants mystery to make the work complete.

We cannot conceive why Mr. Bell should have turned *inhabitant of* into the clumsy *inhabiter to* in the following lines:—

> Hail Thou, the world's Redeemer! whom to free
> From bonds of death and endless misery,
> Thou thought'st it no disdain to be
> Inhabitant of low mortality.

We have probably given instances enough to prove our assertion. Mr. Bell specially stated in the preface to his Oldham that "the text, which in all former editions is full of errors and corruptions, has been carefully revised throughout." There lies before us one of the earlier editions—the sixth, of 1703—with a fine engraving of the poet by Van der Gucht, with large type, on stout paper, and of goodly small octavo form, which, subject only to some slight printer's errors, has a good text. The question of *Bowdlerizing* Oldham is a delicate one; but Mr. Bell has boldly Bowdlerized, and with very questionable discretion. After all, those who wish to study the real Oldham must study him as he is; virgins and boys must leave him alone. All will probably say that Mr. Bell was too squeamish in changing these lines in Oldham's imitation of the Ninth Satire of Horace's First Book:—

> "Come, let us take a bottle." I cried, "No!
> Sir, I am in a course, and dare not now."

To be in a course of medicine does not seem so indecent; but Mr. Bell thought right to substitute *Sir, I'm an invalid*, forgetting probably that this substantive use of *invalid*, a later importation from the French, was not known to Oldham. If Oldham's works should ever be reprinted to take their place among classics with the works of Butler, of Dryden, of Marvell, of Popo, of Prior, and of Swift, it is to be hoped that Mr. Bell's ways of change will be avoided. One instance, by the way, of his bad editing has been omitted. In Oldham's poem to the memory of Charles Morwent there is a puzzling word:—

> Anguish through every member flies,
> And all those inward gemonies
> Whereby frail flesh in torture dies.

Gemonies is a word used by some of Oldham's predecessors for torments—derived, it need not be said, from the *scalæ gemoniæ*, the stairs of groans, by which criminals of Rome were hurried from prison into the Tiber to a drowning death. Ben Jonson uses it; Cleaveland uses it. Mr. Bell, of course, knew nothing of the Latin word; he may have thought *gemonies* an indecency. He cut the Gordian knot by substituting *agonies*.

FREEMAN'S SKETCH OF EUROPEAN HISTORY.*

THIS is a wonderful little book, a miracle of compression as of clearness, of learning as of plainness of speech. As we gather from the preface, it is intended to serve as the introduction to a series of special Histories of the principal European countries, which will aim at putting forth "clear and correct views of history in simple language and in the smallest space and cheapest form in which it could be done." As far as size and cheapness are concerned the present work certainly justifies the pledge of its preface. A summary of the history of the civilized world is not dear at three shillings, nor is it long when summed up in three hundred and sixty pages. The language is "simple" in the best sense, familiar without degenerating into talkee, and preferring (sometimes a little oddly perhaps in point of effect) the common word for a thing to the high-flown phrase which is generally considered suitable to the dignity of history. The clearness of exposition which is one of Mr. Freeman's greatest gifts is shown in this little book at its best. The restriction of size has in fact told advantageously on its writer's style; he has not been tempted by space, as in his larger work, into occasional fits of rhetoric or repetition. On the contrary, he is throughout terse and vigorous, rapid in movement, and clear and lucid in expression. One of its greatest merits as a book for schools is that there is no mistaking throughout what its writer means. He has realized, what so few writers of school books realize, that boys and beginners need for a start in any branch of knowledge simply clear ideas put in clear words. No doubt a great reformation has been brought about of late in this respect, but the reformation has sprung from the simple fact that school books have at last begun to be written by men who are really masters of their subjects. Mr. Freeman's success proves, as that of Professors Huxley and Tyndall proved before, that learning of a high order is pretty sure to express itself in a clear and simple way.

It is the special work of an introductory sketch of this kind to lay down the "main principles" which, in Mr. Freeman's phrase, are to be "taken for granted" in the works which follow, and to define the general lines of historic treatment to which the after Histories will have to conform. We have to go a very little way in the work before we see what some at least of these "main principles" are likely to be. Here, as in his *Old English History for Children*, Mr. Freeman at once dismisses the traditional mode of teaching history as if it were a set of indubitable facts dropped straight down from heaven. From the first his reader is made to regard it simply as an account of the past which is founded on just such evidence as we require for the establishment of any fact in the present, and to bear in mind that its certainty and fulness must vary with the fulness and certainty of the evidence on which it rests. It is so wonderfully difficult to get these simple truths into men's heads that one can hardly begin too early; but there is another reason for especially insisting on them in a school book such as this. History has been so recently introduced into our educational course that teachers have hardly yet learned in what its educational value really consists. It is so easy to regard it as means of enforcing "moral lessons"—that is to say, whatever conclusions the teacher himself has a fancy for—that its use as a means of training the mind to estimate the real worth of evidence and the real correspondence of statements with the facts on which statements are based is too generally forgotten. It is clear, at any rate, that the establishment of the principle of evidence will spare learners a vast deal of unlearning. When Mr. Freeman places the beginning of "trustworthy" Greek history at the Persian wars, or the beginning of "trustworthy" Roman history at the Gaulish Invasion, he no doubt runs counter to ordinary school books. But a boy who thus learns at once to distinguish between what is "trustworthy" and what is not will not have first to fill his head with a world of legendary rubbish in the belief that he is learning history, and then, in the same belief, to set about the task of getting the rubbish out of it again. If the new historical method, however, rejects much that has hitherto been taught, it must be remembered that it introduces much that has never been taught at all. The ablest and the most interesting part of Mr. Freeman's little work lies at its very opening. He seizes, as the foundation of his book, the unity which has been given to European history by the linguistic discoveries of modern times. In a few clear pages he parts off the Aryan race from its rival families of mankind, follows its migrations eastward and westward, and by an ingenious application of geography shows how the physical characteristics of Europe determined the relative development of its various branches as they settled in their historic bounds:—

> A glance at the map will show that of the three continents which form the Old World, Europe, Asia, and Africa, the first two are far more closely connected with one another than either of them is with the third. Africa is a vast peninsula—in our own day indeed it may be said to have become an island—united to the other two by a very narrow isthmus. But Europe and Asia form one continuous mass, and in some parts the boundary between the two is purely artificial. Some maps, for instance, make the Don the boundary; others make it the Volga. The most northern and the most central parts of Europe and Asia form continuous geographical wholes; it is only the southern parts of the two continents which are quite cut off from one another. And it is on these southern parts of each that the earliest recorded history, at all events the earliest recorded history of the Aryan nations, begins. Central Europe and Central Asia form one great solid mass of nearly unbroken territory. The southern parts of each continent, the lands below these central masses, consist of a series of peninsulas, running in the case of Europe into the great inland sea called the Mediterranean—the sea which brings all three continents into connexion—in the case of Asia into the ocean itself. Europe then consists of a great central plain, cut off by a nearly unbroken mountain-range from a system of islands and peninsulas to the south, which is again balanced to the north by a set of secondary system of islands and peninsulas, the Baltic being a sort of northern Mediterranean. We might almost say the same of Asia, as the mouths of the great rivers which run to the north form several peninsulas and inland seas. But then this part of the world has always been, so to speak, frozen up, and it never has played, nor can play, any part in history.

It is only when a geographical picture of this kind is fairly grasped by a beginner that he really understands the course of history—the successive seizure of the southern peninsulas of Europe by the advancing Aryans, the priority of Greek civilization to that of Italy, or the late date at which the historical importance of central and northern Europe begins. But we have quoted it not merely as a specimen of intelligent teaching, of the teaching which counts on something more than mere memory and parrot work in the learner—the converse, in a word, of the sort of teaching which has hitherto dished up history as a mere jumble of so-called "dates and facts," and made it of all his studies the most tedious and hateful to a schoolboy—but as a specimen of the vast store of new material which the critical method, while robbing him of his "legends" and "pretty" stories, places at the command of a teacher of history.

If Mr. Freeman finds a centre of ethnographical unity in the Aryan race, he finds a centre of political unity in Rome. "Through the whole of our sketch," he says at its opening, "we must be ever thinking of Rome, ever looking to Rome, sometimes looking forward to it, sometimes looking back to it, but always having Rome in our mind as the centre of the whole story." The common division of the subject into "Ancient" and "Modern" History, in spite of the sanction which Mr. Gladstone has recently attempted to give it in an Act of Parliament, is silently brushed aside for a threefold division of a very different sort—namely, the history of the States out of which the Roman Empire was formed, of the Empire itself, and of the States which arose out of the breaking up of the Empire. Of these the first portion is the least complete. By the limitation of his sketch to European history Mr. Freeman escapes the necessity of dealing with Egypt or Assyria, but, however convenient such a limitation may be, it can hardly be regarded as historical. The influence of Egypt, at any rate, as the first instance of a really organized State, on the later destinies of the world, can have hardly been less than that of Phœnicia, and Mr. Freeman has devoted one of his most charming pages to the Phœnicians. The political life of Greece, on the other hand, is admirably realized:—

> The Greeks with their many small States were the first people from whom we can learn any lessons in the art of politics, the art of ruling and persuading men according to law. The little commonwealths of Greece were the first States at once free and civilized which the world ever saw. They were the first States which gave birth to great statesmen, orators, and generals who did great deeds, and to great historians who set down their great deeds in writing. It was in the Greek commonwealths, in short, that the political and intellectual life of the world began.

But it is not till he reaches Rome that Mr. Freeman is at his best. He grasps boldly and at once the continuity of its history as the thread on which to string the history of the world:—

> This [he says of the rule of Augustus] is the beginning of the Roman Empire, but the rest of the history of Europe is the history of the Roman Empire in one shape or another, and we shall see that the title of Roman Emperor went on almost to our own times. The first Emperor then was Caius Julius Cæsar Octavianus, and we may count the Empire as beginning in B.C. 27, when he received the title of Augustus. The last Emperor was Francis, King of Germany, who gave up the Empire in A.D. 1806. The differences between the early and the later Emperors we shall see as we go on, but there was a continuous succession between them without any break.

We may perhaps demur to the title of "the Heathen Empire," which Mr. Freeman gives to the period before Constantine, but he has brought finely out the Roman character of Christianity itself:—"Christianity has hardly anywhere taken firm and lasting root except in those countries which either formed part of the Roman Empire or learned their religion and civilization from it, and from this time the history of the Church and of the Empire go together." We may note, as characteristic of the way in which old blunders are quietly set aside, the mode in which the "Close of the Western Empire," so famous in the pages of Gibbon, is reduced to its true proportions:—

> In 476 the succession of the Western Emperors came to an end, and the way in which it came to an end marks the way in which the names and titles of Rome were kept on while all power was passing into the hands of the Barbarians. The Roman Senate voted that one Emperor was enough, and that the Eastern Emperor Zeno should rule over the whole Empire. But at the same time Zeno was made to entrust the government of Italy, with the title of Patrician, to Odoacer, the chief of a German people called the Heruli. Thus the Roman Empire went on at Constantinople, or New Rome, while Italy and the Old Rome itself passed into the power of the Barbarians. Still the Roman laws and names went on, and we may be sure that any man in Italy would have been much surprised if he had been told that the Roman Empire had come to an end.

We have the same clear grasp of this central fact of the Empire through the later times of Otto and the German Cæsars, while the story of the Eastern Empire is restored to something of its real importance. We could have borne, however, a little more of this; indeed we should not have grumbled if up to the capture of Constantinople the two Empires or divisions of the Empire had been kept side by side as common centres of Christendom, rather than the Eastern thrown into the background. From the end of Frederick II.'s reign the imperial unity of European history is lost, and with it

---

* *General Sketch of European History.* By E. A. Freeman, D.C.L. London: Macmillan & Co. 1872.

we lose much of the clearness and definiteness which has up to this point marked Mr. Freeman's sketch. His "centre" is no longer central; Italy, as he confesses, now becomes "the centre of Europe," and though the revolution of the fourteenth and fifteenth centuries, the rise of intelligence, commerce and nationality, is told with a good deal of vigour, the old unity of treatment disappears. The three chapters in which Mr. Freeman has condensed the history of Europe from the close of the middle ages to the French Revolution indicate in their very titles. "The Greatness of Spain," "The Greatness of France," and "The Greatness of Russia," an "outerness" of view which stands fatally in the way of a real grasp of the times. The truth is that events grouped themselves round ideas rather than round this State or that, and that religious, political, and intellectual freedom are the three points in which the history of the three centuries finds its centre. Nothing proves this more clearly than the case of the eighteenth century. Within the bounds of Europe the only great political upgrowth, so far as the map goes, was that of Russia; but whatever may be its after results, Russia has not as yet influenced European history in any considerable degree. Whether we are right or wrong, however, in our judgment of the cause, it is certain that, in spite of great fulness and accuracy of detail, Mr. Freeman gives us no such clear notion of the new world of European history as he gives us of the old.

But whether in the modern or ancient parts of this little sketch, we feel throughout that we are in the hands of an historian. The whole book is a model of historic method. Nothing can be better than the care and precision with which the *voces equivocæ* of history are disentangled from each other, and what people call "natural" blunders guarded against. When, for instance, Mr. Freeman is dealing with Cæsar's conquests, and is stating that the Romans now "first began to have to do with people of our own race," he is careful to add that "our own people, the English, were still in their old land by the Elbe, and Cæsar never came near them." In a host of little phrases we see the difference between a really accurate writer and the mere compiler. When a boy reads that Mary of Scotland was "kept in *ward* for many years," he would note the phrase, and escape a very natural blunder about the character of Mary's detention. So in the admirable account of the Swiss League common errors on the subject are simply prevented by the quiet sentence which describes it as "one of the many German leagues which circumstances allowed to become more independent than the others, and, as it turned out, to survive them." The book is no doubt weakest on the intellectual and moral side of history. There is always a touch of reluctance and of coldness in the way in which Mr. Freeman approaches literary or artistic or religious matters which makes his touch uncertain and vague. When a boy hears that "more learning and science flourished as they had never flourished before" after the conquest of Macedon, he may gladly ask for a more exact description of the additions to human knowledge which the world owes to Aristotle and Alexandria. The same inadequate style of statement sometimes results from Mr. Freeman's endeavours to avoid the shoals of theology. "In England," he tells us, "John Wycliffe, a doctor of Oxford, had written against many things in the received belief and practice of the times, especially against the begging Friars, that is, the Dominicans and Franciscans who professed to live on alms." Had this been the "special" point of Wycliffe's teaching, one hardly sees why he should have been more heretical than the Archbishop of Armagh or a hundred other orthodox opponents of the Friars. We hardly see, too, why, when Wycliffe is mentioned, all mention of Savonarola should be omitted. Florence, in fact, fares a little badly. We are no lovers of the Medici, but to say that "in the later days of Florence there were no men like Dante" is to leave out a figure quite as great, the figure of Michael Angelo. We take Mr. Freeman's steady use of the right names of people to be one of the best points of his book, but these again are wavering when we cross the Alps. "Jane I." and "Jane II." of Naples are hardly known by those titles in Neapolitan history, and if, as is possible, the intention was to point out that these princesses were not Neapolitan, but Angevin, "Jane" is hardly more Angevin than Neapolitan. From the sin of allusiveness Mr. Freeman is freer in this little book than in any of his other writings; still, in his ebullition of wrath when "the Turkish fleet was actually brought by the Most Christian King into the waters of Italy and Provence," a beginner could hardly be expected to recognize Francis I. in the title which points the sneer. The simplicity of the style is here and there a little forced and pedantic. When we hear that the Parthenon was "broken down" in 1684, we hardly realize that it was in fact "blown up;" and we doubt the grammatical correctness of such a sentence as, "A state which does this can never hold up for good against one which uses native armies." In such a phrase, too, as "Antonius did nothing great, for he was utterly bewitched by Kleopatra," the style fairly topples over from simplicity into archaic affectation. "But" and "now" are far too thickly sprinkled over Mr. Freeman's pages in this as in his other books. We point out flaws of this minute order simply because graver faults are wanting. The exactness of the book is wonderful. We pause indeed at the statement that Venice "had gradually become quite independent as it was now," in 1201; but the question is a difficult one, and there is something novel and refreshing in running over three hundred pages of a school history with the detection of hardly a single error. What it wants to make it complete is a sketch map attached to every chapter, and a revision of the summaries at the close of each, some of which appear to us the weakest things in the book. If we have passed without notice over some of the digressions which are scattered over its pages, it has not been from any mistake as to their merit. Such an excursus as that on the Romance tongues, or that on the bearing of language on the early European literature, are models of the brief treatment of great subjects. The special merit of the book, in fact, lies in this—that while simple enough for the boy learner in our schools, it contains a mass of information from which the most advanced historical students will find much to glean. We can only hope that the after volumes of the series will fulfil the promise of this introductory "Sketch."

PAUL'S *FAUST*.*

As the Iliad and Odyssey are the great representative poem of the Greek heroic age, so *Faust* may be considered the great representative poem of modern European life. Both works are almost impossible to translate, and both have a wonderful fascination for translators. Already the translations of *Faust* bid fair to be as numerous as the translations of Homer, notwithstanding that the worshippers of Homer had the start of the worshippers of Goethe by full two centuries. In both cases, too, a somewhat similar progressive development may be observed in the aims and ambitions of those who undertake the work. The authors of the earlier attempts are satisfied with producing an effect sufficiently like that of the original to convey a fairly correct general notion to the reader who relies on the translation alone; they pay comparatively little attention to the details of interpretation, and still less do they concern themselves to follow the particular form and structure of their text. Succeeding translators, however, gradually come to take a stricter view of their office. They set themselves to reproduce the work for foreign readers, not merely in its features of general interest, but in its national and artistic individuality: instead of filling in the outline according to the genius of their own literature, they strive to present an image full and exact at all points. The difficult constructions and unfamiliar forms which their predecessors thought it allowable to evade or soften are now regarded as an integral part of the thing to be rendered, which it would be an abandonment of duty not to cope with. And at last it may so fall out that the interpreter is carried away by his zeal for literal fidelity even to forgetfulness of his first duty, which is to make himself understood. There is much Homeric translation executed by very competent scholars which is all that could be desired but for one defect—that, whatever else it may be, it is not English verse. The translations of *Faust* have not yet arrived at this extreme, but they are quite past the primitive stage marked by the other extreme, and for the future we may expect them to err rather by straining after an impossible adherence to the very words of the poet than by wandering into diffuseness. This is at once apparent when we compare Anster's spirited paraphrase of *Faust*—still the English version in which the first part of Goethe's tragedy is most commonly known—with Mr. Bayard Taylor's elaborate work, or with Mr. Paul's volume now before us.

There is no question but that the later fashion of translating is preferable to the older, if the result is judged either from the purely artistic point of view or by the help afforded to those who wish to use the translation as a commentary on the original. It is perhaps not so certain that the literal method now prevailing makes any material difference—at least any difference so material as to be in itself worth the additional toil and trouble—to the class of readers whose wants a translator is presumed chiefly to contemplate; those, namely, to whom the mother-tongue of the book is unknown. Indeed any determined preservation of the letter in a shape to them strange, and perhaps unwelcome, may be a positive hindrance to their entering into the spirit of the author. At all events the most popular translations have, as a fact, belonged to what we may call the pre-scientific class. As to *Faust*, we entertain a belief which may be deemed a very shocking heresy by orthodox German culture; but, having weighed the consequences, we are nevertheless deliberately of opinion that the right way for an Englishman to know something of *Faust*, if he cannot see the play acted in German, which is the best way of all, or read it in German, which is the next best way, is to take his first impression from Gounod's opera. The superficial ornaments of the piece do no justice to the dramatic insight and sympathy of the composer, which are the more felt the oftener the work is heard. And when M. Faure plays Mephistopheles, whoever has seen him has seen the very Mephistopheles of Goethe. Next to this, our advice would be to go to Mr. Bayard Taylor's version, which was noticed at some length in this journal at the time of its appearance. It is on the whole wonderfully successful in combining accuracy with freedom and beauty of language; it preserves the original metres with great exactness; it has the advantage—to our mind a considerable one—of comprising the Second Part; and its notes, though of some bulk, are an addition which no careful reader of *Faust* will be inclined to call superfluous. There may, however, be those who are alarmed at the proportions of Mr. Bayard Taylor's work, and would rather take their chance of obscurities than accept a poem laden with the apparatus of criticism; and such less patient readers will find in Mr. Paul's new contribution a rendering closer and not less readable than is given by any of his rivals except Mr. Bayard Taylor, who is not likely to be disturbed yet

* *Faust*. A Tragedy, by Goethe. Translated in Rime, by C. Kegan Paul. London: King & Co. 1873

awhile in the supremacy which he has fairly won. It is difficult, and perhaps hardly justifiable, to speak with confidence from the impression produced by comparing a translation step by step with the original and with other translations. The only way in which a really complete and satisfactory opinion might be formed would be for the critic to tell off one half of his brain to forget all about the existence of an original, and read the book through simply as an English poem, while the other half looked after the analytical and comparative department of the task. Unfortunately science has not yet made any such division of labour possible; and instead of getting two distinct results of two processes, we have to find our way to a sort of mixed conclusion as best we can. We may at once state our conclusion in this case before going into any details. Mr. Paul is a zealous and on the whole a faithful interpreter, though his power now and then falls obviously short of his will—which perhaps amounts to no more than saying that a translator cannot expect to be Goethe's equal. He aims at an exactness as nearly literal as may be, translating line for line; accordingly he is best in sustained and continuous scenes, not so happy in the more abrupt flights of poetry, and least successful in the songs and other pieces to which the literal method is not fairly applicable.

It will be juster, we think, to take an extract from a comparatively unconspicuous place to show the general execution of the work than to select any of the most renowned and most difficult passages. We choose the soldiers' song and Faust's speech to Wagner immediately following it, in the early scene before the gate:—

SOLDIERS.

Cities that tower,
Walled o'er the plain,
Maidens with haughty,
Scornful disdain,
These would I gain!
Keen is the struggle,
Lordly the pay!

Rings out the bugle,
Rousing us all,
Whether we conquer,
Whether we fall.
That is a storming!
That is a life!
Cities and maidens
Yield in the strife.
Keen is the struggle.
Lordly the pay!
Soon are the soldiers
Up and away.

FAUST *and* WAGNER.

FAUST.

The rivers and streams are freed from ice
Through the springtide's bright and quickening glow;
Green buds of hope in the valleys blow;
Old winter away in his weakness hies
Back to the rude hills from below.
Thence, in his flight, he only hurls
In streaks over the greening plain
A harmless scatter of icy pearls,
The sun in his scorn dissolves again;
Everywhere rises motion and form,
All with colour is quick and warm;
Though no flowers are in the field,
Men in their best the tints can yield.
Turn yourself round, and from the height
Back to the city direct your sight.
Out of the dark and hollow portals
Presses a varied swarm of mortals;
They sun themselves gaily with one accord,
And greet the arising of the Lord:
* * * * *
The village revel rings loud and clear;
The paradise of the people is here,
Both old and young are glad and gay;
I dare be Man with them to-day.

We subjoin part of Mr. Bayard Taylor's version for comparison:—

SOLDIERS.

Castles, with lofty
Ramparts and towers,
Maidens disdainful
In Beauty's array,
Both shall be ours!
Bold is the venture,
Splendid the pay!

Lads, let the trumpets
For us be suing,—
Calling to pleasure,
Calling to ruin.
Stormy our life is;
Such is its boon!

Maidens and castles
Capitulate soon.
Bold is the venture,
Splendid the pay!
And the soldiers go marching,
Marching away.

FAUST.

Released from ice are brook and river
By the quickening glance of the gracious spring;
The colours of hope to the valley cling,
And weak old Winter himself must shiver,
Withdrawn to the mountains, a crownless king:
Whence, ever retreating, he sends again
Impotent showers of sleet that darkle
In belts across the green o' the plain.
* * * * *
Out of the hollow, gloomy gate,
The motley throngs come forth elate;
Each will the joy of the sunshine hoard,
To honour the Day of the Risen Lord!

Our opinion that ballads do not admit of close translation will be justified, we think, by reference to Margaret's songs. Both in the *King of Thule*, and in the unapproachable *Meine Ruh ist hin*, we rather prefer Mr. Theodore Martin's version to any other; for his manner of treatment, which is to be graceful and poetical without very strict verbal accuracy, is in these instances the only right and practicable one; and Mr. Paul, and even Mr. Bayard Taylor, unwilling to give up any part of the letter, are baffled in their efforts to do justice to the letter and the spirit at once. The opening of the Dedication, as rendered by Mr. Paul, may be added as a further specimen of his handling:—

As once ye passed before my troubled sight,
Again ye near me forms who come and go!
Shall I attempt to-day to clasp you tight?
Feel my heart bent to each delusive show?
Ye press me close! So be it; put forth your might,
Who out of cloud and vapour round me grow;
The magic breath which waves about your train
Brings youthful tremors to my breast again.

Ye bring the pictures of a happier time,
Many dear shadowy visions round me move;
And like an old and half-recited rime,
Friendship returns with you and early love;
And pain grows fresh, my grief renews the prime
Of life perplexed like labyrinthine grove,
Naming those dear ones, who, in fair days done,
Found not the joys they hoped for, and are gone.

In one way indeed these lines are not a fair test, for they contain two slips in one stanza, which is by no means according to the average of the work. We cannot tell how "half-recited" comes to stand for *halbverklungnen*, nor what a "labyrinthine *grove*" has to do with *labyrinthisch irren Lauf*. The exigency of the metre is not enough to justify the intrusion of a foreign idea which almost seems to have been unconsciously suggested by the resemblance in sound of *Lauf* and *Laube*.

We must not leave Mr. Paul's book without giving him due praise for one thing, which, though it is only collateral to the merits of his translation, deserves to be specially mentioned. He has the courage to spell *rime* throughout as it ought to be spelt, and as it may perhaps yet be spelt some day if a few more writers will run the risk of being thought eccentric in the cause of the English tongue.

PROFESSOR BLACKIE ON ACCENT AND QUANTITY.*

WE were very near framing a most hopeless wish—namely, that we could become young again and go and learn Greek in Professor Blackie's class at Edinburgh. At any rate we wish that we could somehow get over that mysterious law of our corporate being which drives us to judge of things by the eye only as they show themselves on paper. We want to hear Professor Blackie at least read Greek; if he could be got to sing it, it would be better still. By the Professor's account of himself he has in his own person solved the great problem, and has found out how to pronounce Greek without neglecting either the accent or the quantity. This, as some of our readers may know, is a thing which we have been long striving after. We have always held that our received pronunciation, which pays no regard to accent, and the modern Greek pronunciation, which pays no regard to quantity, can neither of them be the right thing. It is quite impossible to believe that two such elaborate systems as the Greek quantity and the Greek accent can have existed side by side simply for one or the other of them to be taken no notice of. Of course the great difficulty is to know how to attend to either without sacrificing the other to it. Now we had always fancied that Mr. Blackie had altogether thrown in his lot with the modern Greeks, that he read only by accent, and paid no heed at all to quantity. In this we find we were mistaken. The modern Greeks, according to him, are right in so far as they attend to accent, wrong in so far as they do not attend to quantity. Or perhaps, if we understand Mr. Blackie aright, it might be more correct to say that their mistake lies in so attending to accent as to make it the same as quantity, in making every accented syllable long, and leaving every unaccented syllable short. We, on the other hand, in reading Greek, do not scruple to lay the accent on a long unaccented syllable for fear of leaving it short, and to leave a short accented syllable unaccented for fear of making it long. That is to say, our mistake and that of the modern Greeks are really the same; both start from a hidden belief that accent and quantity are the same thing. It is something like the old doctrine of *feræ naturæ*, from which the English Law has inferred that there ought to be Game-laws and the Civil Law has inferred that there ought to be none. But Mr. Blackie tells us that it is quite possible to pronounce Greek, and that he himself does pronounce Greek, in such a way as to avoid either of these wrong inferences, because he avoids the wrong assumption from which both of them start. Accent is accent, and not something else; that is to say, it really is a stress laid on the accented syllable. But according to Mr. Blackie, this stress, though it may lengthen the syllable somewhat, does not lengthen it so much as to make it

* *On the Place and Power of Accent in Language.* By J. Stuart Blackie. Edinburgh: Printed for the [Royal] Society [of Edinburgh] by Neill & Co. 1871.

a long syllable. Still less does the fact that a long syllable is unaccented make it a short syllable. About this last there can be no doubt. Any one who can say *grándfather* and *hóndhólder* can, if he chooses, say ἄνθρωπος without falling either into ἄνθροπος or ἀνθρῶπος. This we have often said before. Our difficulty has always lain on the other side—how to say σοφία without making the ι long. But Mr. Blackie says that this can be done also. And, after several efforts, we are inclined to think that it can. To be sure, with us it needs a good deal of effort to do it. But very likely it might be otherwise if we had been taught by Mr. Blackie from the beginning. And very likely it might be otherwise even now if we had the opportunity of hearing Mr. Blackie utter a good deal of Greek. Still we think that the effort must always have been something of an effort, and that it is to the fact that it always was something of an effort that the whole later history of the matter is owing.

Mr. Blackie reminds us of what we have often heard before, that the greater part of the changes in language, phonetic decay and the like, are really owing to mere idleness. Men will not take the trouble to utter in full a sound which it needs some little effort to utter. All manner of nice distinctions thus get wiped out, and the four distinct sounds of *rite, write, right,* and *wright* all come to be uttered alike. The fact is undoubted, but it suggests some curious speculations as to the state of mind of those men of earlier times who did not feel any dislike to the trouble of uttering everything in full. And this question is only part of another—namely, how men went on for ages instinctively obeying elaborate rules about inflexions and the like, rules so elaborate, and enjoining forms so full, that what we get in any form of written Greek or written Teutonic comes to little more than traces and survivals. But, however this may be, the fact of the idleness of succeeding generations of men in most parts of the world with regard to the utterance of sounds is beyond all doubt. And it is doubtless owing to this cause that accent supplanted quantity as the rule of verse both in Greek and in Latin. That is to say, instead of going through the subtle process which was needed to keep a short accented syllable from becoming long, or to keep a long unaccented syllable from becoming short, men found it less trouble to let the accent determine the quantity, to let all syllables on which the stress came be long, and not to trouble themselves particularly whether those on which the stress did not come were left long or short. Thus we get the accentual metres which supplanted the quantitative metres both in Greek and Latin. We say in Latin as well as in Greek, because the natural Latin metre through the whole of the middle ages was that accentual metre which sounds so much like a revival of the old Saturnian. Men went on writing hexameters and pentameters, but it was as a learned exercise, just as men write them now. Anything that was meant to be popular was accentual, whether it was written in Latin, English, or French. In Greek, we need not say, the metres which depended on quantity went out of use altogether, and the στιχοι πολιτικοι and metres of the same kind became universal. Our own notion is that purely accentual pronunciation came in very early, and that poems like the hexameters of Nonnus were a mere learned exercise on the part of men whose common pronunciation went wholly by accent. We need not to prove that till the sixteenth century all people in all parts of Christendom who knew any Greek at all sounded it as the Greeks did—that is, without any regard to quantity, or, in more accurate speech, making accent to serve as quantity. Then came the reaction in favour of quantity which began with Erasmus, of the whole literature of which Mr. Blackie has given a very valuable and interesting summary. The main point is that Erasmus did not at all want people to neglect the accent, but only to attend to the quantity as well. That is what Mr. Blackie wants us to do now. Erasmus himself complains of the dulness and carelessness of those who, because they were called on to attend to the quantity, immediately began to pay no attention to the accent. That is to say, the difficulty of attending to both at once was again felt, and, as the Greeks themselves had ages before sacrificed the quantity to the accent, so now Greek scholars in the West sacrificed the accent to the quantity. It was too much trouble to remember to say ἄνθρωπος, so, when they were told to leave off saying ἄνθροπος, they took to saying ἀνθρῶπος. Mr. Blackie goes through a long list of writers, some of them quite strange to us, who have treated the subject at different times between Erasmus and our own days. Meetkerche, late in the sixteenth century, wrote complaining of the density of those who could not reconcile the accent and the quantity; but at the same time he seems to have thought that it was a bad job, and that it would be better to give in, for a while at least, to the new fashion of attending to quantity only. Then at the latter end of the seventeenth century came Isaac Vossius and Hennin, who argued, not as a matter of expediency, but as a matter of principle, for getting rid of the accents altogether. But Hennin bears a most important testimony to the fact that the accentual pronunciation is still in use in his time, when he proclaims "Graecam linguam secundum accentus, ut vulgo ab omnibus huc usque fieri consuerit, pronunciandam non esse." So at Cambridge in Bentley's time there were still men who sounded Greek by accent, though all the remark which so important a fact calls out from Bentley's biographer Bishop Monk is that they must have made some strange false quantities. Then comes Wetstein, in answer to Hennin, and Bentley himself on the same side as Hennin. Then came in England Gally, Foster, and Primatt—names we confess with shame hitherto unknown to us, but the last of whom must have been a very remarkable scholar in 1770. But the most remarkable thing of all was the anonymous work of Bishop Horsley in 1796. He saw one fact which we have ourselves noticed before now, and which Mr. Blackie also insists on—namely, that what we call reading Greek by quantity is really not reading it by quantity. In the Bishop's words as quoted by Mr. Blackie:—

> A practice is adopted in this country of reading Greek verse with the Latin accent, and this is most absurdly called reading by quantity; and having adopted this strange practice of reading one language by the rules of another, it is not unnatural that we should wish to prove the practice right.

About the truth of Horsley's saying there can be no doubt; but he might have gone on to say—or perhaps rather he took for granted—that we really read Latin also, not by quantity, but by accent. We read either a Greek or a Latin hexameter so as to keep up a sort of rhythm, but we certainly do not accurately regard the quantity. This is shown by every one feeling a difference between *reading* and *scanning*. In scanning we really do attend to the quantity, and every ear feels the difference. Every ear too is offended by a false quantity, if it carries with it a false accent; but a mere neglect of quantity, if it does not affect the accent, is not felt to be grievous in the same way. A generation or two back men made no difference in reading Greek between the first vowel in πῶλος and that in πόλις, and Mr. Blackie not unjustly rates the schoolmasters who make no difference between *o* in "bonus" and *o* in "nomen," between *a* in "cano" and *a* in "canus." As a rule, in pronouncing Latin, we make the first syllable of a dissyllable long, and the first syllable of a trissyllable short, without any regard to its real quantity. Everybody makes the *o* in "bonus" long; many people make the first *i* in "spiritus" short. Most people make no difference between the *o* in Socrates and the *o* in Isocrates, and it has been shown over and over again that the received way of pronouncing such words as Miltiades and οἰλομένην sins as heinously against quantity as the accentual way. In all these cases quantity is disregarded, because the neglect of quantity does not carry with it any neglect of accent; but the moment the breach of quantity carries with it a breach of accent as well, our ear is offended, and we cry out "false quantity." The man who, without compunction, makes the *a* in "cano" long would shriek if any one made the *a* in "canebam" short; one man may say *spíritus* and another *spiritus*, but both will shriek if anybody calls it *spíritus*. That is to say, the mere quantity, as quantity, goes for a very little; it is only when accent also is sinned against that our ears are really offended But there can be little doubt, as Mr. Munro shows in a passage quoted by Mr. Blackie, that exactly the same process has happened in Latin which happened in Greek, and that a system of accentuation which at first did not affect the quantity has been changed into one which does, so that, under pretence of reading Latin by quantity, we really read it by an accentual system which makes us indifferent to quantity.

The upshot of all this seems to be, that the genuine rhythm of the Greek hexameter must be something quite different from anything we are used to. In all modern languages, including Greek and Latin in their later forms, we know of none but accentual metres. Quantity has no direct share in determining the flow either of an English verse or of that of a Latin verse in the metre of Walter Map. We say direct share, because an English verse which is much clogged up with unaccented long syllables sounds harsh and awkward; though it is not strictly unmetrical. But, in reading the Greek metres we ought to attend to the quantity of every syllable, and not merely to the quantity of those syllables where the Latin accent requires us to attend to the quantity. And we must further attend to the accent of every syllable, and must take care that we do not make an accented short syllable long, or an unaccented long syllable short. We believe that all this may be done; we take for granted that Professor Blackie can do it; but still it is rather hard to do, and we do not wonder that so elaborate a system died out before the simpler accentual metres of later times. In the iambic metre, as Mr. Blackie shows, the opposition between the two ways of utterance does not come out so strongly as it does in the hexameter. What if the iambics of Simonides should really have been the first downward step in the direction of the στιχοι πολιτικοι?

Mr. Blackie's paper or pamphlet bears date in 1871, but our belief is that we have not had it in our hands so long as that date would seem to imply. If it should chance to be otherwise, we can only say "better late than never."

HEROINES OF THE FRENCH REVOLUTION.*

THE contents of this volume fully merit the care which M. Louis de Lasteyrie has bestowed on their translation. Not only are they interesting as biographical sketches, but they have in various ways an historical value. There is an indefinable charm in French notices of family life which is rarely to be found in corresponding works from English pens, however inspired by love or veneration. Homely without being trivial, tender without descending to adulation, they seem to combine greater delicacy of touch with a much juster insight into the limits of sympathy. In addition to this charm, which they exhibit in common with such works as the *Récit d'une Sœur* and others of a similar kind,

* *Lives of Madame de Lafayette and of the Duchesse d'Argen.* Translated by Louis de Lasteyrie. London: Barthès and Lowell.

the memoirs under review have an historical interest of their own. The very circumstances under which the first of them, the memoir of the Duchesse d'Ayen, was written, recall a momentous incident in the history of the Revolution—the denunciation and subsequent flight of Lafayette. "This narrative," says our translator, "was written by Madame de Lafayette in the prison of Olmütz, on the margin of a volume of Buffon, with a toothpick and a piece of Indian ink." Then, too, the fact of the existence of so exemplary a wife and mother as the Duchess of Ayen during the last years of the reign of Louis XV., and in the ranks of the *haute noblesse* of the ancient *régime*, that privileged class whose vices and tyrannies have furnished a text for so much stump oratory, is not without an instructive significance. Of some periods, as of individuals, it may be said that

> The evil which men do lives after them,
> The good is oft interred with their bones.

History, or the picturesque jargon which sometimes calls itself history, has a niche of infamy for a Pompadour and a Du Barry. It is silent as to the virtues of an Ayen and a De Noailles.

But it is from the graphic sketch which it contains of Paris under the Terror that this book derives its chief historical interest. Of all the victims of the iniquitous Revolutionary Tribunal, none are more entitled to excite pity and admiration than the Duchess of Ayen and her daughter. The Duchess was a lady of singular beauty of character, whose whole life had been devoted to the education of her children and to works of piety. But, however blameless, a lady who was by birth a D'Aguesseau and by marriage a Noailles was not likely in 1793 to escape the tender mercies of the Committee of Public Safety. In October of that year she was put under arrest, but allowed to remain well guarded at the Hôtel de Noailles. A strange infatuation would seem to have led the Duchess to remain with her daughter, the Viscountess de Noailles, at Paris, instead of escaping with the Duke to Switzerland, or with her son-in-law to England. This was due partly to a religious motive. "Let us not murmur at the thought," remarks Madame de Lafayette, "that the motives that were constantly attracting them to Paris contributed to prevent them leaving that spot so full of danger for them, but where the faithful never ceased to find the consolations of religion." But they would also appear to have persistently underrated the danger of their situation, in the face too of repeated warnings. In May 1794 they were ordered to quit the Hôtel de Noailles; but, unhappily, some steps which they took with respect to their furniture reminded the authorities of their existence; and, after having been led through Paris from one prison to another, they were at last conducted with the Maréchale de Noailles, the aged mother-in-law of the Duchess, to the Luxembourg. From the Luxembourg there was but one step further—to the fatal Conciergerie. An interesting account of the night spent in this dreadful place by the three ladies who thus represented three generations of the Noailles family, is given by an eye-witness and fellow-prisoner. Arriving late in the evening, they were refused food and beds, being unable to pay the turnkeys the sum of forty-five francs which they wanted to extort from them. Moved by pity, a certain Madame Lavet gave up her bed to the old Maréchale, who slept at intervals, awaking now and then to read over her *acte d'accusation*, and, like a true Frenchwoman, to arrange her dress and settle her cap, utterly unable to realize that that day was to be her last. Madame de Noailles obtained a prayer-book and light, and spent the whole night in prayer, while her mother and grandmother dozed. At six in the morning Mesdames de Boufflers, who were also fellow-prisoners, brought them some chocolate, and bade them an eternal farewell. Three hours later the *huissiers* carried off their victims. Unaccountably sanguine to the last, the two elder ladies made some arrangements for the event of an acquittal. The youngest, who did not doubt of the doom which awaited them, thanked Madame Lavet with the charming manner which was in her a gift of nature, and added, "Votre figure est heureuse, vous ne périrez pas." Their passage to the guillotine is described in great detail by the Abbé Carrichon, a non-juring priest who had been their spiritual adviser, and who had promised, if ever they went to the scaffold, to accompany them thither. This promise it was not easy to fulfil, owing to the throng and the difficulty of approaching the captives. M. Carrichon made repeated attempts to attract their notice by stationing himself at various points on the route of the tumbrils as conspicuously as possible, but in vain. At last accident favoured his kindly efforts. The street was cleared by a sudden thunderstorm, and as the crowd thinned, he found an opportunity to rush forward towards the second cart in which the Duchess and her daughter were seated. The younger of the two ladies perceived him, and whispered the fact of his presence to her mother. As the cart slackened its pace, the Abbé made a sign that he was about to give the prisoners absolution. They piously bowed their heads with a look of repentance, contrition, and hope. Raising his hand, and without uncovering his head, he "pronounced the form of absolution and the words which follow it very distinctly and with supernatural attention." At the foot of the scaffold the carts stopped, and were immediately surrounded by the soldiers. A ring of numerous spectators was soon formed, most of whom were laughing and amusing themselves at the horrible sight. The end of the tragedy may be best told in M. Carrichon's own words:—

> The mother and daughter took a last farewell of each other, and descended from the cart. As for me, the outer world disappeared for a moment . . . I found myself opposite to the wooden steps which led up to the scaffold. An old man, tall and straight, with white hair and good-natured countenance, was leaning against it. I was told he was a *fermier-général*. Near him stood a very edifying lady, whom I did not know. Then came the Maréchale de Noailles, exactly opposite me, dressed in black, for she was still in mourning for her husband. She was sitting on a block of wood or stone which happened to be there, her large eyes fixed with a vacant look. From where I stood I could only perceive Madame d'Ayen, whose attitude and countenance expressed the most sublime, unaffected, and devout resignation. She looked as she was wont to do when she had the happiness of approaching the altar for Holy Communion. . . The Maréchale de Noailles was the third person who ascended the scaffold. . . Six ladies followed. Madame d'Ayen was the tenth. How happy she seemed to die before her daughter! The executioner tore off her cap; as it was fastened by a pin which he had forgotten to remove, he pulled her hair violently, and the pain he caused was visible on her countenance. The mother disappeared, the daughter took her place. What a sight to behold that young creature all in white, looking still younger than she really was, like a gentle lamb going to the slaughter! I fancied I was witnessing the martyrdom of one of the young virgins or holy women whom we read of in the history of the Church. What had happened to the mother also happened to her; the same pain in the removal of her cap, then the same composure, and the same death.

It is by the light of such scenes as this that the present attitude of political parties in France must be studied. As one reads them, one ceases to wonder at the exaggerated dread and passionate hatred which M. Gambetta and the Red Republic which he is supposed to typify excite in the minds of M. de Lasteyrie and his friends of the Right. The ghosts of their guillotined ancestors haunt them.

Madame de Lafayette was a Frenchwoman of a different type from her mother and sister. Ardent in temperament, ready of speech, full of energy and resource, she was much more fitted for the stormy times in which her lot was cast. And her position was one of peculiar difficulty. All the traditions of her family and education were opposed to the revolutionary movement, which, as the wife of the Commander-in-Chief of the National Guard, she was expected to countenance. She had adopted liberal opinions; she approved and admired her husband's conduct; she did the honours of his house to his numerous guests. "But what she suffered in her heart," says her daughter, "can only be understood by those who have heard her talk of those times. Never did she see him leave the house during that period without thinking that she was bidding him adieu for the last time." Upon one point alone she refused to sacrifice her religious convictions to the exigencies of her husband's position. When the "civil constitution" of the clergy was established, she testified her attachment to the Catholic cause by her presence in the church of St. Sulpice, when the curé, whose parishioner she was, refused from the pulpit to take the oath. M. de Lafayette was often obliged to receive "constitutional" priests at dinner. On such occasions his wife would express before them her attachment to the cause of the former bishops. Once only did she depart from the rule she had laid down for herself—that of receiving all sorts of persons equally well. This was when the Bishop of Paris, the notorious Gobel, came, after his instalment, to dine with the General. Declining to meet him as the bishop of the diocese, Madame de Lafayette dined out that day, though her doing so was much remarked. When Lafayette fled from France, his wife was at the family seat at Chavaniac, in Auvergne. The house was soon invaded by a revolutionary commissary charged with an order from the Committee of Public Safety to bring Madame de Lafayette and her children to Paris. Thanks, however, to her own skilful management, and the efforts of local friends, the perilous journey was deferred, and an order was obtained from M. Roland, permitting her to remain a prisoner under surveillance at Chavaniac. This interval of comparative repose did not last long. A Jacobin Committee was formed at Le Puy, the chief town of the province, and empowered to grant certificates of *civisme*. This document Madame de Lafayette failed to obtain, and in November 1793 she was arrested, and carried to the jail at Brioude, which was full of ladies of the local aristocracy, who treated her with much impertinence on account of her supposed liberal opinions. A few months later the order to convey her to the prison of La Force, in Paris, reached Brioude. Luckily the order was entrusted to a friendly officer, who spared her all the annoyance in his power, and facilitated her communications with her friends. She arrived at Paris on the eve of the Festival of the Supreme Being; when no less than sixty persons were daily falling victims to the revolutionary tribunal. The next five months were passed in momentary expectation of death. But this period of despair ended with the revolution of the 10th of Thermidor. No sooner was she released from prison than, with characteristic energy, she determined to rejoin her husband in his captivity. Having despatched her son to America, with a recommendation to the care of General Washington, she obtained a passport, and started for Germany with her daughters. At Vienna she had an interview with the Emperor, who gave her permission to proceed to Olmütz. Here she remained for nearly two years, sharing the hardships of M. de Lafayette's captivity. It was not until July 1797 that, on the demand of General Bonaparte, now in command of the army of Italy, the prisoners of Olmütz were released. The exiles turned their steps towards Holland, but upon the occurrence of the revolution of the 18th of Brumaire, General Lafayette determined, on the advice of his wife, to return at once, and without any formal permission, to France. The Ministers declared that he must retire again to Utrecht, there to wait till his name should be effaced from the list of *émigrés*. But his indefatigable wife sought an interview with Bonaparte, who received her graciously, remarking, with characteristic *brusquerie*, "Vous avez beaucoup d'esprit, madame; mais vous n'entendez pas

les affaires." Her pleading, however, was successful, and Lafayette obtained permission to remain in France. The rest of her days was devoted to the repose of family life. In 1807 she was attacked by a violent brain-fever, and after a long delirium, in which her peculiar devotion to her husband was very touchingly manifested, her chequered career was brought to its final close. No heroine of romance ever encountered more vicissitudes of fortune, or more bravely.

Both on biographical and on historical grounds these Memoirs are full of interest; and M. de Lasteyrie shows good taste in leaving them to tell their own tale, without preface or comment. That they should leave an indelible impression upon the minds of those who now represent the victims of the Reign of Terror is only natural; but it is not the less a misfortune for the France of to-day that the hatred of political parties should be fed and exasperated by the record of atrocities which moderate Republicans repudiate with as much horror as Royalists and Reactionaries.

UNIVERSITY OARS.*

DR. MORGAN has published a very seasonable book, upon a question brought into prominent notice some years ago by the late eminent surgeon, Mr. Skey, as to the effects of the University race upon the health of the competitors. We need not waste words in proving that it was desirable to have a scientific investigation of a point upon which popular writers had pronounced such confident and such contradictory opinions. It is enough to say that Dr. Morgan is excellently qualified to arrive at the truth, both by his previous acquirements and by a laborious investigation of the special facts. He was formerly captain for three years of a college boat at Oxford; and he is now an experienced surgeon, and especially has devoted much attention to the important question of the deterioration of race. Everything which he says upon the subject deserves attention for its intrinsic value; and he speaks plainly and decidedly. We will endeavour first to give some notion of his method and his results, and we will then add our own opinion.

In the first place, Dr. Morgan has carried out his inquiry into the personal history of University oars with a completeness which leaves little to be desired. He tells us that 255 oarsmen were alive at the end of 1869; he succeeded in obtaining letters from 251 of these gentlemen giving the results of their experience; and, in addition to these, he has received many particulars as to thirty-nine who had died since their performance. Out of the 294 oarsmen who had rowed since the race began, seventeen either describe themselves or are spoken of by their friends as having suffered certain definite injuries. Omitting for the present any notice of their cases, the most instructive part of Dr. Morgan's inquiry is an elaborate statistical return compiled from the facts before him. Taking, for example, the Oxford crew of 1829, and assuming (which may be taken as approximately accurate) that the age of each competitor was twenty, it would follow from Dr. Farr's life-tables that each man should have lived on an average for forty years. Three were dead before 1869. Five were alive at that time, and, assuming that each survivor would enjoy the average life of a man of sixty, we should find, by the same tables, that they ought to live for fourteen years apiece. Thus the five would live for seventy years; and, adding this amount to the years actually enjoyed by all the oarsmen between 1829 and 1869, we find that the aggregate lives of all the crew will probably amount to 370 years. The calculated value of the eight lives in 1829 would be only 320 years; and thus the particular crew in question would have 50 years' more life than eight men of average health, or each rower would live for about 46 instead of 40 years. Applying the same method to all the crews down to 1859 we find the following results. An average man of twenty should live for forty years; the average member of an Oxford University crew lives 43·7 years; of a Cambridge crew 40·7 years; and of a University crew without distinction of Oxford and Cambridge, 42·2 years. On the whole, therefore, the result is that a man who rows in the University race may be expected to live rather longer than a man who is regarded as a select life by an Insurance Office.

If we attempt to trace the special causes of death, we find that accidental and violent deaths and deaths from fever have been unusually numerous in proportion to the whole. Deaths from consumption have been less numerous than usual, and deaths from heart-disease are in about the ordinary proportion. It must be added, however, that the number of deaths is scarcely sufficient to enable us to come to any safe conclusion. We may remark that twenty-four Cambridge men died during the period in question, and only fifteen Oxford men; a difference which is too great to be ascribed with any probability to the deadly influences of the pestiferous Cam or to any occult agency of mathematical study. The result shows, in fact, that pure accident is sufficient to affect very materially such small numbers; and that it would be rash to place any great reliance upon the statistics.

Without going into further inquiries, we may draw one or two obvious inferences. The popular legends of the fatal effects of University races must be dismissed. Mr. Justice Denman, himself a very distinguished oarsman, mentions two or three of the absurd legends which have been current. It was generally said that every member of a certain six-oared crew which rowed from Oxford to London in a day died within a very short time. In fact four of them were alive forty years after the performance, and the other two had been killed in battle. The narrator was himself informed that he was the only survivor of his own crew, which was head of the river in 1842; the fact being that all were then alive, some twenty years after their victories. Such stories are familiar to all rowing men; and though their currency is interesting as illustrating the growth of a modern mythical legend, they may be regarded as devoid of all historical foundation. Dr. Morgan has proved conclusively that University races are by no means as dangerous as alarmists have represented.

Other questions, however, still remain. We may observe that whereas the Cambridge men ought to have averaged forty years of life, they in fact averaged about six months more. Is this a satisfactory result? In each year the very flower of the young men of the time were chosen. The strongest, and presumably the healthiest, eight lads in the University were carefully picked for the contest. Ought they not to have exceeded the average duration of life by more than six months? or, even if we take Oxford instead of Cambridge, by more than three years and a half? This is a question to which, for many reasons, it is difficult to give a competent answer; but we confess that the result does not impress us quite so favourably as it appears to impress Dr. Morgan. Again it is to be observed that the whole system was exceedingly different twenty years ago from what it is now. The work done was in some respects more severe; whilst, on the other hand, the training was far less rigid and prolonged. Dr. Morgan has very properly excluded from his tables the life-rate of all crews since 1859; the experiment has not yet been tried on a sufficiently extensive scale by the later crews to warrant any great reliance upon the results. This limitation, however, excludes the greater number of oarsmen who have performed since the recognition of rowing as one of the leading duties of a good Christian. We are not surprised to hear that every member of the Cambridge crew of 1840 was alive in 1869; and seven of them write to say that they were none the worse, whilst some declare that they were the better, for their exertions. This crew may be expected to enjoy an average of fifty instead of forty years' life after the race. But thirty-three years ago rowing was conducted upon such different principles that the precedent loses much of its value. We will remark parenthetically that a similar circumstance quite destroys to our minds the value of certain statistics alleged by Dr. Morgan to prove that rowing is compatible with reading. He gives a list of honours obtained by rowing men, and says that the percentage who distinguished themselves in the schools and the senate-house was rather larger amongst the University oars than amongst the rest of the students. Now strength of constitution is so important an element in both kinds of success that we might expect some such result. But a slight examination of his facts entirely reverses the inference, as far as recent years are concerned. Down to 1849 the Cambridge oarsmen had supplied seven wranglers in ten crews; the next sixteen crews, down to 1869, only supplied one wrangler, who was moreover the lowest in the list. The first ten crews included two senior classics, three second, and one fourth, in the first class; the last sixteen included one senior classic, one fourth, one fourteenth, and one sixteenth in the first class. In other words, the ten crews down to 1849 altogether distanced the sixteen crews since 1849 in University honours; and a similar result is apparent in the Oxford list. In fact, any University tutor would tell Dr. Morgan, what is noticed in one or two of the letters he publishes, that at the present day it is impossible for any but a very powerful, and moreover a very determined, man to devote himself to both pursuits at once. Rowing has become far too absorbing a profession to admit the interference of any rival.

One other class of evidence must be noticed before we express our conclusions. Dr. Morgan says, with very great truth, that the opinions of relations as to the causes of death and injury are not to be taken too confidently. We need not expatiate upon the reasons, sufficiently well known to every University man, which cause rowing to be saddled with a responsibility not properly belonging to it. Dr. Morgan, however, has hardly given due attention to the corresponding deductions from the evidence of rowing men themselves. The letters which he publishes from old University oarsmen are almost touching in the unanimity with which they repudiate any suspicion of evil resulting from the race. We turned to two or three cases in which we had personal reasons for expecting that some injury would be admitted; but we found that in each instance the supposed sufferer declared that rowing had been perfectly innocent in regard to himself. Now we have no right to set our private guesses against the opinion of the gentlemen who are most interested, and who have the best means of judging; but it certainly occurred to us very forcibly that the evidence of an oarsman as to the effects of rowing is not more likely to be impartial than the evidence of a confirmed smoker as to the influence of tobacco, or of a Roman Catholic as to the influence of confession. The witness is simply testifying to the excellence of the sect of which he is a devoted and distinguished member; and it is only in the plainest cases that he will admit that his favourite practice was to blame.

After making such deductions from Dr. Morgan's evidence, we still admit its great value, and we think that he may help us to certain definite conclusions. In the first place, we heartily agree with all he says as to the extreme value of manly exercise, and the great need of encouraging it at a time when the population is

---

University Oars. By Dr. Morgan. London: Macmillan & Co. 1873.

more than ever gravitating towards great towns and showing ominous symptoms of physical deterioration; and, further, we think that he has shown the utter groundlessness of the popular belief in the extreme danger of the pursuit. Besides his statistics, Dr. Morgan gives some very sensible medical remarks upon the benefit which may be derived from strong regular exercise. But all this does not quite meet the difficulty. We should be exceedingly sorry to see our undergraduates give up their love of athletic exercise; but we may still ask whether the variety of exercise of which the University race is a type is not an abuse of a good principle. The argument seems to stand thus. No one would say that so violent a strain upon the constitution as is implied in a long course of training culminating in the Putney race is in itself desirable. A lad may be all the better for two or three hours a day of good hearty bodily exercise; but if he could be persuaded to take such exercise without the powerful stimulus of a race watched by all England, he would attain all the benefit without any of the danger. That danger may have been exaggerated; but it exists. Dr. Morgan, as we have seen, mentions seventeen cases of supposed injury, and we strongly suspect that the list might be extended. If, therefore, it were possible to remove the abuse whilst preserving the judicious use of the art, all scruples would be obviated, and we might contemplate the sports of our undergraduates with unmixed satisfaction. But, it is urged, this is impossible. One of the best letters published in the book is from the Rev. H. A. Morgan, Fellow and Tutor of Jesus College, Cambridge. He says that the College races would languish if it were not for the stimulus of the University race. We cannot separate the good from the evil. A few young men must be sacrificed on the Thames in order to encourage a great many to take healthy exercise on the Isis and the Cam. Mr. Morgan may very probably be right, and there is at any rate little immediate prospect of the abolition of the London race. Assuming, however, that it is one of our sacred and unalterable institutions, it follows, as Mr. Morgan puts it, that a place in the University boat ought to be made as free as possible from danger to the health. The price which we pay for the stimulus to rowing should be as low as possible. We will add, moreover, that the passion for athletics is so powerful that we need not make the stimulus stronger than at present. It is more in need of restraint than of encouragement, for, whatever is done, there is no visible danger that physical excellence will be undervalued at the Universities for a long time to come; and, from this point of view, two remarks suggest themselves very forcibly after reading Dr. Morgan's book.

In the first place, whatever danger there may be to health is enormously increased by the profound physiological ignorance of the young men and their trainers. Dr. Morgan, for example, makes some valuable remarks as to the cases in which rowing is likely to aggravate or to diminish a predisposition to consumption. Assuming his statements to be accurate, nothing is more certain than that they are systematically disregarded by the oarsmen themselves. Rowing is just as likely to be encouraged when it is a poison as when it is a medicine. We need not dwell upon what sensible rowing men are beginning to discover, that the superstitions about training are of the silliest kind, and imply a total ignorance of the human framework. Hence it certainly appears to us that there is much sense in a remark made by Mr. Richards, an old Cambridge oar, who suggests the value of a little more medical superintendence. Nobody ought to row in the race—as several old oarsmen admit—till he has been passed by a physician, and probably some regular system of inspection would often detect symptoms of approaching mischief which are now disregarded. It is common to find that the men who shirk their work are just those to whom it would be beneficial; and that others, to whom it is really injurious, persist with a courage worthy of a better cause in concealing their ailments to the last. We could give some important facts bearing upon this topic, as to men who have rowed in an utterly unfit state of health; but it is enough to say that either the boat-clubs themselves or the College authorities might do well to insist upon a more systematic subjection to medical advice.

Secondly, a still more important suggestion is made by Mr. Morgan in the letter we have noticed. He speaks very strongly, but not one bit too strongly, of the evil effects of the great amount of public notice now bestowed upon the crews. The daily and weekly bulletins of the newspapers, he says, "lead to a perpetual excitement which is in every way bad for the men." And he mentions, with proper disgust, the appearance of the University race in the betting lists. The stimulus, in fact, provided by the University race may be good up to a certain point; but that part which depends upon the lads becoming for a time the public property of penny-a-liners is altogether bad and demoralizing. It is hardly pleasant for a gentleman to see his personal peculiarities accurately described in the columns of a dozen papers as if he were a prize pig; to have his ribs felt, or at least inspected, by the touts of sporting newspapers; and to have accurate details published as to the quantity of fat deposited upon his abdomen. As to the betting element, which is constantly trying to obtrude itself, it would be difficult to use too strong language. The result of the modern system is that a youth is kept for many months of his academical career in a state of feverish excitement which is generally fatal to his studies, which can hardly be good for his health, and which is certainly not favourable to his self-respect. Rowing becomes less an amusement than a profession; the manly sport which ought to be encouraged is in reality degraded by an infusion of lower motives, and the intellectual tone of the University is palpably lowered by the ridiculous importance attached to mere muscular excellence. The question is too often argued, even by Dr. Morgan, as though the only question were between excessive devotion to athleticism and utter physical idleness. The true question is, how a pursuit which everybody must admit to be excellent within certain limits can be kept from exceeding those limits. We cannot discuss that question at present; but we will throw out one trifling remark which perhaps deserves notice. Of late years the crews have appeared on the Thames at a much earlier period than formerly. It is on the Thames that they chiefly become the objects of the delicate attentions of touts and reporters, and are made the heroes of daily tittle-tattle. The plan is doubtless favourable to their improvement in the art of rowing; but in many other respects it seems to us to be injurious. The University authorities might surely keep the young gentlemen to what is supposed to be their proper work a little longer, and not allow them to cut out so large a slice of the term. This very moderate reform would perhaps help on a further change which is likely to be imperatively demanded before many years, though visionary enough at present—namely, the removal of the race from the London waters altogether. Half the evils of the present system are the result of the fact that the young gentlemen have now to perform, not for their own amusement, but for that of many thousand cockneys. We should be sorry to deprive the cockneys of an innocent pleasure; but it may be doubted whether their patronage is altogether healthy.

GENERAL HAZEN ON THE ARMIES OF GERMANY AND FRANCE.*

WE do not know that it was ever our fate to meet with a book of more varied qualities than that before us. We have shrewd and original remarks here, large patches of well-known works inserted without acknowledgment there; profound and interesting reflections on men and events, mingled with petty gossiping details picked up at second-hand; impartial observations on foreign institutions, interspersed with bits of buncombe worthy of a local electioneering speech in the West. General Hazen's volume reminds us of nothing so much as of certain numbers of the chief New York papers at the height of the Civil War, when events of surpassing historical interest were reported with a commentary so patched and unequal that one could almost distinguish the parts of the conversations woven into it, varying from the well grounded opinions of scientific soldiers to the guesses of the newly commissioned volunteer, all caught up with equal eagerness by the listening Correspondent eager to anticipate by prophecy the news of his brethren of the craft. At first, we confess, we were tempted to put General Hazen's work aside as not deserving a detailed notice; but a second reading has convinced us that the matter, if not the form, of the book is good, and that, whatever objections may be taken to its spirit, the gallant author had both opportunities to see and powers to observe which entitle him to be heard as a witness of much value on the ever fresh subject of the fall of France.

General Hazen is one of the carefully trained West Point officers with whom America supplies the modest needs of her regular army in time of peace. Like most of these, when the exigencies of war came he rose rapidly, and, serving in the rough school of Sherman's Southern campaigns, distinguished himself at the head of a division, and rose to the command of a corps, being still but a young man. The civil strife over, he found himself thrown back to an inferior regimental position, with his brevet rank of General doing him no real service, and conferring on the holder only the awkwardness of a false position. A keen and practical observer, sent nominally to view the shortcomings and advantages of other armies, he could not but fail to bring his experience to bear on his own; and there probably is no chapter of the work more valuable than that in which he analyses the imperfections of the American service during and since the war. Any one among ourselves who wishes to understand how the administration of a suddenly augmented army by untried civilians, even when aided by the advice of such staff officers as cling to the bureaux in time of peace, will inevitably result in costliness, jobbery, and inefficiency, may read the causes plainly for himself in the chapter of Comparative Observations on the United States Army. We have, however, rather to deal with General Hazen's reflections on the forces of our neighbours, and need only observe as a preliminary that the General received his credentials for Europe rather late, and consequently reached the German headquarters when they were already firmly established before Paris, and the blockade fairly begun.

Prince Bismarck, who is said to affect severity and curtness in his bearing to our own countrymen, was all smiles to the newly accredited American Commissioner. On receiving him at Ferrières he not only met General Hazen cordially, but undertook, almost unasked, to expound to him the whole history of the Hohenzollern candidature and of the outbreak of the war in "a very interesting talk of at least two hours' duration, in which he was the uninterrupted speaker." This discourse of the great statesman, as related by the listener, is no doubt interesting enough; but it was reported in this country before the work itself was published by

* *The School and the Army in Germany and France; with a Diary of Siege Life at Versailles.* By Brevet Major-Gen. Hazen, U.S. Army. London: Trübner & Co.

a weekly contemporary supposed to have especial sympathies with America; and the writer shrewdly pointed out that the interest lay, not in accepting its statements as literally true, but in regarding them as what Bismarck desired the Americans to believe. There could be no better or more sufficient commentary. Posterity looking back will judge the events of 1870 more disinterestedly than any Englishman or American, much more any German or Frenchman, can do now; and if Napoleon be condemned for his share, few will believe that the part of Bismarck was chiefly that of ignorant simplicity and surprise, for which he would have had General Hazen accept it.
